Chapter 3

Stock Counting

Drinks Inventory Management Stock Counting Function

Drinks Inventory Management incorporates a Stock Counting function which provides assistance with the control, documentation, reconciliation and adjustment of stock counting.

Reference data is maintained against the Drinks Inventory Stockroom definitions in order to provide the following:

- ABC Classification criteria for items.
- Count frequencies - number of counts per year for each ABC class of item.
- Tolerance criteria in order to assess count error conditions.

This data is used for recommendations and count creation, then, once the count lists are printed and actual stock quantities entered, again during the reconciliation process.

To assist in reconciliation, a report of item movements that have taken place since the first count reconciliation request can be produced and, if required, automatic stock movements can take place to adjust the computer stock figure.

Note: Automatic stock adjustments are not allowed in a UK bonded stockroom.

See the Appendix for a detailed plan of the flow through stock counting. All the stockroom stock counting functions can be accessed from the Drinks Inventory Management Stock Counting menu.

Count Profile Maintenance

1/DIS

This function provides for the definition of count processing criteria for an Inventory stockroom. In addition, if counting by classification is defined for a stockroom, criteria for A,B and C class items within the stockroom are defined.

Note: See the Company Profile - Stock Weeks Matrix Maintenance and the Company Profile - Stockroom Details in the Module Reference Data section of this Product Information to define additional information regarding the ABC classifications.

Count Profile Maintenance Selection Screen

Select the Count Profile Maintenance option.

The system will display a selection screen which allows you to select the stockroom you want to work with.

```

05-27  S      MW      KS      IM      II  KENB20A  PET007S2

```

Fields:

Stockroom

Stockroom code must be defined to the Inventory company profile and represents a discrete area of the company where stock needs to be recorded and controlled separately from other company stocks. The **F4=Prompt** is available.

Press **Enter** to display the Count Profile Maintenance Details Screen.

Count Profile Maintenance Details Screen

This screen is displayed when a valid stockroom is entered on the Count Profile Maintenance Selection Screen.

It enables the entry of counting criteria for stockroom or warehouse.

IN106	HW - Handy Wholesalers Ltd	User PGMR1	6/12/96 15:32:37
Stock Count Profile Maintenance			
Stockroom	01	Central Depot (BEERS)	
Last count number	1	S M T W T F S

View quantity on count ..	2	0=No,1=Yes	
Count by class	0		
Tolerances:			
Percentage (-ve)			
Percentage (+ve)			
Value (-ve)		.00	
Value (+ve)		.00	
F3=Exit F8=Update F11=Delete F12=Previous			
00-27	SE	MW	KS IM II KENB20A PET007S2

Fields:

Last Count Number

Last count number used within the stockroom. This is automatically assigned during count creation.

Overdue Days

Overdue days represents the number of days at which counts become overdue for printing, based on the date of count recommendation as entered at count request time.

Counting Days

Identify the days of the week (by altering the field from '0' to '1') on items of classification 'A' are to be considered for counting when counting by frequency. The first element will correspond to the first day of the week, derived from the inventory week end calendar. (This does not have to be Monday).

Time Fence Days

Time fence days provides the default for count requests by ABC classification and defines the number of days after the entered date of recommendation, which will be considered for further daily count objectives.

View Quantities

View quantities defines whether recorded or computer stock figures are visible to the user after the first reconciliation of a count:

0 - No visibility.

1 - Printed. Computer stocks are printed on reprinted count sheets and reconciliation reports only.

2 - Screens. Computer stocks are displayed on count entry screens only.

3 - Both. Computer stocks are printed and displayed on screens.

Count By Class

Defines if count by class is allowed for the stockroom. If switched on, by entering a '1' in this field, tolerances must be defined for each class i.e. A, B and C.

Count by class cannot be switched off whilst outstanding counts exist for the stockroom.

Negative Percentage Tolerance

Minimum percentage tolerance for stock shortage. A short fall greater than this tolerance will be considered a count error at reconciliation.

Positive Percentage Tolerance

Maximum percentage tolerance for stock shortage. Anything greater than this tolerance will be considered a count error at reconciliation.

Percentage error is calculated as follows:

$$\frac{(\text{CountedQuantity} - \text{ComputerQuantity})}{\text{ComputerQuantity}} \times 100$$

Negative Value Tolerance

Minimum value tolerance for stock shortage. A short fall greater than this tolerance will be considered a count error at reconciliation.

Positive Value Tolerance

Maximum value tolerance for stock shortage. Anything greater than this tolerance will be considered a count error at reconciliation.

Value errors are calculated according to the costing method of the item as follows:

$$(\text{Counted Quantity} - \text{Computer Quantity}) \times \text{COST}$$

COST = Standard/Latest/Average according to costing method of item.

Discrepancies for FIFO costed items are valued at latest cost.

Press **F8=Update** to save changes to the file.

Count Profile Enquiry

2/DIS

Provides for the enquiry of count processing criteria and item/stockroom ABC classification for an Inventory stockroom or warehouse.

Count Profile Enquiry Selection Screen

Select the Count Profile Enquiry option.

The system will display the selection screen, to allow you to select a valid Stockroom.

```

01-02		SE		MW		KS IM II KENB20A PET007S2	

Fields:

Last Count Number

Last count number used within the stockroom or warehouse. This is automatically assigned during count creation.

Overdue Days

Overdue days represents the number of days at which counts become overdue for printing, based on the date of count recommendation as entered at count request time.

Counting Days

Identify the days of the week on which items of classification 'A' are to be considered for counting by the count frequency function. The first element will correspond to the first day of the week, derived from the Inventory week end calendar. (This does not have to be Monday).

Time Fence Days

Time fence days provides the default for count requests by ABC classification and defines the number of days after the entered date of recommendation, which will be considered for further daily count objectives.

View Quantities

View quantities defines whether recorded or computer stock figures are visible to the user after the first reconciliation for a count:

0 - No visibility.

1 - Printed. Computer stocks are printed on count sheets and the reconciliation report only.

2 - Screens. Computer stocks are displayed on count entry screens only.

3 - Both. Computer stocks are printed and displayed on screens.

Count By Class

Defines if count by class is allowed for the stockroom. If switched on, tolerances must be defined for each class i.e. A, B and C.

Count by class cannot be switched off whilst outstanding counts exist for the stockroom.

Negative Percentage Tolerance

Minimum percentage tolerance for stock shortage. A short fall greater than this tolerance will be considered a count error at reconciliation.

Positive Percentage Tolerance

Maximum percentage tolerance for stock shortage. Anything greater than this tolerance will be considered a count error at reconciliation.

Percentage error is calculated as follows:

$$\frac{(\text{CountedQuantity} - \text{ComputerQuantity})}{\text{ComputerQuantity}} \times 100$$

Negative Value Tolerance

Minimum value tolerance for stock shortage. A short fall greater than this tolerance will be considered a count error at reconciliation.

Positive Value Tolerance

Maximum value tolerance for stock shortage. Anything greater than this tolerance will be considered a count error at reconciliation.

Value errors are calculated according to the costing method of the item as follows:

$$(\text{Counted Quantity} - \text{Computer Quantity}) \times \text{COST}$$

COST = Standard/Latest/Average according to costing method of item.

Discrepancies for FIFO costed items are valued at Latest cost.

Note: If you wish to display item / stockroom information i.e. stock balances, costing and valuation, usage details, use the Item / Stockroom Enquiry. (For a full explanation see the Enquiries section of this Product Information.)

Press **Enter** to save the details to file.

Regenerate ABC Classifications

1...
2... **11/DIS**

This function facilitates the reclassification of items within a stockroom based on their average usage and cost in relation to the stockroom cost/usage matrix. Once reclassified the next count date for each item in the stockroom is recalculated based on the last count date and the criteria defined for the stockroom count profile.

This function is prompted at Period End processing within Inventory when average usage for item/stockroom profiles are recalculated; (Week or Month End depending on usage cycle of Inventory company).

This option should be used to reassign classifications and next count dates to items.

This may be required if a stockroom matrix has been changed or a stockroom count profile has been changed.

Regenerate ABC Classifications Selection Screen

Select the Regenerate ABC Classifications option.

The system will display a selection screen which allows you to select a valid stockroom.

```

IN933          HW - Handy Wholesalers Ltd          User PGMR1          6/12/96

Fields:

Stockroom

Enter the stockroom code whose items are to be reclassified according to their usage and cost.

Press **Enter** to reclassify the items in the selected stockroom.

Create Count by ABC Recommendations

1... **21/DIS**
2...

Creation of counts based on the next due for count date defined for each item within the stockroom.

One count will be produced for all items due for count before or on the count recommendation date entered on the screen.

Additional counts will be produced for each day after the entered date up to the number of time fence days specified. These counts will contain items that are due for count on the specific date only and provide a forward looking view of future work loads.

Selection of items is also based on the maximum number of items to count per class as specified on the stockroom count profile.

Created counts can be printed immediately or can be created as recommended counts which can be reviewed prior to print.

Create Count by ABC Classification Selection Screen

Select the Create Count by ABC
Recommendations option.

The system will display the selection screen which will allow you to select a valid stockroom.

```
IN116A          Create IN ABC count                      Date:  6/12/96
                                                         Time: 15:35:12

05-32      [Cursor] MW      KS      IM      II  KENB20A  PET007S2
```

Fields:

Stockroom

Enter the Stockroom code whose items are to be reviewed based on due date for count.

Press **Enter** to display the Create Count by ABC
Classification Details Screen.

Create Count by ABC Classification Details Screen

This screen is displayed when you have selected a valid stockroom from the Create Count by ABC Classification Selection Screen.

IN116B	Z1 - Demonstration Company	User SP1	26/08/94 9:24:59
Create Count by Class/Date Control			
Stockroom	01	Central Stockroom	
Number of days	<u>2</u>	from	<u>26/08/94</u>
Print count sheets	<u>0</u>	0=No,1=Yes	
No of instructions/list	<u>0</u>		
F3=Exit F8=Submit F12=Previous			

Fields:

Number Of Days

This time fence defines the number of days after the date of recommendation (displayed to the right of the screens), which will be reviewed separately for count creation. Where possible a daily count will be produced detailing the items that are due for count on the specific day, thus giving a view of future counts and workloads.

From...Date

The date of count recommendation is the date from which items will be selected based on their next due for count date.

Print Count Sheets

This field indicates whether count sheets should be printed immediately after the generation of recommendations.

If selected for print the count becomes outstanding immediately after generation and the option to review recommendations prior to print, is bypassed. Otherwise the Maintain Count Recommendations function is available for reviewing counts.

Number Of Instructions Per List

When printing count recommendations, this value is the maximum number of items or location details that are to be printed on an action list.

An entry of zero ensures that all instructions for the count will appear on one list only.

Note: It is possible that after running the Create Count by ABC Recommendation option no counts are actually produced. This situation may arise for one of two reasons:

Firstly, on the Count Profile you will have specified how often each item classification (A, B or C) should be counted.

If the number of counts per year field is set to count items relatively infrequently and all items have recently been counted, then no items may be due to be counted, and hence no count recommendations produced.

Alternatively, items that are currently being counted cannot be included on other count lists, whether active or recommended. Hence any items appearing on manually requested counts lists, at either a summary or detail level, will not appear on a count list created by ABC Recommendation.

Create Count by Manual Range

1...
2... **22/DIS**

Counts can be created for one stockroom based on item range selection, item attribute selection, or a list of items can be specified.

A single stockroom may be entered in addition to a single or range selection of one of the following item attributes as defined for the item:

- Item number
- Item group (major and minor)
- Item type
- Item class
- Count class (A,B,C or Z)

Created counts can be printed immediately or can be created as recommended counts which can be reviewed prior to print.

Create Count by Manual Range Selection Screen

Select the Create Count by Manual Range option.

The system will display a selection screen, which allows you to select the range you want to count.

F3=Exit F4=Prompt F5=Refresh F8=Submit F16=Item List			
07-30	SA	MW	KS IM II KENB20A PET007S2

Fields:

Stockroom

Enter the stockroom code whose items are to be selected for count - it must exist as a stockroom defined to the company. A stockroom code must be entered.

Item

This is the code which serves to uniquely identify an item.

If a single item is selected, then it must exist on the item master file. If, however, you are entering a range, the 'from and 'to items which are used to define the range need not exist on the item master file, except when they are the same value.

Item Group Major

Enter a valid item group major code as defined to the Descriptions File against the Major Type 'PGMJ'.

If a single major/minor combination is selected, it must exist on the item master file. However, if you are entering a range, the 'from and 'to major/minor groups which are used to define the range need not exist on the item master file, except when they are the same value.

Item Group Minor

This is the item group minor as defined to the Descriptions File against the Major Type 'PGMN'.

If a single major/minor combination is selected, it must exist on the item master file. However, if you are entering a range, the 'from' and 'to' major/minor groups which are used to define the range need not exist on the item master file, except when they are the same value.

Item Type

This is the item type as defined to the Descriptions File against the Major Type 'PTYP'.

If a single item type is selected, then it must exist on the item master file. However, if you are entering a range, the 'from' and 'to' item types which are used to define the range need not exist on the item master file, except when they are the same value.

Item Class

This is the item class as defined to the Descriptions File against the Major Type 'PCLS'.

If a single item type is selected, then it must exist on the item master file. However, if you are entering a range, the 'from' and 'to' item classes which are used to define the range need not exist on the item master file, except when they are the same value.

Count Class

This is the classification of items within a given stockroom by a combination of their usage and value. They are then categorised by this into classes A, B and C.

Items with the highest usage and value are usually classified as A and receive the most attention. Class B receives less attention, while class C with the lowest usage and value combination receive the least attention.

This means that effort is saved by relaxing controls on low value, low usage items which allows for more control of the higher value, higher usage items.

Valid classes are 'A', 'B', 'C' and 'Z'. The 'Z' class allows exclusion from count requests by ABC classification.

Count Date

The date which will be associated with this count recommendation.

Print Count Sheets

This field indicates whether count sheets should be printed immediately after the generation of recommendations.

If selected for print the count becomes outstanding immediately after generation and the option to review recommendations prior to print, is bypassed. Otherwise the Maintain Count Recommendations function is available for reviewing counts.

Number Of Instructions Per List

When printing count recommendations, this value is the maximum number of item or location details that are to be printed on an action list.

If warehousing is attached then the value will default to the value defined for the Warehouse List Profile for count lists.

An entry of zero will ensure that all instructions for the count will appear on one list only.

Note: If the 'from entry is keyed and the 'to entry is blank for any range, the 'to entry defaults to the 'from entry.

Tip: If no other selection criteria is specified, all items will be selected within the specified stockroom range.

Functions:

Fields:

Item Code

Enter the item codes you want.

 *Note: Entering an item list is mutually exclusive to selecting a range of items / groups etc. Any item entered must be in the selected stockroom and must not exist on an outstanding count.*

 Press **F8=Update** to save any changes to the file.

Create Count by Frequency

23/DIS

Counts can be created for one or more stockrooms based on the following classes:

A Class - Daily Frequency

The Stockroom Profile Counting Days indicates on which day of the week the item will be counted.

B Class - Weekly Frequency

The Stockroom details 'Count Day' indicates on which single day of the week (1-7) the item will be counted.

C Class - Period Frequency

The stockroom details 'Count Day' indicates on which single day of the period (1-35) the item will be counted.

Create Count By Frequency is normally used in place of Create Count by ABC Recommendations - however, it is possible to use both.

All other options are the same as for Count by ABC Recommendations (see Create Count by ABC Recommendations).

Tip: To control this option the ABC class override on the item / stockroom profile should be specified for all items.

Maintain Count Recommendations

31/DIS

Recommended counts can be reviewed prior to being printed, if the option to print count sheets was not taken when the count was requested.

Summary recommendations i.e. a request to count all balances for an item, can be added or deleted. In addition, detail recommendations - i.e. specific lots, batches or serial numbers - can be requested for count. Counts can be deleted in their entirety and all associated items taken 'off count'.

Tip: Detailed recommendations can only be added if a summary recommendation does not exist for the item.

Any additions are considered, 'Unplanned requests' and an appropriate reason code must be entered.

Maintain Count Recommendations Selection Screen

Select the Maintain Count option.

The system will display a Selection Screen, which enables you to select a valid stockroom and count number.

```

Fields:

Item

Enter a valid item number. This must have been defined to this stockroom, through the Stockroom Details Maintenance option.

Lot

Enter a valid lot, batch or serial number. This field is optional, only required if a detail count recommendation is required for a lot, batch or serial controlled item.

Note: If a count exists for a particular item at summary level then a detailed count recommendation cannot be generated for the same item, and vice versa.

Reason Code

Enter a valid reason code to be associated with the count request. The reason code must be a valid entry as defined to the descriptions file against the major type 'CTRE' and must be of an unplanned nature i.e. the reserved code of '#1' which represents a 'Planned request for an item originating from an initial count request cannot be used.

Press **Enter** to validate any entries you have made.

Count Warning Window

This window is displayed as a warning on update for count request by ABC classification where the number of items specified for any of the classifications exceeds the maximum number of 'items' to count as maintained against the stockroom count profile.

This situation can arise where unplanned additions are made to the count.

Enter Count Details

32/DIS

Counted details are entered on a list by list basis. Details can be added, changed or deleted until the list is recorded as complete. Lists can be deleted in their entirety and all associated items taken 'off count' (unless item details span a number of lists).

Item details can only be added if the item already exists as 'on count in this particular count. Any additions are considered 'Override' details and an appropriate reason code must be entered.

It is recommended that the list is not completed until the reconciled details have been reviewed, as once recorded as complete, a list can no longer be maintained.

Enter Count Details Selection Screen

Select the Enter Count Details option.

The system will display a Selection Screen which allows you to enter selection details.

Fields:

Stockroom

Enter the stockroom code for which the count has been requested.

Count Number

Enter the count number against which details are to be entered. It must be of an outstanding status i.e. printed.

List Number

Enter a valid list number which is associated with this count. Lists must be of incomplete or outstanding status.

Note: The stockroom must be entered in order to prompt on associated counts and lists.

Press **Enter** to display the Enter Count Details Screen.

Enter Count Details Screen

This screen is displayed when you have made a valid selection on the Enter Count Details Selection Screen.

It allows the entry and addition of detail item count quantities.

Position to item ..

Fields:

Item

Enter a valid item number, that is defined to the current stockroom and is already 'on count' in this count.

Lot

Enter a valid lot, batch or serial number. This is only required if item is lot, batch or serial controlled.

Note: New lot details may not be added to a count in a bonded stockroom.

Reason Code

Enter the reason code to be associated with the additional item details. The reason code must be a valid entry as defined to the descriptions file under major type 'CTRE' and must be of an override nature. The reserved code of '#1' which represents a 'Planned request for an item originating from an initial count request cannot be selected.

Quantity

Enter the counted quantity in dual unit format.

Press **Enter** to return the module to the Enter Count Details Screen; the stock balance for the additional item will not have been calculated, and will not be displayed in the Recorded quantity column.

Enter Count Details List Completion Window

This window is displayed when you press **F8=Update** on the Enter Count Details Screen and confirms a completed list.

All lists associated with a count must be completed before reconciliation 'with update can take place. Once all the count details have been entered for the list press the **F8=Update** key to update the entered quantities and display the screen.

Fields:

Complete List

Indicates whether the list is to be considered complete. Once flagged as complete a list cannot be further maintained.

*Note: The list cannot be completed if they contain detail records with lots referring to the special case of '*Lot Error*'.
These lots are generated during the printing of count sheets if no lots exist for a batch, lot or serial controlled item. In this case the update window is not displayed and you will then exit the option.*

Press **Enter** to validate your entry.

Complete Count Lists

33/DIS

If a count has many associated lists it may be easier to complete the list entries 'en masse' after all details have been entered and the results of reconciliation reviewed.

This facility provides the ability to select one or more lists for completion via a single operation without the need to manually maintain each list via count entry.

Lists cannot be complete if they contain detail records with lots referring to the special case of '* Lot Error *'. These lots are generated during the printing of count sheets if no lots exist for a batch, lot or serial controlled item.

Complete Count Lists Selection Screen

Print Count Sheets

41/DIS

Once count recommendations have been reviewed, count sheets can be printed on the output queue, according to the Drinks Sales Order Processing Depot Profile for the Stockroom. Summary recommendations are expanded - i.e. if an item is lot, batch or serial controlled, each reference with its associated balance is recorded.

If a lot, batch or serial controlled item has no recorded lots a record will be added to the count with a lot reference of '* Lot Error *'.

This reference must be deleted during count entry and the actual lots counted (if they exist) added or the item deleted from the count.

In addition, at time of print the workload for the count can be split across a number of lists based on the number of instructions on the count and the number of required instructions per list.

Print Count Sheet Selection Screen

Select the Print Count Sheets option.

The Selection Screen is displayed which enables you to select stockroom details.

Fields:

Stockroom

Enter the stockroom code for which the count has been requested.

Count Number From ... To

The count number must be of an outstanding status if a single count is entered BUT if entering a range, the 'from' and 'to' count numbers which are used to define the range need not exist except when they are the same value.

If the 'to' count number is left blank, it will default to the 'from' count number.

List Number From ... To

Enter the list number that is associated with a count. List numbers must be of incomplete or outstanding status if a single count is entered or if the 'from' and 'to' list are the same: BUT if entering a range, the 'from' and 'to' list numbers which are used to define the range need not exist.

If the 'to' list number is left blank and the 'from' and 'to' count number are the same, it will default to the 'from' list number.

Press **F8=Submit** to submit the job for processing.

Count Reconciliation

Reconciliation is the comparison of counted stock quantities with recorded computer stock quantities in order to assess stock count errors. When the first reconciliation is run for a count the computer stock values for all items / lot combinations or all lists or the count are recorded.

Stock errors are assessed on both a percentage quantity variance and a value variance basis as defined by the tolerances specified for the stockroom count profile.

For count profiles that are defined for count by classification, the appropriate classification tolerances are used for each item detail record i.e. A,B or C.

Where count by classification is not specified for the stockroom, the single default set of quantity percentage and value tolerance figures are used to assess count errors.

Reconciliation (without update) can be restricted to 'Complete lists within the count' or can additionally include 'Open lists that are still available for modification'. In addition the report content can be restricted such that it only includes those items with quantity/value variances.

Full detail or summary information by item can be printed, with selection by item range.

Detail or item summaries that are considered to be in error are flagged with an '*' at the right hand side of the report.

If an item summary is found to be in error but no errors have occurred for the detail lines, the summary is flagged for attention with a '**'. This situation will normally arise due to a number of small positive (or negative) variances which in total constitute an error.

A similar situation arises with reconciliation (with update) where detail lines exist that are in error; however the summary is not flagged as in error. This situation will normally arise due to a number of positive and negative variance errors at detail level that cancel each other out.

If this arises the system will assess whether the item summary is placed in error or the adjusted detail lines are ignored for the summary totals.

If they are in error, forced adjustments are made for ALL detail variances regardless of the extent of the variance, and the summary is flagged for attention with a '**'.

In order to assess whether variances are true count errors, Inventory movements that have occurred since the first reconciliation, (and the computer stocks recorded), can optionally be printed for those items that are in error, if required. The first reconciliation count, either with or without update, examines the current stock balance and records this as the 'Computer Stock'.

Reconciliation (with update) enables adjustments to be made if desired involving the update of the Inventory stockroom balances according to the variances specified.

Note: This is not allowed in UK Bonded

Stockrooms.

Full movement audit and history updates are reflected in Inventory for any adjustments that take place.

Additionally item count summaries are updated to reflect the type of count carried out for the item, together with the last count date and a recalculated next due count date; the stockroom period count history is updated to reflect the number and type of counts carried out for the stockroom.

If Drinks DRP and/or Production Planning are installed net change triggers are written for any adjusted items in order to facilitate the selective re-planning of items within the appropriate modules.

Count Reconciliation Without Update

1...
2...

51/DIS

Reconciliation (without update) can be restricted to 'Complete lists within the count' or can additionally include 'Open lists that are still available for modification'. In addition the report content can be restricted such that it only includes those items with quantity / value variances.

Count Reconciliation Without Update Count Selection

Select the Without Update option.

The system will display a selection screen which allows you to select stockroom details.

Enter the valid item reference number required.

If a single item is selected, it must exist on the item master file: *but* if entering a range, the 'from' and 'to' items which are used to define the range need not exist on the item master file except when they are the same value.

If the 'to' item is left blank, it defaults to the 'from' item.

Generate Adjustments

The following entries are valid:

0 - None. No adjustments to stock figures will be made.

Note: This is the only option allowed in a UK Bonded Stockroom.

1 - All. All quantity variances regardless of size will be adjusted within inventory.

2 - Outside tolerances. Only those variances which are flagged as errors (i.e. with '*') will be adjusted within Inventory.

Reason Code

A movement reason must be entered if adjustments are requested. Reason codes are defined to the Descriptions File against the Major Type 'MOVR'.

Note: A blank range selection for items will default to all items on the count.

Press **F8=Submit** to submit the job to be processed.

Reconciliation History Updates

The following count history updates are performed if count reconciliation is requested with update:

Item Count History

1. Count by Class

Number of recommended counts is incremented if item was a planned summary recommendation.

Number of unplanned counts is incremented if item was an unplanned recommendation i.e. originating from an addition via recommendations maintenance.

2. Count by Manual Range

Number of unplanned counts is incremented.

Stockroom Count History

1. Count by Class

Numbers of A, B and C items counted are incremented for all items that were planned via summary recommendations. In addition the numbers of A, B and C items that are in error are incremented for all items in error that were planned summary recommendations.

2. Count by Manual Range

Number of other counts is incremented. In addition the numbers of other counts that are in error is incremented if any of the items on those counts are in error.

Note: If Warehousing is installed and count by Warehouse location was selected, then other updates associated with these counts are performed. For a full explanation see the Stock Counting section of the Drinks Warehousing Product Information.

```

Fields:

Selection

Enter '1' against a line to display count details for that item.

Position To Item

If the list extends over a single screen, enter the item reference number or the first few characters of an item in order to position the count list at the required point.

Enter '1' next an item to display the Item Count Summary Enquiry Item Details Screen.

Item Count Summary Enquiry Item Details Screen (Option 1)

This screen displays summary count information for any item selected from the Item Count Summary Enquiry Summary Details screen.

The selected item and stockroom are displayed at the top of the summary screen. This is immediately followed by the year and the dates/times (details of the time may not be stored) of the last and next counts.

Fields:

Recommended Counts

The number of counts recommended by the module that have been carried out this year.

Unplanned Counts

The number of unplanned, or manually requested, counts that have been carried out this year.

Note: Negative Stock Counts, Low Stock Counts, Zero Stock Counts, Transaction Frequency Counts are currently unsupported count methodologies, which will be provided for recommending counts in the future.

Press **F3=Exit**.

Count History Enquiry

64/DIS

This function enables the review of stockroom summary count information by period. Counts are only included in this enquiry once a reconciliation with update has been run, even if no stock adjustments were actually generated.

At summary level, the total number of counts is displayed, with information on the number of each ABC classified item counted with the number of items in error.

The number of other counts (those where the range is selected manually) and other counts in error are displayed only at a details level on an individual period basis.

Count History Enquiry Stockroom Selection Screen

 Select the Count History option.

The system will display a Selection Screen which allows you to select valid stockroom details.

Fields:

Stockroom

Enter the stockroom code for which count summaries are to be reviewed.

Week / Period

Enter the week or period to be reviewed. The entry must be in the following format and in the same units as the usage cycle:

YYMM - If usage cycle is Monthly.

YYWW - If usage cycle is Weekly.

Where 'YY' is the current year, 'MM' is the current period and 'WW' is the current week.

 *Note: The usage cycle is defined to the Drinks Inventory company profile maintenance.*

 Tip: The period field can be left blank to display all period summaries associated with stockroom.

 Tip: Summaries are displayed in descending period sequence by year.

 Press **Enter** to display the Count History Enquiry

Summary Details Screen.

It displays summary count history information for the stockroom.
