Glossary

Glossary

Below is a list of frequently used terms and expressions.

Action List

List of count instructions associated with a count. A count may have many lists associated with it, depending on the number of items or locations to count and the required number of instructions per list as defined at the time of count print.

Allocated (Stock)

The quantity of an item which has been allocated to customer or works orders. It is usually expressed as a **balance** at **item/stockroom** level.

Alternative (Item)

An item which can be used as an alternative to another.

Available (Stock)

The quantity of an item which is available for issue It is usually expressed as a **balance** at **item/stockroom** level.

Average Cost

The average cost of an item in a stockroom. This is recalculated every time a receipt is made.

Average Usage

The average **usage** per week/period of an item in a stockroom. The weeks or periods which are included in this calculation are defined by the **usage profile**.

Back Order

The quantity of an item which is required for customer orders which cannot currently be satisfied from stock. It is usually expressed as a **balance** at **item/stockroom** level.

Balance

This may be used either to signify a database record holding summary information, such as a **stockroom balance** or a single summary quantity field on such a record, such as **allocated stock**.

Batch Control

This is a level of stock control at a more detailed level than **item/stockroom**. The batch of items will have certain characteristics specified for the whole group. See also **lot** control.

Batch/Lot Traceability

Where stock control is specified at batch or **lot** level, this refers to the ability to trace the movement of stock at this detailed level.

Certificate of Conformance Code (C-of-C)

A Certificate of Conformance Code with specific characteristics (e.g. shape, finish, etc.) can be defined and is associated with a Certificate of Conformance. Defined in Drinks Advanced Order Entry.

Classification

Class associated with an item in a given stockroom. Class can be 'A', 'B', 'C' or 'Z' and is required (together with stockroom profile class criteria) in order to provide automation of items requiring count via a time based cycle.

Cost

A value associated with an item in a stockroom, or a movement. It is usually a value related to a single item (a unit cost), but may refer to a quantity of items (a movement cost or value).

Costing Method

This refers to the method used to establish a **cost** for **movements** or stock **balances**. The methods available are **latest**, **average**, **standard** and **FIFO**.

Count Error

Error condition when one or more of the items associated with a count are found to be in error i.e. there is a sufficiently large discrepancy between the recorded

computer stock figure and the actual counted physical balance as specified by the allowed tolerances for the stockroom.

Count Objective

Associated with stockrooms defined for counting by class/date control. A count objective is specified for each class 'A', 'B' and 'C' and defines the number of times per working year that each item (defined to the appropriate class) should be counted.

Count Reconciliation

The comparison of counted stock quantities with the recorded computer stock quantities in order to assess a stock error or discrepancy, as defined by the tolerance criteria specified for a stockroom.

Cycle Counting

The term given to the methodology associated with performing physical stock checks on an automated time based, or cyclic process defined by the class of each item and the number of times each class should be counted per working year.

Descriptions File

This is a file maintained within the Drinks Inventory Management Application which defines a number of parameter codes and their descriptions.

Detail Recommendation

A manual request to count a specific lot, batch or serial number.

Detail recommendations are entered via count recommendations maintenance after the count has been generated and may be a modified summary recommendation or may be a request to count an item or location that was not originally requested on the count.

Economic Order Quantity

This is an optimum quantity of an item to be ordered on a single occasion. Its calculation is based on the usage of the item, the cost of order placement and the cost of carrying the item in stock.

Expected (Stock)

The quantity of an item which it is expected will be available for issues on a given date. This is usually expressed as a quantity for an **item/stockroom**.

FIFO

'First In First Out' - one of the costing methods available in the Drinks Inventory Management application. By this method, each stock receipt is valued at actual cost, and issues are valued using these receipt batch costs on a First In First Out basis.

First Available Date

The system calculates the first available date as being the lot production date plus the first release lead time. The first release lead time is the time the lot is held in Inventory before being released. This may be used for produce which is kept for maturing - e.g. wines and spirits, cheese, etc.

First Available Time

If the production date is equal to the first available date then this time must be equal to or greater than the production time. The time is only displayed if the Display Time field on the lot header parameters file is set to 1.

Frozen (Stock)

The quantity of an item which is not available for issue (and not **allocated**). It is usually expressed as a **balance** quantity at **item/stockroom level**.

In Transit

The quantity of an item which is currently in transit between two **stockrooms**. It is usually expressed as a **balance** quantity at the target **item/stockroom**.

Item

The single term used to describe an element of stock identified by a unique number.

Item Characteristics

The characteristics or attributes relating to an item (e.g. shape, grade, length, section, finish, etc.)

Item Class

This is the main analysis categories in which like items can be grouped together. Selection and sequencing on many reports is provided by these categories. See Also Item Group and Item Type.

Item Group

This is the main analysis categories in which like items can be grouped together. Selection and sequencing on many reports is provided by these categories. See Also Item Type and Item Class.

Item Type

This is the main analysis categories in which like items can be grouped together. Selection and sequencing on many reports is provided by these categories. See Also Item Group and Item Class.

Item/Stockroom

This is the main level at which **costs** and **balances** are held within this application. The item/stockroom record also defines **stock management** rules for an item in a particular stockroom.

Kit

A group of items which may be sold as a set. It is maintained in Drinks Inventory Management as a single level list.

Last Available Date

The system calculates the last available date as being the expiry date minus the customer shelf life. All lots with a with a last available date less than the current date will be frozen if there is no stock status code entered.

Last Available Time

Enter the latest time that this lot will be available on the last available date. If the last available date equals the expiry date then the last available time must be equal to or less than the expiry time.

Latest Cost

The last cost at which an **item** was received into a **stockroom**. One of the costs maintained at **item/stockroom** level.

Lead Time

The standard amount of time, in weeks, from a decision to order an item for a stockroom, to the item being received in the stockroom.

Lot Control

This refers to a level of stock control lower than **item/stockroom**. May also be known as **batch control**. The lot of items will have certain characteristics specified for the whole group.

Lot Error

Special lot reference generated for an Inventory stock count, when a summary request for a lot, batch, or serial controlled item is printed and no lot balances exist for the item.

Maximum Stock

The maximum quantity of an item in a stockroom preferred by the user. This may be set manually, or automatically calculated by the system.

Movement Type

This refers to the classification of movements by type of transaction, e.g. miscellaneous receipts, customer order issues.

On Order

The quantity of an item for which outstanding purchase or works orders exist. It is usually expressed as a **balance** quantity at **item/stockroom** level.

Order Placement Cost

The cost in base currency of placing and processing a purchase order. This is used in the calculation of **economic order quantity**.

Overdue Days

Overdue days represents the number of days at which counts become overdue for printing, based on the date of count recommendation as entered at count request time.

Perpetual Inventory

See Cycle Counting

Physical (Stock)

The total quantity of an item in a stockroom. It is usually expressed as a **balance** quantity at **item/stockroom** level.

Pick List

This contains a number of lists, one per order/schedule. Within all the lists are all the warehouse controlled components required, their quantities, locations within the warehouse and if appropriate the lot details.

Planned Request

Items that are targeted for count in summary form (i.e. count all item balances), via the initial count creation, are considered planned requests.

Item summaries and/or detail requests that are entered via count recommendations maintenance are considered to be unplanned count requests.

Potency

The potent value of the entire lot is displayed irrespective of which stockroom it is held in.

Reason Code

This is entered whenever the stock status of a lot is changed. valid codes are held on the descriptions file against major type SSRC.

Reorder Point

The quantity of an item in a stockroom which, when reached, should trigger a reorder action. This may be set manually or calculated by the application.

Reorder Policy

The policy adopted to control the reordering of items - may be either 'ROP/MAX', 'ROP/ROQ' or 'Up to ROP'.

Reorder Quantity

The quantity of an item recommended for reorder when **reorder point** is reached for the item in a stockroom.

Reorder Quantity Factor %

The number of lead times worth of average usage to be reordered, expressed as a percentage.

Search Family Code

A search family code with specific characteristics (e.g. shape, finish, etc.) can be defined and is associated with an item.

Serial Number Control

A form of **batch** or **lot control**, but exercised at a single, unique element level.

Standard Cost

The unit **cost** of an item in a stockroom, specified as a standard by the user for a defined period. Standard costing is one of the available **costing methods** within the application.

Stock Carrying Rate %

The percentage cost of carrying a stock item for a year. This rate is used in **Economic Order Quantity** calculations.

Stock Count

A periodic verification of the accuracy of computer-held stock figures by a physical count of stock.

Stock History

A summarised view of **stock movements** per week or period.

Stock Management

The planning and control of the acquisition and disposition of a company's inventory.

Stock Movement

A movement of a quantity of an **item** into or out of a **stockroom**. More particularly, this will refer to the recording of such a movement in the application, and the transaction record created as a result.

Stockroom

A discrete area of a company where stock is recorded and controlled separately from other company stocks.

Stockroom Balance

See balance and item/stockroom.

Summary Recommendation

A request to count an item or location in its entirety (i.e. all lots, batches or serial numbers for a lot controlled item in an Inventory stockroom, or all low level warehouse balances for an item or location as defined within a warehouse).

All item or location recommendations that are targeted via the initial count creation are summary recommendations by default.

Suppliers Lot Reference

This is the specific lot reference allocated by the supplier.

Time Fence Days

Time fence days are used during creation of counts automatically by class/date control. They define the number of days after the entered date of recommendation which will be reviewed separately for count creation, i.e. where possible a daily count will be produced detailing the items that are due for count on the specific day.

Time fence days will normally be utilised in order to provide a forward looking view of the items that will be due for count on a number of successive days in the future.

Tolerance

Tolerances are defined against the stockroom and define the upper and lower variances (by quantity percentage and value) that will be allowed for stock discrepancies for items counted within the stockroom.

Percentage variances for a balance are defined as follows:

(Counted Quantity - Computer Quantity) x COST

COST = Standard/Latest/Average according to the costing method of the item.

Discrepancies for FIFO costed items are valued at Latest cost.

Unit of Measure

The unit in which a quantity or **unit cost** is expressed.

Usage

The quantity of an **item** issued from a **stockroom** in a given period.

Usage Profile

A user-defined profile which specifies the pattern of periods to be included in the calculation of **average usage**.

Variance

The calculated quantity percentage or value discrepancy between the counted stock balance and the associated computer balance for an item. Variances outside the defined tolerances for a stockroom are considered to be a count error for the item.
