Glossary

Glossary

Calendar

The start date, holidays, and non-working days are specified in order to generate a “calendar”.

Centre

A central distribution point, supplying one or more DCs within the company.

Central Stockroom

The inventory stockroom, defined at the Centre, which normally supplies the Item.

Customer

The customer code allocated to a stockroom within Drinks Distribution Requirements Planning.

DC

Distribution Centre.

Distribution Centre

A regional distribution or retail outlet for the company.

Demand

The outstanding sales and distribution orders and sales forecasts against an item.

Distribution Item

A valid inventory item which has been defined to DRP.

Distribution Order

An internal sales order placed on a centre to meet the demand of one of the DCs it supplies, i.e. a formal request to transfer stock.

Forecasts

A sales forecast is the anticipated value, or quantity, to be sold within a given period. A stock forecast is the required level of stock to be planned as being available within a given period, i.e. as part of a stock build process (to typically meet a seasonal demand with a potential lack of supplier capacity.)

Forecast/Seasonal Profiles

Time phased spread patterns which can be applied to item group and item sales forecasts or stock building requirements to break them down by period, week and day.

Item Master

Details for each item which are specific to its control within DRP.

Local Stockroom

The primary inventory stockroom for the item at the centre or DC, i.e. where it is normally stocked.

Net Change

A method of planning by which items may be selected for re-planning on the basis of unplanned changes in supply, demand, stock levels or replenishment parameters that have occurred since last planning.

Network

The relationship between a centre and all the DCs it can supply.

Overdue Days

The number of calendar days, prior to the current date, that DRP considers overdue orders in the planning runs

Order Policy

This code defines how an item is to be replenished when a supply requirement has been identified.

Pack Type Code

The code for the pack in which the item is being shipped (from centre to DC). Applies to Drinks Warehousing interface (if available).

Planner

The person responsible for controlling the supply of a number of items within DRP.

Planner Actions

Actions suggested by DRP to be taken against supply orders (in attempting to match supply to demand).

Reason Codes (Net Change)

A code defined in DRP and referring to a type of transaction within the applications which potentially affects the supply, demand, stock levels or replenishment parameters of DRP items. Net change triggers are set under particular reason codes.

Safety Stock

The fixed level of stock to be permanently planned as being available.

Schedule

The time-phased plan generated by DRP for each item showing supply, demand and suggested actions.

Selective Processing

A method of planning by which a range of DRP items, DRP planners, inventory minor item groups, inventory cost/usage elements and/or preferred suppliers are used to select certain DRP items for re-planning.

Shipments

Items in-transit between supply centres and DCs, i.e. confirmed as despatched from the centre but not as fully received at the DC.

Supply

The stock of an item to be replenished, i.e. purchase order lines, distribution order lines, and stock in-transit to a DC.

Supply Centre

A central distribution point, supplying one or more DCs within the company.

Time Fence Days

The number of calendar days, from the current date, that DRP 'freezes' the schedule, i.e. it does not suggest any new supply orders.

Triggers

In net change DRP, the means by which changes which potentially affect the planning of DRP items are registered within DRP.

Triggers are set by transactions and maintenance options throughout distribution management applications under the control of a set of defined reason codes.

Valuation

An assessment of the cost involved in following the supply suggestions shown on the schedule.

Week Templates

A representation of the working and non-working days in a week, i.e. Monday to Sunday (these are associated with a range of dates).
