Chapter 2

Processing

Drinks Inventory Management

Processing Functions

The primary functions of Drinks Inventory Management are to record stock movements and determine, at any moment, the current stock levels. In order to achieve this a number of different types of stock movements are provided.

While provision is made to record these transactions within Drinks Inventory Management, the module does form part of an integrated business system and many transactions are more easily performed by other Drinks applications. (For example, Drinks Purchase Management handles the receipt of goods, and Drinks Sales Order Processing handles the despatch). Stock counting and housekeeping are, therefore, the main movements transacted solely within Inventory Management.

When transactions are performed using Drinks Inventory, the format of entry is the same for all types. In order to simplify control one procedure processes a single transaction type. The first screen enables any common data to be entered for a batch of movements, thus reducing keying. The second screen allows one movement to be entered at a time. At the end of a series of movements the first screen is returned showing the number of movements entered and the last item processed. This is provided so that if a number of postings are made, perhaps from the same document, control may be exercised.

All transactions can be accessed from the Drinks Inventory Management Processing menu.

Customer Order Issue

1/DIP

You use this option to enter details of the issue of stock previously allocated to an individual Customer Order Issue.

The stock to be issued must have been previously allocated using the Adjust Allocated Stock Inventory Processing option.

Note: The Adjust Allocated Stock option has no link with allocating stock to a customer order in Drinks Sales Order Processing.

Note: If the message 'you cannot issue more than has been ordered' is displayed, you must use the System 21 options to order sufficient stock to cover the issue.

Note: If the message 'you cannot issue more than has been allocated' is displayed, you must use the System 21 options to allocate sufficient stock to cover the issue.

Customer Order Issue Selection Screen

Select the Customer Order Issue option.

You use this screen to select the order issue criteria.

IN009	HW - Handy Wholesalers Ltd	USER PGMR1	5/12/96 15:58:48

Reason code.....?..	___		
F3=Exit F4=Prompt			
05-26	82	MW	KS IM II KENB20A PET087S2

Fields:

Stockroom

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the Company Profile. This field is mandatory.

Reference Number

Enter up to fourteen alphanumeric characters which specify the reference number of the movement, this may be linked with the reference type specified.

Reference Date

Enter a valid date to specify the reference date. This field is mandatory and defaults to the current date.

If the date the movement actually took place is not the same as the current date, you may change the reference date. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Reference Type

Enter up to three alphanumeric characters which specify the reference type. These are defined on the Descriptions File against the Major Type 'TRAN'. You can use the reference type as a mnemonic to describe the reference number, e.g. 'REQ' may indicate that the reference number is a stores requisition note number.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative or description associated with the movement.

Reason Code

Enter a reason code for the Order Issue, chosen from those defined on the Descriptions file against major type 'MOVR'.

All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Press **Enter** to accept the entered details and display the Customer Order Issue Detail Screen for entry of individual movements.

Customer Order Issue Detail Screen

This screen is displayed when valid entries have been made into the Customer Order Issue Selection Screen.

You use this screen to enter individual stock movements.

Error messages

Cannot Issue More Than Has Been Allocated.

A negative number appears next to the message 'Allocated stock.' To proceed with an issue, you should take the following course of action:

Exit the Customer Order Issue screen and then take the Adjust Allocated Stock option. Enter a number of items equal to or greater than the negative allocated stock figure displayed at the same time as the error message. Then retake the Customer Order Issue option and continue as before.

Standard Unit Cost Has Not Been Defined In Stockroom

You should take the following course of action:

Exit the Customer Order Issue screen and then take the Stockroom Details option. Enter a standard cost for the item in the issuing stockroom. Then return to the Customer Order Issue option and continue as before.

Customer Order Issue updates

The following updates are performed for each Customer Order Issue:

The movement quantity is subtracted from the physical stock and allocated stock.

for the item / stockroom / lot balances.

Available stock for the item / stockroom is calculated.

Usage figures for the item / stockroom are updated.

The last issue date for the item / stockroom is updated.

07-24	☒	HW	KS IM II KENB20A PET087S2

Fields:

Stockroom

Enter up to two alphanumeric characters to specify the stockroom from which the purchase order will be issued. The value input on the previous screen will be displayed as a default, but it may be changed if necessary.

Customer

Enter up to eleven alphanumeric characters to specify the customer to which the issue is being made.

Note: This is not validated against customer profiles in Drinks Sales Order Processing.

Item

Enter up to fifteen alphanumeric characters to specify the item on order. The item must be defined to the Items Master file and linked to the stockroom through Inventory Maintenance.

Movement Quantity

Enter the quantity to be issued. If you wish to enter a negative quantity to correct a previous over estimate of goods on order, then key the quantity followed by a minus ('-') sign.

Lot

If this item is lot, serial or batch controlled (as specified on the Item Master file), enter up to 15 alphanumeric characters to specify the lot that will receive this item.

The lot number is *not mandatory* for recording a purchase order, but *is mandatory* when actually issuing, receiving or adjusting stock.

If you wish to receive these items into an existing lot, then prompt on the Lot field and all lot numbers for this item will be displayed. If you enter a new lot number for this purchase order, it would automatically create it when subsequently

prompting on the Lot field for this item, the new lot number will be displayed with no stock present on the physical or available balances.

Cost/Unit

Any data entered is overwritten by the cost determined by the costing method, i.e. Standard, Latest, Average, FIFO.

Note: The reference number, date and type, the narrative and movement reason will default to the values input on the Selection Screen. However, these may be amended for an individual movement.

Press **Enter** to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. The screen may still be changed.

The Details Screen continues to re-display until no more changes have been made, in which case pressing **Enter** processes the movements and prompts for the next item number.

When the batch of movements has been entered and the last movement has been processed, press **F12=Previous** to return to the previous screen.

Warehouse Details Window

 This window is displayed when the Stockroom specified for the receipt is defined as a Warehouse and you enter item details in the Customer Order Issue Detail Screen and press **Enter**.

You use this window to enter the warehousing details for the item. These are the details of where the item is stored in the warehouse.

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the Company Profile. This field is mandatory.

Reference Number

Enter up to fourteen alphanumeric characters which specify the reference number of the movement, this may be linked with the reference type specified.

Note: This field is mandatory if you are receiving goods into a Bonded Stockroom.

Reference Date

Enter a valid date to specify the reference date. This field is mandatory and defaults to the current date.

If the date the movement actually took place is not the same as the current date, you may change the reference date. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Reference Type

Enter up to three alphanumeric characters which specify the reference type. These are defined on the Descriptions File against the Major Type 'TRAN'. You can use the reference type as a mnemonic to describe the reference number, for

example, REQ may indicate that the reference number is a stores requisition note number.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative or description associated with the movement.

Reason Code

The Reason Codes available depend on whether you are receiving goods into a Bonded or non Bonded stockroom.

- If you are receiving goods into a non Bonded Stockroom:
 - Enter a reason code chosen from those defined on the Inventory Descriptions file major type MOVR.
- If you are receiving goods into a Bonded Stockroom:
 - Enter a reason code chosen from those defined on the Inventory Descriptions file major type RCPT.

Tip: All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Press **Enter** to accept the details you have entered and display the Purchase Order Receipt Detail Screen for entry of individual movements.

Purchase Order Receipt Details Screen

This screen is displayed after you have made valid entries on the Purchase Order Receipt Selection Screen.

Note: If the message 'you cannot make a receipt for more than has been ordered' is displayed, return to Record Purchase Order and enter a new order before attempting to receive stock.

The updates associated with this transaction type are as follows:

- Add to physical stock.
- Subtract from on-order.
- Recalculate available.
- Recalculate costs (average, latest, and the creation of a FIFO record, depending on costing method).
- Update date of last receipt.

As costs are being re-calculated, a cost should be entered if any form of actual costing is being used. A new lot/batch record is created if the item is lot controlled and if a lot of the stated number does not already exist.

06-63	SA	MW	KS IM II KENB20A PET007S2

Fields:

Stockroom

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the Company Profile. This field is mandatory.

Reference Number

Enter up to fourteen alphanumeric characters which specify the reference number of the movement, this may be linked with the reference type specified.

Reference Date

Enter a valid date to specify the reference date. This field is mandatory and defaults to the current date.

If the date the movement actually took place is not the same as the current date, you may change the reference date. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Reference Type

Enter up to three alphanumeric characters which specify the reference type. These are defined on the Descriptions File against the Major Type 'TRAN'. You can use the reference type as a mnemonic to describe the reference number, e.g. 'REQ' may indicate that the reference number is a stores requisition note number.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative or description associated with the movement.

Reason Code

Enter a reason code chosen from those defined on the Descriptions file against major type 'MOVR'.

Tip: All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Press **Enter** to accept the entered details and display the Adjust Physical Stock Detail Screen for entry of individual movements.

Adjust Physical Stock Details Screen

This screen is displayed when valid entries have been made in the Adjust Physical Stock Selection Screen.

It shows details of stock for adjustment.

F3=Exit F4=Prompt F12=Previous			
07-24	SE	MW	KS IM II KENB20A PET007S2

Fields:

Stockroom

Enter up to two alphanumeric characters to specify the stockroom from which the purchase order will be issued. The value input on the previous screen will be displayed as a default, but it may be changed if necessary.

Item

Enter up to fifteen alphanumeric characters to specify the item on order. The item must be defined to the items file and linked to the stockroom through Inventory maintenance. The search facility is available.

Movement Quantity

Enter the quantity to be adjusted. If you wish to enter a negative quantity to correct a previous over estimate of goods on order, then key the quantity followed by a minus ('-').

Lot Number

If this item is lot, serial or batch controlled (as specified on the item master file), enter up to 15 alphanumeric characters to specify the lot that will receive this item.

The lot number is *not mandatory* for recording a purchase order, but *is mandatory* when actually adjusting stock.

If you wish to change an existing lot, then prompt on the Lot field and all lot numbers for this item will be displayed. If you enter a new lot number for this purchase order, it would automatically create it when subsequently prompting on the Lot field for this item, the new lot number will be displayed with no stock present on the physical or available balances.

Cost/Unit

For positive adjustments, enter up to fifteen numeric characters, five decimals, which specify the cost/unit for this movement. For negative adjustments the cost used depends on the costing method.

If the movement is a goods receipt transaction and Latest, Average or FIFO costing is in use, this method of costing will be used to value the movement. Otherwise the movement will be valued according to the costing method defined for the item/stockroom.

Note: The reference number, date and type, the narrative and movement reason will default to the values input on the previous screen. However, these may be amended for an individual movement.

Press **Enter** to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. The screen may still be changed.

The details screen continues to re-display until no more changes have been made, in which case pressing **Enter** processes the movements and prompts for the next item number.

When the batch of movements has been entered and the last movement has been processed, press **F12=Previous** to return to the Adjust Physical Stock Selection Screen.

The updates associated with this transaction type are as follows:

- Adjust physical stock.
- Recalculate available stock and frozen stock.

When the physical stock balance is adjusted, the available or frozen stock balances, as appropriate, will be updated by the same amount.

Lots or batches may be adjusted using this procedure, if the item is lot, batch or serial controlled. If a new lot number is specified it is automatically created.

Warehouse Details Window

This window is displayed when the Stockroom specified for the receipt is defined as a Warehouse and you enter item details in the Adjust Physical Stock Details Screen and press **Enter**.

You use this window to enter the warehousing details for the item. These are the details of where the item is stored in the warehouse.

Press **F3=Exit**.

Receive Bottles

9/DIP

This option is specifically for Bonded stock. The procedure enables the recording of details of a receipt for which no record of supply has been made.

When orders are recorded in Sundry Receipts, the item uses cases as the unit of measure. However, in the event of breakage, supply may be incomplete. It is very important that Bonded stock is strictly controlled for both business practice and for legal reasons. Therefore, a case would not be classified as being received as a complete case, if it contains breakage.

You use this option to identify the exact number of bottles, from the case, that remained intact and were received.

Note: The breakage will be the responsibility of the suppliers and therefore does not need to be recorded.

Receive Bottles Selection Screen

Select the Receive Bottles option.

Note: This field is only displayed if you are receiving goods into a Bonded Stockroom.

Movement Quantity

Enter the quantity to be received in dual units. The quantity must be positive and entered in issue units, and must be less than the number of issue units in a stock unit.

Lot

If this item is lot, serial or batch controlled (as specified on the item master file), enter up to 15 alphanumeric characters to specify the lot that will receive this item.

The lot number is *not mandatory* for recording a purchase order, but *is mandatory* when actually issuing, receiving or adjusting stock.

If you wish to receive these items into an existing lot, then prompt on the Lot field and all lot numbers for this item will be displayed. If you enter a new lot number for this purchase order, it would automatically create it when subsequently prompting on the Lot field for this item, the new lot number will be displayed with no stock present on the physical or available balances.

Note: This field is not displayed if you are receiving goods into a Bonded Stockroom.

Quantity Units

Enter the Quantity Unit of Measure for the Item, or enter the Item and use the prompt in this field to pick up the unit from the Item Master File.

Note: This field is not displayed if you are receiving goods into a Bonded Stockroom.

Cost/Unit

Enter up to fifteen numeric characters, five decimals, which specify the cost/unit for this movement, unless standard costing is in use.

If the movement is a goods receipt transaction and Latest, Average or FIFO costing is in use, this method of costing will be used to value the movement. Otherwise the movement will be valued according to the standard cost defined for the item/stockroom.

Press **Enter** to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. The screen may still be changed.

Press **Enter** again to continue with the receipt process.

Note: If you are processing receipts for a non Bonded Stockroom, you are returned to a blank Receive Bottles Details Screen, to allow you to enter another receipt.

If you are processing receipts for a Bonded Stockroom, you are taken to the Bond Rotation Receipt screens to enter bond information for the receipt.

Refer to the Drinks Bonded Inventory product information for more details.

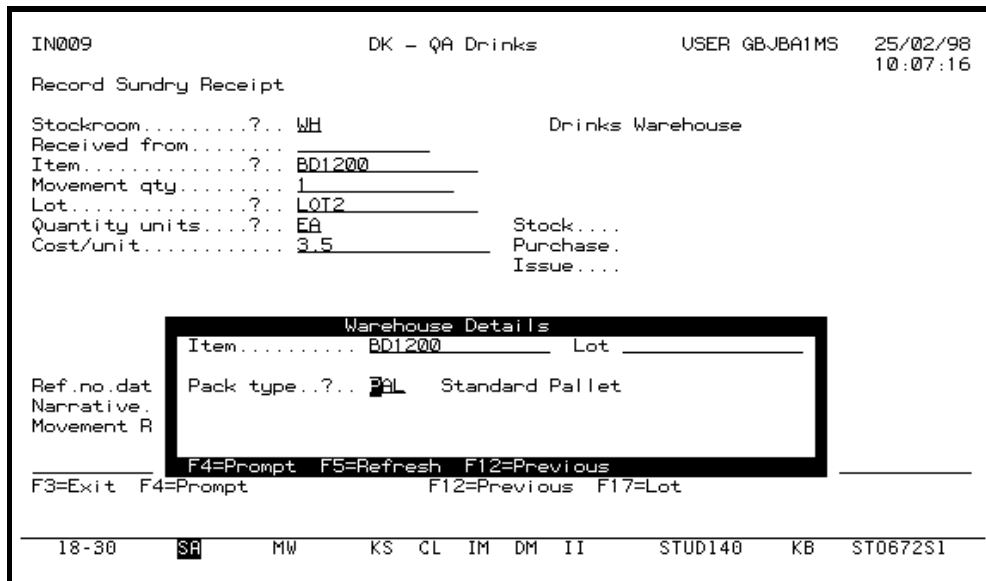

When the batch of movements has been entered and the last movement has been processed, press **F12=Previous** to return to the Receive Bottles Selection Screen.

Warehouse Details Window

 This window is displayed when the Stockroom specified for the receipt is defined as a Warehouse and you enter item details in the Receive Bottles Details Screen and press **Enter**.

You use this window to enter the Warehousing Pack Type for the item. This is the pack in which the item is stored in a warehouse.

The screenshot shows a terminal window with the following content:

Fields:

Pack Type

Enter the Pack Type for the item. This is the default pack type in which the item is stored in the warehouse.

The default pack type for an item is defined in Item / Warehouse Profile Maintenance.

 Enter the Pack Type and press **Enter** to record the stock movement in the warehouse and return to the Receive Bottles Details Screen.

Expense Account Adjustments

21/DIP

Responsibility for stock needs to be well defined to ensure accuracy of stock figures. It is important that those users who are responsible for a stockroom have control over the transactions which affect stock.

In Drinks Sales Order Processing there can arise situations where one set of users are entering data which affects stock under the control of another user. In these situations transactions are not recorded directly against the stock balances, but indirectly against Expense Accounts. Thereafter, the user responsible can investigate and take corrective action.

The Expense Account details which are held against an Item/Stockroom are:

Expense Account Code (2 character code held on the Descriptions file in Major Type 'BADJ')

- Expense balance this week.
- Expense balance next week.
- Expense balance this period.
- Expense balance this year.

Seven sets of such figures can be held for a single item/stockroom.

The figures are processed at week/month/year end to ensure the balances are carried from week to period to year.

Besides the balances, all the detailed transactions are recorded in the Expense Accounts Adjustments file. This is very similar to the Stock Movement file.

In Drinks Inventory Management there is a facility to maintain and adjust the figures from one Expense Account to another and there are two enquiry programs. The enquiries are discussed in detail in the Enquiry section, in Expense Account by Item / Stockroom Enquiry and Expense Account by Expense Account Enquiry.

Expense Account Adjustments Selection Screen

Select the Expense Account Adjustments option.

This screen is used to identify header information for one or more adjustments to Expense Account data.

Fields:

Item

Item number

Movement Quantity

Adjustment quantity

Lot

Lot number (or batch / serial number) if this is applicable.

From Expense Account

The expense account code from which the adjustment quantity will be subtracted. This must be a valid value held against Major Type 'BADJ'.

To Expense Account

The expense account code to which the adjustment quantity will be added. This must be a valid value held against Inventory Description file Major Type 'BADJ'.

Only certain types of transfer are allowed. This is controlled by the 'rate' field on the Inventory Description 'BADJ'. If the sum of 'rates' on the from and the to expense accounts is greater than 3, then the transfer is allowed.

Cost / Unit

The cost if the item is not standard costed.

Press **Enter** to validate the data, then press **Enter** again to adjust the balances for the two expense accounts.

Warehouse Details Window

 This window is displayed when the Stockroom specified for the adjustment is defined as a Warehouse and you enter item details in the Expense Account Adjustments Details Screen and press **Enter**.

You use this window to enter the warehousing details for the item. These are the details of where the item is stored in the warehouse.

Pack Type

Enter the Pack Type for the item. This is the default pack type in which the item is stored in the warehouse.

The default pack type for an item is defined in Item / Warehouse Profile Maintenance.

Label Number

Enter the warehouse Label Number for the item.

Location

Enter the warehouse Location for the item.

 Enter the warehouse details and press **Enter** to record the stock movement in the warehouse and return to the Expense Account Adjustments Details Screen.

Stock Transfers

When a transfer takes place between two stockrooms, there is often not only a physical change in location, which may take some time to accomplish, but also a change in responsibility. Drinks Inventory Management has two movements to record these actions, one to transfer goods out of a stockroom and the second to transfer goods into a different stockroom. Transfer Out and Transfer In are used in conjunction to perform the two halves of a stock transfer, or alternatively, the two activities can be achieved in a single process.

Note: A transfer can only take place if the item is already defined at the 'to' stockroom using the Stockroom Details option.

Tip: If a message indicating that there is **Insufficient Physical Stock** in the stockroom for the desired transfer to take place appears at the base of the screen and you wish to proceed with the transfer you should take the following course of action:

Exit the transfer option.

Note: If you are unsure as to which stock balance is preventing the transfer from occurring take the Item/Stockroom option. This will enable you to view each stock balance for the item/stockroom combination.

- *Take the appropriate stock adjustment option: physical, allocated or frozen, to increase that stock balance.*
- *Return to the Stock Transfer option and continue as before.*

Transfer Out

31/DIP

This procedure enables the recording of the first part of a transfer, the booking out of the stock at the 'From' stockroom.

Transfer Out Selection Screen

Select the Transfer Out option.

Fields:

Stockroom

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the Company Profile. This field is mandatory.

Reference Number

Enter up to fourteen alphanumeric characters which specify the reference number of the movement, this may be linked with the reference type specified.

Reference Date

Enter a valid date to specify the reference date. This field is mandatory and defaults to the current date.

If the date the movement actually took place is not the same as the current date, you may change the reference date. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Reference Type

Enter up to three alphanumeric characters which specify the reference type. These are defined on the Descriptions File against the Major Type 'TRAN'. You can use the reference type as a mnemonic to describe the reference number, e.g. 'REQ' may indicate that the reference number is a stores requisition note number.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative or description associated with the movement.

Reason Code

Enter a reason code chosen from those defined on the Descriptions file against major type 'MOVR'.

Tip: All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Press **Enter** to accept the entered details and display the Transfer Out Detail Screen to allow entry of individual movements.

Transfer Out Details Screen

This screen is displayed when you press **Enter** after entering valid details into the Transfer Out Selection Screen.

It is used to allow individual movements.

Fields:

Stockroom

Enter up to two alphanumeric characters to specify the stockroom from which the purchase order will be issued. The value input on the Selection Screen will be displayed as a default, but it may be changed if necessary.

To Stockroom

Enter the stockroom code of the stockroom to which the item is transferred.

Item

Enter up to fifteen alphanumeric characters to specify the item on order. The item must be defined to the items file and linked to the stockroom through Inventory maintenance. The search facility is available.

Movement Quantity

Enter up to eleven characters, three decimals to specify the quantity to be received. If you wish to enter a negative quantity to correct a previous over estimate of goods on order, then key the quantity followed by a minus ('-') sign.

Lot Number

If this item is lot, serial or batch controlled (as specified on the Item Master file), enter up to 15 alphanumeric characters to specify the lot that will receive this item.

The lot number is *mandatory* when actually issuing stock and must exist.

Cost/Unit

This displays the cost per unit of the issued stock based on the costing method.

Note: The reference number, date and type, the narrative and movement reason will default to the values input on the previous screen. However, these may be amended for an individual movement.

Press **Enter** to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. The screen may still be changed.

The Transfer Out Details Screen continues to re-display until no more changes have been made, in which case pressing **Enter** processes the movements and prompts for the next item number.

When the batch of movements has been entered and the last movement has been processed, press **F12=Previous** to return to the Transfer Out Selection Screen.

The updates associated with this transaction type are as follows:

- Subtract from physical stock (From stockroom).
- Recalculate available stock (From Stockroom).
- Add to in-transit stock (To stockroom).
- Usage is updated at the 'from' stockroom.
- Date of issue is updated at the 'from' stockroom.

Costing Methods

If a method of costing is specified on the item file, the transaction is costed as follows:

- Average costing
 - The movement is valued at the average cost of the 'from' stockroom, causing a re-calculation of average cost the 'to' stockroom.
- Standard costing
 - The movement is valued at standard cost of the 'from' stockroom.
 - The movement is valued at standard cost of the 'to' stockroom.
 - Any difference is written to the Inventory movement file as an 'A' type value only adjustment.
- FIFO
 - The movement out is valued at FIFO cost.

- The movement in is at the same value and creates a new FIFO record.

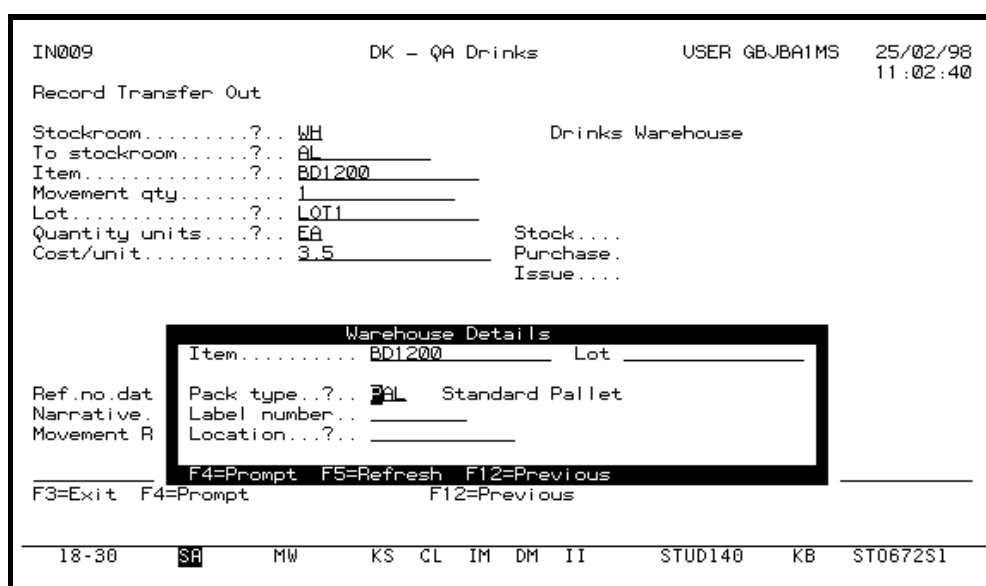

Tip: If the item is lot controlled, Drinks Inventory Management will automatically create a lot with the same lot header details as the lot in the 'from' stockroom. Until stock is transferred into this batch, both the physical and available balances are set to zero.

Warehouse Details Window

 This window is displayed when the Stockroom specified for the adjustment is defined as a Warehouse and you enter item details in the Transfer Out Details Screen and press **Enter**.

You use this window to enter the warehousing details for the item. These are the details of where the item is stored in the warehouse.

This window is only displayed if the Stockroom you are transferring out of is defined as a Warehouse.

Fields:

Pack Type

Enter the Pack Type for the item. This is the default pack type in which the item is stored in the warehouse.

The default pack type for an item is defined in Item / Warehouse Profile Maintenance.

Label Number

Enter the warehouse Label Number for the item.

Note: This field is only displayed when the from Stockroom entered in the Single Item Transfer Selection, is defined as a Warehouse.

Location

Enter the warehouse Location for the item.

Note: This field is only displayed when the from Stockroom entered in the Single Item Transfer Selection, is defined as a Warehouse.

Enter the warehouse details and press **Enter** to record the stock movement in the warehouse and return to the Single Item Transfer Details Screen.

Multiple Item Transfer Out and In

34/DIP

This procedure enables the recording of a transfer for several Items, in a single transaction; the booking out of the stock at the 'From' stockroom, and the booking in of the stock at the 'To' stockroom.

Warning: This option is not available for Bonded Stockrooms.

Multiple Item Transfer Selection Screen

Select the Multi Item (Out and In) option.

Fields:

From Stockroom

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the Company Profile. This field is mandatory.

To Stockroom

Enter up to two alphanumeric characters which specify the stockroom. The stockroom must exist on the Company Profile. This field is mandatory.

Reference Number

Enter up to fourteen alphanumeric characters which specify the reference number of the movement, this may be linked with the reference type specified.

Reference Date

Enter a valid date to specify the reference date. This field is mandatory and defaults to the current date.

If the date the movement actually took place is not the same as the current date, you may change the reference date. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Reference Type

Enter up to three alphanumeric characters which specify the reference type. These are defined on the Descriptions File against the Major Type 'TRAN'. You can use the reference type as a mnemonic to describe the reference number,

e.g. 'REQ' may indicate that the reference number is a stores requisition note number.

Narrative

Enter up to twenty alphanumeric characters which specify the narrative or description associated with the movement.

Reason Code

Enter a reason code chosen from those defined on the Descriptions file against major type 'MOVR'.

Tip: All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Type in the 'From' and 'To' Stockrooms, and, optionally, the reference details, then press **Enter**. The system will display the Multiple Item Transfer Details Screen

Multiple Item Transfer Details Screen

This screen is displayed when you have made valid entries into the Multiple Item Transfer Selection Screen.

It allows you to specify the Items and Quantities that you wish to Transfer, line by line.

Fields:

Item

Enter up to fifteen alphanumeric characters to specify the item on order. The item must be defined to the items file and linked to the stockroom through Inventory maintenance. The search facility is available.

Movement Quantity

Enter the quantity to be transferred. The quantity must be positive.

Lot Number

If this item is lot, serial or batch controlled (as specified on the Item Master file), enter up to 15 alphanumeric characters to specify the lot that will receive this item.

The lot number is *mandatory* when transferring stock.

Lots are automatically created at the 'To' stockroom if they do not exist.

Quantity Units

Enter the Quantity Unit of Measure for the Item, or enter the Item and use the prompt in this field to pick up the unit from the Item Master File. This must be the issue units for dual unit items.

Note: The reference number, date and type, the narrative and movement reason will default to the values input on the Multiple Item Transfer Selection Screen. However, these may be amended for an individual movement.

Press **Enter** to display the cost per unit.

The Multiple Item Transfer Details Screen continues to re-display until no more changes have been made, in which case pressing **Enter** moves the data to the top half of the screen. Any items can be amended by selecting from the top half of the screen.

When the batch of movements has been entered and the last movement has been processed, press **F8=Update** to process the movements.

For each item the following updates are performed:

- From stockroom
 - Physical and Available stock is reduced.
 - Issue date is changed.
- To stockroom
 - Physical and available stock is increased.
 - Receipt date is changed.

Warehouse Details Window

This window is displayed when the Stockroom specified for the adjustment is defined as a Warehouse and you enter item details in the Multiple Item Transfer Details Screen and press **Enter**.

You use this window to enter the warehousing details for the item. These are the details of where the item is stored in the warehouse.
