Chapter 3

Sales Processing

EDI Sales Order Considerations

The options available via this menu are to support EDI interfaces for documents sent and received by the Sales function within the company. The following facilities are provided:

- Send Sales Invoices.
- Send Order Acknowledgements.
- Send Despatch Advices.
- Send Ship Notices.
- Send Pick Notes.
- Send Catalogue Information.
- Send Sales Catalogue.
- Receive Sales Orders.
- Receive Despatched Orders.
- Receive Stock Adjustments.
- Receive Stock Balances.
- Generate And Maintain Electronic Sales Catalogue.
- Print Electronic Sales Catalogue.

Valid sales orders are received into the Sales Order Processing order bank and optionally suspended. These orders can then be processed via the standard order processing options.

Sales orders that fail verification are reported on a control list for review.

Receive Orders

1/DES

You use this option to receive sales orders sent via EDI by customers directly into the order bank. These orders are fully validated as if they were entered via conversational order entry and are suspended with the appropriate code if any of these checks fail. A control list is available to provide an audit of sales orders received, or of only those in error.

You can generate the following reports:

- Audit Report - This report contains details of all the inbound orders including all exceptions.
- Exception Report - This report only contains orders where an error has been encountered. There are three types of error:
 - Warning Messages. These are provided to inform users of conditions that may warrant review. Sales orders have been created on the basis of well defined circumstances. The related AI inbound file records are deleted from the AI files.
 - Suspense Messages. These reflect conditions which are serious enough to place the sales order on suspend. The order is created and the related records are deleted from the AI files.
 - Fatal Error Messages. These reflect an inability to create order entry database records. Fatal errors may exist at the header - in which case the order cannot be created - or may be at the line level, where the order can be created but the order line in error is not created.
- Summary Report - This report contains a summary of all the orders with the total number of lines created for each order.

When you print these reports, the received orders are listed in supplying department sequence, allowing you to split the report by department. The supplying department is the department that will be responsible for fulfilling the order.

The supplying department is the department defined for the delivery stockroom on the Company Profile Maintenance Stockroom Details Screen.

Note: These sales orders must have already been received into the Application Interface database via the documents receiving function in the EDI application you are using.

Receive EDI Orders Screen

Select the Receive Orders option

You use this screen to select the required options prior to invoking the batch function which receives sales orders sent via EDI by customers.

AI510	DK - QA Drinks	User GBJBAIMS	6/01/98 16:10:18
Receive EDI Orders			
Print EDI orders control list. ☐ (1=All orders,2=Exceptions only)			
F8=Exit F8=Submit			
6-41	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Print EDI Orders Control List

You can enter the following:

- 1 - All Orders. To print details of all Sales Orders received. The Audit Report, Exception Report and Summary Report are printed.
- 2 - Exceptions Only. To print only those details in error. The Exception Report and Summary Report are printed.

Press **F8=Submit** to submit the batch function.

Send Acknowledgements

1... **2/DES**

You use this option to extract order acknowledgements from the Sales Order Processing module, which are to be sent via EDI.

This option determines which acknowledgements are sent via EDI and/or printed. This is achieved by validating the customer delivery account against the trading partners maintained in this module. The decision is based on the following table, which applies to all document types not just acknowledgements:

Document Active	In Production	Send Via EDI	Print
Yes	Yes	Yes	No
Yes	No	Yes	Yes
No	Yes	No	Yes
No	No	No	Yes

The acknowledgements to be sent via EDI may be added into the EDI Mailbox send queue. A control list is available to be printed and displays all acknowledgements sent via EDI.

Send Acknowledgements Screen

Select the Send Acknowledgements option.

You use this screen to select the required options prior to invoking the batch function which sends order acknowledgements via EDI.

AI030	DK - QA Drinks	User GBJBAIMS	6/01/98 16:12:38
Send Acknowledgements			
Add acknowledgements directly into mailbox queue. . . . ☒ (0=No,1=Yes)			
Print EDI acknowledgements control list ☐ (0=No,1=Yes)			
F3=Exit F8=Submit			
6-58	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Add Acknowledgements Directly Into Mailbox Queue

You can enter the following:

0 - No. Holds the extracted order acknowledgements in the Application Interface database.

1 - Yes. Extracts and adds order acknowledgements into the EDI Mailbox send queue as translated documents.

Print EDI Acknowledgements Control List

You can enter the following:

0 - No. Suppresses printing of the Control List.

1 - Yes. Prints a Control List showing details of all acknowledgements to be sent via EDI.

Press **F8=Submit** to submit batch function.

Send Despatch Advices

3/DES

You use this option to extract despatch advices from the Sales Order Processing module, which are to be sent via EDI.

This option extracts order lines which have been despatched since this option was last invoked. This is limited to customers defined as accepting despatch advices via EDI, with the document defined as active.

The despatch advices may be added directly into the EDI Mailbox send queue.

A control list may be printed, giving details of all despatch advices to be sent via EDI.

Send Despatch Advices Screen

Select Send Despatch Advices option.

You use this screen to select the required options prior to invoking the batch function which sends despatch advices via EDI.

Once all despatch advices have been extracted, then (if selected) an EDI function is invoked. This finds all despatch advices created in the Application Interface database, translates them into the appropriate message standard and adds them into the Mailbox send queue in the EDI module.

AI050	DK - QA Drinks	User: GBJBA1MS	6/01/98 16:13:16
Send Despatch Advices			
Add despatch advices directly into mailbox queue. . . . ☒ (0=No,1=Yes)			
Print EDI despatch advices control list ☒ (0=No,1=Yes)			
F3=Exit F8=Submit			
6-58	SA	MM	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Add Despatch Advices Directly Into Mailbox Queue

You can enter the following:

0 - No. Holds the extracted despatch advices in the Application Interface database.

1 - Yes. Extracts and adds despatch advices into the EDI Mailbox send queue as translated documents.

Print EDI Despatch Advices Control List

You can enter the following:

0 - No. Suppresses printing of the Control List.

1 - Yes. Prints a Control List showing details of all despatch advices to be sent via EDI.

Press **F8=Submit** to submit the batch function.

Send Invoices

4/DES

You use this option to extract invoices from the Sales Order Processing module, which are to be sent via EDI.

This option can be used to both send EDI invoices and print non EDI invoices in one operation. If you choose to send and print invoices separately, first send the EDI invoices, using this function, then print the non EDI invoices using the Sales Order Processing Invoice/Credit Note Print function.

The sales invoices to be sent via EDI are determined by validating the customer against the trading partners maintained in this module. The customer account used for this purpose is the one to which the invoices are sent. If the partner is defined to receive invoices, and the document is active, the invoice is sent via EDI.

The EDI sales invoices may be added into the EDI Mailbox send queue.

A control list may be printed, displaying all invoices sent via this run.

A VAT analysis report is always printed, giving a breakdown per VAT code for each trading partner who is to receive an invoice file via EDI in this run.

Send Invoices Screen

Select Send Invoices option.

You use this screen to select the required options prior to invoking the batch function which sends sales invoices via EDI.

Once all the selected documents have been extracted an EDI Interface function can be invoked; this picks up all selected documents created in the Application Interface database, translates them into the appropriate message standard and adds them into the Mailbox send queue in the EDI module.

You can print a control list, giving details of all documents sent via EDI.

A VAT analysis report is always printed, giving a breakdown per VAT code, for each trading partner who is sent documents via EDI.

Fields:

Add Invoices Directly Into Mailbox Queue

You can enter the following:

0 - No. This holds the extracted documents in the Application Interface database.

1 - Yes. This extracts and adds the selected documents into the EDI Mailbox send queue as translated documents.

Print EDI Invoices Control List

You can enter the following:

0 - No. This suppresses printing of the Control List.

1 - Yes. This prints a Control List containing all documents sent via EDI.

Print Invoices Immediately

0 - No. Use the EDI function to only send invoices defined to be sent via EDI.

1 - Yes. Use the EDI function to send the invoices defined to be sent via EDI and print all non EDI invoices, in one operation.

Press **F8=Submit** to submit batch function.

Send Ship Notices

1... **2...** 5/DES

Ship Notices are an ANSI X.12 equivalent of despatch advices.

When an order is confirm assembled you can use this option to send Ship Notices, via EDI. The Ship Notices are sent to any organisation defined as a Business Entity within Drinks Purchase Management.

Business Entities would normally be organisations such as Customs Agents, Freight Companies and Shipping Lines. Business Entities are validated against inventory description ENCD.

Send Ship Notices Screen

Select the Send Ship Notices option.

You use this screen to select the required options prior to invoking the batch function which sends ship notes via EDI.

AI700	DK - QA Drinks	User GBJBAIMS	6/01/98 16:14:11
Send Advance Ship Notices			
Add advance ship notices directly into mailbox queue.. ☒ (0=No,1=Yes)

Add Advance Ship Notices Directly Into Mailbox Queue

0 - No. This holds the extracted documents in the Application Interface database.

1 - Yes. This extracts and adds the selected documents into the EDI Mailbox send queue as translated documents.

Print EDI Advance Ship Notices Control List

0 - No. This suppresses printing of the Control List.

1 - Yes. This prints a Control List containing all documents sent via EDI.

Select **F8=Submit** to submit the batch function.

Product Activity Information Transfer

6/DES

You use this option to receive Product Activity Data via EDI.

Product Activity Data provides information on customer sales activity and inventory status. You can use this data in a variety of ways, for example, to replenish customer stocks, to generate rebates and commission payments.

The data is received into the EDI files, validated and stored in product activity files in Drinks Sales Order Processing. An audit report is produced which either reports on all data received or only on exceptions.

Tip: You can produce enquiries and reports and maintain and archive this data using the Product Activity Information options in Drinks Sales Order Processing.

Note: In the present release, System 21 does not use this data to automatically replenish customer stocks, generate rebates or commission payments. You can only receive, maintain and report on the data using System 21.

Note: Inventory description major types RFTP and RFCD must be set up for this option to work correctly.

Product Activity Information Transfer Screen

Select the Product Activity Information Transfer option.

You use this screen to select the required options prior to invoking the batch function which performs the product activity information transfer via EDI.

AI600	DK - QA Drinks	User GBJBA1MS	6/01/98 16:14:28
Transfer Stock Activity			
Print EDI product activity list. . . . ☐ (1=All details,2=Exceptions only)			
F8=Exit F8=Submit			
6-41	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Print EDI Product Activity List

1 - All details. Print all details in the product activity list. The Audit Report, Exception Report and Summary Report are printed.

2 - Exceptions only. Print only those details in error. The Exception Report and Summary Report are printed.

Select **F8=Submit** to submit the batch function.

Send Pick Notes

7/DES

When you have stockrooms which are controlled by a third party you can use this option to notify the third party, via EDI, of deliveries to be made from this stockroom.

Orders are raised and allocated in the usual way. If the stockroom specified on the order is third party controlled and the Pick Note document is active, the pick note number is added to the transmission request file.

This option then:

- Processes the transmission request file.
- Extracts the pick note information.
- Initiates the EDI transmission.

Note: The Pick Note is flagged as printed (status 2) only after it has been transmitted.

Send Pick Notes Screen

 Select the Send Pick Notes option.

You use this screen to select the required options prior to invoking the batch function which sends pick notes via EDI.

AI804	DK - QA Drinks	User GBJBA1MS	6/01/98 16:14:43
Send Pick Notes			
Add Pick Notes directly into mailbox queue..... 1 (0=No,1=Yes)

Fields:

Add Pick Notes Directly Into Mailbox Queue

0 - No. This holds the extracted documents in the Application Interface database.

1 - Yes. This extracts and adds the selected documents into the EDI Mailbox send queue as translated documents.

Print EDI Pick Notes Control List

0 - No. This suppresses printing of the Control List.

1 - Yes. This prints a Control List containing all documents sent via EDI.

 Select **F8=Submit** to submit the batch function.

Receive Despatched Orders

8/DES

When you have stockrooms which are controlled by a third party you can use this option to receive despatch advices from the third party.

The third party delivers the goods and sends a Despatch Advice. This option processes the despatch advices in the same way as Confirm Assembly.

Invoice At Assembly can be switched on or off using the Maintain Third Party Trading Partners option. When Invoice At Assembly is switched on, System 21 will perform Batch Confirm Delivery and then generate invoices.

Note: The data received on the despatch advice must match the data on the corresponding pick note. Only changes in quantities are accepted.

Warning: If any of the data received on the despatch advice does not match the data on the corresponding pick note in terms of Items, Units of Measure, Number of lines, the transaction is rejected and an exception report produced.

Receive Despatched Orders Screen

Select the Receive Despatched Orders option.

You use this screen to select the required options prior to invoking the batch function which receives despatched orders via EDI.

AI806	DK - QA Drinks	User GBJBA1MS	6/01/98 16:15:28
Receive EDI Despatched Orders			
Print EDI despatched orders control list... ☐ (1=All orders,2=Exceptions only)

7-46	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Print EDI Despatched Orders Control List

1 - All orders. Print all orders in the despatched orders control list. The Audit Report, Exception Report and Summary Report are printed.

2 - Exceptions only. Print only those orders in error. The Exception Report and Summary Report are printed.

Select **F8=Submit** to submit the batch function.

Send Catalogue Information

11/DES

When you have stockrooms which are controlled by a third party you can use this option to send item details from a catalogue to the third party. This enables them to maintain item information in line with your own.

The initial transmission will send all item data contained in the catalogue. Subsequent transmissions will send any changes.

Send Catalogue Information Screen

 Select the Send Catalogue Information option.

You use this screen to select the required options prior to invoking the batch option which sends catalogue information via EDI.

AI801	DK - QA Drinks	User GBJBAIMS	6/01/98 16:15:48

Add items directly into mailbox queue. 1 (0=No, 1=Yes)			
Print EDI Items Control List 1 (0=No, 1=Yes)			
F3=Exit F8=Submit			
7-49	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Add Items Directly Into Mailbox Queue

0 - No. This holds the extracted documents in the Application Interface database.

1 - Yes. This extracts and adds the selected documents into the EDI Mailbox send queue as translated documents.

Print EDI Items Control List

0 - No. This suppresses printing of the Control List.

1 - Yes. This prints a Control List containing all documents sent via EDI.

 Select **F8=Submit** to submit the batch function.

Receive Stock Adjustments

12/DES

You use this option, together with the Receive Stock Balances option, to ensure that DRP orders are processed correctly.

When you have stockrooms which are controlled by a third party you can use this option to receive the following stock adjustments from the third party:

- Physical
- Frozen
- Sundry Issues
- Sundry Receipts
- Transfers In
- Transfers Out.

Data in error is left on the EDI files to enable more detailed reporting and correction. If you do not want to correct this data, it can be cleared from the EDI files.

Receive Stock Adjustments Screen

 Select the Receive Stock Adjustments option.

You use this screen to select the required options prior to invoking the batch function which receives stock adjustments via EDI.

Fields:

Print EDI Stock Adjustments Control List

1 - All orders. Print all stock adjustments in the control list. The Audit Report, Exception Report and Summary Report are printed.

2 - Exceptions only. Print only those stock adjustments in error. The Exception Report and Summary Report are printed.

Clear Data in Error From Previous Run

0 - No. Do not clear data in error left from the previous run. Data in error can be left in the EDI files for more detailed reporting and correction.

1 - Yes. Clear data in error left in the EDI files, from the previous run.

 Select **F8=Submit** to submit the batch function.

Receive Stock Balances

13/DES

You use this option, together with the Receive Stock Adjustments option, to ensure that DRP orders are processed correctly.

When you have stockrooms which are controlled by a third party you can use this option to receive a statement of current stock balances from the third party.

Stock balances transmitted by the trading partner are compared with the stockroom balances currently held in your records. An exception report is produced listing all items that are not the same and all stock balances that are not the same.

Receive Stock Balances

 Select the Receive Stock Balances option.

You use this screen to select the required options prior to invoking the batch function which receives stock balances via EDI.

AI810	DK - QA Drinks	GBJBATMS	6/01/98 16:16:20

```

Fields:

Add Catalogue Transactions Directly To Mailbox Queue

You can decide whether or not a call is made to the translator by entering one of the following:

- 0 - No.
- 1 - Yes.

Print Electronic Catalogue Control List

You can decide how to print the electronic catalogue by entering one of the following:

- 0 - No.
- 1 - Brief. This displays a one line description for each item sent to the trading partners.
- 2 - Full. This displays all the details of each item before and after being sent to the trading partners.

Include

You can decide what types of database records are sent by entering one of the following:

- 1 - Add. Add records.
- 2 - Del. Delete records.

3 - Chg. Change records.

4 - All. That is, the records of type Add, Delete and Change.

8 - Init. Initialise. Only Sent records are sent. If a catalogue has previously been sent to a trading partner, it can be sent to an additional trading partner. This is useful if a new trading partner is added to the catalogue, because current item records can be sent to update the trading partner.

9 - Replace. This replaces a catalogue which has previously been sent to a trading partner.

Send To Single Trading Partner

If 8 or 9 are entered in the Include field, you can select the trading partner by entering it in this field. If you do not know which trading partner to enter, you can prompt for a list of existing trading partners.

Search Criteria

You do not have to make entries in all of these fields. You could, for example, select a range of catalogues by just entering a From Catalogue and To Catalogue. If you make entries into more than one set of fields the system will only send catalogue records that satisfy all of the search criteria.

From/To Catalogue

You can select the range of catalogue records to be sent. If you do not know which catalogues to enter you can prompt for one. If you select the catalogue records, you can also enter a range for the selection and revision records. If a range of trading partners is defined, then the range of catalogue records to be sent must also satisfy the range of trading partners. If these fields are left blank, all the catalogues are sent.

From/To Selection

You can select the range of selection records to be sent if a range has been defined for the catalogue records. If a range of trading partners is defined, then the range of selection records to be sent must also satisfy the range of trading partners.

From/To Revision

You can select the range of revision records to be sent if a range has been defined for the catalogue records. If a range of trading partners is defined, then the range of revision records to be sent must also satisfy the range of trading partners.

From/To Trading Partner

You can select the range of trading partners for which records are to be sent. If you do not know which trading partner to enter you can prompt for one. If you also select a range of catalogue, selection or revision records, then the records to be searched must also satisfy the range of trading partners.

Select **F8=Submit** to send the selected records.

Catalogue Maintenance

21/DES

You use this option to:

- Define a new sales catalogue.
- Copy a catalogue from an existing one.
- Edit an existing catalogue.

Note: The catalogue, selection and revision fields are used to make a unique reference code for the catalogue by defining the catalogue header.

Electronic Catalogue Maintenance Screen 1

Select Catalogue Maintenance option.

You use this screen to enter the details of the Sales Catalogue. This can be an existing Sales Catalogue or a new one.

Catalogue Item Maintenance Change Profile Screen (F17)

This screen is displayed when you press
F17=Change Profile on Electronic Catalogue
Maintenance Screen 2.

If item details change on the System 21 database, you can decide which item details on the System 21 database are compared to the customer catalogue. If there is a difference and a change item record already exists, it is updated, otherwise a change item record is automatically added. You can send the change item record later, using the Send Catalogue Information option.

When **F8=Update** is selected, the catalogue database is updated with the item detail edits.

Catalogue Item Maintenance Selection Screen (F21)

This screen is displayed when you press **F21=Details Maint.** in the Electronic Catalogue Maintenance Selection Screen.

You use this screen to display a list of items in a selected catalogue, then select an item to be edited or deleted.

Note: All references to catalogues in this screen actually refer to Catalogue/Selection/Revision.

```

Fields:

Catalogue

This field displays the name of the catalogue and is for your information only.

Selection

This field displays the name of the selection and is for your information only.

Revision

This field displays the name of the revision and is for your information only.

(Untitled)

For each item, you can enter:

1 - Select. To edit the details of the selected item. The first Catalogue Item Maintenance screen is displayed.

4 - Delete. To delete the selected item from the catalogue. You cannot delete an item of type Sent.

Item Number

For each item, the item code is displayed for your information only and cannot be amended.

Description

For each item, the item description is displayed for your information only and cannot be amended.

Type

For each item, the item type is displayed for your information only and cannot be amended. The following types can be displayed:

S - Sent. This item record has been sent to the trading partners.

D - Delete. This item record has not been sent to trading partners and, when sent, deletes the item from the customer's catalogue.

C - Change. This means the item record has been changed but not yet sent to trading partners. When sent to the trading partners, the item on the customer's catalogue is changed.

A - Add. This means the item record has been added but not yet sent to trading partners. When sent to the trading partners, the item is added to the customer's catalogue.

Status

For each item, the item status is displayed for your information only and cannot be amended. The following status can be displayed:

(blank). This means the item record has not been edited.

H - Held. This means the Add item record has not been sent to trading partners and the user has set it to Held to stop it from being sent.

M - Maintained. This status means the type of the Add or Change item record has been edited.

F - Firm. This means the Add or Change item record has not been sent to trading partners but, when it is, it is automatically set to Held. This allows the user to define changes which are inconsistent with the database but are not changed by the system after running Catalogue Change Recognition.

Chg Date

For each item, the date the item details were last changed is displayed for your information only and cannot be amended.

Functions:

F10

Add. You can add an item to a catalogue. When this option is selected the Add Item window is displayed containing the Item field. Enter the name of the new item in the Item field and press **Enter**. The item is added to the list and is type A (Add).

F14

All/Held. Toggle the screen between displaying item records for the selected catalogue with a status of either All or Held.

F15

All/Pending/Sent. Toggle the screen between displaying item records for the selected catalogue with a type of either All, Pending or Sent. Pending item records are those item records which are not of type Sent.

Enter 1 or 4 against an item and press **Enter** to continue.

When you have completed the item maintenance, press **F12=Previous** to return to the Electronic Catalogue Maintenance Screen.

Catalogue Item Maintenance Screen (Option 1)

This screen is displayed when you enter 1 against an item on the Catalogue Item Maintenance Selection Screen (F21) and press **Enter**.

This screen displays the details of the item selected in the Catalogue Item Maintenance Selection Screen.

The type of the item record is displayed at the top of the screen. This can be Sent, Delete, Change or Add.

If the item record is of type Delete, Change or Add, you can edit the item details.

If the item record is of type Sent, the item details are displayed for your information only.

Functions:

F11

Delete. If the item type is Sent, this function is displayed. You use this to create a Delete item record for this item.

Activate. If the type of the item is Delete, this function is displayed. You use this to create a Change item record for this item. This means that the item is re-activated and is flagged as type Change.

F15

Qty/Price. Displays the quantity price breaks for the specified item. Existing price breaks can be viewed and new price breaks added.

F16

Maintain/View Sent. If the type of the item is Sent, Change or Delete, this toggle function is displayed on the screen.

Maintain. You can display and edit, change or delete existing item records which can be updated when the item details change on the System 21 database.

View Sent. You can display the item details which were previously sent to the trading partner.

F18

Release/Hold. If the type of the item is Add, this toggle function is displayed on the screen.

Release. If the item record displayed has a status of Held, this function is displayed on the screen. An item with a status of Held cannot be sent to trading partners. When you select this option, the status of the item is no longer Held.

Hold. If the item record displayed has a status other than Held, this function is displayed on the screen. When you select this option, the status of the item becomes Held.

F19

Firm. If the type of the item is Change or Add, this toggle function is displayed on the screen.

When you select this function, the status of the item becomes Firm. This means that a Change or Add item (and the subsequent Sent item) cannot be edited when Catalogue Item Maintenance Change Profile is used. This means that if the item details change in the Inventory database, they will not change in the catalogue.

Press **F8=Update** to update the catalogue database with the changes you have made.

Price/Qty Maintenance Window (F15)

This Window is displayed when you press
F15=Qty/Price in the Catalogue Item
Maintenance Screen (Option 1).

You use this window to view and maintain the quantity/price breaks for the item selected in the Catalogue Item Maintenance Screen (Option 1). These details are first set up using Pricing Type Detail Maintenance in Sales Order Processing Advanced Pricing, but can be maintained here.

Fields

Minimum Order Quantity

The minimum quantity for this item. This quantity will default to one issue unit and cannot be maintained here. The value in the corresponding Price field is the price for one issue unit.

Qualifying Limit

The quantity, in issue units, up to which the price, in the corresponding Price field, applies.

Price

The price per issue unit of that item for the quantity specified in the corresponding Minimum Order Quantity or Qualifying Limit field.

Enter the values you require and press **Enter**.

Electronic Catalogue Trading Partner Authorisation Screen (F23)

This screen is displayed when you press **F23=TP Maint.** on the Electronic Catalogue Maintenance Screen 1.

This screen is displayed when you press **F23=TP Authority** on the Electronic Catalogue Maintenance Screen 2.

You use this screen to specify which trading partners are associated with a catalogue. When the catalogue is sent to the trading partner, the outbound files are only created for the defined trading partners. Even if the catalogue is to be sent to a single specified trading partner, it must be defined here.

Fields:

Catalogue

This field displays the name of the catalogue and is for your information only.

Selection

This field displays the name of the selection and is for your information only.

Revision

This field displays the name of the revision and is for your information only.

Sel

Select. For each trading partner, you can enter the following in this field:

1 - Select. You can display a list of all the catalogues to which this trading partner belongs. In this case, the All Catalogues For Selected Trading Partner screen is displayed.

4 - Delete. You can delete a trading partner from the list. To do this enter 4 in this field. The selected trading partner is deleted from this catalogue.

Trading Partner

For each trading partner, the trading partner code is displayed for your information only and cannot be amended.

Seq

The delivery sequence which defines the different delivery addresses of the same company is configured in the Delivery Name & Address Maintenance screen.

For each trading partner, the delivery sequence of trading partners is displayed for your information only and cannot be amended.

Trading Partner Name

For each trading partner, the trading partner name is displayed for your information only and cannot be amended.

Add Trading Partner

There are two fields after this heading. If you want to add a trading partner to this catalogue, first enter a trading partner code and sequence in the fields. If you do not know which trading partner code to enter you can prompt for one. Next, select **F10=Add Trading Partner** and the trading partner is displayed on the list.

Functions

F10

Add Trading Partner. If you want to add a trading partner to this catalogue, first enter a trading partner code and sequence in the Add Trading Partner fields. If you do not know which trading partner code to enter you can prompt for one. Next, select **F10=Add Trading Partner** and the trading partner is displayed on the list.

All Catalogues For Selected Trading Partner Screen (Option 1)

This screen is displayed when you enter 1 against a trading partner on the Electronic Catalogue Trading Partner Authorisation Screen.

You use this screen to display a list of all the catalogues to which a trading partner is authorised.

Fields:

To Catalogue

You can enter the catalogue code where the item(s) is to be added. If you do not know which catalogue to enter you can prompt for one.

Selection

You can enter the selection code where the item(s) is to be added.

Revision

You can enter the revision code where the item(s) is to be added.

Compound Inclusion Criteria

There are two fields for each of the following criteria. You use these fields to enter the range of items and item details which are to be added. If you do not know which item or item detail to enter you can prompt for one.

Note: You do not have to make entries in all of the fields. For example, if you just enter a range of stockrooms, you will select all items in that range of stockrooms.

You can enter selection criteria for:

Item Number

TS Buying List

Item Price Type

Item Group Major

Item Group Minor

Item Type

Item Class

Stockroom

Discount Group

Division

Sub-Division

Press **F8=Submit** to add the selected range of items to the selected catalogue.

Catalogue Change Recognition

23/DES

You use this option to identify changes in item details within the System 21 database which are different to the item details in the catalogue database. This option uses the item details defined in the Catalogue Item Maintenance Change Profile Screen for the comparison. The differences in the item details can be printed on the Electronic Catalogue Change Control Report. This is useful when a customer has a different definition for an item to that held on the System 21 database.

Catalogue Change Recognition Screen

Select Catalogue Change Recognition option.

You use this screen to specify the range of catalogue records to be searched for item detail differences.

AI325A	DK - QA Drinks	User GBJBA1MS	6/01/98 16:38:46

F3=Exit F4=Prompt F8=Submit			
7-22	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Print Report

You can decide whether or not to print the Electronic Catalogue Change Control Report by entering one of the following:

0 - No.

1 - Yes.

This report shows before and after change details, with the after details showing only the fields that have changed.

From/To Catalogue

You can select the range of catalogue records to be searched for item detail differences. If you do not know which catalogues to enter you can prompt for one. If you select the catalogue records, you cannot enter a range for either the selection or revision records. If a range of trading partners is defined, then the range of catalogue records to be searched must also satisfy the range of trading partners. If these fields are left blank, all the catalogues are searched.

From/To Selection

You can select the range of selection records to be searched for item detail differences. If you select the selection records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the

range of selection records to be searched must also satisfy the range of trading partners.

From/To Revision

You can select the range of revision records to be searched for item detail differences. If you select the revision records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the range of revision records to be searched must also satisfy the range of trading partners.

From/To Trading Partner

You can select the range of trading partners for which records are to be searched for item detail differences. If you do not know which trading partner to enter you can prompt for one. If you also select a range of catalogue, selection or revision records, then the records to be searched must also satisfy the range of trading partners.

Catalogues/selections/revisions within the selected range that are authorised to trading partners within the selected range are compared with the System 21 database to find item detail differences.

Select **F8=Submit** to search the selected records.

Print Electronic Catalogue

24/DES

You use this option to print catalogue reports.

You can include all records to see what information has been sent to trading partners, or produce reports which can assist in managing catalogue activity.

Print Electronic Catalogue Screen

Select Print Electronic Catalogue option.

You use this screen to select the range of catalogue records to be printed.

Fields:

Include

You can decide what to include in the print of the Electronic Catalogue report by entering one of the following:

0 - Sent Records Only. This prints the item records of type Sent.

1 - All Records. This prints all item records for the selected catalogue.

From/To Catalogue

You can select the range of catalogue records to be printed. If you do not know which catalogues to enter you can prompt for one. If you select the catalogue records, you cannot enter a range for either the selection or revision records. If a range of trading partners is defined, then the range of catalogue records to be printed must also satisfy the range of trading partners. If these fields are left blank, all the catalogues are printed.

From/To Selection

You can select the range of selection records to be printed. If you select the selection records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the range of selection records to be printed must also satisfy the range of trading partners.

From/To Revision

You can select the range of revision records to be printed. If you select the revision records, you cannot enter a range for either the catalogue or revision records. If a

range of trading partners is defined, then the range of revision records to be printed must also satisfy the range of trading partners.

From/To Trading Partner

You can select the range of trading partners for which records are to be printed. If you do not know which trading partner to enter you can prompt for one. If you also select a range of catalogue, selection or revision records, then the records to be printed must also satisfy the range of trading partners.

Select **F8=Submit** to print the selected records.

Print Trading Partner Report

25/DES

You use this option to print a list of all the catalogues/selections/revisions which are associated with one or more selected trading partners.

Print Trading Partner Report Screen

Select the Print Trading Partner Report option.

You use this screen to specify the range of trading partners for which the list is to be printed.
