Chapter 1

Maintenance

Drinks US Bonded Inventory Management Maintenance Functions

The maintenance functions of Drinks US Bonded Inventory Management enable the creation and amendment of master files and the parameters that are fundamental to the application's operation.

File maintenance, particularly description file maintenance, should be executed with extreme care, since errors will have far reaching effects. A proper procedure should be introduced as a matter of company policy.

Where master file inquiries exist, these are generally output only versions of the maintenance facilities and are therefore not separately described.

Drinks US Bonded Inventory Management also makes use of other applications for the maintenance of certain master file data. Description file maintenance within Drinks Inventory Management is an example. In these cases, this section explains the data requirements necessary for Drinks US Bonded Inventory Management, but the method of data entry is explained in the relevant application Product Information.

Company Profile Maintenance

3/DNU

This procedure is for maintaining company details within Drinks US Bonded Inventory Management.

Company Profile Selection Screen

Select the Company Profile Maintenance option.

An initial screen enables the selection of the company to be maintained. Once the company is selected, the Company Profile Maintenance screen is displayed.

Note: A Company must be defined to both Drinks Sales Order Processing and Drinks Inventory Management before it can be used in Drinks US Bonded Inventory Management.

Company Profile Maintenance Screen

This screen is displayed when you have selected a valid company from the Company Profile Selection Screen and enables the maintenance of the company parameters.

```

```

Fields:

Status

Enter a single character:

A - Active.

I - Inactive. 'Inactive' allows the Bond to be prepared before making it 'Active' with other Drinks applications.

D - Deleted.

Note: Once set to 'Active' it cannot be reversed to 'Inactive' again.

VAT Reg. No.

Not applicable.

VAT Turn No.

Not applicable.

Guarantees

Enter up to 30 alphanumeric characters for any applicable Guarantees.

Solicitor

Enter up to 30 alphanumeric characters for Solicitor Guarantee references.

Goods Receiving:

Auto Rotation No.

- 1 - Specifies system generated Rotation numbers.
- 0 - Specifies rotation numbers are to be entered manually at time of receipt.

Warning: If, in your initial configuration, you set this field to 0 (enter rotation numbers manually) and then later change it to 1 (auto generate rotation numbers), you could get duplicate rotation numbers. The auto generation process does not check for duplicate rotation numbers.

Blind Entry

- 1 - Specifies that certain fields are generated by the system during receipts (e.g. commodity code, volume per stock unit, strength, etc.).
- 0 - Specifies that certain fields are not generated by the system during receipts and require entry.

Suspend Rotations at Receipt

- 1 - Specifies all receipts will not normally be suspended.
- 0 - Suspends all receipts and inhibits the Put-away process within the Drinks Warehousing application

Note: Suspended / frozen Rotations must be maintained before the Put-away process can be performed.

Ownership at Statement or Delivery

- S - restricts customer access to items by Statement account number.
- D - restricts customer access to items by Delivery account.

Currency Rate Code

Enter up to 4 Alphanumeric characters to specify the Currency Rate Code to be used for converting Prime Currency to Base Values on the General Ledger.

To accept the required amendments, press Enter.

Bond Index Maintenance

1/DNM

This procedure is for maintaining a list of US Authorized Bonds and other Duty Free addresses. It should include your own Bond.

Note: Bond Index addresses are used as the delivery address when maintaining Duty Free customer details. See Customer Maintenance - Bond Details, for further information.

Bond Index Maintenance Selection Screen

Select the Bond Index option.

This screen enables the selection, or deletion, of an existing Bond, or the entry of a new Bond. The list of current Bonds is displayed.

Fields:

Name

Enter up to 35 alphanumeric characters for the name.

Address

Enter up to 35 alphanumeric characters for the first three address lines. Enter up to 25 alphanumeric characters for the last two address lines.

Zip Code

Enter up to 10 alphanumeric characters for the Zip Code.

Active (1 or 0)

- 1 - To specify Active Bond Number
- 0 - To specify Inactive Bond Number.

Stock Held in Base Currency

- 1 - Yes.
- 0 - No.

Export Serial Number

Enter a 7 digit numeric for the export serial number. This is a unique serial number associated with each Export Shipments report.

To accept the required amendments, press
Enter.

Bond Stockroom Details Maintenance

2/DNM

When a company is Bonded, there is a specific option to enable the entry of Customs and Excise references. This procedure is used to maintain a list of valid Bonded Stockrooms.

The Drinks Sales Order Processing Product Information gives a full explanation on how to amend / create standard Depot (Stockroom) Profile information. The details explained below only refer to the processes / entries required for Drinks US Bonded Inventory Management.

This procedure produces an audit report. A log of the changes made are recorded in an audit file for subsequent inquiry and further reporting.

Implementing Warehousing for Bonded Stockrooms

If you want to implement warehouse control for a stockroom that is already Bond controlled, you do not need to carry out any additional steps. Simply perform the data takeon procedure detailed in Drinks Warehousing. Once the Bonded Stockroom has been defined as a Bonded Warehouse, any item receipts will invoke the Warehousing screens as well as the Bond receipt screens to capture Bond information. Issues from a Bonded Warehouse will calculate any duty payable.

If a stockroom is already warehouse controlled you must not use the Bond application to define this stockroom as Bonded.

To define a warehouse as a Bonded stockroom:

1. Issue all stock from the warehouse.
2. Use the Bond module to define the stockroom as a Bonded stockroom.

Re-receive the stock into the warehouse. The stock receipt will then capture the Bond details for the stock.

Bond Stockroom Details Screen

-  Select the Bond Stockroom Details option This procedure displays a screen to maintain Bonded Stockrooms only.
-  Enter a valid two character Stockroom Code to display the Details Screen.

Fields:

Bond Short Code

Enter a 2 alpha code to define an abbreviated reference for the Bond. A different code must be entered for different Bond numbers. If a depot has already been assigned to a Bond, the Bond Short code will be in display only mode. The Bond Short code is included in the Rotation number at time of goods receipt.

Customs Account No.

Enter up to 15 alphanumeric characters to record the Customs Deferment Account Number applying to the Bond.

Excise Account No.

Enter up to 15 alphanumeric characters to record the Excise Deferment Account Number.

Customs Warehouse Ref.

Enter up to 30 alphanumeric characters to record the Customs and Excise warehouse reference.

Local VAT Office Refs

Not applicable in the US.

Guarantee Details

Enter up to 30 alphanumeric characters.

Solicitors Refs.

Enter up to 30 alphanumeric characters.

Customs Limit

Enter up to 11 numeric characters. This information is used for memo purposes only.

Excise Limit

Enter up to 11 numeric characters. This information is used for memo purposes only in the standard application.

Use Today's Date

1 - Transactions Movement Date will always be the current date.

0 - Transactions can be backdated.

No. of Days Allowed

No. of days for which transactions can be backdated.

Note: Transactions cannot be backdated into a previous period which has already been reported.

Rotations Entered at Dispatch

1 - Yes. Currently only '1' is supported in the US, where the rotation number is pre-filled in Confirm Assembly, but additional or different valid Rotation Numbers must be entered.

0 - No.

Note: See Chapter 7 for examples.

Bond Type

2 - BATF.

3 - Customs.

4 - Third Party. (A stockroom for which the bond duties are the responsibility of a third party).

Report Libraries

Library name for the output print queue.

Report Output Queues

Output print queue for each of the four special reports.

Allow Dual Units

1 - Quantities displayed are entered as dual units, i.e. stock units and issue units. E.g. cases and bottles.

0 - Quantities are entered in decimal notation.

To accept the required amendments, press **Enter**.

Bond Calendar Maintenance

3/DNM

This procedure is for maintaining four calendars within Drinks US Bonded Inventory Management.

Note: The details entered via this procedure must contain dates which apply to when the application will be in use and the daily Duty Run is requested and performed. See Reports, Duty Run for further details.

This procedure produces an audit report. A log of the changes made are recorded in an audit file for subsequent inquiry and further reporting.

Bond Calendar Selection

Select the Bond Calendars option.

This screen enables the selection of four calendar screens:

- EPD. The EPD Calendar holds the Period End Date for each reporting period, and the beer returns date.
- Customs. The Customs calendar holds details of each Customs period which is used to control the numbering sequence of the C88A report.
- Excise. The Excise calendar is used to control the numbering sequence of the W5D report. *Not applicable in the US.*
- Stock Return. *Not applicable in the US.*

Note: Although these report generations are not relevant in the US, the Stock Return Calendar is used to control the period to which each movement is assigned.

Fields:

Bond Number

Enter up to 10 alphanumeric characters for the required Bond number. Do not enter Bond numbers which refer to customers.

Functions:

F16

EPD Calendar

F17

Customs Calendar

F18

Excise Calendar

F19

Stock Return Calendar

To continue to the relevant Calendar Maintenance Screen, press the appropriate function key.

Calendar Maintenance Screen

This screen is displayed when a relevant Bond Number has been entered into the Calendar Maintenance Selection Screen and enables the maintenance of the Period End Dates, the associated Period Number and the Return Dates. The example described refers to the EPD calendar.

The other three calendar screens are not illustrated as they are of the same format (although they do not have the EPD Period field).

Period end date	E.P.D. period (PPYY)	Return date
<u>10196</u>	<u>196</u>	<u>290296</u>

08-09 **SP** MW KS IM II KENB20A PED129S1

Fields:

Period End Date

Enter numeric date in the form MMDDYY to specify the last day of each period.

E.P.D., S/Return, Excise, or Customs Period

Enter numeric period number in the form PPYY.

Return Date

Enter numeric date.

To accept the required amendments, press **Enter**.

Item Variant and Customer Item Maintenance

1... **2...** 4/DNM

This procedure is for linking Customs and BATF tariff references to items. This linking process involves the creation of one, or more Item Variants.

For Example: Two Item Variants would be necessary for an item sold as one product but sourced from two different countries.

This procedure also allows you to assign items to customers in order to inhibit other customers from obtaining the same items. Also, the customer item assignment process can be used to define items belonging to a specific customer where duty is paid against the customer's deferment account and not the proprietor of the bonded warehouse.

This procedure produces an audit report. A log of the changes made are recorded in an audit file for subsequent inquiry and further reporting.

Item Variant Maintenance Selection Screen

Select the Item Variants / Customer Items option.

This screen enables the selection of an item and item variant.

Fields:

Tax Type

Enter up to 4 numeric characters to assign Tax Types to a Commodity Code.

To remove a Tax Type combination, space over the entry.

Once the required amendments have been made, press **F8=Update** to update.

Rotation Detail Maintenance

6/DNM

This procedure permits the maintenance of rotation details where they may have been incomplete or incorrect on the receipt, or where goods have been received in a suspended state. If a Rotation has been received as suspended, it must be released from suspension before it can be used in any further movement transactions.

Only certain information may be amended.

This procedure produces an audit report. A log of the changes made are recorded in an audit file for subsequent inquiry and further reporting.

Rotation Detail Maintenance Selection Rotation Screen

 Select the Rotation Details option.

This screen enables the selection of a Rotation for amendment.
