Chapter 1

Maintenance

Drinks DRP Maintenance Functions

As this is an advanced module, much of the primary data will already have been set up through the base modules. However, within Drinks DRP there are maintenance functions to define additional reference data specific to DRP. These functions include specification of company level DRP defaults, calendar and planning period information applicable to distribution Centres, details of the distribution networks, Centres and associated stockrooms, planning information at DC/item level and supplier schedule report profiles.

Periods Maintenance

1... **1/DDM** **2...**

This option is used to define the periods, which are time slots for which the supply and demand will be assessed. These are set up for each site, i.e. Centre or DC, and may be amended before any processing run.

The periods are defined in terms of calendar days and are associated with a particular Calendar Code (from Inventory Management). This is, in effect, the first stage in defining a new Centre or DC. Conversely, it is the last stage in deleting one.

Period Maintenance Centre / DC Selection Screen

Select the Periods option.

The initial screen enables you to select the Centre or DC.

A list of all Centre and DC codes may be prompted. This also gives details of the last processing run for each one.

The following information may be entered:

Centre/DC

Enter the code of the Centre or DC you wish to create or amend.

Press **Enter** to display the Period Maintenance
Details Screen.

Period Maintenance Details Screen

 This screen is displayed when you have selected a Centre / DC on the Period Maintenance Centre / DC Selection Screen.

This screen enables you to associate a calendar with the Centre or DC, and to enter a definition of the periods to be analysed by DRP for this site. The designated calendar is displayed in the top right-hand corner. All possible calendar codes (from Drinks Inventory Management) may be prompted. The remainder of the screen enables the time periods to be defined in calendar days.

Fields

Calendar Code

Enter a valid calendar code with which to associate these periods.

 **Warning: Stockrooms must have been defined previously to Drinks Inventory Management.**

1 - 46

Up to 46 periods can be used, entering, for each one, the number of calendar days in each period.

 Press **F8=Update** to save the period details for the Centre/DC. All updates are audited.

Stockroom Maintenance

2/DDM

This option is used to define stockrooms to Centres or DCs.

Note: The same code may be used for the Centre or DC as for the stockroom, if that Centre/DC only includes the single stockroom.

Warning: Stockrooms must have been defined previously to Drinks Inventory Management.

Stockroom Maintenance Selection Screen

Select the Stockroom option.

An initial Selection Screen is used to select the required Centre/DC and to state whether or not to include all Stockrooms.

Fields:

Centre/Dc

Any valid Centre or DC code, i.e. one for which periods have been defined.

Include All Stockrooms

Set to 1 to add all Drinks Inventory Stockrooms to a Centre or DC, or 0 to include specific Stockrooms.

Functions:

F8

To add a centre to a DRP stockroom file, if a new code is being set up.

Press **Enter** to display the Stockroom Maintenance Details Screen.

Stockroom Maintenance Details Screen

 This screen is accessed when you press **Enter** on the Stockroom Maintenance Selection screen.

It enables you to select the stockrooms to be defined to the Centre or DC. All stockrooms currently defined to the Centre or DC are displayed on the screen. A prompt is available to list all Drinks Inventory stockrooms.

Fields:

Stockrooms To Be Included

Any valid stockroom code. If orders are to be confirmed as despatched from this stockroom, then it must be defined as a depot within Sales Order Processing.

 **Warning: If Delete is selected, the Centre/DC and all its associated stockrooms are deleted.**

 Press **F8=Update** to save the new details for the displayed stockrooms.

Customers Maintenance

1... **2...** **3/DDM**

Distribution orders created through DRP are processed through the Sales Order Processing module in a similar way to normal sales orders.

For this reason an Internal Customer Account must be set up in Sales Order Processing Customer Maintenance for each stockroom which is to supply DCs in the DRP network.

Note: The internal customer must be set up with a delivery address sequence number of '001'. The customer code is then defined to the appropriate stockroom in this option.

Customer Maintenance Selection Screen

Select the Customer option.

All Stockrooms defined to Drinks Inventory Management are listed by Code, Description and associated Internal Customer (if defined).

SR	Description	Customer
E1	Central Depot Empties	C002
E2	Eastern Depot Empties	C004
01	Central Depot (BEERS)	DRP01
02	Central Depot (W&S)	DRP01

 *Note: The internal customer must be a valid sales order processing customer with a delivery sequence of '001'.*

 Press **Enter** to save the details.

Network Maintenance

4/DDM

This option allows you to define DRP networks.

A DRP network consists of one Centre and any number of DCs which are supplied by that Centre.

A particular Centre or DC can be defined to more than one network. It is also possible to define a hierarchy of networks, allowing a Centre in one network to be a DC in a higher network.

Network Maintenance Selection Screen

Select the Networks option.

The initial screen enables you to select the Network code to be maintained (a prompt is available if required).

Fields:

Network Code

Enter a valid code for the network to be maintained or a new code to be added.

Press **Enter** to re-display the screen as the Network Maintenance Details Screen, enabling you to maintain the Centre.

Network Maintenance Network Details Screen

 This screen is displayed when you have entered a valid network code on the Network Maintenance Selection Screen.

It enables you to maintain the Centre code and descriptions. If a Centre has already been associated with a Network, it is displayed as the default.

21-08  MW KS IM II KENB20A PED171S1

Fields:

Line

Enter any valid line number, corresponding to the DC to be amended.

Dc

Enter a valid DC or Centre code.

Description

Enter a description for the DC being maintained.

 *Note: If deletion is selected with a line retrieved at the bottom of the screen, the corresponding DC is deleted from the DC file. If deletion is selected with no line retrieved, **F11=Delete** can be selected to delete the details for the whole Network (this key will need to be pressed a second time for confirmation of delete).*

 Press **F8=Update** to save the DRP Network file with the associated Centre code and

descriptions. Updates to the Network file are audited.

Distribution Item Master Maintenance

5/DDM

This option is used to maintain additional distribution details in order to include an Inventory Item within Drinks DRP.

This information must be maintained for each site, i.e. the Centre or DC 'handling' the item. The site may be a distribution or retail outlet for the item.

Note: If the item is manufactured, it should be defined to DRP only at its retail DCs. The manufacturing Centre, and its items, must be defined to the Production applications. The Centre will then be treated as a 'Model' within MPS/MRP.

Distribution Item Master Maintenance Selection Screen

Select the Distribution Item Master option.

The initial screen allows you to enter the Centre/DC and Item that you want to maintain.

Tip: Two separate item prompts are available:
prompting on the item field gives a list of DRP
items defined to the selected Centre or DC.
Alternatively, pressing **F16=Inventory Search**
gives the standard Inventory item prompt.

Fields:

Centre/Dc

Valid Centre or DC code - i.e. one with periods and stockrooms defined.

Item

A valid Inventory Item Code.

Functions:

F16

Entry into standard Inventory item search, for all items within the company.

Press **Enter** to display the Distribution Item
Master Maintenance Details Screen.

Distribution Item Master Maintenance Details Screen

This screen is displayed when you have made valid entries into the Distribution Item Master Maintenance Selection Screen.

It enables you to maintain the replenishment parameters for the selected item. All current replenishment details are shown.

```

Fields:

Source Of Supply

Enter one of the following:

- 1 - If the item was purchased locally.
- 2 - If the item was centrally supplied (purchased or produced at a centre defined to DRP or production).

Planner

Enter a code representing the person responsible for this Item. It must be a valid planner code defined to DRP.

DRP Forecast

Must be one of the following:

- 1 - Sales Forecasts are to be used for this Item.
- 2 - Stock level forecasts are to be used for this Item.
- 3 - Both sales forecasts and stock levels used for this Item.
- 0 - Neither used. In this case, the only demand considered is actual orders.

Forecast Error Tolerance % (Absolute)

Specify the default absolute percentage difference by which sales forecast quantities may be greater than actual sales quantities, or vice versa, without causing a Net Change trigger to be written for the item concerned. If no value is entered, the tolerance defaults to the value set up for this company in Company Profile Maintenance.

Order Policy

(Mandatory). Must be A, B, D, G, or H. Other values are reserved for future use.

Each Order Policy code is interpreted as follows:

A - Discrete. DRP suggests an order for the exact quantity required.

B - Discrete above minimum. Suggests an order for the required quantity if greater than the minimum. Otherwise, suggests the minimum order quantity.

D - Fixed Quantity. Multiple orders of the fixed quantity will be suggested until the demand is satisfied.

G - Number of days supply. Accumulates the requirements over the specified number of calendar days and suggests an order quantity to satisfy this demand.

H - Fixed Quantity Above Minimum. Suggested order quantity will be greater than the minimum quantity and divisible by the multiple quantity.

Min Order Qty

The minimum quantity to be suggested by DRP for replenishment of this Item. If the re-order quantity calculated by DRP is less than this minimum, the latter is used. Applies only to order policies B and H.

OR

Use Inventory Order Quantity

1 - If the economic order quantity, as maintained in the Drinks Inventory Management module, is to be used as the DRP minimum order quantity;

2 - If the Inventory re-order quantity is to be used as the DRP minimum. Leave blank if neither is to be used.

Note: Either 'Min Order Qty' or 'Use Inventory Order Qty' fields may be entered, but not both. A minimum order quantity must be specified for order policies B and H (refer to 'Order Policy').

Max Order Qty

Maximum quantity to be suggested by Drinks DRP for replenishment of this Item. If the re-order quantity calculated by DRP is greater than this maximum, then this is highlighted on the DRP Planner Action Report.

This maximum order quantity may be used regardless of the order policy specified for the Item, but is optional.

Fixed Order Qty

(Mandatory - greater than 0 - for Order Policy D). If greater than zero, all re-order quantities suggested by DRP will be of this quantity.

If the required quantity is greater than the fixed order quantity then multiples of the latter will be suggested until the demand is satisfied.

Multiple Order Qty

(Mandatory - greater than 0 - for Order Policy H). If greater than zero, all reorder quantities suggested by DRP will be multiples of this quantity.

Safety Stock

If there is a requirement to specify a safety stock level for the item at DC/Centre which need not be recalculated during DRP processing, a 'fixed' quantity safety stock may be entered here.

Days' Supply

(Mandatory - greater than 0 - for Order Policy G). If greater than zero, DRP requirements for the given number of calendar days are summed and a single order is raised to meet them.

Local Stockroom

(Mandatory). The stockroom entered must be defined to the item in Inventory, and to the Centre/DC in DRP. On-order and in-transit quantities are updated against this stockroom for the item. This is considered as the primary stockroom for the item at this Centre or DC.

Centre

(Mandatory if source of supply is 2 - Central). Otherwise not displayed. Must be defined as a Centre within at least one Network,(refer to Network Maintenance). This is used to include/exclude Items when processing a particular Centre.

Central Stockroom

(Mandatory if source of supply is 2 - Central). Otherwise not displayed. The stockroom must be defined to the Item within Inventory, and to the Centre within Drinks DRP.

Distribution Order lines for this item are created against this stockroom.

Tip: All updates are recorded in the Drinks DRP Item master audit file.

Press **Enter** to update.

Planner Maintenance

6/DDM

This option is used to maintain details of all planners, at each Centre or DC.

This planner code is then assigned to all items he/she is responsible for (via Distribution Item Master Maintenance).

Planner Maintenance Selection Screen

Select the Planner Maintenance option.

The initial screen enables you to select the Centre or DC and enter the Planner Code which is to be maintained.

A list of Centres/DCs and Planner Codes may be prompted for, if required. If a valid Centre or DC has been specified, the list of planners is restricted to this Centre/DC. If not, all planners are displayed for the company.

Fields

Centre/DC

Any valid Centre or DC code - i.e. one for which periods have been defined.

Planner Code

A valid planner code to update, OR a new planner code to be added.

Press **Enter** to display the associated Planner Maintenance Details Screen.

Planner Maintenance Details Screen

This screen displays when you have made valid entries on the Planner Maintenance Selection Screen.

It enables you to update information relating to the planner. It also specifies the Purchase Officer number, which is used in Purchase Management when purchase orders are created from DRP suggestions (for items controlled by the planner).

If the Planner Code is new, all entries are blank on entry into the screen. Otherwise, all details previously maintained are shown.

Name

Enter the name of the planner.

Department

(Optional.) Enter the planner's department.

Telephone

The planner's telephone or extension number.

Purchase Officer Number

(Mandatory - prompt available.) The number must be defined in Drinks Purchase Management, and must fill the field.

Press **F8=Update** to save the details to the DRP Planners' file.

Net Change Reason Codes Maintenance

1... **2...** 7/DDM

This option allows the maintenance of up to twenty Reason Codes for DRP Net Change processing. Each Reason Code corresponds to a type of transaction which may affect the supply, demand, stock or replenishment parameters of items within DRP. Such transactions affecting DRP items, set Net Change 'triggers' in DRP, grouped by Reason Code. This allows a flexible approach to DRP planning runs, whereby a subset of DRP items can be re-planned based on an analysis of triggers set for particular Reason Codes.

Net Change Reason Code Maintenance Selection Screen

Select the Net Change Reason Codes option.

The initial screen displays a list of available Net Change Reason Codes, their associated Descriptions, and a flag detailing whether or not they are active.

Code	Description	Active (1=Yes, 0=No)
01	Forecast vs Actual Comparison.	0
