Chapter 1

Maintenance

Drinks Inventory Management Maintenance Functions

The maintenance functions of Drinks Inventory Management enable the creation and amendment of master files, and of the parameters that are fundamental to the systems operation.

File maintenance, particularly description file maintenance, should be executed with extreme care since errors will have far reaching effects. A proper procedure of authorisation and post maintenance checking should be introduced as a matter of company policy.

All the functions in this section, except for Company Profile Maintenance, can be accessed from the Drinks Inventory Management Maintenance menu.

Tip: Company Profile Maintenance is accessed from the Drinks Inventory Management Utilities Menu.

Company Profile Maintenance

1...
2...

2/DIU

This procedure has three purposes:

- To maintain company details and defaults for Inventory Management.
- To create and maintain stockrooms for a company.
- To create and maintain usage profiles for a company.

Company Profile Maintenance Selection Screen

Select the Maintain Company option.

The Selection Screen is displayed.

Fields:

Select

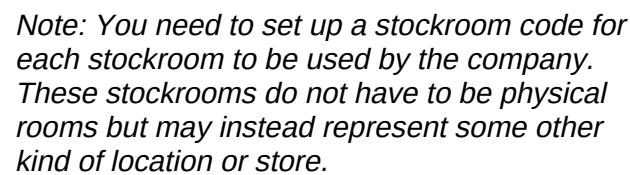

Enter '1' against the company to be maintained

When you enter '1' next to the company you want to maintain, the Company Profile Maintenance Select Action Screen is then displayed for the selected company.

- Establish the default parameters for your company profile.
- Create or maintain associated stockroom codes.
- Create or maintain associated usage profiles.

Fields:

Enter the code of the stockroom to be maintained; an existing code for amendment, or a new code for addition.

Usage Profile Code

1-5

nominate which historical data, by week or month, is to be used to calculate average usage.

To establish the default parameters for your company profile press **Enter**.

To create or maintain associated stockroom codes enter a valid stockroom code and press **Enter**.

To Create or maintain associated usage profiles, enter a valid usage code and press **Enter**. The Default Parameters Screen is then displayed.

Company Profile Maintenance Default Parameters Screen

This screen is reached by pressing **Enter** on the Company Profile Maintenance Select Action Screen.

It enables the maintenance of the default parameters for the company. The current details for the company are displayed.

13-73	•	MW	KS CL IM DM II EDN400A KB ST0672S1

Fields:

Company Name

The system will display the 30 character company name. This displayed on all screens and printed documents relating to the company.

Costing Method

Enter one character to specify the company's costing method, codes are:

L - Latest costing.

A - Average costing.

S - Standard costing.

F - FIFO costing.

This costing method will be the default method for each item within this company. It can be overridden for individual items.

Specification 1, 2 And 3

Provision is made within Inventory Management for the definition of three numeric specifications for each item. These three, 15 character alphanumeric descriptions define the specifications.

Note: Specification 1 being Alcoholic Strength if the Global Duty Uplift facility is used.

The description entered here for each specification appears alongside the specification on the item maintenance screen.

Typically, these specifications would be used to define some dimension of an item not provided in the standard data. Standard processing makes no use of specifications 2 or 3.

Batch, Lot, Serial controlled

Use these options to specify if items which are batch, lot or serial controlled, require extended lot details.

0 - Do not allow this type of control at item lot level.

1 - Allow this type of control at item lot level. You will be required to enter additional information about the item, such as potency, availability dates, at item lot level.

Tip: You use Item Maintenance to define a specific item as batch, lot or serial controlled.

General Ledger A/C

Enter up to 12 alphanumeric characters. This is the default account number in the General Ledger to which purchase invoices are posted if Drinks Purchase Management is in use.

Sales GL A/C

Enter up to 12 alphanumeric characters. This account is used for memo purposes only in the standard module.

Cost Of Sales GL A/C

Enter up to 12 alphanumeric characters. This account is used for memo purposes only in the standard module.

Price Variance GL A/C

Enter up to 12 alphanumeric characters. This is the default account number in the General Ledger to which price variances are posted if Drinks Purchase Management is in use.

Note: If no number is entered price variance accounting is assumed not to be active.

Usage Cycle

This dictates whether average usage is to be calculated on a weekly or monthly basis. Enter 'M' if the usage figures are to be maintained by month, and average usage to be expressed as average usage/month. Enter 'W' if the usage figures are to be maintained by week, and average usage to be expressed as average usage/week.

Monthly usage should only be used if the period end dates match the week end dates, i.e. 4, 4, 5 week periods.

Default Re-Order Policy

Enter one alphanumeric character to specify the company's normal reorder policy. This normal policy will provide the default for all items in all stockrooms, but may be changed for a particular item or stockroom. The valid codes are:

1 - ROP/ MAX. Re-ordering is to be recommended when the stock falls below the re-order point. The quantity ordered should be based on replenishment to the maximum stock level.

2 - ROP/ROQ. Re-ordering is to be recommended when the stock falls below the reorder point. The quantity ordered should be the calculated or maintained re-order quantity.

3 - Up to ROP. Re-ordering is to be recommended when the re-order point is reached. The quantity ordered should be based on a replenishment to the re-order point.

Re-Order Quantity Factor %

This is used by the module to automatically calculate re-order quantity. Define, as a percentage, the number of lead times worth of average usage to be re-ordered, e.g. 100% is 1 lead times worth, 150% is 1½ lead times worth. This is used to calculate reorder quantity for those item/stockroom combinations where the reorder policy is 2 (ROP/ROQ) and no re-order quantity has been specified.

Stock Carrying Rate %

Enter five numeric characters with two decimals, to specify the cost of carrying a stock item for a year as a percentage of the item cost. This rate is used in the economic order quantity calculations.

Order Placement Cost

Enter five numeric characters with two decimals, to specify the cost in base currency of placing and processing a purchase order. This cost is used in the economic order quantity calculations.

Purchasing In Use

This flag identifies whether Purchase Management is in use.

Enter '0' if the Drinks Purchase Management module is not in use.

Enter '1' if the Drinks Purchase Management module is in use.

SOP In Use

This flag identifies if Sales Order Processing is in use.

0 - If Drinks Sales Order Processing is not in use.

1 - If Sales Order Processing is in use.

3 - If Sales Order Processing will process Back to Back orders.

Note: Option '2' for Advanced Order Entry is currently not supported within Drinks.

Date Last Changed

This is a system maintained field holding the date at which the company profile was last changed.

Packaging Reporting

Enter one of the following:

1 - report in the packaging usage for this company.

0 - do not report on the packaging usage for this company.

Default Country

This field is only displayed when you set the Packaging Reporting flag to '1'.

Enter the default reporting country.

Sales Channel

This field is only displayed when you set the Packaging Reporting flag to '1'.

Enter the sales channel to be used for the packaging reporting.

Functions

F10

Extended options. Display the Company Profile Maintenance Extended Options Window.

12-51	SA	MW	KS CL IM DM II MARVIN KB ST0672S1

Fields:

Default Item Search Option

Specify the default item search criteria. The selection mask will be displayed as default, whenever an item search is requested.

- 1 - Search by Item reference
- 2 - Search by Inventory description
- 3 - Search by Purchasing description (only available if Drinks Purchase Management is installed).

Stockroom Standard Costs

0 or blank - All stockrooms take their item costs from the item master file.

Note: This cost is less duty, in a duty suspended stockroom.

- 1 - Item costs can be maintained at stockroom level for individual stockrooms.

If standard costs are maintained at stockroom level, when a new standard cost becomes effective for an item in a specific stockroom, the standard cost of the item will change in this stockroom only. The standard cost of the item on

the Inventory Item Master will remain unchanged.

You must be sure that any costs maintained at stockroom level take into account the duty status of the stockroom. The system does not make automatic adjustments for duty.

Maximum Low Units Digits.

This field sets the maximum length of the lower unit of dual units. This controls dual unit entry of quantity, e.g. cases and bottles.

Note: Dual units refer to the two units used for the items e.g. case units contain bottle units. The 'case' unit would be the upper stock unit and the 'bottle' issue unit would be the lower unit.

Press **Enter** once to update these additional options and return to the Company Profile Maintenance Default Parameters Screen.

Company Profile Maintenance Reference Numbers Window (F15)

 This window is displayed when **F15=Reference Numbers** is pressed from the Company Profile Maintenance Default Parameters Screen.

This is a general facility for defining numbers used within the system. Currently this is used for Product Activity Information reference numbers.

Fields:

Stockroom

Enter up to 25 alphanumeric characters for the stockroom name. This name will then be printed on all reports with reference to this stockroom.

Include In Valuation

Should the stockroom be included in valuation.

0 - No.

1 - Yes.

Stockroom Usage Code

Enter the usage code associated with this stockroom. Stockroom usage codes are defined in the Descriptions File against Major Type 'STKU'.

Department

Enter a department code to be associated with this stockroom. Department codes are defined on the Descriptions File against Major Type 'DEPT'.

Transaction Allowed:

Receipts

Can goods be received at this stockroom.

0 - No.

1 - Yes.

Issues

Can goods be issued from this stockroom.

0 - No.

1 - Yes.

Adjustments

Can adjustments be made at this stockroom.

0 - No.

1 - Yes.

Transfers

Can transfers be initiated at this stockroom.

0 - No.

1 - Yes.

Supplier Orders

Can supply orders be initiated at this stockroom.

0 - No.

1 - Yes.

Sales Orders

Can sales orders be taken against this stockroom.

0 - No.

1 - Yes.

If Purchase Management is installed, the following extra fields appear on the stockroom details maintenance screen.

Purchase Order Queue

Enter in the queue name that will hold the purchase orders that are to be printed.

Deliveries Report Queue

Drinks Purchase Management generates a deliveries due report. Enter the name of the queue that will hold the report before it is printed.

Empty Container Stockroom

The stockroom should have a corresponding stockroom that will contain empty containers of the items. Enter in the stockroom for the empty containers.

Nominated Purchasing Officers

Only authorised purchasing officers may release purchase orders. Enter in the identity code of the purchasing officers for this stockroom.

Press **Enter** to validate the options modified.
Press **Enter** again to update the stockroom
profile and to display the Company Profile
Maintenance Stock Weeks Matrix Maintenance
Screen displaying details associated with this
stockroom.

Company Profile Maintenance Stock Weeks Matrix Maintenance Screen

Pressing **Enter** twice from the Company Profile Maintenance Stockroom Details Screen displays the stock weeks matrix.

This function enables the maintenance of parameters which are used to classify items into one of nine value / usage categories. A stock weeks matrix should be defined for each stockroom, with the minimum and maximum stock holding specified in weeks for each category.

Each item held in the selected stockroom is automatically allocated to one of these categories and the figures entered in the matrix are then used in calculations concerning the reorder policy. This categorisation can be overridden at the item level.

A three by three matrix is displayed on the screen. The 'Y' axis, labelled value, is the unit cost of the item held in the selected stockroom. The 'X' axis, labelled usage, is the most recently calculated average usage for any item in the stockroom.

By specifying low / medium and medium / high boundaries you have defined nine cells which represent the following categories for items in this stockroom:

Value	Usage
Low	Low
Low	Medium
Low	High
Medium	Low
Medium	Medium
Medium	High
High	Low
High	Medium
High	High

The minimum and maximum stock holdings for each category are expressed in number of weeks of average usage.

Note: An explanation of the use of these figures with regards reorder policy is included in the Stock Management section.

The date the matrix was last changed is displayed.

F3=Exit F11=Delete F12=Previous							
08-29		<u>SF</u>	MW	KS	IM	II	KENB20A PET087S2

Fields:

Enter the following details for each cell:

Class

Enter A, B, C or Z to assign a classification to all items that fall within this value / usage category.

Historically, 'A' class items are considered to be high value / high usage, where as 'C' class items are considered low value / low usage.

Min

Enter three numeric characters, one decimal, to specify the minimum weeks' stock to hold for the category.

Max

Enter three numeric characters, one decimal, to specify the maximum weeks' stock to hold for the category.

Stock counting can be requested by ABC classification and a profile defined so that higher value items are counted more frequently than lower value items. (See the Stock Counting section for more details).

Entering the classification 'Z' will ensure that associated items are ignored during count creation by ABC Classification.

To define the 'Y' axis:

Value 1

Enter fifteen numeric characters, five decimal, to specify the first value de-limiter. Any item with a unit cost less than or equal to this value will fall into categories 1, 2 or 3.

Value 2

Enter fifteen numeric characters, five decimals, to specify the second value de-limiter. Any item with a unit cost between this value and value 1 will fall into category 4, 5 or 6.

Items with a unit cost over this value will fall into category 7, 8 or 9.

To define the 'X' axis:

Usage Qty 1

Enter eleven numeric characters, three decimals, to specify the first usage de-limiter. Items with an average usage up to this quantity will fall into category 1, 4 or 7.

Usage Qty 2

Enter eleven numeric characters, three decimals, to specify the second usage de-limiter. Items with an average usage between quantity 1 and this quantity will fall into category 2, 5 or 8.

Items with an average usage over this quantity will fall into category 3, 6 or 9.

Functions:

F11

Delete. Delete the Stockroom record.

Press **Enter** to update the stockroom weeks matrix.

Company Profile Maintenance Usage Profiles

This screen is displayed when you enter a valid Usage Code into the Company Profile Maintenance Select Action Screen.

It enables the creation and maintenance of a set of profiles which are used to define historical periods used in the calculation of average weekly or monthly usage for items where seasonal variations in sales are significant.

The periods displayed may be weekly or monthly depending on your definition of usage cycle on your company profile. The usage pattern can be defined for the current and previous 59 periods, hence depending on the period definition the history may go back one and a quarter or five years.

Fields:

Inclusion Flag

An inclusion flag is located beneath every period number.

1 - to be include in the average usage calculation.

0 - indicates the month will be omitted from the calculation. (This is the default).

The date the usage profile was last changed is displayed.

Note: An explanation of the use of these profiles is included in the Stock Management section.

Press **Enter** to update the usage profile.

Descriptions File Maintenance

1/DIM

This option is used by Drinks Inventory Management to define valid parameter values for the module.

The Description file is delivered with some preset description types. Most of these can be changed, and are used to validate data entered. A limited number assume certain values exist and should not be changed. There is a list in the Appendix of this Product Information of the types supplied, and which should not be deleted. You should make sure that the inventory descriptions described in this Appendix are set up.

Parameter files are used by the system for a number of reasons. They enable codes to be used at data entry time instead of long repetitive data. This also enables coded data to be checked for integrity.

Once they have been set-up and checked, parameter files help to ensure that data input is both accurate and acceptable to the system.

An example of the use of the Descriptions File is for the usage cycle. When an Inventory company profile is set up a usage cycle code must be input; this field will establish whether the stock history records should be summarised at a weekly or monthly level.

Description Codes

These codes are used to define parameters values for the module. Some of these codes must be set up for the module to run properly, some should be set up for optimum usage, and others are optional user defined codes.

Description Codes - Mandatory

The following codes must exist for the module to run properly:

Type	ID	Description	Limit
ASRS	1	Out of Stock - to follow	
ASRS	2	Substitute Item	1
ASRS	3	Part delivery - bal to follow

Description Codes Required For UK Bonded Inventory

The Descriptions file can contain codes which are specific to Drinks Bonded Inventory Management.

Description File Codes

When you are using Drinks UK Bonded Inventory Management, the following Description codes must be set up:

Desc'n I.D.	Description	Limit
ADJT	Bond Adjustment Types	30
AUDT	Bond Audit Types	30
COUN	Bond Country Codes	30
DOCT	Bond Document Logging	30
DTYP	Bond Delivery Types	30
ECU	Bond ECU Rates	30
GCAT	Bond Goods Categories	30
HOME	Bond Default Home Country Code	30
PGRP	Bond Preferential Groups	30
PORT	Bond Ports	30
RCPT	Bond Receipt Types	30
ROTS	Bond Rotation Suspend Codes	30
TRID	Bond Tariff Rate ID Refs.	30
SMCA	BD Susp Mvmnts Clearance Action	30

Description File Low Level Codes

When Drinks Bonded Inventory Management is in operation, the Description Low Level codes listed below must be entered.

Note: Where the Limit column shows a value in the range 1 to 18, the equivalent Excise Warehouse Return line number is given for information purposes only. P/V is not used.

The codes listed are given as a guide. Unless 'Mandatory' is shown, other Low Level codes may be used, but the description attributes (Limit, Rate & VAT Code) must remain the same. The length of each code should not exceed the examples given.

Bond Adjustment Types - ADJT (Example):

Low Level Code	Description	Limit	VAT Code	Rate
AD	Authorised Destruction's	18	0	0
GS	Gain in Storage Open Rotation	4	0	1.00
LB	Loss in Storage - Breakage	16	0	0
LD	Loss in Storage - Home Use	11	1	0
LO	To Losses in Operations	17	0	0
TB	Bond Transfer	N/A	0	0

Note: Rate Value 1.00 forces adjustment transactions to be typed as a positive adjustment. All other adjustments will be treated as negative.

Note: VAT Code of '1' means Duty is liable; Code '0' means no Duty.

These adjustment movement codes are used in the following functions:

- Stock Gains and Write Offs.
- Cycle Counting Adjustments.
- Stock Transfers.

Bond Audit Types - AUDT (Mandatory):

Type	Description
ADJT	Bond Adjustment Types

COUN	Bond Country Codes
DOCT	Bond Document Logging
DTYP	Bond Delivery Types
ECU	Bond ECU Rates
GCAT	Bond Goods Categories
HOME	Bond Default Home Country Code
PGRP	Bond Preferential Groups
PORT	Bond Ports
RCPT	Bond Receipt Types
ROTS	Bond Rotation Suspend Codes
TRID	Bond Tariff Rate ID Refs.
VAT	VAT Codes & Descriptions

These Audit Codes trigger the production of an Audit Report when maintaining Low Level Codes within their respective Type descriptions.

Bond Country Codes - COUN (Example):

Low Level Code	Description	VAT Code
AF	Afghanistan	0
AU	Australia	0
BFR	Belgium	1
DK	Denmark	1
ES	Spain	1
FR	France	1
GB	Great Britain (MANDATORY)	1
NG	Nigeria	0
NL	Netherlands	1
NZ	New Zealand	0

Low Level Code	Description	VAT Code
TR	Turkey	0

Note: Country Codes should conform to the standard coding published by H M C & E.

Note: VAT Code '1' means EC Member; Code '0' means Non-EC Member, 'A' means an Accessionary country (one that is shortly due to join the EC and will not be entitled to country preferential rates).

Country Codes must be established on each Item Variant for Country of Origin and Consignment.

Bond Document Logging - DOCT (Mandatory):

Low Level Code	Description	VAT Code
81	W81 Document	1

Bond Delivery Types - DTYP:

At least one Bond Delivery Type must be created.

Low Level Code	Description	Limit	VAT Code	Rate
12	To Other Bonds	12	0	1.00
13	To Home Use with Deferment	11	1	0.01
14	To Home Use - No Deferment	11	1	0.00
15	To Export	13	0	100.00
16	To Ship as Stores	13	0	10.00
17	Dip Privileges/Visiting Forces	14	0	0.10
18	To Other Duty Free	15	0	0.00
19	To Loss in Storage	16	0	0.00
20	To Loss in Operations	17	0	0.00
21	To Authorised Destruction's	18	0	0.00

Note: Rate Values are:

100.00 - C88 Despatch Report Required.

10.00 - W70 Despatch Report Required.

Low Level Code	Description	Limit	VAT Code	Rate
----------------	-------------	-------	----------	------

1.00 - W81 Despatch Report Required.

0.10 - W88 Despatch Report Required.

0.01 - Duty Deferment in operation.

These determine the line on the returns report against which the movement is recorded.

Note: VAT Code '1' means Duty is liable; Code '0' means no duty.

Delivery Types must be established on each Customer.

Bond ECU Rates - ECU:

Low Level Code	Description	Limit
ECUA	ECU Agricultural Rate	800000
ECUI	ECU Industrial Rate	900000

Limit represents the conversion rate per pound. The decimal point before the Limit value should not be entered.

Bond Goods Categories - GCAT:

Low Level Code	Description	Limit	VAT Code	Rate
BEER	Beer	34	2	2.00
BLEN	Blended Whisky	10	1	3.00
CIPE	Cider, Perry	33	0	
COGN	Cognac	20	1	1.00
GRAI	Grain Whisky	10	1	2.00
MALT	Malt Whisky	10	1	1.00
MWIN	Made Wine	32	0	
OTHB	Other Brandy	20	1	2.00
OTIS	Other Imported Spirits	20	1	2.00
OTUS	Other UK Produced Spirits	20	1	2.00
RUM	Rum	20	1	3.00

UKGN	UK Produced Gin	20	1	5.00
WINE	Wine	31	0	

Note: Limit Values are:

10 - W1 Report.

20 - W2 Report.

31 - W3 Wine Report.

32 - W3 Made Wine Report.

33 - W3 Cider, Perry Report.

34 - EX46 Beer Duty Returns Report.

Note: Rate Values specify the associated line number on the W1 and W2 Excise Warehouse Return, as given above.

Note: VAT Code '1' means Spirit; Code '0' means Non-spirit, '2' means Beer.

Bond Default Home Country Code - HOME (Mandatory):

Low Level Code	Description
GB	Great Britain

Bond Preferential Groups - PGRP:

Enter up to 4 alphanumeric characters for Preferential Group Country Codes and their descriptions (e.g. AUNZ for Australasia).

Bond Ports - PORT:

Enter up to 4 alphanumeric characters for Port and Airport codes and their descriptions (e.g. STN for Southampton Port).

Bond Receipt Types - RCPT:

Low Level Code	Description	Limit
GS	From Gain in Stock	4
I	From Imports (MANDATORY)	1
OB	From Other Bonds	2
OP	From Own Production	3

Note: Limit Values determine which panel of input is required for a receipt:

1 - Import.

2 - Other Bond.

3 - Own Production.

4 - Stock Gain.

Bond Tariff Rate ID Refs - TRID - Mandatory:

Low Level Code	Description
F	Full Rate No Acquisition VAT
G	GSP Rate No Acquisition VAT
M	IFC No Acquisition VAT
MA	IFC with Acquisition VAT

Bond Rotation Suspend Codes - ROTS:

Enter up to 2 alphanumeric characters for Rotation suspend Codes and their Reason Descriptions.

At time of receipt, Rotations can be suspended on an exception basis, provided a Suspend Code is entered. If Rotations are never to be suspended, or are always suspended, do not enter any Suspend Codes.

Suspended Movements Clearance Action - SMCA (Example)

Low Level Code	Description
UL	Update it Locate
SP	Shipped Previously
DC	Damaged Consignment

These suspended movements clearance actions are used for the Return Reason when clearing delivery exceptions.

VAT Rates and Codes - VAT (Examples):

Low Level Code	Description	PV	Rate
A	UK Acquisition VAT	P	15.00
E	Export		17.50
F	France	P	15.00
H	German Standard VAT	P	15.00
I	Standard Irish VAT	P	21.00

Low Level Code	Description	PV	Rate
J	Irish Acquisition	P	21.00
K	German Acquisition VAT	P	15.00
M	10%	P	10.00
S	Standard (VAT S)	P	17.50
T	New VAT Code	P	10.00
Z	Zero	P	00.00
1	Spain	P	5.00
2	Desc. 4%	P	4.00
4	15%	P	15.00
5	Holland	P	15.00
6	Germany	P	15.00

Drinks Bonded Inventory Management uses these VAT entries to calculate VAT on Duty.

Note: These codes should match GL Codes/rates.

Description Codes Required For US Bonded Inventory

You can use the Descriptions file to set up codes which are specific to Drinks Bonded Inventory Management.

When you are using Drinks US Bonded Inventory Management, the following Description codes must be set up:

Description File Codes

When Drinks US Bonded Inventory Management is in operation, the following Description I.D.'s must be entered:

Desc'n ID	Description	Limit
ADJT	Bond Adjustment Types	30
AUDT	Bond Audit Types	30
COUN	Bond Country Codes	30
DOCT	Bond Document Logging	30
DTYP	Bond Delivery Types	30
ECU	Bond Conversion Rates	30
GCAT	Bond Goods Categories	30
HOME	Bond Default Home Country Code	30
PGRP	Bond Preferential Groups	30
PORT	Bond Ports	30
RCPT	Bond Receipt Types	30
ROTS	Bond Rotation Suspend Codes	30
TRID	Bond Tariff Rate ID Refs.	30

Description File Low Level Codes

When Drinks US Bonded Inventory Management is in operation, the Description Low Level codes listed below must be entered.

The codes listed are given as a guide. Unless 'Mandatory' is shown, other Low Level codes may be used, but the description attributes (Limit, Rate & VAT Code) must remain the same. The length of each code should not exceed the examples given.

Bond Adjustment Types - ADJT - Example:

Low Level Code	Description	Limit	VAT Code	Rate	PV
AD	Authorized Destructions	18	0	0	
CR	Tax Credit - Return to Bond	5	1	1.00	
GS	Gain in Storage Open Rotation	2	0	1.00	
LB	Loss in Storage - Breakage	8	0	0	P
LD	Loss in Storage - Home Use	2	1	0	
LO	To Losses in Operations	2	0		
TB	Bond Transfer	3	0	0	
TO	Transfer Out of Bond	4	1	0	

Rate Value 1.00 forces adjustment transactions to be typed as a positive adjustment. All other adjustments will be treated as negative.

VAT Code of '1' means Duty is liable; Code '0' means no Duty.

PV Indicator 'P' forces these transactions to print on the Breakages Analysis report.

Limit Values are the columns under which these adjustment movements appear on the Duty Transaction Summary.

These adjustment movement codes are used in the following functions:

- Stock Gains and Write-Offs.
- Cycle Counting Adjustments.

- Stock Transfers.

Bond Audit Types - AUDT (MANDATORY):

Low Level Code	Description
ADJT	Bond Adjustment Types
COUN	Bond Country Codes
DOCT	Bond Document Logging
DTYP	Bond Delivery Types
ECU	Bond ECU Rates
GCAT	Bond Goods Categories
HOME	Bond Default Home Country Code
PGRP	Bond Preferential Groups
PORT	Bond Ports
RCPT	Bond Receipt Types
ROTS	Bond Rotation Suspend Codes
TRID	Bond Tariff Rate ID Refs.
VAT	VAT Codes & Descriptions

These Audit Codes trigger the production of an Audit Report when maintaining Low Level Codes within their respective Type descriptions.

Bond Country Codes - COUN - Example:

Low Level Code	Description	VAT Code
AF	Afghanistan	0
AU	Australia	0
BFR	Belgium	0
DK	Denmark	0
ES	Spain	0
FR	France	0

GB	Great Britain	0
NG	Nigeria	0
NL	Netherlands	0
NZ	New Zealand	0
TR	Turkey	0
USA	United States of America	1

VAT Code '1' means countries associated with the Home Country when determining whether or not receipts should be in Free Circulation.

Inventory Product Division - DIVN:

Low Level Code	Description	Rate
A	Type A	0.00
E	Export	0.00
ED	Export/Domestic	0.00
I	Import	0.00
ID	Import/Domestic	0.00

Bond Document Logging - DOCT - Mandatory:

Low Level Code	Description	VAT Code
81	W81 Document	1

Bond Delivery Types - DTYP:

Low Level Code	Description	Limit	VAT Code	Rate
12	To Other Bonds	3	0	1.00
13	To Home Use with Deferment	4	1	0.01
14	To Home Use - No Deferment	4	1	0.00
15	To Export	9	0	100.00
16	To Ship as Stores	3	0	10.00
17	Dip Privileges/Visiting	3	0	0.10

	Forces			
18	To Other Duty Free	3	0	0.00
19	To Loss in Storage	3	0	0.00
20	To Loss in Operations	3	0	0.00
21	To Authorized Destructions	3	0	0.00

Limit Values are the columns under which these dispatch movements appear on the Duty Transaction Summary.

Rate Values are:

- **100.00** - C88 Dispatch Report Required
- **10.00** - W70 Dispatch Report Required
- **1.00** - W81 Dispatch Report Required
- **0.10** - W88 Dispatch Report Required
- **0.01** - Duty Deferment in operation

VAT Code '1' means Duty is liable; Code '0' means no duty.

Bond Conversion Rates - ECU- Example:

Low Level Code	Description	Limit
AGRI	Agricultural Rate	1100000
INDU	Industrial Rate	100000

Used in the calculation of Customs Duty, this allows for a conversion rate by Goods Category.

Limit represents the conversion rate per dollar. The decimal point before the Limit value should not be entered.

Bond Goods Categories - GCAT:

Low Level Code	Description	Limit	VAT Code
BLEN	Blended Whisky	10	1
CIPE	Cider, Perry	20	0
COGN	Cognac	10	1
GRAI	Grain Whisky	10	1
KITS	Tax Kits	70	1
MALT	Malt Whisky	10	1

MWIN	Made Wine	30	0
OTHB	Other Brandy	10	1
OTIS	Other Imported Spirits	10	1
OTUS	Other US Produced Spirits	10	1
RUM	Rum	10	1
SPIR	Spirit	10	1
SPRK	Sparkling Wine	50	0
UKGN	US Produced Gin	10	1
WINE	Wine	20	0
WL14	Wine less than 14%	20	0
WL21	Wine 14.1% to 21%	30	0
WO21	Wine over 21%	40	0
ZERO	Non-Alcoholic	70	0

VAT Code '1' means Spirit; Code '0' means Non-spirit.

Bond Default Home Country Code - HOME (MANDATORY):

Low Level Code	Description
USA	USA Home Country

Bond Preferential Groups - PGRP:

Enter up to 4 alphanumeric characters for Preferential Group Country Codes and their descriptions (e.g. AUNZ for Australasia).

Bond Ports - PORT:

Enter up to 4 alphanumeric characters for Port and Airport codes and their descriptions (e.g. CHCG for Chicago Port).

Bond Receipt Types - RCPT:

Low Level Code	Description	Limit	Rate
GS	From Gain in Stock	4	2.00
I	From Imports (MANDATORY)	1	6.00
OB	From Other Bonds	2	6.00

OP	From Own Production	3	1.00
----	---------------------	---	------

Rate values are the columns under which these receipt movements appear on the Duty Transaction Summary.

Limit Values determine which type of input is required for a receipt:

- 1 - Import.
- 2 - Other Bond.
- 3 - Own Production.
- 4 - Stock Gain.

Inventory Item Sub-Division - SDIV:

Low Level Code	Description	Rate
1	Bought In Item	0.00
10	Distilled spirits	0.00
2	Manufactured	0.00
20	Wine	0.00
3	Sub-Contract	0.00
30	Beers/Lagers	0.00
40	Non-alcoholic	0.00

Bond Tariff Rate ID Refs - TRID (MANDATORY):

Low Level Code	Description
F	Full Rate No Acquisition VAT
G	GSP Rate No Acquisition VAT
M	IFC No Acquisition VAT
MA	IFC with Acquisition VAT

Bond Rotation Suspend Codes - ROTS:

Enter up to 2 alphanumeric characters for Rotation suspend Codes and their Reason Descriptions (Default Suspension 01).

At time of receipt, Rotations can be suspended on an exception basis, provided a Suspend Code is entered. If Rotations are never to be suspended, or are always suspended, do not enter any Suspend Codes.

Descriptions File Maintenance Screen 1

 Select the Descriptions option.

To facilitate the entry and use of Parameters, codes pertaining to a single function are grouped together. The identifier for a group of codes is the Major Type. The members of any group are the descriptions codes.

This screen enables the addition and maintenance of the definitions of Major Types.

```

Fields:

Description

Enter the description associated with the description code.

Parameter Limit

Enter up to seven numeric characters. This field is for information purposes only within Inventory Management, and may be left blank.

Rate

Enter up to five numeric characters, two decimal. The rate is used for certain description types, such as extra charges to define a rate associated with the Major Type. The nature of the rate is defined by the percentage/value flag specified for this descriptions code.

P/V

Enter one character. The valid codes are:

P - where the rate is a percentage basis

V - where the rate is a value basis.

VAT Code

Enter one character to specify the VAT code, if required. This would for example be used to define VAT codes associated with extra charges.

Functions:

F11

Delete. Delete the Description Code.

*Note: The description code to be deleted must have been selected prior to pressing the **F11=Delete** key. The code will be marked for deletion. When you later review the list, the deleted description codes will no longer be displayed.*

Note: The limit field for description 'MVTP' determines whether or not a reason code and/or reference should be entered as follows:

Limit Field	Reference Mandatory	Reason Code Mandatory	Reference Type Mandatory
00	No	No	No
01	Yes	No	No
10	No	Yes	No
11	Yes	Yes	No
20	No	No	Yes
21	Yes	No	Yes
30	No	Yes	Yes
31	Yes	Yes	Yes

*Note: The 7th digit of the **Limit** field for description 'STKS' determines whether or not stock is to be frozen.*

Press **Enter** to update the description code details. You can select the description ID from this screen also, as on Descriptions File Maintenance Screen 3.

Item Maintenance

1... **2/DIM**

This procedure creates and maintains the primary Item Master information. This information is primarily concerned with classifying and describing an item. Additional information can be set up using other procedures for specific functions, e.g. kit lists. The item number is a unique fifteen character, non-structured alphanumeric code which is used solely for access and sequencing.

The characteristics of the item are defined by the many analysis codes. The use of these codes will vary depending upon the needs of the company. The following points should, however, be noted.

- Major item group is used to determine whether containers are monitored and / or charged.
- Minor item group is used as the main level of aggregation for the entry and maintenance of forecast data in MPS, MRP and DRP when Production is installed.
- Reports and stock counts in Drinks Inventory Management can be requested by item type, item class, major item group or minor item group.
- Input field validation includes the 'Mandatory' option defined by the Mandatory Input Maintenance option.
- Item type is used to distinguish between associated containers and other item types. A value of 'H' indicates an item is a container.
- Item type / class combinations are used within Drinks Sales Order Processing to control picking document creation.

Item Maintenance Selection Screen

Select the Items option. The initial screen enables the selection of the item to be maintained.

```
IN002                HW - Handy Wholesalers Ltd        USER PGM1        27/11/96

Fields:

Description

This field is not displayed on the screen. Enter up to 36 alphanumeric characters, which describe the item. This field is mandatory. The description is used to identify the item on enquiries and reports, and to build the default alpha search words for the item. These can be manually overridden.

Spec 1, Spec 2, (Spec 3)

These are the three user-defined item specification fields. Their use in the Drinks Inventory Management company is defined at company level. Each field is eleven numeric characters with four decimal places.

Note: Spec 1 should be Alcohol by Volume (Strength) if the Global Duty Increase facility is used.

Note: Alcohol by Volume is the Volume of Alcohol per case, printed on packing and delivery notes. (Not directly used by Drinks US Bonded

Inventory Management).

Date Last Changed

The date is automatically generated and updated by the system. It displays the date the item was last altered.

Status Indicator

To analyse an item, various codes are set up. The status indicator is used to identify the stage of the item, and to restrict Item searches. The valid codes are defined in the Descriptions File against Major Type 'ITMS'.

Minor Group

To group the items with other items, a minor group code is set up. This is a memo field only.

Effectivity Start / End Date

These memorandum date fields indicate the life of the item.

Item Type

Enter an item type chosen from those defined on the Descriptions File Major Type 'PTYP'. This field can be used to select items for stock takes; to restrict the Item search; to identify containers; and, with Mandatory Item maintenance, control which other fields are required for the type.

Tip: Item Type 'H' signifies a container which is not normally sold on it's own.

Item Class

Enter an item class chosen from those defined on the Descriptions File against Major Type 'PCLS'.

AY - This depicts cartons / cardboard boxes where item type is 'H'. You can mix items in cartons. The pick note will determine how much to ship.

AZ - This depicts a CHEP pallet where item type is 'H'. These were originally needed to track against a supplier i.e. the pallet is not owned by you.

Item Group Major

Enter a major item group chosen from those defined on the Descriptions File against Major Type 'PGMJ'.

Tip: Group Major has a special meaning when associated with an Item Type 'H'. Four flags determine a containers progress through the system.

0 - Not monitored or charged through the system.

1 - Container monitored but not charged.

2 - Monitored and charged - a one off charge is applied.

3 - Gas Cylinder - this was developed for beer. Monitored, chargeable, usually on a daily bases like a rental charge.

Item Group Minor

Enter a minor item group chosen from those defined on the Descriptions File against Major Type 'PGMN'.

The above codes are used to classify similar items for reporting purposes and select items for the valuation of stocks movements.

Note: Item group minor is used as the main level of aggregation for the entry and maintenance of forecast data in MPS, MRP and DRP where Production is installed.

Division

Enter a division chosen from those defined on the Descriptions File against Major Type 'DIVN'.

Sub-Division

Enter a sub-division chosen from those defined on the Descriptions File against Major Type 'SDIV'.

Note: The above codes are used to define which area of the company has responsibility for this item.

Purchase Pack

Enter up to 6 alphanumeric characters to define the purchase pack for this item. This is used for memo purposes only in the standard module.

Purchase Unit

Enter a unit chosen from those defined on the Descriptions File against Major Type 'UNIT'.

Stock Unit

A unit chosen from those defined on the Descriptions File against Major Type 'UNIT'. This field is mandatory. For dual unit items this should be the unit in which the item is normally sold, i.e. cases.

This would normally be set to represent a case, even if the case normally contains only one bottle.

Issue Unit

A unit chosen from those defined on the Descriptions File against Major Type 'UNIT'. For dual unit items this should be the lowest unit available for the item, i.e. bottles.

The units of measure you specify in the above fields will be the only valid units of measure to be used when ordering, moving, stocking and selling this item. The purchase unit defined here will provide the default purchase ordering unit at the item / stockroom level.

The issue unit defined here will provide the default issue unit at item/stockroom level, and will be the unit in which stockholding is expressed and will be the common stock unit for this item in Drinks Purchase Management.

For example, if purchase orders have been raised in crates, boxes and bottles for a single item, and the issue unit is bottles, then all orders will be expressed in the module in bottles only.

If you only enter the stock unit, then the module will automatically enter the same unit of measure for issue and purchase units and enter '1.00000' for the conversion factors.

Unit Format

The format for the Unit of Measure (UoM) to be used for this Item throughout Drinks.

0 - Decimal Format - normally used for a Production Material or Component Item;

1 - Dual Unit of Measure - standard for Drinks Items not to be used in Production.

Note: Only dual unit items, or decimal unit items where the stock to issue conversion factor is equal to '1' can be sold through Drinks SOP. Decimal unit items, where the stock to issue factor is not '1' can be stocked and used as components for production.

Pkg Reporting

Enter one of the following:

1 - include the item in packaging reporting.

0 - exclude the item from packaging reporting.

Stock To Purchase Conversion Factor

Enter nine numeric characters with five decimals to specify the relationship between the stock and purchase units. If stock and purchase units are the same, this should be 1. If, for example, stock units are 'Each' and purchase units are 'Tens' then this conversion factor should be 10.

Issue To Stock Conversion Factor

Nine numeric characters (with five decimals) to specify the relationship between the issue and stock units.

Note: This must only be set in whole units for dual unit items - decimals are not allowed, and will not be validated.

Tip: If issue and stock units are the same, this conversion factor should be 1. If, for example, the issue unit is 'Each' and the stock unit is 'Tens' then this conversion factor should be 10.

Note: If the issue unit and the purchase unit are the same, then the following condition must apply:

Tip: The product of the Stock to Purchase and

the Issue to Stock factors must be exactly equal to 1.

Sales Unit Indicator

This flag determines whether you can order bottles in SOP, or whether you can only order in cases.

0 - if only stock units may be used.

1 - if stock or issue units or both may be used.

VAT Code

Enter a VAT code chosen from those defined on the Descriptions File against Major Type 'VAT'. Within that Major Type the rate field will be used to hold the appropriate VAT percentage. This is a mandatory field.

If Drinks Sales Order Processing and/or Drinks Purchase Management are installed, this information will be used to calculate the VAT payable on this item.

VAT code validation is via General Ledger VAT code definitions if General Ledger is attached.

Weight Per Selling Unit

Enter eleven numeric characters, four decimals to specify the weight of a single selling unit. (Issue unit).

Max Issue Unit Digits

This refers to the maximum length of the issuing units - e.g. if set to 3, the maximum number of issued units cannot exceed 999. This field is protected and set from the default established at company level.

Discount Group

(Memo only). A code from those defined on the Descriptions File Major Type 'PGR'.

Inventory Source

Enter an inventory source code chosen from those defined on the Descriptions File against Major Type 'INSC'.

Sales Analysis Update

Enter a Sales Analysis update code. This controls updates to Drinks Sales Analysis, and has the following values:

0 - No Sales Analysis update is to take place for this item.

1 - *Either* this is a non-kit item and should update Sales Analysis normally *Or* this is the parent of a kit for which only the parent details should update Sales Analysis.

2 - This is the parent of a kit for which only component details should update Sales Analysis.

3 - This the parent of a kit for which both parent **and** component details should update Sales Analysis.

Note: The Sales Analysis update for a kit is therefore controlled by the flag on the parent. The flag on the kit component merely specifies the Sales Analysis update when the component is sold as an item in its own right. (For more information refer to the Kit Lists section.)

Functions:

F21

Text entry. Item Text.

F22

Purchase Text.

Press **Enter** to validate all entered data and re-display the screen, showing code descriptions for confirmation.

Enter must be pressed a second time with no intervening changes before the Item Maintenance Screen 2 is displayed.

Item Maintenance Text Entry Window (F21)

The text maintenance windows are invoked by pressing **F21=Text Entry** from the Item Maintenance Screen 1.

To maintain text related to the item for use in Drinks Sales Order Processing. It is important to note that the words associated with this item in the item alpha search facility are built first from the item description, but also from the first few words of item text entered here. Text may be maintained against the following usage codes, for memo purposes only:

- B - Batch Reference Text.
- D - Certificate of Conformance.
- E - External Text.
- I - Internal Text.
- Q - Quality Control.
- S - Sales Office Memo.
- T - Technical.

The screen enables you to maintain the item text. The fields at the base of the window can be used to move around the text and add or delete lines.

Note: The text does not wrap around - you must manually enter the line breaks as required.

Press **F8=Update** to save the text and return to Item Maintenance Screen 1.

Item Maintenance Purchase Text Window (F22)

This window is opened when **F22=Purchase Text** is pressed on Item Maintenance Screen 1.

It's purpose is to maintain text related to the item for use in Drinks Purchase Management. This text can be used to provide a more detailed specification of the item than is required for internal use. Text entered against the item here can be reviewed at order entry time within Drinks Purchase Management. This text entry option is only available if Drinks Purchase Management is installed and is linked to this Inventory company.

Note: The text does not wrap around - you must manually enter the line breaks as required.

The fields at the base of the window can be used to move around the text and add or delete lines.

The screenshot displays the 'Item Maintenance Purchase Text Window (F22)'. At the top, it shows 'IN002', 'HM - Handy Wholesalers Ltd', 'USER PGMR1', and the date/time '27/11/96 10:28:12'. Below this, the 'Item Maintenance' section lists various fields for item 'XB01' (Deposit Bottle B/Tulip 500ml), including 'Pallet Height', 'Bonus Points', 'Handling Factor', 'Effectivity start' (24/07/95), 'Item type' (H), 'Item class', 'Item group major', 'Item group minor', 'Division', 'Sub-division', 'Purchase pack', 'Purchase unit', 'Stock unit', 'Issue unit', 'VAT code', 'Discount group', 'Inventory source', and 'Sales analysis flag'. A 'Date last changed' field shows 24/07/95, 'Status Indicator' is 4, 'Minor Group' is BCD, and 'End' is 0/00/00. A 'Containers' field is also present. The main area is titled 'Item Text.' and contains a list of lines (1-6) with 'XB01' entered on line 1. Below the list are fields for 'Position to', 'Insert', 'after', 'Delete', and 'from'. At the bottom, function keys are listed: F3=Exit, F4=Prompt, F12=Previous, F5=Refresh, F8=Update, F21=Text entry, F12=Previous, F22=Purchase text, 14-33, SF, HM, KS, IM, II, KENB20A, and PET007S2.

Fields:

Position To

Enter the line number to appear at the top of the window.

Insert ... After

Enter the number of lines to be inserted in the text as well as the line number after which they should appear

Delete ... From

Enter the number of lines to be deleted from the text as well as the number of the first line which should be deleted.

Press **F8=Update** to save the text and return to the Item Maintenance Screen 1.

Item Maintenance Screen 2

This screen maintains the second part of the data related to the item and is displayed after pressing **Enter** twice on Item Maintenance Screen 1.

		EDN400A		KB		ST0672S1	

Fields:

Description

The full description of the Item.

Superseded By

(Memo only). Enter up to fifteen alphanumeric characters to specify if the item on display has been or is to be superseded by another item. If the item has been superseded then enter the new item number and the supersession date.

Supersession Date

Enter up to the date on which the item was or is to be superseded. This field must be entered if 'superseded by' is entered.

Costing Method

Enter one alphanumeric character to specify the costing method for this item. This field need only be entered if the item costing method is not to be the same as the default costing method set up on the company profile. The valid codes are:

S - Standard

L - Latest

A - Average

F - FIFO

Enter a Standard Cost, in Stock Units, on a new item, which will be used for each stockroom detail added for the item.

Standard Cost

When a 'New Standard Cost' has been replicated across all stock balance records, that cost is also retained here for memo purposes.

Latest, Average Cost

These fields are not used by this version of the module. However, they may be used as references for non-stock items.

Account Codes - General Ledger, Sales, Cost Of Sales, Price Variance

These codes will default to those specified on the company profile. See Company Profiles for an explanation of these codes.

New Standard Cost Date

The date refers to when the new standard cost will take effect.

New Standard Cost

Only enter a cost (in stock units) if you intend to update all the depots with a new standard cost for the item.

Purchasing Officer

Must be a valid purchasing officer as maintained in Purchase Management, if it is installed.

Base List Price

This is used to generate a default price list.

Price Regulator Code

Enter two alphanumeric characters chosen from those defined on the Descriptions File against Major Type 'PRC'.

Price List Seq. Code

Enter five alphanumeric characters. This field is used for ordering Buying lists in Telesales, and can be used for selecting items in Global Price Uplift.

Warranty Type

Enter a warranty type code chosen from those defined on the Descriptions File against Major Type 'WTYP'.

Storage Method

Enter a storage method code chosen from those defined on the Descriptions File against Major Type 'STRM'.

Non Stock Item

Enter a non stock item code from those defined on the Descriptions File against the Major Type 'STKF'. A non stock code can be useful when invoicing customers for services such as on site repairs. The item description should indicate whether the item is a non stocked item or a service.

If left blank, the item is stocked.

Shelf Life Unit

Enter a shelf life unit code chosen from those defined on the Descriptions File Major Type 'SHLU'. This determines the units associated with the shelf life and customer shelf life.

Valid shelf life codes are as follows:

- 1 - Days
- 2 - Weeks
- 3 - Months
- 4 - Years
- 5 - Unlimited

Shelf Life

Enter up to three numeric characters. This is the total shelf life of the item expressed in the shelf life units specified above. This is the actual life of the product until its expiry date.

Ana Inner Code

This is an optional memo field that is used as a validation field. Enter in a 13-digit numeric code. The last digit will be used as a check digit when transferring details of this item.

Customer Shelf Life

Customer shelf life is a portion of the total shelf life after which time some action should be taken. The last available date is calculated as Expiry Date - Customer Shelf Life. Customer shelf life is expressed in the shelf life units specified above.

*Note: If the **Batch Control** field is set to 'L, B or S', the **Shelf Life Unit**, **Shelf Life** and **Customer Shelf Life** fields become mandatory.*

EC Tariff Code

Enter an EEC tariff code chosen from those defined on the Descriptions File against Major Type 'TAR'. If a tariff code has been entered then duty percentage is retrieved from the Descriptions File entry for the tariff code.

This field is not used in Drinks US Bonded Inventory Management.

Tariff Date

Enter the date on which the tariff classification was agreed, in the format DD/MM/YY.

This field is not used in Drinks US Bonded Inventory Management.

Reference

Enter 12 alphanumeric characters to specify the reference number of the document confirming the EEC tariff classification.

This field is not used in Drinks US Bonded Inventory Management.

Duty %

Duty is retrieved from the Descriptions File if an EEC tariff code has been entered.

This field is not used in Drinks US Bonded Inventory Management.

Batch Control

Enter one alphanumeric character to specify the type of batch control for this item. The valid codes are:

L - Lot: control stock by Production lot number;

S - Serial Number: control stock by item serial number;

B - Batch control stock;

N - No batch control: stock control by total quantity recorded only.

With the exception of 'N', these methods of batch control require the entry of the appropriate control number when making a stock movement.

Drinks US Bonded Inventory Management assumes lot control ('L') for any Bonded Stockrooms, regardless of this setting on the Item Master file. Batch Control can be set to 'N', 'L', 'D', or 'S', as required, for Duty Paid Stockrooms.

Bar Code

Enter up to thirteen alphanumeric characters to specify the bar code for this item.

Inspection Req'd

Should the item be inspected before despatch

0 - No.

1 - Yes.

If Drinks Purchase Management is installed, any item flagged as requiring inspection upon receipt will have a warning displayed when received directly into goods inward or stores.

Sub Contract Item

This field is only used if Drinks Inventory Management is linked to Drinks Purchase Management. Enter up to fifteen alphanumeric characters to specify if the item on display is to be booked into stock under another item number. If a sub contract is specified, then any purchase receipts against the maintained item will be booked into stock against the sub contract item.

Order Method

Enter the default method by which this item is processed in Sales Order Processing. The options are:

0 - Normal allocation. Orders are supplied from existing stock.

1 - Make to order. This option is not available in Drinks.

2 - Purchase to order. Hunting is used to find the first stockroom where the item is stocked, and on completion of the order line, a purchase requisition is created and the sales order line is reserved against the requisition.

3 - Direct Delivery This works the same as option '2', purchase to order, except that the receiving address on the Purchase Requisition is set to the Customer

Delivery Address. This line cannot be changed to any other order method once the sales order line has been raised. A normal order can be changed to direct delivery providing the whole order line quantity is outstanding.

Note: This method cannot be used against bonded stockrooms, and the hunt group processing will ignore any bonded stockrooms.

4 - Reservation. The hunting operates as for the previous order methods, and on completion of the line the reservations window is displayed to allow the order line to be reserved against existing purchase orders. A single sales order line can have reservations against more than one purchase order, and vice versa.

Note: Any reservations created are treated as allocations in terms of 'back order' and 'part delivery' processing, and the value of the reserved stock is included in the customer's 'on order' balance for credit checking purposes.

Note: In kit processing a kit parent must have an ordering method of '0', normal, but kit components can have '2' and '4' but not '3', direct delivery. If an order is raised for a kit parent, the associated component lines are created as ordering method '0' and cannot be changed. Component reservations are treated as allocations in terms of how much of the kit parent can be delivered.

Functions:

F19

Pricing Groups. Pricing Groups identify specific item groups in a particular sequence, which will be used when pricing goods

F20

Calculate the base list price. The new standard cost is used in the calculation.

F21

Lot Header Maint. Calls the Lot Header Maintenance screen. This allows you to create or amend the default details of the Lot Header for the selected item.

Press **Enter**; any codes which have been entered will be validated and the screen redisplayed for confirmation.

Enter must be pressed a second time without intervening changes for the Item Maintenance Screen 3 to be displayed.

Item Maintenance Pricing Groups Window (F19)

This window is displayed when **F19=Pricing Groups** is selected from Item Maintenance Screen 2.

It is used to display / amend item pricing group information. Within Drinks Sales Order Processing, prices and discounts can be defined from item groups, i.e. the same price appears to a range of items. This screen is used to define to which groups an item belongs.

Fields:

Copy Price Groups From Item

You can base the item's pricing group on an existing pricing group from another item.

Sequence

Identify the sequence number. This will prioritise the price lists; the lower the number the higher the priority.

Type

The price or discount list that you wish to sequence.

Group

The item group must be entered - conforming to Descriptions File Major Type 'ITMG'.

To amend item groups or to delete a price list from the Pricing Group, select the sequenced price item by entering a '1' against it.

Position To

Enter the line number to appear at the top of the window.

Functions:

F5

Refresh. Clear the lower screen.

Press **F8=Update** to save any changes to file.

6-32 * MW KS CL IM DM II EDN400A KB ST0672S1							

Fields:

Potency Required

Potency is an attribute of the whole lot. This is the assumed grade of each lot for the item, but may be changed on individual lots.

0 - The potency field is not displayed when a new lot of this item is received.

1 - To force the user to enter a potency every time a new lot of this item is received into Inventory.

This field is mandatory.

Standard Potency

If potency required is equal to 1 then a value may be entered in this field. If a value is entered then this defaults into the potency field every time a new lot of this item is received.

Note: Potency is a percentage, i.e. the potency you specify here is the number of parts of active ingredient per hundred parts.

Grade Required

Enter a '1' to force the user to enter a grade every time a new lot of this item is received into Inventory. Otherwise enter a 0 and the grade field is not displayed when a new lot of this item is received. Grade is an attribute of the whole lot.

Default Grade

If grade required is equal to 1 then a value may be entered in this field. If a value is entered then this defaults into the grade field every time a new lot of this item is received.

The grade must be chosen from those defined on the descriptions file against the major type GRAD.

Note: You can define either Potency or Grade for an item but not both.

Default Stock Status

Enter a stock status code chosen from those defined on the descriptions file against the major type STKS. If a stock status code is entered then this defaults into the stock status field every time a new lot of this item is received into Inventory. Stock status codes are designated as either available or unavailable and when applied to a lot make the quantity of that lot frozen or unfrozen.

A blank stock status implies that a lot is available.

*Note: The seven digit limit field of the description codes defined against **STKS** indicates the availability of an item. If the seventh digit of this field is 1 then the stock status code indicates an unavailable item. Any other value renders the stock status code an available code.*

Release Lead Time Units

Enter one alphanumeric character to specify the release time unit to be used when calculating the first available date of a lot.

i.e. Production Date + Release Time=First Available Date

The valid release time units are:

- 1 - Days
- 2 - Weeks
- 3 - Months
- 4 - Years

If this field is left blank the release lead time cannot be entered. In this case when the lot dates are calculated the first available date equals the production date.

Release Lead Time

Mandatory if a units flag entered. Enter up to three numeric characters. This is the release time of the item expressed in the release time units specified above. The release time is used in the following calculation:

e.g. Available Date + Release Time=First Available Date

This defines the period of time before the product should be used, for example, a maturing period.

If this field is left blank when the lot dates are calculated the first available date equals the production date.

Lot Dates To

Enter an alphanumeric character to specify the method used to position lot dates once they are calculated.

The valid codes are:

- 1 - Lot availability dates calculated as actual lot dates.
- 2 - Lot availability dates calculated as first day of the period in which the actual date would fall.
- 3 - Lot availability dates calculated as last day of the period in which the actual date would fall.

All of the lot dates are either entered or calculated using shelf life and release times. Once calculated, the dates can be repositioned to the start or end of a period depending on the business requirements.

Display Lot Times

Enter 1 if lot times are to be displayed as well as lot dates. In this case you are required to enter a time, as well as a date, upon receipt of a lot. Enter 0 and the lot times are not displayed when a new lot of this item is received into Inventory. This field is mandatory.

Press **Enter** on each screen until the item is completely updated.

Item Maintenance Screen 3

The following screen is displayed when you have pressed **Enter** twice on Item Maintenance Screen 2.

It displays further information for the item selected.

04-45	82	MW	KS IM II KENB20A PET007S2

Fields:

Item Code And Description

The full Item Code and Description.

Size Code

This is Item Size Code which is an optional memo field which is printed on Pick Lists, and delivery notes, and is usually the volume of the issue unit. For example on bottles it could be 75cl or 1L.

Vintage

This is an optional memo field. It is used by the Drinks Sales Analysis module.

Telesales Description

The description that will be used by the Drinks Telesales module. This is a mandatory field.

Equivalent Case Factor

This is a conversion factor which is used to enable items with different stock units to be in the same group for pricing and promotion purposes.

This field is not used in Drinks US Bonded Inventory Management.

Volume Per Stock Unit

The volume of the item for each stock unit.

DSI Code

For EDI only - not used.

DSI Factor

For EDI only - not used.

Barrelage

This is used by the Drinks Sales Analysis and State Profile Taxation applications. It is the conversion factor of changing issue volumes to a percentage of a barrel volume.

Litrage

This field is used by the Drinks Sales Analysis and Bond applications. It will convert the invoice line quantity to litres.

Gallonage

This field is used by the Drinks Sales Analysis and Bond applications. It will convert the invoice line quantity to gallons. (Only used if State Profile is in use, or for US Bond).

Bottles Per Case

The number of bottled items to a case, as entered on the first screen. It must be the same as the Stock to Issue conversion factor.

Where the Issue to Stock conversion factor was entered on the first screen, Bottles Per Case is set to the same number automatically.

Cases Per Pallet

The number of cased items to a pallet - used in Telesales Order Entry for pallet orders.

Duty Tariff

The tariff codes are set up in the description file 'DTAR'. Enter in a valid tariff code.

Duty Rate

This corresponds to a duty tariff, and is also maintained within the description file 'DTAR'.

Duty Value

The duty value will change each time a global duty uplift is run. The duty value is determined by the duty tariff and the duty rate, but will only be due change on the effectivity date.

Note: If the duty value is changed, as an item that is not standard costed, a warning is generated:

'Update may result in incorrect Transfer costs or cost of sales'.

This is because transfers and cost of sales use the duty value to increase movement costs for duty suspended to duty paid, and subsequently

get updated by the actual duty calculated.

Duty Status

The duty corresponding to an item may fall into one of the three categories:

1 - No limitation. The item can be sold to either Duty Free or Duty Paid customers.

2 - Duty free only. The item can only be sold to customers established as Bonded.

3 Duty paid only. The item can only be sold to normal Duty Paid customers that are not established as Bonded.

Note: A Warning is displayed in Order Entry if you try to sell goods to a customer of the wrong duty status.

Item Search Index Maintenance Screen

This screen maintains the search index, displaying any current search criteria.

If the item description or external text has been changed, **F13** rebuilds the item search index.

If the search index has already been rebuilt, **F13** displays the previous version of the index. Either version of the index can be amended.

Functions:

F13

Re-build Item Search index.

Note: On completion of Item Maintenance, you are given the option to update all Stock Balance Item Costs.

Press **Enter** to update this screen and return to Item Maintenance Screen 2.

Alternative Items Maintenance

3/DIM

If an item is no longer available, you can use an alternative item instead. You can define which alternative items can be used.

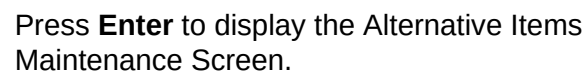

```

Alternative Item

Enter up to fifteen alphanumeric characters which specify the item number of the alternative item. The alternative item must be defined on the Item file in Descriptions.

Reverse?

Is the item substitution reversible.

0 - No.

1 - Yes.

 *Note: If the item substitution is reversible, an associated record is set up for the alternative item.*

 *Tip: Alternative item relationships may be deleted by removing the alternative item description from the list.*

 Press **Enter** to display the item descriptions of the items entered, and **Enter** again to update the

file and return to the Selection Screen.

Kit List Maintenance

4/DIM

A kit list is a group of items normally sold as individual finished goods, but on occasions sold together as a unit.

The kit is known as the Parent, the individual items as components.

In some industries it is more appropriate to sell a kit of items, rather than regarding the kit as a single indivisible item. This enables a much greater level of flexibility to be achieved with a smaller investment in inventory. This procedure provides for the creation and maintenance of kits. When a component item is added to a kit the module checks that a stockroom balance record has previously been created in all of the stockrooms where the parent of the kit is held.

Note: Stock is only held at component level.

This feature is used by Sales Order Processing where orders are raised against the kit parent as defined here in Inventory.

Kit List Maintenance Selection Screen

 Select the Kit List option to display the Selection Screen.

This screen enables the selection of the item which defines the Kit parent which is to be created or maintained.

 *Note: The components must exist in the same stockroom as the parent item.*

Qty Off

Enter up to five characters, two decimals, which specify the quantity of the kit component which makes up the kit.

 *Note: Component items cannot be 'parent' items of another kit and must be defined to all of the stockrooms to which the parent item is defined.*

 **Tip:** A component may be deleted from the kit by removing the item reference from the kit list.

 Press **Enter** to display the item descriptions of any items which have been entered.

 Press **Enter** again to update the file and return to the Selection Screen.

Stockroom Detail Maintenance

1...
2...

5/DIM

A stockroom is a discrete area of a company where stock is recorded and controlled separately from other company stocks. Some companies may require only one stockroom, whilst others, perhaps with a number of distribution points, will require more.

The key issue is that if there is a continuous requirement to record movements in and out and know the current balance of a particular area, then a stockroom should be defined.

This procedure provides for the creation and maintenance of details related to the stocking of an item in a stockroom.

The stock management policies within the system concern themselves with ensuring the levels of stock in each stockroom are correct. Parameters defining the implementation of these policies can be specified here.

An item must have the same method of costing throughout a company, be it average, standard, FIFO, or latest but the actual cost of the item can be independently maintained at each stockroom.

Stockroom Detail Maintenance Selection Screen

Select the Stockroom Details option.

This screen enables you to select the item and stockroom to be maintained.

Purchase Unit

Enter a purchase unit chosen from the three defined on the item. This unit will be assumed as the default ordering unit in Drinks Inventory Management and Drinks Purchase Management if installed. This field is mandatory.

Issue Unit

Enter an issue unit chosen from those defined for the item. All stock balances and costs for this item in this stockroom will be expressed in this unit.

Reorder Policy

Enter one alphanumeric character to specify the item's normal re-order policy in this stockroom.. This field is mandatory. The valid codes are as follows:

- 1 - ROP/MAX - When expected stock falls below the re-order point, order up to the maximum stock.
- 2 - ROP/ROQ - When expected stock falls below the re-order point, order up to the re-order quantity.

3 - Up to ROP - When expected stock falls below the re-order point, order enough stock to return to the re-order point.

The code will default to that defined on the company profile.

Profile Code

Enter up to two alphanumeric characters to specify the usage profile, previously defined in the company profile, to be used in calculating the average usage for the item in this stockroom.

Lead Time

Enter up to five numeric characters, two decimals, to define the lead time for this item into this stockroom. The lead time is expressed in weeks. This value will be used in reorder policy calculations.

Reorder Point

Enter up to thirteen numeric characters, three decimals. This is only required if you do not want the system to calculate this value automatically.

Maximum Stock

Enter up to thirteen numeric characters, three decimals. This is only required if you do not want the system to calculate this value automatically.

Reorder Quantity

Enter up to thirteen numeric characters, three decimals, to specify the reorder quantity. If this value is left as zero, the system will calculate a reorder quantity based on reorder factor percentage. This only applies if reorder policy 2 - ROPROQ - is specified.

Reorder Factor %

Enter up to three numeric characters, to specify the reorder factor percentage. This will default to the percentage defined on the company profile. This percentage is the number of lead times worth of average usage to be reordered.

Tip: See Company Profiles and Stock Management for an explanation of this percentage. *This only applies if reorder policy 2 - ROP/ROQ - is specified.*

EOQ

Enter up to thirteen numeric characters, two decimals, to specify the economic order quantity. This is only required if you do not want the system to calculate this value automatically.

Calculate EOQ Etc.

This flag determines if the module is to calculate economic order quantity, reorder point and maximum stock.

0 - if these figures are to be entered.

1 - if the module will calculate these figures.

Note: If reorder policy is '3' then this field should be set to '0'.

Standard Cost

Taken automatically from the item - held in issue units.

Latest Cost

Enter up to fifteen numeric characters, five decimals, to specify the latest cost. The latest cost is maintained by the module as the unit cost associated with the last stock receipt recorded, but may be specified here when the item/stockroom is first set up.

Base List Price

Enter up to fifteen characters, five decimals. It is also used by Sales Analysis to calculate sales values for kit components.

Date Changed

This is a system maintained field that indicates the date this record was last changed.

Suppliers

Enter up to three, eight character supplier codes to specify the suppliers of this item for this stockroom. The first supplier is used by Requisitioning as the preferred supplier when generating recommended purchase orders.

Count Day

For 'Frequency' counted items - the day of the week (1-7) for B class items, or the day of the period (1-35) for C class items.

ABC Class Override

The ABC classification matrix is defined for each stockroom on the company profile. Based on the value and usage of an item, it is categorised as an A, B or C item with associated recommended minimum and maximum stockholding levels.

'A', 'B' or 'C' may be entered to associate the item with a different class, so that when stock counting is requested the item is counted more or less frequently than would have been the case.

'Z' may also be entered in this field, in this case the item will be ignored when a stock count is requested.

Over Confirm

This value will default from the Descriptions File. It is defined with the 'DSTL' description code against the Major Type 'MISC'. This is a memo field.

New Standard Cost

Enter the new standard cost for this item in this stockroom.

When this cost becomes effective, the standard cost of this item will change in this stockroom only. The standard cost of the item on the Inventory Item Master remains unchanged.

You must be sure that any costs maintained at stockroom level take into account the duty status of the stockroom. The system does

not make automatic adjustments for duty.

This field is only displayed if, in Company Profile Maintenance Extended Options you enable Stockroom Standard Costs, to allow items to be priced at stockroom level.

New Cost Date

Enter the date on which the New Standard Cost becomes effective.

This field is only displayed if, in Company Profile Maintenance Extended Options you enable Stockroom Standard Costs, to allow items to be priced at stockroom level.

Bins

Enter up to two sets of six alphanumeric characters to specify the bins where this item is stored in this stockroom. If full location management is required, Drinks Warehousing should be installed.

Negativity

Indicates the over-allocation allowed in this stockroom. This field is display only. See the section on negativity control for a full explanation.

Functions:

F11

Delete.

Note: This key must be pressed TWICE after all validation.

To delete a stockroom the following conditions must be satisfied:

- The physical stock balance must be zero
- No movements must exist in the current month
- No outstanding orders, either sales, Production, or purchase must exist

Note: Deleting the stockroom balance record for an item deletes all the movements and history records for the item at this stockroom.

F14

Landed costs. These are set up either now or within Drinks Purchase Management.

Press **Enter** to validate all fields. Press **Enter** a second time to update the record. The Stockroom Detail Maintenance Selection Screen is redisplayed.

Stockroom Detail Maintenance Landed Costs Screen (F14)

 This screen is displayed when you press **F14=Landed Costs** from the Stockroom Detail Maintenance Screen.

Landed costs are purchasing costs incurred over and above the basic purchase price of goods and services. Each code set up represents a category of landed cost, for example transportation costs, insurance, or excise duty.

Fields:

Cost Code

Enter a valid landed cost code.

Description

The description of the landed cost code.

Standard Landed Cost

The value entered here is either the default value of this landed cost element, or the percentage to be applied to the item cost, on receipt, to establish the cost.

Perc / Value

A landed cost can be calculated as a percentage or value.

0 - Denotes a cost value per unit of measure for the order line will apply.

1 - Denotes a percentage of the item cost will apply.

 Press **F8=Update** to save changes to the file.

FIFO Cost Maintenance

6/DIM

The purpose of this option is to allow for the modification of First In First Out (FIFO) costed stock receipts.

FIFO records are generated by the module when both the following have occurred: the costing method of an item is set to FIFO on the Item Master file and that item is received into a stockroom.

If an error was made at the time of entry, or for whatever reason the price of the item delivered was reduced after its receipt into a stockroom, this facility can be used to amend the details of a FIFO record.

To audit any cost changes made, a movement is written to the transaction file with zero quantity and a value equal to the value of the adjustment, and an audit report is printed.

FIFO Cost Maintenance Selection Screen

 Select the FIFO Costs option.

The first screen enables the selection of the item/stockroom for FIFO cost amendment.

 Press **Enter** to display the FIFO Cost Maintenance Screen, showing FIFO details for the selected stockholding.

FIFO Cost Maintenance Screen

This screen is displayed when valid item and stockroom codes have been entered into the FIFO Cost Maintenance Selection Screen.

It enables the maintenance of the unit cost of a FIFO record. It is important to realise that the cost change only affects items associated with the record that have not been issued. The module does not track items that have been already issued and amend their cost.

The upper part of the screen identifies the item and stockroom for which the amendment has been requested. The lower part lists the open FIFO records for the item/stockroom. To amend the cost for the required FIFO record, simply change the cost on the relevant line on the screen.

Sourcing Rule Access Maintenance

12/DIM

You use this option to define sourcing rule access criteria for this company. The sourcing rule access criteria determine the level at which sourcing rules can be defined. Sourcing rules define how you source inventory for multi-plant production. Sourcing rules are only used in System 21 Production applications, where multi-plant production is used.

With this option you can define:

- The activity access level for Master Production Schedule (MPS) and Materials Requirements Planning (MRP) and. For example, a Materials Requirements Planning (MRP) business process could include the following activities:
 - Create a suggested MRP supply.
 - Recommend re-scheduling a firm order.
 - Recommend cancellation of a firm order.
- The item access level at which demand will be sourced. Demand can be sourced for all items, specific item attributes or specific items.
- The demand access point. This satisfies any geographical constraints on sourcing requirements. Demand can be sourced from all locations or from specific warehouse/ plant locations.

When you have defined the sourcing rule access criteria, you use the Sourcing Rule Maintenance option to set up sets of sourcing rules.

Maintain Sourcing Rule Access Criteria Screen 1

 Select the Sourcing Rule Access option.

You use this screen to select the type of demand for which to define sourcing rule access criteria.

Activity Access Level

0 - All. Sourcing rules can be defined without specifying a specific activity.

1 - Activity Group. Reserved for future development.

2 - Activity. When sourcing rules are defined you must specify an activity. This allows distinct sourcing paths to be defined for different MPS or MRP item groups. For example, Item Group Major, Item Group Minor, GT Family.

Item Access Level

0 - All items. Sourcing rules can be defined without specifying a specific item or item attribute.

1 - Item Attribute. When sourcing rules are defined you must specify an item attribute.

2 - Item. When sourcing rules are defined you must specify a specific item.

Item Attribute Type

If you select 1 Item Attribute, in the Item Access Level field, you must specify an Item Attribute Type. These are selected from Inventory Description Major Type ITAT.

Demand Point Access

0 - All Demand Points. When sourcing rules are defined, demand can be sourced from all locations.

1 - Warehouse/Plant. When sourcing rules are defined, you must specify a planning unit or planning unit combination from which demand can be sourced. This allows different sourcing paths to be defined for different locations.

2 - Stockroom. Reserved for future development.

Press **Enter** to save the details you have entered.

Authorise Users to Stockrooms

21/DIM

Although a user may create a stockroom and then attach items to it, they are not permitted to actually carry out any transactions until they are authorised.

This is purely for security purposes. It is to prevent users adjusting stock, ordering and receiving stock that they are not authorised to do.

This procedure controls who is authorised to carry out any transactions in Stockrooms Bonded Depots / Stockrooms

Note: Users not authorised to Depots will not be allowed to perform the following functions:

Receive stock via Drinks Inventory or Drinks Purchase Management.

Receive stock via Drinks Sales Order Processing using the In Transit Order facility.

Freeze stock via Drinks Inventory Management.

Source and Allocate stock against sales orders via Telesales or via Drinks Sales Order Processing.

Request Picking Note preparation via Drinks Sales Order Processing.

Adjust stock via Drinks UK Bonded Inventory Management module.

Transfer stock from Depot to Depot via Drinks UK Bonded Inventory Management.

Adjust stock via Drinks US Bonded Inventory Management module.

Transfer stock from Depot to Depot via Drinks US Bonded Inventory Management.

This procedure produces an audit report. A log of the changes made are recorded in an audit file for subsequent enquiry and further reporting.

Authorise Users to Stockrooms Selection Screen

Select the Authorise Users to Stockrooms option.

The Selection Screen is displayed which enables you to select a user and company code.

Item Container Maintenance

1...
2...

22/DIM

The product can be stored in various containers, e.g. bottles, cans, cases, crates. These are defined in two groups: primary containers and secondary containers (i.e. inner unit and outer unit respectively).

Primary Container

This refers to the unit that is closest to the liquid - e.g. bottle, can.

Secondary Container

This refers to the unit that holds the primary container - e.g. case, box, pallet.

All containers must be defined in Drinks Inventory Management Maintenance/Items under Item Type 'H'. The Item Class should be a two character alphanumeric field ('AY' for Cartons, 'AZ' for Chep Pallets, etc.). The Item Group Major should be one of the following values:

- 0 - Unmonitored/Non-chargeable.
- 1 - Monitored/Non-chargeable.
- 2 - Monitored/Chargeable.
- 3 - Optionally for Gas Cylinders.

The purpose of this option is to define the relationship between the product sold and it's containers. For chargeable containers this relationship is used to raise invoice lines.

Container Conversion Maintenance Selection Screen

Select the Item Containers option.

This screen enables the selection of a Base Product Number for the container conversions.

	Case for 12 x 75 cl Bottles	UoM :	EA
Number of Primary Containers..	12	per Secondary Container	
F3=Exit F4=Prompt F8=Update F11=Delete F12=Previous			
09-33	82	MW	KS IM II KENB20A PET007S2

Fields:

Primary Container Product No.

Enter the primary container unit code (the 'inner') associated with the item.

Number Of Primary Containers Per Base Stock Product

Enter the quantity of primary containers for each finished good.

Secondary Container Product

Enter the secondary container unit code (the 'outer') associated with the item.

Number Of Primary Containers Per Secondary Container

Enter in the quantity of primary container units held in each secondary container.

Costs and deposits are held for both primary and secondary containers. Thus, a cost can be calculated for a customer before sending off the finished goods. It also means that more accurate refunds can be calculated for returned goods that have been part of a larger delivery.

Press **Enter** to validate the entry. Press

F8=Update to save the details to the database.

Negativity Control Maintenance

1...
2...

23/DIM

For fast moving products, where stock is being received just prior to despatch, it is necessary to allow allocation of non-existent stock (i.e. over allocation). This will allow picking notes to be produced in anticipation of receiving stock. For each item in a stockroom it is possible to define the level of over allocation to be allowed.

Negativity Control Maintenance Selection Screen

Select the Negativity Control option.

This screen enables the selection of the item and stockroom.

Stockroom.....	01	Central Depot (BEERS)	
Negativity.....	_____		
F3=Exit F12=Previous			
08-26		MW	KS IM II KENB20A PET007S2

Fields:

Negativity

Enter the quantity of stock that you will permit to be over allocated for the item, in the specified depot.

 *Note: All the automatic allocation processes will allocate up to this level of over allocation. This applies to sales orders only. This is not used in manual allocation or for DRP orders.*

 Press **Enter** to accept the negativity quantity.

Tax Kit Maintenance

24/DIM

A single saleable product may be made up of components liable to different tax rates, for example, a case of mixed wines, box of spirit miniatures. Items with different tax classifications need to be identified and their duty calculated separately.

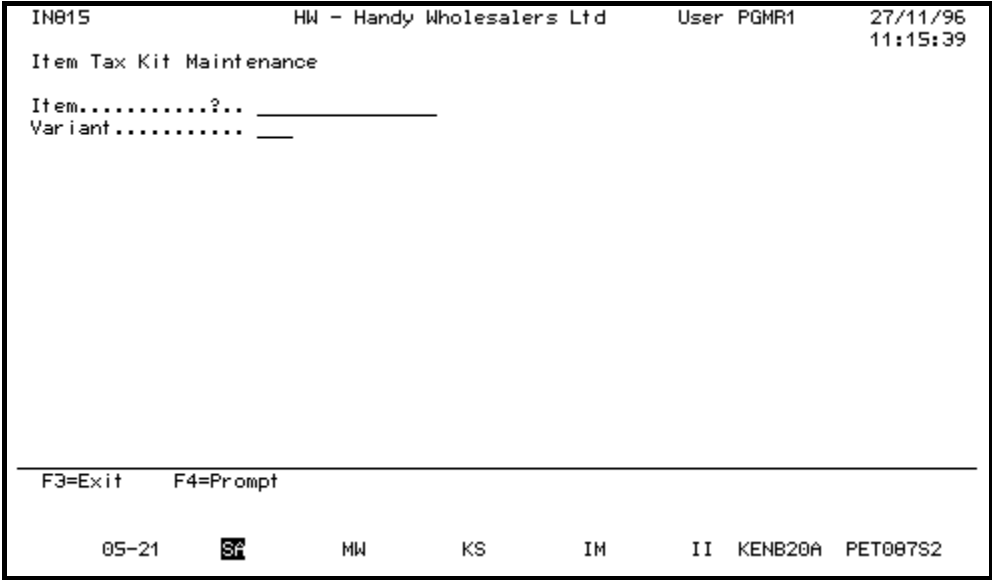

This option is used in Drinks US Bonded Inventory Management only and allows for the definition of the kit content.

It is the kit parent that is processed through Drinks Inventory Management and Sales Order Processing, but it is the kit components that have the movements and Duty Payable recorded in Drinks US Bonded Inventory Management.

Tax Kit Maintenance Selection Screen

 Select the Tax Kits option. The Selection Screen is displayed.

You use this screen to enter an Item (the Parent or Sales Item) and a Variant of that Item.

The screenshot shows a terminal window with the following text:

```

                                           11:15:39

Item Tax Kit Maintenance

Item.....?.. _____
Variant.....  _____

F3=Exit  F4=Prompt

05-21  S4  MW  KS  IM  II  KENB20A  PET007S2
```

Fields:

Item

Enter the parent item code that represents the kit.

Variant

With bond implemented it is possible to define a variant of a product.

 Press **Enter** to display the Tax Kit Maintenance Detail Screen.

Tax Kit Maintenance Detail Screen

This screen is displayed after entering a valid item and variant code on the Tax Kit Maintenance Selection Screen.

The top of the screen displays the description of the kit.

All current components (if any) of the Tax Kit are displayed.

Note: Any number of items can be defined as components of the Kit - however, each item must be defined as present in the Parent Stockroom in Item Maintenance.

Kit Item (?)	Description			
VOD2	Relska Vodka		1	
WIN2	Wine in a tax kit		2	
				+

F3=Exit F4=Prompt F12=Previous

```
08-02    SF    MW    KS    IM    II    KENB20A    PET087S2
```

Fields:

Kit Item

If the item kit exists a list of components will appear on screen. To change the list of components override the existing list.

Qty Off

Enter the quantity of each Item which is to be included in the Kit. the total quantity of items in the kit would normally equate to the Stock to Issue Conversion Factor for the Item that describes the number of bottles in a case.

Variant

To identify the correct duty variables for the component item, an appropriate variant must be specified.

Note: This is a Kit for Tax purposes only - it is not used as a kit for assembling products or delivery.

Press **Enter** to validate and confirm changes.

Business Entity Names and Addresses

1...
2...

25/DIM

A number of Business Entities may be attached to an order, and maintained via this option.

Business Entity Maintenance Selection / Addition Screen

Select the Business Entity Names and
Addresses option.
