Chapter 9

Utilities

Copy Company

1/DIU

This procedure is used to create a new company within the Drinks Inventory Management module by copying Company Profile data from one company to another. Any differences, such as the company's name, within the new company can then be established by use of the standard maintenance facility.

Copy Company Selection Screen

Select the Copy Company option.

```
IN005                                User PGMR1          9/12/96
                                      11:05:22

Copy Companies

From Company.....?..  |
To Company.....      |

F3=Exit  F4=Prompt

05-41  SE  MW  KS  IM  II  KENB20A  PET007S2
```

Fields:

From Company

Enter the company code of the company from which the data is to be copied.

To Company

Enter the company code of the company to which the data is to be copied. This company code should not exist already within the module.

Press **Enter** to copy the company.

Maintain DRP Profile

1...
2... **3/DIU**

This process allows you to maintain the DRP company parameters and also the default period end warning days for new and existing companies.

Maintain DRP Profile Selection Screen

Select the Maintain DRP Profile option.

A list of valid Company Codes and names is displayed.

DR019	DRP Company Profile	User PGMR1	9/12/96 15:08:52
Maintain Profile Records			
SEL	Company

1=Select			
F3=Exit			
05-03	SA	MW	KS IM II KENB20A PET007S2

Fields:

Select

Enter '1' next to the company whose details you want to maintain.

Enter New Company

Enter the code for a new company to be added.

Press **Enter** to display the Maintain DRP Profile Detail Screen.

Maintain DRP Profile Detail Screen

Having entered a valid company code into the Maintain DRP Profile Selection Screen, the system displays the Maintain DRP Profile Detail Screen.

This screen allows maintenance of company DRP defaults, i.e.

- How forecasts will be consumed by actual demand.
- The maximum number of lines created on a distribution order.
- The forecast error tolerance used for setting net change flags if not set at item level.

All details for an existing company are displayed.

DR019		Maintain DRP Company Profile.		USER PGMR1	9/12/96
					15:09:35

- - - - - N N		(Blank for working day or 'N' for non-working day)			
F3=Exit					
05-21	SA	MW	KS	IM	II KENB20A PET087S2

Fields:

Consume Forecast

Enter one of the following:

0 - forecast consumption is not required. Demand for a particular period will simply be the greater of the forecast or actual sales for that period.

1 - consumption of forecast by period is required - i.e. forecast will be based on cumulative consumption of and actual demand within each period defined in the calendar for DC / Centre. At period ends accumulations will be reset to zero.

Lines Per Distribution Order

Enter the maximum number of lines to be included on any Distribution Order. This must be greater than zero.

Forecast Error Tolerance % (Absolute)

Specify the default percentage difference by which sales forecast quantities may be greater than actual sales quantities or vice versa without causing a Net Change trigger to be written for the item concerned. This default will be used if no tolerance has been entered at item level.

Calendar Code

Enter the default Calendar Code for the company. Any DC or Centre without a Calendar Code assigned to it via Period Maintenance will use this calendar (defined via Drinks Inventory Maintenance Working Days Calendar Maintenance).

Number Of Periods Per Year

Must be entered in the range 1 to 13 inclusive.

Period Names

Enter a description for each period, up to the number of periods specified above.

Standard Week Template

Enter 'N' against non working days in a 'normal' working week Leave blank for working days.

Note: The total number of days must equal 364 or 371. Also, the number of days in the last period must ensure that the next year begins on a Monday.

Note: The Drinks Distribution Requirements Planning module provides the facility for each site, i.e. Centre or DC, to have a separate calendar. The calendars for all sites within the company are maintained within Working Days Calendar Maintenance. The calendar codes defined may then be assigned to each site via the Periods Maintenance option.

Press **Enter** to update the Company Profile record.

Rebuild Item Search

4/DIU

This facility is used during installation to build the Item Search Keys. Subsequently it should be used after item maintenance when changes have been made to item descriptions and item text and when items have been added to the item file.

There are no selections or parameters to be input; this procedure is submitted directly.

Select the Rebuild Item Search option.

Renumber Item Search Words

5/DIU

This procedure renumbers the search words associated with each item.

The function is submitted directly, with no selections or parameters required.

Select the Renumber Item Search Words option.

Set Stock Balances To Zero

6/DIU

The purpose of this procedure is to reset all the Stockroom and Lot Balance records for the nominated company to zero.

Warning: Under normal circumstances this option should not be used!

In a test environment, however, there may be a need to initialise all stock balances for a company.

This procedure runs directly from the menu.

Select the Set Stock Balances To Zero option.

Mandatory Input Maintenance

1...
2... **7/DIU**

This facility is a useful validation procedure. It enables the user to define mandatory fields for particular item types.

Therefore, when item details are being maintained the user must enter data into those fields specified for the type.

This option controls validation of input fields by item type during Item Maintenance. Item Type distinguishes between, for example, beer, spirits, etc. It allows you to specify which fields in Item Maintenance can be used for each type, i.e. for spirits you can determine which fields are mandatory, and for beer you can specify a different selection of fields as mandatory.

Mandatory Input Maintenance Screen

Select the Mandatory Input Maintenance option.

Field	Mandatory for Item Types
ACSU35	ABC
DESS35	ABCDEFGH
DGLA35	ABCDEFG
DIVN35	ABCDEFG K
DPCV35	ABCDEF
DSGA35	ABCDEFG IJK

4=Delete
F1=Help
F3=Exit
F12=Previous

06-04 **SA** MW **KS** IM II KENB20A PET007S2

Fields:

Selection

To delete the field type a '4' against the required line, and press **Enter**.

Field

Enter the field name that is to be mandatory for the item types listed in the Mandatory For Item Types field.

Mandatory For Item Types

Enter the list of Item Types that are to have the corresponding mandatory field for the item description.

These Item Types are defined in Inventory Description Major Type PTYP. If you enter more than one Item Type against a field, that field will be mandatory for all items with those Item Types.

For example: If you enter Field=ESDT35 and Mandatory For Item Types=AB, entry of the Effectivity Start Date will be mandatory for all items of type A, Draught Beer, and B, Package Beer.

Either enter '4' next to the line you want to delete and press **Enter**, or press **F3=Exit**.

Mandatory Input Fields

You can specify mandatory input for specific item types for any of these fields on the Inventory Item Master File.

In the Mandatory Input Maintenance Screen, you enter the field name and the Item Types for which you want input to the field to be mandatory.

The Item Types are defined in Inventory Description Major Type PTYP.

Company Deletion

8/DIU

The purpose of this procedure is to remove all data from the module for one or more selected companies.

Warning: Beware - this procedure deletes data from the Live Library - make sure that no-one else requires the company/data before continuing.

The process is performed in three steps:

- Copy to a temporary library, the data for the companies to be retained.
- Clear the physical files in the live library.
- Copy back the data from the temporary library to the live library.

If bespoke libraries are present, this option should be run separately for each library.

Company Deletion Selection Screen

Select the Company Deletion option.

The screenshot shows the SAP 'Company Deletion' selection screen. At the top left is the ID 'IN903'. At the top right, it displays 'User PGMR1' and the date/time '9/12/96 11:07:05'. The main title 'Company Deletion' is centered. Below it are two input fields: 'Object library.....' and 'Files library.....', each followed by a horizontal line for text entry. At the bottom left, a status bar shows 'F3=Exit'. At the very bottom, a series of small icons and codes are visible: '05-24', a square icon with 'S', 'MW', a square icon with 'K', 'IM', 'II', 'KENB20A', and 'PET007S2'.

Fields:

Object Library:

Enter the library that contains the programs, e.g. OSLDID3.

Files Library:

Enter the library containing the files from which the company is to be deleted, e.g. OSLDKF3.

Type in the required Libraries and press **Enter** to validate.

Delete History and Movement Records

9/DIU

The purpose of this procedure is to purge data from the Stock Movement and Stock History files. A record is deleted from the appropriate file when its week number is prior to the current week being processed, modified by the number of weeks entered as a parameter.

Warning: Great care must be taken over the control of history deletion, as the Stock History Records are used to determine average usage.

Delete History and Movement Records Selection Screen

Select the Delete History and Movement Records option.

```
IN039          HW - Handy Wholesalers Ltd      User PGMR1      9/12/96
                                                    11:07:30
Remove Obsolete Movement And/Or History Details

No. of weeks movements to retain.... 060    (999 - Retain all)
No. of weeks history to retain..... 060    (999 - Retain all)

F3=Exit

05-39  SF  MW  KS  IM  II  KENB20A  PET007S2
```

Fields:

No Of Weeks Movement To Retain

Enter up to three numeric characters to specify the number of weeks of Stock Movements to be retained. The default is 60 weeks. If 999 is entered then all movements will be retained.

No Of Weeks History To Retain

Enter up to three numeric characters to specify the number of weeks of Stock History records to be retained. The default is 60 weeks. If 999 is entered then all history records will be retained.

Press **Enter** to confirm the input parameters, and submit the job to remove the specified movement and history records.

Delete FIFO / Lot Details

1...
2...

10/DIU

This procedure purges data from the FIFO Details file . The option to purge details from the batch / lot file is also included.

Cut-off dates for the deletions are selected. Only records up to and including the cut-off dates are considered for deletion.

FIFO records with zero balances, and batch/lot records with zero balances and no stock movements are deleted. If stock movements exist they can be deleted using the Delete History and Movements Records option.

Delete FIFO / Lot Details Selection Screen

Select the Delete FIFO / Lot Details option.

```
IN910          HW - Handy Wholesalers Ltd      USER PGMR1      9/12/96
                                                    11:08:01
FIFO and batch/lot

Cut-off Date..... 9/12/96

Only FIFO cost records up to and
including the cut-off date with a
zero balance will be deleted

Location.(0=no,1=yes)..... 0
Cut-off Date for location. 9/12/96

F3=Exit

06-29  SF  MW  KS  IM  II  KENB20A  PET007S2
```

Fields:

Cut-Off Date

Enter the cut-off date for the FIFO details deletion (defaults to current date).

Location

Enter '1' if you wish to delete batch/lot details, otherwise enter '0'.

Cut-Off Date For Location

Enter the cut-off date for the batch/lot details deletion (defaults to current date).

Press **Enter** to confirm the selection criteria and submit the job to remove FIFO details and batch / lot records.

Purge Cycle Counts

11/DIU

This function facilitates the purge of completed counts by individual count or a count range basis.

The count headers and their associated count recommendations are deleted with full auditing to Drinks standards. In addition, the associated count lists and their details are deleted.

Optionally, incomplete outstanding counts can be purged, resulting in associated items being taken 'off count' (for item based counts) and associated locations being taken 'off count' (for location based counts).

Purge Cycle Counts Selection Screen

Select the Purge Cycle Counts option.

IN921	HW - Handy Wholesalers Ltd	User PGMR1	9/12/96 11:08:34
Purge stock count			
Stockroom.....?.. _			
Count number from.....?.. _____ to.....?.. _____			
Purge incomplete count..... @ 0=No 1=Yes			
F3=Exit F4=Prompt F8=Submit			
05-32 SF MW KS IM II KENB20A PET007S2			

Fields:

Stockroom Code

Enter the stockroom for which at least one count has been requested.

Count Number

If a single count number is selected then it must exist, be of a complete (i.e. reconciled) status and the purge incomplete counts field should set to '0'. If outstanding counts are also to be purged, then the purge incomplete flag must be set to '1'.

However, if entering a range, the 'from' and 'to' count numbers used to define the range need not exist, except when they are the same value.

If the 'to' count number is left blank, it will default to the 'from' count number.

Purge Incomplete Counts

Toggle field - indicates if incomplete outstanding counts are to be targeted for purge in addition to counts that are reconciled complete.

0 - No.

1 - Yes.

Press **F8=Submit** to send the report to print.

Purge Cycle Count Details / Action Lists

12/DIU

This function facilitates the purge of completed count list details, by date.

Count lists and all associated details will be deleted where their date of creation is less than or equal to the date entered.

The date entered defaults to the period end date for the current period minus two.

This utility is intended to allow the removal of completed count details in isolation of the original recommendations (which can be purged with full audit via the purge counts option).

Purge Cycle Count Details / Action Lists Selection Screen

Select the Purge Cycle Count Details / Action Lists option.

```

IN927          HW - Handy Wholesalers Ltd          User PGMR1          9/12/96

```

Fields:

Stockroom

Enter the stockroom code for which purge has been requested.

Purge Date

Enter the date up to which completed details should be deleted.

Press **F8=Submit** to send the report to print.

Database Integrity

1...
2...

21/DIU

The purpose of this procedure is to check the integrity of the item's data across several files. These are:

- Item Master.
- Stockroom Balance.
- Stockroom Profile.
- Stock Location.
- FIFO Costs.

No automatic adjustments are made, but a report is produced highlighting the errors for manual amendment.

Database Integrity Selection Screen

Select the Database Integrity option.

```
IN900                                User PGMR1          9/12/96
                                      11:09:43

Inventory Integrity Menu

1. Top-down validation.
2. Bottom-up validation.

Company code.... 01
Enter option.... 01
Message type.... 2

1 = warning and serious messages will print,
2 = serious messages only will print (default)

F3=Exit  F6=Messages  F7=Submitted jobs

17-19    SF      MW      KS      IM      II  KENB20A  PET007S2
```

Fields:

Company Code

Enter the company code of the company for which this integrity processing should be done.

Option

Specify whether the validation should be top-down or bottom-up.

- 1 - Top Down.
- 2 - Bottom Up.

Message Type

- 1 - If warning and serious messages should be printed.
- 2 - Will cause only serious messages to be printed. This is the default.

Top-down validation

This function reads the Item Master Records and performs the following integrity checks:

- Each item must have at least one item/stockroom record associated with it. A warning message is printed if this is not the case.
- A stockroom profile record must exist for each stockroom defined on a stockroom balance record. A serious error message is printed if this is not the case.

- At least one FIFO cost record must exist for stockroom balances associated with items for which FIFO costing is specified. A warning message is printed if this is not the case.
- For FIFO costed items, the sum of the FIFO balance quantities must be equal to the stockroom balance physical stock. A serious error message is printed if this is not the case.
- The presence of FIFO records must be checked for items which are not FIFO costed. If any such records are found, a serious error message is printed. Unless an item is batch / lot / serial / controlled.
- For lot controlled items, the sum of the balance must be equal to the stockroom balance physical stock. A serious error message is printed if this is not the case.
- The presence of lot records for items which are not defined as lot controlled must be checked. If any such records are found, a serious error message is printed.

Bottom-up validation

This function is processed as above in reverse and a similar report is produced.

Processing Profiles

25/DIU

The processing profile provides information for the Inventory interface program. These profiles provide both user-defined Inventory updates as well as standard updates dictated via other distribution products.

Processing Profile Description Codes

These are predefined profile codes and descriptions set up through the Drinks Inventory Management Utilities, but used across many Drinks applications to dictate the standard updates during processing.

KENB20A

PET087S2

Fields:

Profile Code

Enter the profile code which defines the interface instruction set.

 *Note: Refer to Appendix - Processing Profiles Descriptions for a list of predefined profiles for use in all Drinks applications.*

 Entering the profile code will display the Processing Profiles Maintenance Screen.

Processing Profiles Maintenance Screen

Entering a code on the Processing Profiles Selection Screen displays the Maintenance Screen.

Note: This details existing sequences within the profile, showing movement type and description.

1=Select			
F3=Exit F8=Addition F11=Delete F12=Previous			
05-27	SE	MW	KS IM II KENB20A PET087S2

Fields:

Profile Code

The profile code (and its description) which define the interface instruction set.

Selection

Enter '1' to select the profile to display further details.

Sequence

The sequence number allocated by the module to use in the profile.

Type

The movement type that is to be generated for a given item.

Description

A description of the movement type.

Select the a profile by entering '1' in the selection field next to it. This will display the Processing Profiles Details Screen.

Processing Profiles Details Screen (Option 1)

The detail screen is accessed by selecting (typing '1' against) the required line on the Processing Profiles Maintenance Screen.

```

```

Fields:

Profile Code

Profile code which defines the interface instruction set.

Sequence

Define the sequence of Inventory updates within the profile.

Movement Type

The movement type which is to be generated for a given item.

Stockroom

Enter a '1' for 'from' stockroom or a '2' for the 'to' stockroom.

The 'to' stockroom should only be used when two stockrooms are affected by the instruction set in this profile.

Sign Of Quantity

This specifies the sign in which the quantity would normally be expressed on the movement record.

Cost Value Calc

0 - For FIFO costed items - cost supplied.

1 - Zero movement value.

2 - Cost to be calculated.

Suppress FIFO Cost Updates

1 - No FIFO cost updates take place.

Blank - FIFO cost updating as normal.

Update for Balance Fields

The update for balance fields specify which of the following balance fields are to be updated as a result of this transaction:

- Physical.
- On order.
- Allocated.
- On back order.
- Frozen.
- Bonded.
- In-transit.
- Forward.

Note: Valid options are as follows:

0 - Update not required.

1 - Add quantity actually moved.

2 - Subtract quantity actually moved.

3 - Add quantity planned to move.

4 - Subtract quantity planned to move.

Other Stock Balance Updates

Recalculate Available

Is available stock to be recalculated?

Update Cost

Are latest, average and FIFO costs to be updated?

Update Usage

Are the usage figures to be updated?

Date Of Issue

Is the date of last issue to be updated?

Date Of Receipt

Is the date of last receipt to be updated?

0 - No.

1 - Yes.

Stock History

Update For History

Specify the balance to be updated for stock history:

0 - Update not required.

1 - Receipt.

2 - Issue.

3 - Adjustment.

4 - Transfer out.

5 - Supplier orders.

6 - Transfer in.

Note: Refer to Appendix - Processing Profiles Descriptions for a list of predefined profiles and their associated field settings, to be used for standard processing updates across many applications.

AFI Stock Movements Extract

These options provide an interface to the General Ledger Advanced Financial Integrator (AFI). For general information, please refer to the AFI Product Information - details given here are additional and specific to Drinks Inventory Management.

Test Extract

1... **26/DIU** **2...**

This function is used to undertake a trial extract of data from the source module (in this case, Inventory Management) and create a General Ledger journal.

Note: No actual updating of data takes place, either within the source module or the General Ledger. It is purely a “paper” exercise to simulate the effect of creating the specified journals for the nominated company.

Up to three reports are generated:

- A list of the General Ledger postings generated.
- An exception report showing, for example, any balancing postings automatically created for an unbalanced journal.
- An error report, showing any error conditions encountered.

Test Extract Screen

Select the Test option.

FI510		Advanced Financial Integrator		User	PGMR1	9/12/96
						11:12:33
Prompt for Inventory Trial Extract and Update						
Source company ? <u>2</u>						
EITHER: work with inventory movements not yet processed <u>1</u> (1/0)						
OR : work with inventory movements from . ? _____ to _____						
Type of Journal definition to use: <u>1</u> 1=Under Test						
2=LIVE						
3=Both						
Consolidate postings? <u>0</u> (1/0)						
F3=Exit		F4=Prompt		F8=Proceed		F12=Previous
07-39		S2		MW		KS IM II KENB20A PET007S2

Fields:

Source Company

Indicate the source company whose data is to be used for this trial extraction.

Include Only Inventory Movements Not Yet Processed

1 - If, for the purposes of this trial, you want to use only data which has not been extracted in 'live operation' mode by AFI.

0 - If you wish to specify a range of transaction numbers on which the trial is to be based.

Work With Inventory Movements From And To

This is only relevant if the previous response was '0'. Specify here the range of transaction dates in the source module to be used in this trial. If you wish to use only the inventory movements which occurred on a single day, specify the same date in the From and To entries. A window facility is available to display transactions within the source module which can be used for this trial.

Type Of Journal Definition To Use

There are three valid options here:

1 - Use only journal definitions which are specified as being under test.

2 - Use only journal definitions which are specified as being live.

3 - Use both test and live journal definitions.

Consolidate Postings

Indicate here, by specifying a '1', whether you wish consolidation to take place on those postings defined as 'consolidatable'. A '0' here specifies that no consolidation will take place, even though you may have postings defined as consolidatable.

Press **Enter** to validate the selection screen.

Press **F8=Process** to proceed with the trial extraction after selecting the required options.

Live Extract

27/DIU

This facility enables you to initiate the extract of Inventory transactions from the Inventory movements file for processing by AFI to create General Ledger journals.

Transactions will be extracted according to the selection criteria set up on your journal condition.

Live Extract Selection Screen

Select the Live option.

Fields:

Company Code

Specify the company code of the company for which Inventory transactions are to be extracted.

Press **F8=Proceed** to proceed with the extraction.

Installing the Inventory / AFI Link

1...
2...

28/DIU

Having first installed each Drinks module and the AFI module, this option must be run to copy the Drinks Inventory Data Dictionary and other control files into the AFI module. AFI is then aware that Drinks Inventory Management exists as an module that can be a source of transactions.

Transactions are created in AFI for the Inventory movement types as defined on the journal conditions set up for the Inventory module. These are posted to the General Ledger as journals when you take the *AFI to General Ledger Update* option. Within the Inventory module, unlike Sales Invoicing, there is no facility to automatically extract transactions and post to the General Ledger without operator intervention. Because of the wide range of Inventory movement types, and the likely number of transactions, it is deemed more appropriate to control the extract of Inventory movement transactions on a manual basis.

Note: AFI is required in order to post automatically to the General Ledger goods purchased account when goods are received into Inventory.

As well as the AFI link status being set to 'active', there must also be one or more 'live' journals. The facility to set up a journal as 'live' is part of the *Journal Conditions Maintenance* facility.

Note: The journal condition field must be set to test for a valid value when reading data from the source module. For example, the journal condition field must be set up to test for a specific Inventory movement type or range of types.

FI950	HW - Handy Wholesalers Ltd	USER PGMR1	9/12/96 11:13:49
Install AFI Control Data - APPLICATION: Drinks Inventory			
This option causes AFI Control Data to be copied from the install files in the application files library into the control files in the AFI Library. AFI will then be aware that this application is installed, and be able to support the links.			
Copy From Library . . . <u>OSLDID3</u>		Only amend this, if you have renamed your application programs library.	
Copy To Library . . . <u>OSLFIF3</u>		Amend this library to match your Financial Integrator files library, or the Consolidated Financials files library.	
Please note that records will be copied into the file if they do not already exist. If they do exist, they will be overwritten by the new records.			
F3=Exit F8=Submit Job			
11-25	<u>S4</u>	MW	<u>K5</u> IM II KENB20A PET087S2

Press **F8=Submit Job** to send the job to the job queue.

Data Dictionary

The following files, and their associated fields, are available for defining how selection and/or consolidation is to take place.

Item Master

- Company Number.
- Item Code.
- Item Type.
- Item Class.
- Division.
- Sub-Division.
- Item Group Major.
- Item Group Minor.
- VAT Code.
- Item Master Discount Group.
- General Ledger Stock Account.
- General Ledger Cost of Sales Account.
- General Ledger Sales Account.
- General Ledger Price Variance Account.
- Costing Method.
- Sub-Contracted Item.
- Resource Code.

Inventory Movement

- Company Number.
- Item Code.
- Stockroom Code.
- Transaction Type.
- Reference Number.
- Movement Type.
- Movement Reason Code.
- Movement Source.
- To/From.

Stock Balance

- Item Type.

- ABC Override.
- ABC Class.

Stockroom

- Stockroom Usage Code.
- Department Code.

Daily Movements

The following fields are defined as quantities which are available to post, (refer to 'Quantity field to post' within posting definitions).

- Movement Quantity (Movement UoM).
- Movement cost.

Below are the different Inventory Movement Types which the file may contain together with their normal sign (+ or -).

Description	Inventory Movement Type	Sign
Customer Order Issue	C	-
Sundry Issue	S	-
Purchase Order Receipt	P	+
Sundry Receipt	R	+
Adjust Physical Stock	A	+/-
Adjust Allocated Stock	L	+/-
Adjust Frozen Stock	F	+/-
Transfer Out	O	-
Transfer In	I	+
Purchase Order	U	+
Adjust In-Transit	T	+ (Transfer Out) - (Transfer In)
Frozen Trans Out	G	-
Frozen Trans In	H	+
Multi Item In / Out	2	+ / -

Adjustments follow the sign of the transaction, i.e. positive adjustment has a positive sign.

Activating the Link

Warning: It is strongly recommended that journal conditions are first set up as 'under test' and that they are thoroughly proven using the facilities of the AFI Test Extract before they are set to 'live' and AFI is 'active'.

Until such time as AFI is activated, posting of Inventory movements to the General Ledger will not take place. When AFI is set to 'active' only from that point will postings to the General Ledger take place via AFI each time Inventory movements are extracted.

The steps required to be taken to activate AFI are as follows:

1 AFI Maintenance.

Use the *Maintain Journal Condition* option to change the status of your journal conditions from 'inactive' (0) or 'under test' (1) to a status of 'live' (2).

This need not be done for all journal conditions - only those which you are ready to activate.

2 AFI Utilities.

Use the *Maintain Application* option to change the status of the AFI link from 'inactive' to 'active' using **F8**. At the same time check the validity of your consolidation settings on this display.

AFI will now be used to process Inventory movements to create General Ledger journals, according to your rules and definitions, from the point when you next create movements within the Inventory Management module and extract them using AFI.

Library List

A separate “task level” library list has been created within AFI to include all the Inventory files necessary to undertake a data extract of Inventory movements from the Inventory Management module into AFI.

As well as containing the necessary Inventory libraries, this includes the AFI Program and Data Libraries.

Reference Number Maintenance

1... **29/DIU**
2...

This option allows the definition of document number ranges used to define the Product Activity Reference number range.
