Chapter 2

Purchasing

Send Orders

1/DEP

You use this option to extract purchase orders, which are to be sent via EDI, from the Drinks Purchase Management module. These orders can be sent to suppliers and third party trading partners.

The purchase orders to be extracted are determined by the purchase orders release/print function in Drinks Purchase Management, which validates the supplier against the trading partners maintained in this module. If the partner is to be sent purchase orders and the document is active, the audit function will flag the order to be sent via EDI. The EDI Purchase Orders may be added into the EDI/400 Mailbox send queue.

A control list may be printed, displaying all orders sent via this run.

Note: Purchase order amendments are also automatically extracted along with new purchase orders, but are flagged as amendments in the Application Interface database.

Send Orders Screen

Select the Send Orders Option.

You use this screen to select the required options prior to invoking the batch function which extracts purchase orders to be sent via EDI and/or printed.

AI010	DK - QA Drinks	User GJBATMS	6/01/98 9:10:46
Send Orders			
Add orders directly into mailbox queue . ☒ (0=No,1=Yes)			
Print EDI orders control list 1 (0=No,1=Yes)			
Extract Supplier and/or Third Party . . . B (S=Supplier, T=Third Party, B=Both)			
F3=Exit F8=Submit			
6-44	SA	MW KS CL IM DM II	MARVIN KB ST0672S1

Fields:

Add Orders Directly Into Mailbox Queue

You can enter the following:

- 0 - No. Holds the extracted purchase orders in the Application Interface database.
- 1 - Yes. Extracts and adds the purchase orders into the EDI Mailbox send queue as a translated document.

Print EDI Orders Control List

You can enter the following:

- 0 - No. Suppresses printing of the Control List.
- 1 - Yes. Prints a Control List showing details of all purchase orders extracted in the run which are to be sent via EDI.

Extract Supplier and/or Third Party

You can enter the following:

- S - Supplier. Only extract purchase orders to be sent to the supplier.
- T - Third Party. Only extract purchase orders to be sent to third party trading partners.
- B - Both. Extract purchase orders to be sent to both the supplier and third party trading partners.

Press **F8=Submit** to submit the batch function.

This performs the following functions:

1. Selects only purchase orders which have been flagged to be sent, by the purchase orders release/print function, via EDI.
2. Creates a supplier header record in the Application Interface database, for each Supplier.
3. Creates an order header record for each order, flagging amended orders to differentiate from new orders.
4. Creates delivery instruction records where found.
5. Creates purchase order line records for each order line.
6. Once all order lines are processed, an order trailer record is created and, if required, all the order details are output to the control list.
7. Creates a supplier trailer record, once all orders for the supplier have been processed.
8. Once all EDI orders have been extracted and written to the Application Interface database, an EDI Interface function can be invoked. This picks up these records, translates them into the appropriate message standard and adds the orders into the Mailbox Send queue in the EDI module. When records have been added to the mailbox they are removed from the Application Interface files.
9. If selected, the standard Purchase Order Print function is invoked which selects all new purchase orders to be printed, excluding only those defined as active and in production via the Trading Partners Maintenance option.

Receive EDI Acknowledgements/Despatch Advices

2/DEP

Order Acknowledgements update the promised delivery date on the appropriate purchase order lines, from the shipment date on third party Despatch Advices.

You use this function to receive order acknowledgements and despatch advices sent, via EDI, by suppliers. These documents are matched to the corresponding purchase orders and may update the promise date and shipment date on the order line or schedule line.

Acknowledgements and despatch advices may be received separately.

A control list is available to provide an audit of:

- All acknowledgement/despatch lines received.
- Only those acknowledgement/despatch lines in error.

Note: The acknowledgements and despatch advices must have already been received into the Application Interface Database via the documents receiving function in the EDI application you are using.

Receive EDI Acknowledgements/Despatch Advices Screen

Select the Receive EDI Acknowledgements/Despatch Advices option.

You use this screen to select the required options prior to running the batch function which updates purchase orders based on acknowledgements and/or despatch advices, received via EDI.

AI530	DK - QA Drinks	User GBJBAIMS	6/01/98 9:13:50
Receive EDI Acknowledgements/Despatch Advices			
Document inclusion 3 (1=Ackn only,2=Advices only,3=Both)			
Control list inclusion 1 (1=All orders,2=Exceptions only)			
Update order dates 1 (0=No,1=Yes)			
F3=Exit F8=Confirm			
6-41	SA	MW KS CL IM DM II	MARVIN KB ST0672S1

Fields:

Document Inclusion

You can enter the following:

- 1 - Ackn Only. Process acknowledgements only.
- 2 - Advices Only. Process despatch advices only.
- 3 - Both. Process both acknowledgements and despatch advices.

Control List Inclusion

You can enter the following:

- 1 - All Orders. Prints all order acknowledgements and/or despatch advices received.
- 2 - Exceptions Only. Prints only those order acknowledgements and/or despatch advices in error.

Update Order Dates

You can enter the following:

- 0 - No. Do not update the order date.

1 - Yes. Update the dates on the purchase order lines, to the order acknowledgement date. This date is only updated if the actual shipment dates, received from the supplier, are different from the original delivery dates on the order.

Press **F8=Confirm** to submit the batch function.

This performs the following functions:

1. If a customer order reference is found, it checks that this is a valid order number in Drinks Purchase Management. If it is invalid the acknowledgement or despatch advice is ignored and output on the control list. All document lines are processed as follows:
2. The promised date on the acknowledgement must not be earlier than the current date or the shipment date on the despatch advice must not be later than the current date. In such cases, the document line is ignored and output on the control list.
3. The item and required date are used to find the corresponding purchase order line, including schedule lines. If no match is found the line is ignored and output on the control list.
4. If the document line quantity differs from that outstanding on the purchase order line, the document line will be ignored and output on the control list.
5. If you select update the acknowledgement date, this date is used to update the promise and due dates. Similarly, the despatch advice date updates the shipment and due dates.
6. If the control list inclusion has been set to All orders, the lines are always output to the control list.
