Chapter 4

Utilities

Drinks Sales Analysis Utilities

A number of Utility functions are provided within Drinks Sales Analysis, which are not used during the day to day operation of the system, but which may be used during installation, or under certain special circumstances.

All these functions are located on the Drinks Sales Analysis Utilities menu.

Maintain Company Profile

1/DAU

This procedure enables the maintenance of system parameters specific to a company.

Maintain Company Profile Selection Screen

Select the Maintain Company Profile option.

This screen enables the selection of the company to be maintained. It displays a list of all companies currently defined to this module.

SA005	Company Profile Maintenance	USER GALBRAIJ	23/01/96
			16:39:52

Company name	Company Code
■ D1 Drinks Test Company	D1
- State Profile System Test Comp	SP

Fields:

SOP System

This indicates Drinks Sales Order Processing module to which Drinks Sales Analysis is interfaced. Normally this value will be '1' to indicate that the Drinks Sales Order Processing module is used.

In bespoke environments, there may be an interface to MAAPICS or a bespoke system.

1 - JBA

2 - MAAPICS

3 - OTHER

SOP Company

The company code of the company in Drinks Sales Order Processing with which this Drinks Sales Analysis company is to interface.

Inventory System

This indicates which Inventory module is interfaced to Drinks Sales Analysis. Normally this will be 1 to indicate the Drinks Inventory Management module will be used.

1 - JBA

2 - MAAPICS

3 - OTHER

Inventory Company

The Company Code of the company in Drinks Inventory Management with which this Drinks Sales Analysis company is to interface.

Current Year

The current year. This should be entered at the time of installation, but will be maintained by Drinks Sales Analysis, during the last period end run during the year.

Current Period

The Current Sales Period. This should be entered at the time of installation but will be maintained by Drinks Sales Analysis Period end update.

Current Week

The Current Week. This should be entered at the time of installation, but will be maintained by Drinks Sales Analysis Week end update.

Number Of Periods This Year

Enter '12' if your Sales Periods are calendar months or '13' if they are 4 week periods.

Number Of Weeks This Year

Enter either '52' or '53'.

Number Of Weeks Last Year

Enter the number of weeks last year, either '52' or '53'.

Lowest Level Of History

Enter either:

1 - To hold sales data at period level. If 1 is entered then reports will only show period and year to date figures.

2 - To hold it at a weekly level. If you require reports to show weekly figures then enter 2.

Margin

Enter either:

1 - To see margins expressed as a percentage of Sales Value.

2 - To see margins as a percentage of Cost Value.

Value Derivation

This is required when Sales Kits are used in Drinks Sales Order Processing, and you wish to see details of Kit components in Drinks Sales Analysis. As the components in a kit have no invoice value, this must be derived by the module.

- 1 - The Sales Value of kit components to be apportioned on the basis of cost
- 2 - The Sales Value to be taken from the selling price of the component in Drinks Inventory Management.

UOM For Sales Quantities

This field is defaulted to '1' since all Drinks Stockrooms use the same issue units.

Press **Enter** to validate the values on the screen and write them to the company profile.

Clear Database

2/DAU

This function clears all user data in the Drinks Sales Analysis system. It may also be used to clear test data at installation time, prior to live running.

Warning: This function clears all data for all companies.

Note: Before a Clear Database is attempted, make sure that the logical file SALESSUM, or physical file SALANALD has not been created in the interactive library QTEMP. This will cause problems with the later recreation of the database. In the event that the logical file SALESSUM has been created in QTEMP, sign off to clear QTEMP. The Clear Database function can now be used.

Select the Clear Database option.

```
SA301CLP          Sales Analysis Utilities          0/00/00
                                                    15:54:57

Clear Database

      +-----+
      |          W A R N I N G          |
      +-----+

This utility will clear ALL data in the Sales Analysis system
not just the Sales History Database.

Only continue if you are sure you want to do this.

Press ENTER to continue, or F3 to exit this function.

F3=Exit

01-02  [Logo] MW KS IM II KENB20A PET087S2
```

If you choose to continue you will be prompted to select **F8=Submit** to submit the job to clear the data. Select **F8=Submit** to clear the database, or select **F3=Exit** to exit.

You will receive a warning screen on taking the option. Press **Enter** to continue or **F3=Exit** to exit the function.

Reset Invoice Posted Flag For Company

1... 2... 3/DAU

This function enables you to re-set the invoice posted-flag on the invoice details file, which indicates whether they have been posted to Drinks Sales Analysis.

It may be used prior to running the Sales History Update function for a second time with the same invoice data when, for example, the Sales History Database has been re-defined.

Select the Reset Invoice Posted Flag for Company option.

The screenshot shows the 'Sales Analysis Utilities' screen with the following details:

- Top left: SA300CLP
- Top center: Sales Analysis Utilities
- Top right: 21/11/96 15:55:57
- Main area: Company number.?.? ?
- Bottom status bar: 10-43 SF MW KS IM II KENB20A PET087S2

A 'Company Selection' dialog box is open, displaying a list of companies with a 'More: +' button at the top right. The list includes:

- 1 CO Company name
- DL Drinks US System Test Company
- D1 D1 Drinks Test Company
- GD
- HW Handy Wholesalers Ltd
- RH Richard Hayward's Company (RH)
- SP State Profile System Test Comp
- SU *-- Single Currency U.K. Compa
- UK UK Definition Testing
- US US State Profile Company (US)
- U1 Drinks US System Test Company

At the bottom of the dialog box, there is a 'Position to:' field and a button labeled 'F12=Previous'.

Fields:

Company Number

Enter the 2 character company number you want. The **F4=Prompt** is available.

Select

This is displayed if you have pressed **F4=Prompt** to select a company from a list. You are prompted to select the company to process. Enter '1' next to the company you want to process.

This option requires exclusive use of the system.

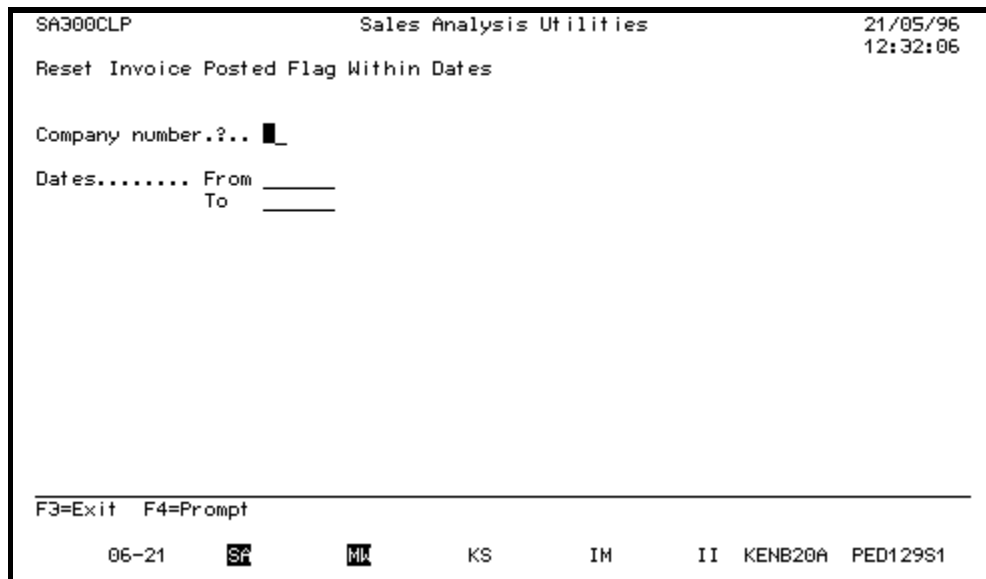

Once you have selected a company, select **F8=Submit** to submit the batch job to un-flag the invoices.

Reset Invoice Posted Flag Within Dates

1... **2...** 4/DAU

This function is similar to the Reset Invoice Posted Flag function, but allows you to restrict the time period to be processed by entering a from and a to date, as well as specifying the company code.

 Select the Reset Invoice Posted Flag Within Dates option.

```
SA300CLP          Sales Analysis Utilities          21/05/96
                                                12:32:06

Reset Invoice Posted Flag Within Dates

Company number.?. _

Dates.....  From ____
              To   ____

F3=Exit  F4=Prompt

06-21    SF      MM      KS      IM      II  KENB20A  PED129S1
```

Fields:

Company Number

Enter the company number. The **F4=Prompt** is available.

Dates

Enter the required date range. All dates should be entered in the format DDMMYY, where DD is Day, MM is Month and YY is Year.

 This option required exclusive use of the system.

 Press **Enter**.

 You will then be prompted to select **F8=Submit** to submit a batch job to un-flag the selected invoices.

Flag All Invoices As Posted For Company

1... 5/DAU

This function enables you to flag invoice details as having been posted to Drinks Sales Analysis for a particular company.

Select the Flag All Invoices as Posted for Company option.

Enter the year for which you wish to delete data.

Press **Enter** .

Press **F8=Submit** to submit the batch job to delete the data.

Change Initial Field Descriptions

1... **2...** 8/DAU

This function is used to change the descriptions of fields known to Drinks Sales Analysis. To be effective, this must be done prior to Sales History Database creation. The names of the fields to be shown on displays and enquiries will be those defined in this option.

Select the Change Initial Field Descriptions option.

This function steps through the fields in sequence. You may overwrite the descriptions of fields, and press **Enter** to update the information and proceed on to the next field.

Changes made using this function will be incorporated into the database during Sales History Database creation, and will be available to IBM Utilities such as DFU and QUERY.

```
SA098                HW - Handy Wholesalers Ltd        USER GALBRAIJ    21/05/96
                                                           12:41:23

```

Overtyping the short description as required. Pressing **Enter** will update the database.

Define Database

10/DAM

The Sales History Database uses information from both Drinks Inventory Management and Drinks Sales Order Processing this structure allows easy manipulation and analysis of the available information.

Selection of Data Elements

The Drinks Sales Analysis Define Database function is used to define a database file containing those data elements which you choose to be of importance or relevance.

You may be looking for trends, such as the changes in sales volumes across regions, or the relative performance of the sales force, or you may want to analyse the sales performance of different item groups, etc.

The nature of the analysis you wish to perform, together with the information held for items and customers should serve as a guide when defining the database.

If you group your customers by region, and you wish to analyse the sales performance by region, then the Region from the customer related information should be chosen for inclusion on the database. If Salesman is important, then this data element should also be included. Similarly, if the Item Group from the item related information is important then this should be included.

You may select up to six customer-related data elements and six item-related data elements for inclusion on the database, along with 5 value data elements.

The Drinks Sales Analysis module itself will incorporate the Customer Code and delivery sequence, the Item Code, and the value fields cost, quantity and sales value.

Setting Values

When defining the database, you should also consider the sales volumes which you expect to handle as it is possible for particularly high values to be too large to display on the enquiry (if they are in excess of 9 digits). In this event, scaling factors are provided to scale values into 10's, 100's, 1000's or 10,000's.

The default is a factor of '01', which is standard units. '02' will scale in 10's, '03' in 100's and so on.

Defining the Time Period

Whilst not a part of the Create Database function, you should also consider the level of analysis you will require in terms of time period.

This is defined on the Company Profile, and may be by week or by period. Holding information at a weekly level will cause more information to be stored than if it is held by period. This value should not be changed during the normal operation of the system.

Note: There is only one Database definition for all companies in an installation of Drinks Sales Analysis. This definition may be used by all companies independently, once created.

Re-naming of Data Elements

It is possible within Drinks Sales Analysis to alter the names of data elements or fields which you see when using the system.

For example, if you use the customer related field Territory to actually mean County then you may change the name which will be used in Drinks Sales Analysis. This may be done in two ways and have slightly differing effects.

The function Change Initial Field Descriptions may be used to change the names of fields before database creation. If this is done, the changed names will be available in views of the database external to Drinks Sales Analysis e.g. IBM utilities such as QUERY.

The Change Database Field Descriptions function may be used after database creation, and will only change the names within Drinks Sales Analysis.

Thus, if you wish the re-name to be fully incorporated into the database, then you should set this up prior to creating the database.

Define Sales History Database Screen 1

10/DAU

This procedure is used at installation time to define the contents of the Sales History data file.

Select the Define Database option.

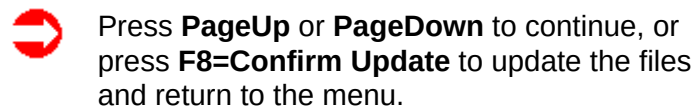

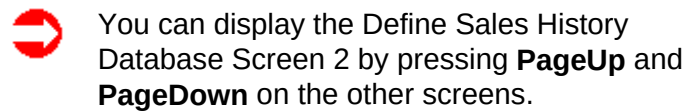

You may chose up to six customer related fields, up to six item related fields, and up to five value or invoice related fields. A batch job will be submitted, which will delete any existing Sales History Database, and create a new version according to your definition.

The screen displays a list of data elements, together with their names within Drinks Sales Analysis, grouped into Customer Related elements, Item Related elements and Invoice Related elements (values). For value items a default scaling factor will also be displayed

05-20 SF MW KS IM II KENB20A PET087S2					

Fields:

Short Name Line

You may select data elements for inclusion in the Sales History Database by entering a '1' alongside the chosen element.

To the right of each data element, you may overwrite the short name which will be used within Drinks Sales Analysis. These names will be incorporated into the database definition of Drinks Sales Analysis, and will therefore be available to IBM utilities.

S/F Field

Value fields also require the entry of a scaling factor to be used on the enquiry display. A default of '01' will be used, but a value from '01' to '05' may be entered as a default for scaling.

If Forecasting is used then Despatch Stockroom may be selected.

Press **PageUp** or **PageDown** to continue, or press **F8=Confirm** Update to update the files and return to the menu.

You can display the Define Sales History Database Screen 4 by pressing **PageUp** and **PageDown** on the other screens.

Fields:

You may select data elements for inclusion in the Sales History Database by entering a '1' alongside the chosen element.

Press **PageUp** to continue, or press **F8=Confirm Update** to update the files and return to the menu.

Change Default Scaling Factors

1... **2...** 11/DAU

When you create the Sales History Database you are required to specify scaling factors which will be used to scale the data shown on the enquiry. However, it may be necessary to change these at some time. This function is available to enable you to do this.

Select the Change Default Scaling Factors option.
