Chapter 5

Utilities

Drinks US Bonded Inventory Management Utilities

The utilities in this application perform two main functions:

- Set Rotation Number to zero.
- Maintain Company Profile Data.

The former sets the log of the last Rotation numbers back to zero. This should be used at the end of each year.

The latter option is described in Maintenance.

Warning: It is strongly recommended that these utilities are not given public access.

Set Rotation Number to Zero

1... **2...** 1/DNU

At the end of each calendar year, the Rotation numbers can be reset so that in January they start again at one. This is useful when using automatic rotation numbering within a Bond Stockroom end year.

This process sets the Rotation numbers back to zero for each selected company and Bond.

Setting Rotation Numbers To Zero Procedure

-  Select **F16=Change Company** and select the company you want.
-  Select the Setting Rotation Numbers To Zero option.
-  Enter a valid Bond Number.
-  Press **Enter** to display the confirmation screen.
-  Press **F8=Reset** to reset the Rotation number to zero for the selected Bond.
-  Repeat the above process for each company and Bond.

Note: Attempts to reset Rotation Numbers to zero more than seven days before or after the New Year, will be prohibited by an error message.

AFI Bond Movements Extract

These options provide an interface to the General Ledger Advanced Financial Integrator (AFI). For general information, please refer to the AFI Product Information - details given here are additional and specific to Drinks US Bonded Inventory Management.

AFI Bond Movements Extract Test

4/DNU

This function is used to undertake a trial extract of data from the source application (in this case, US Bonded Inventory Management) and create a General Ledger journal.

Note: No actual updating of data takes place, either within the source application or the General Ledger. It is purely a “paper” exercise to simulate the effect of creating the specified journals for the nominated company.

Up to three reports are generated:

- A list of the General Ledger postings generated.
- An exception report showing, for example, any balancing postings automatically created for an unbalanced journal.
- An error report, showing any error conditions encountered.

Test Extract Screen

Select the Test option.

          07-39      SF          MW          KS          IM          II  PLYM400A PED171S1
  
```

Fields:

Source Company

Indicate the source company whose data is to be used for this trial extraction.

Work with Bonded Inventory Movements not yet Processed

1 - If for the purposes of this trial, you want to use only data which has not been extracted in 'live operation' mode by AFI.

0 - If you wish to specify a range of transaction numbers on which the trial is to be based.

Work with Bonded Inventory Movements From and To

This is only relevant if the previous response was '0'. Specify here the range of transaction dates in the source application to be used in this trial. If you wish to use only the inventory movements which occurred on a single day, specify the same date in the From and To entries. A window facility is available to display transactions within the source application which can be used for this trial.

Type of Journal Definition to Use

There are three valid options here:

- 1 - Use only journal definitions which are specified as being under test.
- 2 - Use only journal definitions which are specified as being live.
- 3 - Use both test and live journal definitions.

Consolidate Postings

1 - You wish consolidation to take place on those postings defined as 'consolidatable'.

0 - No consolidation will take place, even though you may have postings defined as consolidatable.

Press **Enter** to validate the selection screen.

Press **F8=Proceed** to proceed with the trial extraction.

AFI Bond Movements Extract Live

This facility enables you to initiate the extract of Bonded Inventory transactions from the Bonded Inventory movements file for processing by AFI to create General Ledger journals.

Transactions will be extracted according to the selection criteria set up on your journal condition.

Live Extract Screen

Select the Live option.

```

Fields:

Company

Specify here the company code of the company for which Bonded Inventory transactions are to be extracted.

Press **F8=Proceed** to proceed with the extraction.

Installing US Bond / AFI Link

6/DNU

Having first installed each Drinks application and the AFI application, this option must be run to copy the Drinks US Bonded Inventory Data Dictionary and other control files into the AFI application. AFI is then aware that Drinks US Bonded Inventory Management exists as an application that can be a source of transactions.

Transactions are created in AFI for the Bonded Inventory movement types as defined on the journal conditions set up for the Bonded Inventory application. These are posted to the General Ledger as journals when you take the *AFI to General Ledger Update* option. Within the Bonded Inventory application, unlike Sales Invoicing, there is no facility to automatically extract transactions and post to the General Ledger without operator intervention. Because of the wide range of Bonded Inventory movement types, and the likely number of transactions, it is deemed more appropriate to control the extract of Bonded Inventory movement transactions on a manual basis.

Note: AFI is required in order to post automatically to the General Ledger goods purchased account when goods are received into Bonded Inventory.

As well as the AFI link status being set to 'active', there must also be one or more 'live' journals. The facility to set up a journal as 'live' is part of the *Journal Conditions Maintenance* facility.

Note: The journal condition field must be set to test for a valid value when reading data from the source application. For example, the journal condition field must be set up to test for a specific US Bonded Inventory movement type or range of types.

Data Dictionary

The following files, and their associated fields, are available for defining how selection and/or consolidation is to take place.

Item Master

- Company Number.
- Item Code.
- Item Type .
- Item Class.
- Division.
- Sub-Division.
- Item Group Major.
- Item Group Minor.
- VAT Code.
- Item Master Discount Group.
- General Ledger Stock Account.
- General Ledger Cost of Sales Account.
- General Ledger Sales Account.
- General Ledger Price Variance Account.
- Costing Method.
- Sub-Contracted Item.
- Resource Code.

Bonded Inventory Movement

- Company Number.
- Item Code.
- Stockroom Code.
- Transaction Type.
- Reference Number.
- Movement Type.
- Movement Reason Code.
- Movement Source.
- To/From.

Stock Balance

- Item Type.
- ABC Override.
- ABC Class.

Stockroom

- Stockroom Usage Code.
- Department Code.

Daily Movements

The following fields are defined as quantities which are available to post, (refer to 'Quantity field to post' within posting definitions).

- Movement Quantity (Movement UoM).
- Movement cost.

Below are the different US Bonded Inventory Movement Types which the file can contain together with their normal sign (+ or -).

Description	Bonded Inventory Movement Type	Sign
Customer Order Issue	C	-
Miscellaneous Issue	S	-
Purchase Order Receipt	P	+
Miscellaneous Receipt	R	+
Adjust Physical Stock	A	+/-
Adjust Allocated Stock	L	+/-
Adjust Frozen Stock	F	+/-
Transfer Out	O	-
Transfer In	I	+
Purchase Order	U	+
Adjust In-Transit	T	+ (Transfer Out) - (Transfer In)

Adjustments follow the sign of the transaction, i.e. positive adjustment has a positive sign.

Activating the Link

Warning: It is strongly recommended that journal conditions are first set up as 'under test' and that they are thoroughly proven using the facilities of the AFI Test Extract before they are set to 'live' and AFI is 'active'.

Until such time as AFI is activated, posting of Bonded Inventory movements to the General Ledger will not take place. When AFI is set to 'active' only from that point will postings to the General Ledger take place via AFI each time Bonded Inventory movements are extracted.

The steps required to be taken to activate AFI are as follows:

1 - AFI Maintenance

Use the Maintain Journal Condition option to change the status of your journal conditions from 'inactive' (0) or 'under test' (1) to a status of 'live' (2).

This need not be done for all journal conditions - only those which you are ready to activate.

2 - AFI Utilities

:

Use the Maintain Application option to change the status of the AFI link from 'inactive' to 'active' using F8. At the same time check the validity of your consolidation settings on this display.

AFI will now be used to process Bonded Inventory movements to create General Ledger journals, according to your rules and definitions, from the point when you next create movements within the Drinks US Bonded Inventory Management application and extract them using AFI.

Library List

A separate “task level” library list has been created within AFI to include all the Bonded Inventory files necessary to undertake a data extract of Bonded Inventory movements from the Drinks US Bonded Inventory Management application into AFI.

As well as containing the necessary Bonded Inventory libraries, this includes the AFI Program and Data Libraries.
