Chapter 5

Lot Control

Drinks Inventory Management Lot Control

Batch or Lot control may be required for items where further detailed identification of the stock is needed, for example, concentrates, bulk raw materials, date controlled items. It is the same item, but quantities of the item may be manufactured at different times, or be of varying strength or need greater traceability through the supply chain.

Serial control is much more specific. This is where each individual item must carry a unique number, for example, a keg.

You indicate on the Item Master file if the item is to be batch, lot or serial controlled. However, the first stage is to indicate on the company profile if Extended Lot details are required.

Enhanced lot control allows you to use the full facilities provided by the System 21 Production Applications. To interface to the Production Applications you must install the OSLDKF3INT Interface Library, which is supplied separately and with full installation instructions.

Are Extended Lot Details Required?

If the answer is **NO** - extended lot details are not required, the system functions as follows:

- On receipt of items, the entry of a lot number (only) will be mandatory.
- Stock balances will be held at lot number level.
- Issues will demand the entry of a valid lot number.
- All Inventory enquiries will include lot number information.

If the answer is **YES** - that extended lot details are required, the system supports the Production application but also provides extra controls:

- Stock status
- Production Receipt Date
- First available Date
- Last available Date
- Expiry Date
- Shelf life
- Potency
- Grade
- Lot traceability

Stock Status

This is one of the functions that controls the availability of stock. It covers the requirement to classify stock as being unavailable for processing i.e. allocating, picking and despatch. It may be stock that requires inspection/QA, stock for internal sales or for key customers.

Stock status can be controlled by date or by a stock status code. The default is for stock status to be date controlled. Stock status will be date controlled unless you enter a stock status code.

A blank status - dates will control availability

A stock status - the stock status code will determine availability

If you enter a stock status code, you must also enter a reason code to indicate why the default has been overridden.

Using a stock status code with a 1 in the seventh digit of the Limit field of a Description code against STKS in the Descriptions file, will ensure that all receipts of that item will be automatically frozen.

The stock status applies to a complete lot regardless of how many stockrooms it is in. If stock is made unavailable, it is frozen in all stockrooms and vice versa. A default stock status may be entered on the Item Master. Changes to the stock status are written to an audit file.

Note: When you are using enhanced lot control, the Stock Status Monitor must be run and stopped daily. This is a background process which is part of the Drinks Sales Order Processing Utilities.

To run the Stock Status Monitor use the Start Stock Monitor at the beginning of every day, and the End Stock Monitor at the end of every day.

Dates

All lots have a production receipt date, first available date, last available date, expiry date associated with them. These dates are used by Production to control release and allocation of stock.

A shelf life is maintained for all lot controlled items. A status flag, also on the lot header, provides extra function for lot control and may be used to override the availability dates for the whole lot.

Maintenance will be required of shelf life units (e.g. days), and possibly numbers for shelf life and customer shelf life.

Release lead time units and numbers may be maintained, if an inspection/QA period is required.

Production Receipt date = Current date (if finished goods are received from Production or Purchasing)

First Available date = Production date + Release lead time

Last Available date = Expiry date - Customer shelf life

Expiry date = Production date + Shelf life

A background process called Stock Status Monitor constantly reviews all controlled items and automatically freezes/unfreezes stock according to stock status codes or availability dates.

Potency

The grade and potency level of the lot may be maintained and made mandatory for certain items. Lot potency is used in process Production to enable the processing of actual potent units of a product where the strength of an active ingredient is important, rather than physical units.

Grade

This is used for products that have a wide range of quality specifications and require multiple grades and where there may be a requirement to downgrade, upgrade stock.

Allocation and issues may be controlled - with specific grades only being issued to production, received into stock or issued to customers.

Lot Traceability

The location of a lot can be traced over time and by location. Lots can be traced back to Production - both component and parent items - and to Sales Orders and Purchase order enquiries. Lots may also be transformed and the lot details for each part amended.

Enquiry facilities are available on all these aspects of lot control.

Note: A single lot can be held in more than one stockroom, where all parts of it retain the same lot header details.

Full forward/backward traceability for all lots is provided.

Forward traceability is provided for:

- Customer Orders
- Production Orders
- Transfer Orders

Backward traceability is provided for:

- Purchase Orders
- Production Orders
- Transfer Orders

Items received into Bonded Stockrooms are automatically allocated a bond rotation number. For the purposes of lot traceability, System 21 treats this bond rotation number as the lot number.

Lot Header Maintenance

1/DIL

This procedure enables the recording of basic information about a lot of a product irrespective of where the lot is being held within the Inventory Management application.

The information is normally entered when a batch, lot or serial controlled item is received into the Inventory Management application by any route (Inventory Receipts, Purchase Management Receipts, Production Finished Goods Receipts etc.). However it is possible to maintain the lot header directly.

Lot Header Maintenance Selection Screen

Select the Lot Header option.

Fields:

Item

Enter a valid item reference for an existing item.

Lot Reference

To maintain an existing lot header, enter a lot reference that is valid for the item entered in the **Item** field.

Note: The item reference must be entered before you can use the F4 prompt on associated lot references.

To create a new lot header, enter a unique reference.

Press **Enter** to display the Lot Header Maintenance Detail Screen.

Lot Header Maintenance Detail Screen

This screen is displayed when a valid Item and Lot reference are entered in the Lot Header Maintenance Selection Screen.

This screen enables the maintenance of the header details for the lot requested. Even if parts of the lot are located in different stockrooms the lot header details will be valid for all items included in the lot. If you wish to modify the details for a certain subset of the lot, see Lot Transformation.

Note: The visibility and maintenance of some of these fields is controlled by external flags or applications. (This is particularly relevant if Production is installed).

The lot header information will be held in the system until the lot number itself is purged using the Delete FIFO/lot utility.

The upper part of the screen identifies the item and lot number for which maintenance has been requested. The lower part lists the lot header details specifically required for this item.

The current data for the lot, if there is any, is displayed.

Fields:

Production Date

This is the date on which the lot is manufactured or received. The field will default to be the current date but may be any previous date. If not entered it can be calculated back from the expiry date using the shelf life of the item.

If the lot is being received by the Purchase Management or Production applications then either production data or expiry date must be entered. If the lot is being received by the Inventory application the fields are not mandatory.

This only applies if the item lot is being received for the first time. Once the lot exists both the production and expiry dates are not maintainable.

Tip: You only need to enter the Production Date or Expiry Date. The other dates can be calculated, based on release time, shelf life, and customer shelf life.

Note: As each lot is received, the availability dates are calculated and if the current date is before the first available date or after the last available date then by default, the lot is frozen. Any other stock for this lot held in other stockrooms will also be frozen.

Warning: The production, expiry and first and last available times are displayed if the Display Lot Time field on the Lot Header Parameters screen, in Item Maintenance is set to 1.

Production Time

This cannot be changed once the lot has been created and is for memo purposes only.

Expiry Date

This is the date on which the shelf life of the item expires.

If not entered, it is calculated by adding the shelf life to the production date. If the lot is being received by the Purchase Management or Production Applications then either the production or expiry date must be entered. If the receipt is via the Inventory application the fields are not mandatory.

Once the lot exists, the production and expiry dates are not maintainable. Enter a date not less than today's date. If entered the production date can be calculated by subtracting the shelf life from the expiry date.

Expiry Time

The time at which the shelf life of the item expires.

First Available Date

This field is always maintainable. If entered it must be greater or equal to the production date.

All lots with the first available date greater than the current date will normally be automatically frozen. If not entered it will be generated by adding the release time into the production date.

First Available Time

Enter a valid time, this time is for memo purposes only. If the production date is equal to the first available date, then the first available time must be equal to or greater than the production time.

Last Available Date

This field is always maintainable. If entered it must be greater than the first available date but less than or equal to the expiry date.

All lots with a last available date less than the current date will normally (if there is no stock status) be frozen automatically. If not entered, the date will be generated.

Last Available Time

Enter a valid time. If expiry date is equal to the last available date, then the last available time must be less than or equal to the expiry time.

Status Code

Enter a stock status code chosen from those defined on the description file against major type STKS.

The stock status code is used as an override to the availability dates, defined above, to determine if a lot quantity is to be available or classed as frozen stock.

If stock status is left blank the availability dates above will be used to move stock in and out of the frozen stock.

Stock statuses are divided into available or not available by use of the 7 digit limit field held against the stock status descriptions codes on the descriptions file. If the seventh digit is set to 1 the stock status indicates that the lot will be made unavailable. If set to any other value the lot will be made available.

Reason Code

Enter a reason code chosen from those defined on the descriptions file against major type SSRC.

This code can only be entered if the stock status code is changed or is blank initially and indicates why the status of the lot was changed. This is validated against Inventory Description MOVR.

Potency

This is the potency of the whole lot irrespective of which stockroom the lot is located in.

To change the potency, press **F16=Adjust Active Ingredient**.

Note: This field is only displayed if the Potency Required flag on the Lot Header Parameters Maintenance screen is set to 1 (yes).

Note: Potency is a percentage i.e. the potency you specify here is the number of parts of active ingredient per hundred parts.

Grade

A grade code chosen from those defined on the descriptions file against the major type GRAD. This is the grade of the whole lot irrespective of which stockroom the lot is located in.

Note: This field is only displayed if the Grade Required flag on the Lot Header Parameters Maintenance screen is set to 1 (yes).

Suppliers Lot Reference

Enter up to 36 alphanumeric characters to specify the lot reference allocated by the supplier. This field is optional.

Functions:

F13

Grades. Display lot Grade History Enquiry (22/DIL).

F14

Status. For an existing lot, display the Stock Status History Enquiry (24/DIL).

F15

Potency. Displays lot Potency History Enquiry Window.

F16

Adjust Active Ingredient. The Adjust Active Ingredient screen is displayed.

F21

Text Entry. This is where you can enter text to be displayed or printed on external documentation, e.g. despatch notes, according to the usage code selected.

Press **Enter** to validate the data.

Press **Enter** again to return to the Lot Header
Maintenance Selection Screen Functions:

Adjust Active Ingredient Screen (F16)

This screen is displayed when you press
F16=Active Ingredient in the Lot Header
Maintenance Detail Screen.

This screen shows the current potency of a lot and allows you to modify the potency level. This change applies to the whole lot irrespective of its location.

Item number, item description and lot number of the selected lot are displayed at the top of the screen.

N231	DK - QA Drinks	USER GBJBA1MS	22/09/97 14:31:49

F3=Exit F8=Update F12=Previous			
1-1	▪	MW	KS CL IM DM II EDN400A KB ST0672S1

Fields:

Potency

The current potency of the lot.

Quantity

The current quantity of items in the lot defined in the issue unit.

Total Potent Units

Quantity x Current Potency %=Total Potent Units.

New Potency

Enter up to nine characters, five decimal places to specify the new potency. Negative values are not allowed.

Note: Potency is a percentage i.e. the potency you specify here is the number of parts of active ingredient per hundred parts.

Reason Code

Enter a two alphanumeric character reason code from those defined in the descriptions file against the major type PRSC.

When you press **Enter**, the application will calculate and display the following information:

New Potent Units

This is the total potent units in the lot using the new potency level in the Quantity x Potency % calculation.

Potency Change

The difference between the original total potent units and the new potent units. This field can be positive or negative.

Select **F8=Update** to update the lot header details and potency history file.

Maintain Text Window (F21)

This window is displayed when you press **F21=Text** in the Lot Header Maintenance Detail Screen.

You use the Maintain Text window to enter or select a Usage Code for text entry. When you press **Enter**, the Item Text window is displayed. This is where you can enter text to be displayed or printed on external documentation, e.g. despatch notes, according to the usage code selected.

Enter a valid code describing why the grade is amended. Choose from those defined in the descriptions file against the major type RSCD. This field is mandatory.

Press **Enter** to update the records for that item.

Stock Status Recalculation

11/DIL

This procedure processes all lots currently with physical stock. It uses the current date and the first and last available dates of each lot to determine if the lot quantity should be available or frozen. This process only selects lots with the stock status equal to blank i.e. no Product override is present. A change in stock status will apply to the whole lot across all stockrooms.

This process affects two stock balance values: available and frozen. The actual quantity of the lot does not change and the equation and will not be affected by this procedure: $\text{Physical} = \text{Available} + \text{Allocated} + \text{Frozen}$. The procedure reviews dates and stock status if the stock monitor is not running. (See Background processing).

Stock Balance Recalculation Detail Screen

Select the Stock Status Recalculation option.

This screen allows you to enter the details for the stock balance recalculation.

Fields:

Sel

The following selections are available against each lot transformation entered:

1 - To amend, details will return to the entry fields at the base of the screen. Modify any details and press Enter to accept the changes.

3 - To display lot header details, the display the lot header details of the lot named in the from/to lot column.

Movement Qty

Enter up to eleven characters, three decimals to specify the quantity to be subtracted from the first lot and transferred to the second lot.

From Lot

Enter up to fifteen alphanumeric characters to indicate the originating lot. This lot must exist in the above stockroom.

To Lot

Enter up to fifteen alphanumeric characters to specify the lot which will receive the items to be transferred. This lot may be one that already exists or a new lot. In the case of an existing lot, the items will be added to the total physical stock for that lot and the frozen or available balance as appropriate.

When you press **Enter** the current or default lot header details for the *to* lot will be displayed and can be amended. The values entered here will be valid for the whole lot, even if parts of the lot are located in different stockrooms.

The lot header details must be complete for the transformation to proceed.

The application will redisplay the details screen, with the line just entered moving to the top part of this screen. The quantity units and cost per unit will default from the from lot. To toggle between the from lot and the to lot press **F13=From/To Lot Details**.

The reference data will default from the previous screen but can be amended if required.

Functions:

F13

From/To Lot Details. This allows you to toggle between the two lots.

Press **Enter** to validate data and display it in the top portion of the screen.

Press **Enter** again to carry out the update.

Grade Enquiry

21/DIL

This displays the grade status of all lots for a specified item.

Grade Enquiry Selection Screen

Select the Grade option.

Fields:

Item

Enter a valid item code for the item you wish to enquire about.

Press **Enter** to display the Grade Enquiry Details
Screen

Grade Enquiry Details Screen

This screen is displayed when item number and press enter in the Grade Enquiry Selection Screen.

This screen displays the item number and item description and a list of valid lots, with associated grades and grade descriptions.

F3=Exit F4=Prompt			
5-26 * KS CL DM II EDN400A KB ST0672S1			

Fields:

Date

The date defaults to today's date.

Select one of the following four mandatory fields:

Tip: You cannot select more than one of these fields.

Available

1 -To view stock balances and current stock status of only available stock, otherwise leave this field blank.

Frozen

1 - To view stock balances and current stock status of only frozen stock, otherwise leave this field blank.

All

1 - To view stock balances and current stock status of all lot controlled stock, otherwise leave this field blank.

Stock Status

Enter a two alphanumeric character code from those defined on the descriptions file against the major type STKS if you wish to view stock balances for stock that has the particular stock status code specified.

Select any of these additional fields in order to restrict the scope of the enquiry:

Item

Enter a valid lot controlled item reference number to restrict the enquiry to this item only.

Lot

Enter a lot number, associated with the item specified above. The lot field cannot be entered independently of the item field. An entry in this field will restrict the enquiry to that lot only.

Alternatively some of the following optional fields may be entered:

Stockroom

Enter a two alphanumeric character code specifying the stockroom you wish to restrict the enquiry to. If left blank all stockrooms will be included in the enquiry.

To further restrict the breadth of the enquiry you may select a range of items:

Item From

Enter a valid fifteen alphanumeric item reference code. This will be the item from which items will be selected. If no Item To field is specified, then the application will select all lot controlled items ordered alphanumerically after this item.

Item To

Enter a valid fifteen alphanumeric item reference code to specify the last lot controlled item in the range.

If a stockroom is entered and a range of items specified the enquiry will be restricted to those items within the range, in the stockroom. If the stockroom is left blank then all stockrooms will be checked for items within the range.

Press **Enter** to display the Stock Status Enquiry Screen.

Stock Status Enquiry Detail Screen

This screen is displayed when you enter valid data in the Stock Status Enquiry Selection Screen.

This screen displays the stock balances and stock status codes for all lots located that fulfil the selections made on the previous screen.

Fields:

Sel

The following selections are available against any lots displayed:

- 1 - To view the lot header details
- 2 - To perform a lot trace
- 3 - To display any allocations that have been made against the selected lot. This option is only available if you are using back to back orders. Frozen Lots with existing allocations are marked with an * for lot header, to view the lot header details.

Note: The lot quantity will display in reverse image if its status is not derived from the availability date range for the lot. This can occur when the stock status is manually adjusted.

To continue, enter a valid option against one of the displayed lots and press **Enter**.

Stock Status History Enquiry

24/DIL

This enquiry allows you to view the stock status of a single lot associated with a particular item. Whenever the stock status changes, an audit is created. The Stock Status History shows these changes and the quantities affected.

Stock Status History Enquiry Selection Screen

 Select the Stock Status History option.

Fields:

Item

Enter a valid item code for the item you wish to enquire about.

Lot Number

Enter a valid lot code for the lot you wish to enquire about.

 Press **Enter** to go to the Stock Status History Enquiry Detail Screen.

Stock Status History Enquiry Detail Screen

This screen is displayed when you have made valid entries and pressed **Enter** on the Stock Status History Enquiry Selection Screen.

The item reference number, item description and lot number specified on the previous screen are displayed at the top of this screen. Upon entering the stock status enquiry, only summary information will be displayed. This includes:

- Stock status and description.
- Stockroom where the lot is located.
- Stock balances that are affected by changes in the stock status.
- Available stock, frozen stock and the net change in the two balances.
