Chapter 1

Maintenance

Drinks Sales Order Processing Maintenance

The maintenance functions allow the creation and amendment of master files, control records and parameters that are fundamental to the operation of the module.

Warning: File maintenance, particularly of the company control records and descriptions file, should be executed with extreme care, since errors will have far reaching effects. A proper procedure of authorisation and maintenance checking must be operated as a matter of company policy.

By identifying a customer or product as special, you are highlighting its importance. This does not affect the sales ordering process, but it is used by Drinks Sales Analysis.

Company Profile Maintenance

1... **1/DOU** **2...**

You use this option to create and maintain company details and defaults. The company is identified by a two character Company Code.

A Sales Order Processing company interfaces to Drinks Inventory Management, General Ledger and Accounts Receivable companies.

Company Profile List Of Companies Screen

Select the Maintain Company Profile option.

The first screen displays the list of existing companies that you can maintain.

08010	Company Profile Maintenance	USER GALBRAIJ	1/08/95 12:00:07
-------	-----------------------------	---------------	---------------------

Company name	Company code
Drinks system test company	D1
Handy Wholesalers Ltd	HW

State Profile System Test Comp	SP
Single Currency U.K. Company	SU
UK Definition Testing	UK
Multi-Currency Company	US
* Drinks U.S. System Testing *	U1
Multi-Currency Company	ZM

Enter company code to maintain..

1=Select company
F3=Exit

Fields:

Select

This field is untitled on the left of the screen. To maintain an existing company select it with a 1.

Enter Company Code To Maintain

To create a new company, type the new code and press Enter.

Enter 1 next to the company you want to maintain, or Enter a new company code and press **Enter**. The Company Profile Maintenance Controls Screen is displayed.

Company Profile Maintenance Controls Screen

This screen is displayed when a company code has been entered on the List of Companies Screen.

You use this screen to enter and maintain:

- The name and address of the sales company.
- Key control numbers.

Warning: Great care must be taken when updating any company data. For instance, if control numbers are changed there may be a risk of duplicate order or invoice numbers being created.

OE010	Company Profile Maintenance	USER GALBRAIJ	1/08/95 12:02:51
Company code..... HW			
Company name..... Handy Wholesalers Ltd			
Address..... Unit 11 Knightsbridge Trading Estate Norfolk Street Birmingham

Invoice consolidation..... 0 (0=Desp, 1=Ord, 2=Weekly, 3=Mthly, 4=Daily)			
F3=Exit F4=Prompt F12=Previous			

Fields:

Company Name, Address And Postcode

The name of this sales company and its trading address.

Note: The following four fields are maintained by the system.

Last Order Number Used

The last order number processed. This will be automatically incremented by the system, but at set-up time should be set to the number prior to the first order number to be used.

Last Invoice Number Used

The last invoice number processed. This will be automatically incremented by the system, but at set-up time should be set to the number prior to the first invoice number to be used.

Last Product Summary No. Used

This number is used in conjunction with the Product Summary report.

Last Acknowledgement Printed

The last order number for which an acknowledgement was printed. This is automatically incremented by the system, but at set-up time must be set to the number prior to the first acknowledgement number to be used.

Note: The following fields are defaults.

Proforma Invoices

This indicates whether pro forma invoices are generated automatically for Cash With Order customers when an order is raised, and prior to despatch.

0 - No.

1 - Yes.

Last Proforma Number Used

The last pro forma number processed. This will be automatically incremented by the system.

Last Consignment Ref Used

The last consignment reference number processed will be automatically incremented, by delivery note print if multi-stockroom allocation is switched on.

Currency Rate Code

The default rate code to be used for the identification of the currency rates used to convert prime currency orders into base currency. The default may be changed at customer or at order level.

Note: This field will only be displayed if Accounts Receivable is operating as a multi-currency module.

Default Price List

This field is no longer used.

Invoice Consolidation

This function is used to identify how the invoices should be processed for the customer. The number indicates whether each transaction will be accompanied with an invoice. Alternatively the customer can be sent one document containing details of all their invoices, for a particular day, week or month.

In addition, defaults from the Company Profile are used. Valid entries are:

0 - Each despatch to raise a separate invoice.

1 - All despatches for a particular order are consolidated by order number. This consolidates all despatch notes for a single order, since the last invoice run.

2 - All orders despatched during a particular week are consolidated, by week number.

3 - All orders despatched during a particular month are consolidated, by period number.

4 - All orders despatched during a particular day are consolidated, by date.

Note: Invoice Consolidation uses the Drinks Inventory Management weeks and periods.

Press **Enter** to continue. The Customer Profile Maintenance Operation Defaults screen is displayed.

Company Profile Maintenance Operation Defaults Screen

This screen is displayed when you have pressed **Enter** on the Company Profile Maintenance Control Screen.

You use this screen to set up, at company level, the defaults which control the processing logic of Drinks Sales Order Processing.

When a new account is added it will normally assume these company defaults unless they are specifically changed. As an order is entered the defaults from the customer are presented. They may then be confirmed or altered, as appropriate for each order.

Note: Most of the fields switch on a function or process. Enter 1 to switch a function on, or 0 to switch the function off.

Fields:

Customer Defaults

Produce Manual Pick Lists

Not used in Drinks.

Allow Back Orders

If an attempt to allocate stock fails, your customer may or may not wish the item to be held until stock is available. By typing in 1 back orders are permitted.

Allow Part Delivery

If only part of an order is available, your customer may or may not want the part order items to be shipped. By typing in 1 part delivery is permitted. The Allow

Back Orders and Allow Part Deliveries fields work together in the following fashion:

Option A

Allow back orders - No

Allow part delivery - No

If an allocation fails, no allocation takes place, and the order line is cancelled.

Option B

Allow back orders - No

Allow part delivery - Yes

If an allocation fails, the unallocated part of the order line is cancelled.

Option C

Allow back orders - Yes

Allow part delivery - No

If an allocation fails, no allocation takes place, and a back order for the whole line quantity is created.

Option D

Allow back orders - Yes

Allow part delivery - Yes

If any allocation fails, a back order at line level for the unallocated quantity is created.

Order Reference Required

Enter 1 if the customer requires their order number to be quoted on an order.

Print Acknowledgement

Enter 1 if acknowledgements are required.

Carriage Charged

This is a memo only field in Drinks.

Cash With Order

This option dictates whether or not cash payment is required with the order. This is the default for the Company, but can be changed at Customer level. Enter 1 if cash with orders is required

Special Customer

This flags customers and products as special.

0 - For normal.

1 - For special.

Tip: By identifying a customer/product as special you are highlighting its importance. This does not affect the sales ordering process, but it is used by Drinks Sales Analysis.

Invoice At Assembly

In Drinks the Confirm Assembly process is used to book out stock. Confirm Delivery is a separate process which allows you to reconcile for discrepancies between what is sent and what is eventually received. This can be used to take account of breakages, for example. If this flag is set to 1 the system will automatically run Confirm Delivery with the same quantities after completion of assembly updates.

Allocation

Allocation Priority

When orders are considered for batch allocation they are sequenced by priority to ensure those with the highest are satisfied first. The priority can be between 0 and 99 inclusive.

0 means do not allocate in the batch run as this is done manually.

99 means force allocate the order even if there is insufficient stock.

Priority Increment

If an order is not satisfied by an allocation run the priority is incremented by the value entered here up to a maximum of 98.

Allow Negative Stock

When a manual allocation takes place stock will be allocated up to the point where available stock is zero. If forced allocation is allowed this option should be set to 1. This is not recommended in Drinks.

When this flag is on, manual allocation will allocate the full requested quantity, ignoring the normal availability rules. Allocating more than available stock should be controlled using the negativity field in Stockroom Maintenance in Drinks Inventory Management.

Multiple Stockroom Allocation?

This flag identifies if multiple stockroom allocation is allowed. If the quantity required is not available in a single stockroom, the system will try to find it in another stockroom, and create a sales order line for each quantity found in each stockroom. This is achieved by means of a hunt group which is set up in Depot Profile Maintenance.

1 - Yes. Order lines may be sourced from more than one stockroom when allocation hunting takes place.

0 - No. Order line must be satisfied from one stockroom only in allocation hunting.

Pricing

Option

This parameter is not used for Drinks.

Order Priced At

This flag setting determines when the invoice pricing takes place. If priced at order, then the prices shown on order entry / amend are maintained through to

invoice. If priced at despatch, the order is re-priced at the time the invoice is printed.

Pricing at order is based on the date the order is entered into the system. Pricing at despatch is based on the estimated delivery date, recorded on the order, until actual despatch takes place, when it is based on the date the goods were confirmed delivered, or the latest requested ship date, if this has been entered in the order additional details.

1 - Order entry. Pricing at order entry is to be used.

2 - Despatch. The order is to be re-priced at despatch time.

Despatch

Cancel Balance Allowed

This parameter is not used for the Drinks Module.

Clean Despatch Notes

This parameter is not used for the Drinks Module. A separate delivery note is printed within Drinks.

Print Borders On Documentation

There are two styles of document, i.e. with or without borders. This feature may be controlled separately for each document:

- Acknowledgements.
- Invoices.

You may wish to suppress borders if you use pre-printed stationery. There are a number of documents in Drinks where borders are not supported, however if you switch borders on, it will not do any harm, but will just not print out.

Tip: This setting applies only to Acknowledgements and Invoices.

Press **Enter** to confirm the details. Press **Enter** again and the Company Profile Maintenance Customer Search Control Screen 1 will then be displayed.

Company Profile Maintenance Customer Search Control Screen 1

This screen is displayed when you press **Enter** twice after entering details on the Customer Profile Maintenance Operation Defaults Screen and displays the current and available Search Arguments for the selected Company.

This screen enables the selection of three fields from the customer database to be used in conjunction with the customer name in the customer alpha search facility.

Note: This procedure would normally only be used when the company is set up and not changed thereafter. If it is changed then the housekeeping utility Recreate Customer Search Index must be run in order to rebuild the search cross references.

Tip: You can use the Utilities Menu if you want to search on accounts maintained via Accounts Receivable. Only invoice and delivery addresses have the alpha search facility maintained automatically.

OE010	Company Profile Maintenance	USER GALBRAIJ	1/08/95

6-44 SA MW KS CL IM DM II STUD140 KB ST0672S1			

Fields:

Print Invoices And Credits

This would normally be set to 1 to produce a hard copy printed invoice or credit note, otherwise the print is output to a data file for subsequent user-defined printing.

0 - No.

1 - Yes.

Customer Delivery Lead Time

Default lead time for Customer Sales Detail Extension screen.

Note: If you set this delivery lead time to a value greater than zero it will override a zero Delivery Lead Time set for an individual customer.

In this case, during order entry, the delivery date will be calculated using this Company Profile Customer Delivery Lead Time and not the zero delivery lead time set for the individual customer.

State Profile In Use

This has been developed as a US function and allows for the maintenance, calculation and reporting of State and City Excise taxes.

0 - No.

1 - Yes

Customer Stockroom Default

This flag indicates if you want to display the customer's stockroom as a default in Drinks Sales Order Processing.

0 - No.

1 - Yes

Ansi X12 Messages In EDI

This indicates the use of ANSI X12 messages in EDI. This is for the US market only.

0 - Off. The use of ANSI X12 messages is disabled. Barcodes entered against an item, in Inventory Item Maintenance, are limited to 13 digits. The 13th, digit is the check digit.

1 - On. The use of ANSI X12 messages is enabled. Barcodes entered against an item, in Inventory Item Maintenance, can be 14 digits. The 14th, digit is the check digit.

Country Indicator

This indicates if this is a US installation.

0 - No. This is not a US installation.

1 - Yes. This is a US installation.

Duty Value To Use To Uplift Issue Costs

This flag provides the opportunity to use actual duty rather than notional duty to uplift cost of sales and inventory movement values.

0 - Use the Notional Duty as defined in Item Maintenance.

1 - Use the Actual Duty calculated for the Movement from a duty suspended stockroom to a duty paid stockroom / customer.

Price Elements in Use

Price elements allow a more detailed analysis of invoice details in the General Ledger via AFI. If a non zero entry is made in this field Price Breakdowns must be defined.

0 - Price element breakdown is not required.

1 - Price element breakdown is in use, zero values are not posted to the General Ledger.

2 - Price element breakdown is in use, zero values are posted to the General Ledger.

Note: Once Price Elements are in use, then the Price Element Breakdown must be defined for every price break on every Price Type.

Extended Analysis In Use

If this field is set to 1, then an additional 30 characters of information can be entered against each line of a sundry invoice or credit note.

0 - No.

1 - Yes.

Commission Calculation Point

Specify the point at which sales commission schemes are due for payment. This is the default value for all customers but can be overridden in Customer Sales Information Maintenance.

Sales Commission schemes can be paid at:

- 1 - Invoice Generation.
- 2 - Invoice Payment.

Press **F8=Update** to save the information you have entered.

Descriptions File Maintenance

1... **2...** 1/DOM

The Descriptions File is used by Drinks Sales Order Processing to define valid parameter values for the module. Parameter files are used by the system for a number of reasons. They enable codes to be used at data entry time instead of typing in long repetitive data. This also enables coded data to be checked for integrity. Once they have been set up and checked, parameter files help to ensure that data input is both accurate and acceptable to the system.

For more information see Descriptions File Maintenance in Drinks Inventory Management.

Customer Maintenance

2/DOM

This procedure enables the creation and maintenance of a customer database which accurately reflects the customer's organisation. This is to ensure that invoices, statements, and acknowledgements, as well as the goods, are sent to the correct address.

Equally, it is necessary to ensure that the correct analysis codes are applied to sales and orders so that accurate analysis can be performed.

It is therefore necessary to identify:

- Where statements are sent, and from where the payments will be received.
- The delivery points.
- Where invoices should be sent.
- Trading terms and analysis codes.

For each customer Drinks Sales Order Processing offers the following address possibilities:

- A single statement address.
- Any number of delivery addresses.
- Any number of invoice addresses.

The account code used as a unique identifier of a customer is 8 characters long with a suffix of 3 characters. Statement and invoice accounts always have a suffix of 000, these are mutually exclusive.

Statement Address: This is held as a record in the Accounts Receivable Customer Master File. The data in this file is identified by the *customer account code* and a system generated three digit sequence number of 000. The statement account is the responsibility of the sales accounting function because much of the data is concerned with credit worthiness and payment terms.

Delivery Address: Each delivery address required is set up as another record in the Customer File. Each delivery address is identified by the statement address *customer account code* and a user generated three digit sequence code. This will be anything other than 000.

Normally the invoice would be sent to the delivery point or to the statement address, however, they can be sent to yet another address if required.

Invoice Address: If this is not the statement address or delivery point it is identified by a unique *customer account code*, which cannot be the same as the statement customer number, along with a system generated *delivery sequence number* of 000.

Sales Details: Drinks Sales Order Processing holds a profile on each customer delivery profile in addition to address details and the other data needed by Accounts Receivable. This customer sales information defaults through to each

customer order, and includes the stockroom that will usually supply the customer, normal allocation priority and so on.

The profile also holds customer data to be used by Sales Analysis.

To set up the statement account see the information on Customer Maintenance in the Accounts Receivable Product Information.

Customer Maintenance Selection Screen

Select the Customer option.

This screen enables the selection of both the customer and the required function.

0 - If only the Accounts Receivable Base currency is allowed.

1 - If this is a currency customer.

Currency Code

If the account is to be processed in a currency other than your base currency, enter the currency code associated with the customer's currency. This field will default to the base currency but can be changed.

Group 1 - 4

These are optional analysis codes and can be used to sequence the customer report in Accounts Receivable.

Remarks

Enter up to 50 characters of free format text.

Salesman

Accounts Receivable salesman.

Region

Accounts Receivable region.

Invoice Consolidation

This function is used to identify how the invoices should be processed for the customer. The number indicates whether each transaction will be accompanied with an invoice. Alternatively the customer can be sent one document containing details of all their invoices for a particular day, week or month.

On addition, defaults from the Company Profile are used. Valid entries are:

0 - Each despatch to raise a separate invoice.

1 - All despatches for a particular order are to be consolidated by order number. This consolidates all despatch notes for a single order, since the last invoice run.

2 - All orders despatched during a particular week are to be consolidated by week number.

3 - All orders despatched during a particular month are to be consolidated by period number.

4 - All orders despatched during a particular day are to be consolidated by date.

Activity

Note: This field will only be displayed if the customer invoice detail is being amended.

Enter one of the following:

S - If you want to suspend a customer temporarily.

D - If the customer is to be deleted.

Press **Enter** to update any changes to the file.

Delivery Name And Address Maintenance Screen (Option 2)

This screen is displayed when you have selected option 2 from the Customer Maintenance Selection Screen, and enables many delivery points to be set up for a single customer.

The customer name and delivery address are displayed, together with the caption **Addition** and **Amendment**, as appropriate.

F3=Exit F4=Prompt F10=Additional details F12=Previous			
00-14 00 MW KS IM II KENB20A PED129S1			

Fields:

Name

Enter up to 35 alphanumeric characters for the customer's name.

Address And Post Code

Enter up to 5 lines of delivery address and 5 characters for each half of the post code.

Contact

Enter up to 35 characters for the name(s) of the contact(s) at the customer.

Telephone Number

Enter up to 20 characters for the customer telephone number.

Fax Number

Enter up to 20 characters for the customer fax number.

Currency Customer Flag

Set this flag to 1 if this is a currency customer, or to 0 if only the Accounts Receivable base currency is allowed.

Currency Code

If the account is to be processed in a currency other than your base currency, enter the currency code associated with the customer's currency. This field will default to base currency but can be changed.

VAT Code

This only needs to be entered if it is different from the set-up in Accounts Receivable. The default value for orders will be taken from the delivery address.

The group codes should be entered for the Accounts Receivable customer print. Activity suspend / delete should also be described. For Bonded customers the VAT code must have a zero rate.

Note: For orders the default VAT code used will be determined by the values of the VAT indicator.

VAT Indicator

This flag is used to indicate whether or not the VAT Code should be applied to the customer or the item. Valid entries are:

- 0 - Customer Statement account VAT indicator used.
- 1 - Exempt. The VAT code should have a rate value of zero.
- 2 - This records Delivery Address VAT code.
- 3 - The Item VAT code is used.

Note: This processing is modified when World Trade is attached.

St Addr

This is the statement address code associated to the delivery address. This is used to determine where the postings are sent in Accounts Receivable. This should be the level 3 account if hierarchies are in use.

In Addr

This is the invoice address code. The default code will be the account code for which a delivery address is currently being maintained. If the invoice for this customer is to be sent to another address, enter the appropriate invoice account code.

If this field is left blank, the invoice will be sent to the delivery sequence code. If a customer code is entered the invoice will be sent to the 000 sequence address.

Tip: This controls consolidation if you want to consolidate by account. All delivery sequences go on the same invoice.

Group 1 - 4

These are optional analysis codes and can be used to sequence the customer report in Accounts Receivable.

Remarks

Enter up to 50 characters of free format text.

Salesman

Accounts Receivable salesman.

Region

Accounts Receivable region.

Activity

Enter one of the following:

S - Suspend.

D - Delete.

Warning: You must specify an Invoice Address code, either the account or a different invoice address

Note: The remaining entries are not required for despatch only addresses.

*Note: If the customer name is amended, the alpha search fields on the Company Profile need to be updated. The Customer Maintenance screen will be displayed. Press **Enter** to accept changes, otherwise return to the previous screen **F12=Previous**.*

Functions:

F10

Additional Details.

Press **Enter** to update the details and return to the Customer Selection Screen, or **F10=Additional Details** to enter further details.

Delivery Name And Address Maintenance Additional Details Screen (F10)

This screen is displayed when you have pressed **F10=Additional Details** on the Delivery Name and Address Maintenance Screen. Essentially it is the same as the Delivery Address Screen, but with an additional field.

Customer Sales Information Maintenance Screen 1 (Option 3)

This screen is displayed by taking option 3 on the Customer Maintenance Selection Screen and enables the maintenance of customer data used to control the processing of sales orders, and the coding of customers for use in Drinks Sales Analysis.

Tip: Depot Profiles must be set up or already exist before Sales Details can be set up.

The customer account code and sequence code are displayed together with the caption **Addition** or **Amendment** as appropriate.

The column of data on the left of the screen is used to control Sales Order Processing whilst the data in the right column is for Sales Analysis coding.

Company defaults will be displayed for **Additions**, while current data is displayed for **Amendments**.

Fields:

Stockroom

The depot which usually supplies this customer. Not required if the Customer Default Stockroom is not in use.

Trade Price Type

Must be a price type function - used to price containers in preference to the wholesale price list. Can also be used as a Telesales Promotion constraint.

If entered, this is used to obtain the following special values:

A - For taxable freeloaders this Price Type is searched before the Wholesale Price List, defined against inventory description type WSPL, to determine the value on which tax is calculated.

B - To determine the trade value of freeloaders and ordinary items on the invoice line using the same rules for the order of price retrieval as freeloaders. See note 2 below.

Note 1: Associated containers are always priced using the wholesale price list. The customer trade price type has no effect. Containers ordered in their own right are priced as normal items and may apply any price defined for the Item / Customer, and / or groups, including the wholesale price list entry.

*Note 2. To use the customer trade price type for trade value retrieval, the customer trade price type must be set up by customer group and the pricing groups for the customer must have an entry with the group code the same as the trade price type. Also the wholesale price list should be set up by item only. **This should be the normal setup for the wholesale price list.***

Promotion Discount Type

Must be a discount type pricing function. If set to FRE, the customer is entitled to Freeloader/loyalty promotions. Can also be used for standard promotion constraints.

Cash Disc Code

The cash discount code as defined on the descriptions file against major type CDSC. The rate of discount is defined as a percentage which is to apply to the order generated for this customer.

Allocation Priority

The usual priority of orders for this customer.

Status

Customer Status indicates the stage that the customer has reached, e.g. Prospect, Trading Customer, Historic. From Descriptions file major type CUSS. The default is 3 for Prospect.

Currency Rate Code

The default rate code to be used for the identification of the currency rates used to convert prime currency orders into base currency.

Back Orders

If an order is required to remain on the system because of a stock shortage, back orders should be allowed. Enter 1 to set back orders. Otherwise enter 0 to prevent a build up of back orders.

Note: If only part of an order is available, your customer may or may not want the part order items to be shipped. By typing in 1 part delivery

is permitted. The Allow Back Orders and Allow Part Deliveries fields work together in the following fashion:

Option A

Allow back orders - No

Allow part delivery - No

If an allocation fails, no allocation takes place, and the order is cancelled.

Option B

Allow back orders - No

Allow part delivery - Yes

If an allocation fails, the unallocated part of the order is cancelled.

Option C

Allow back orders - Yes

Allow part delivery - No

If an allocation fails, no allocation takes place, and a back order for the whole line quantity is created.

Option D

Allow back orders - Yes

Allow part delivery - Yes

If any allocation fails, a back order at line level for the unallocated quantity is created.

Part Delivery

Although a full order cannot be met due to stock shortages, the completed order lines can be despatched. This function will only work if part delivery is set to 1. Otherwise enter 0.

Manual Pick List

This function does not exist in Drinks. This field is memo only.

Carriage Charged

This field is not used currently, and is a memo field.

Cash With Order

Enter 1 if orders are taken with cash. Customers Orders will be suspended at trailer time with code CW. Once cash is received order can be released and processed.

Acknowledgement

This identifies if an acknowledgement is to be printed for each of this customer's orders.

0 - No.

1 - Yes.

Order Reference

This indicates if this customer requires an order reference on each order.

0 - No.

1 - Yes.

Customers Own Ref

Reference associated with this customer.

Division

The customer division chosen from those defined on the descriptions file against major type DN.

Sub-Division

The customer sub-division chosen from those defined on the descriptions file against major type SV.

State

The customer state code chosen from those defined on the descriptions file against major type ST.

Region

The customer sales region code chosen from those defined on the descriptions file against major type SN.

Territory

The customer territory code chosen from those defined on the descriptions file against major type TR.

Salesman

The customer salesman code chosen from those defined on the descriptions file against major type TN.

Customer Class

The customer class code chosen from those defined on the Descriptions file against major type CCCC.

Corporation

If the customer is part of a larger organisation, this may be used to define the corporation for analysis purposes.

Special Customer

This indicates if this is a special customer by your own definition.

0 - No.

1 - Yes.

Invoice Consolidation

This function is used to identify how the invoices should be processed for the customer. The number indicates whether each transaction will be accompanied with an invoice. Alternatively the customer can be sent one document containing details of all their invoices for a particular day, week or month.

On addition, defaults from the Company Profile are used. Valid entries are:

0 - Each despatch to raise a separate invoice.

1 - All despatches for a particular order are to be consolidated by order number. This consolidates all despatch notes for a single order, since the last invoice run.

2 - All orders despatched during a particular week are to be consolidated by week number.

3 - All orders despatched during a particular month are to be consolidated by period number.

4 - All orders despatched during a particular day are to be consolidated by date.

Note: Consolidation uses the Drinks Inventory Management weeks and periods.

Buying Group

The customer buying group chosen from those defined on the descriptions file against major type GRPC.

Outlet Code

Memo field only.

Functions:

F16

Pricing Restrictions. Displays windows with pricing information.

F19

Pricing Groups. Displays windows with pricing information.

F21

External Text. Additional external customer text to be printed on order documentation, for example.

Press **Enter** to continue to the Customer Sales Information Screen 2.

Customer Sales Information Maintenance Pricing Type Restrictions Window (F16)

This window is displayed when you have pressed **F16=Pricing Restrictions** on the Customer Sales Information Maintenance Screen 1, and enables you to select the pricing type.

7-32	SA	MW	KS CL IM DM II STUD140 KB ST0672S1

Fields:

Customer

This is the customer code entered on the Selection Screen.

Customers Own Group

A Customer code chosen from those defined on the Descriptions file against major type CGRP. This is a special type of customer which restricts allocation when entering a sales order.

Booking-In Delivery

This flag records if booking-in details are to be recorded.

1 - Yes. Booking-in details need to be recorded against the order before allocation/picking can take place.

0 - No. Booking-in details are not required.

Customer Delivery Lead Time

Enter numeric Lead Time in Days. This will be added to the system date when Orders are entered, to calculate the delivery date.

Note: If you set this delivery lead time to zero and the default Customer Delivery Lead Time on the Sales Order Processing Company Profile to a

value greater than zero, the Delivery Lead Time on the company profile will override this the Delivery Lead Time for the individual customer.

In this case, during order entry, the delivery date will be calculated using the Customer Delivery Lead Time on the Sales Order Processing Company Profile.

Note: The Lead Time should be expressed in working days - the system ignores weekends.

Minimum Order Quantity

A numeric memo field.

Large Drop Discount

A numeric memo field.

Trade Key

A code chosen from those defined on the Descriptions file against major type TRAD.

Sales Stream

A code chosen from those defined on the descriptions file against major type SSTR.

Restrict Buying List

This field is only relevant if US functionality is installed. If State Profile is active, this indicator restricts this customer's orders to items on that customer's buying list, or the state buying list Items ordered which are not on the buying list result in a State Violation suspension.

1 - Yes.

0 - No.

Price At Delivery Address Level

This flag determines where the Customer Pricing and Discount Groups should be established.

0 - Established for the customer sequence 000 only.

1 - Established for each delivery point, and then customer sequence 000.

Commission Calculation Point

Specify the point at which any sales commission schemes, defined for this customer, are due for payment.

1 - Invoice Generation.

2 - Invoice Payment.

This field defaults to the value set up in Company Profile Maintenance, but can be overridden here.

The following four fields are only displayed if
State Profile is active:

Taxation State

A code chosen from those defined on the Inventory Descriptions file major type ST. Mandatory if State Profile is active.

City Code

A code chosen from those defined on the Inventory Descriptions file major type CITY. Mandatory if State Profile is active.

Buying List

A Telesales buying list that must have been established through Drinks Telesales Maintenance. Although used to set up the Company, it would not, initially, have to have all items listed.

If left blank, the system defaults to the buying list on the State Profile. Mandatory if State Profile is active.

Used in conjunction with the Restrict Buying List indicator to restrict the items that a Customer can order.

Tax Group

A code chosen from those defined on the Inventory Descriptions file major type CTPP. Mandatory if State Profile is active.

Used in conjunction with the Pay Taxes field on the State Profile to condition which groups of Customers in the State pay Excise Tax.

Entry By State References

This is only available in the US environment. This enables the customer to order an item using a code defined by the state where the customer operates, and the system will convert this to a code used by the system.

0 - No.

1 - Yes.

When ordering by state reference, the entered code is first checked against the state buying list to determine the item number that the system uses to identify the product. A prompt will be displayed if the reference points to more than one entry on the buying list.

If the item retrieved is not on the customers buying list a state violation occurs, if the customer is restricted.

If the entry is not by state reference and the buying list restriction flag is set to yes, a partial item code may be entered. This must be an item recognised by the system. This is then checked against the customers buying list and if the partial code matches one defined the item is acceptable, otherwise state violation occurs. The customer item code is then checked against the state buying list, if not found a state violation occurs. The order is entered with the customers buying list item code, provided it is also defined to the system.

Note: This latter facility enables state variant items to be ordered by your common item number.

For example: You sell VODKA, but in Georgia the label has to bear specific wording and you

must only supply Georgia labelled VODKA in Georgia. You then need to stock two items and stock balances:

VODKA - the standard product.

For example, VOPKAGE - The Georgia labelled variant.

Press Enter to validate the information and return to the initial Customer Maintenance screen.

Customer Maintenance Bond Details (Option 6)

This screen is displayed by entering 6 on the Customer Maintenance Selection Screen and is used to enter and amend Bond details

0E020	HW - Handy Wholesalers Ltd	USER PGMR1	4/11/96 10:44:10

Fields:

Customer Number

This is the customers code number from the previous screens.

C & E Bond Number

Enter a valid Customs and Excise Bond Number, or leave blank for a non bonded customer.

Bonded Depot

Enter one of the following:

- 0 - No, the depot is not duty suspended.
- 1 - Yes, the customers depot is duty suspended.

Deferment Account

The bond movements generated will be stamped with the specified codes if the delivery type is set to use customer deferment accounts. Otherwise the stockroom deferment accounts are put on the movements.

If the Delivery Type field is set to To Home Use With Deferment, the next four fields are mandatory. In this case deferment means that duty is being paid on behalf of another company. This situation would occur, for example, if you are

managing a bonded warehouse which contains stock owned by another company.

Customs

The deferment code for customs duty.

Excise

The deferment code for excise duty.

Local VAT Office

Enter the local VAT office of the customer.

VAT Reg No

Enter the customer VAT Registration Number. This is mandatory for a duty suspended customer.

Turn No

This is printed on the W5D Excise Return along with the VAT Registration Number.

Delivery Type

Enter a delivery type code.

If you enter a bond reference, you must pick a bonded delivery type. This code determines where movements for this customer are reported on the Bonded Inventory Module.

Inter Company A/C

For future development.

Press **F8=Confirm** to save details to the file. The Customer Sales Information Maintenance Screen 2 is then displayed.

Depot Profile Maintenance

3/DOM

Depot profile provides details of which Inventory stockrooms are allowed to be used as depots, i.e. which stockrooms are to be used to satisfy customer orders. This procedure enables the maintenance of the control parameters for a depot.

Note: Depot profiles must exist before customer sales details are set up.

Depot Profile Maintenance Selection Screen

Select the Depot Profiles option. A list of Depots are displayed.

```
08090          HW - Handy Wholesalers Ltd      USER GALBRAIJ      2/08/95
Depot Profile Maintenance                               10:24:01

          E2         EASTERN EMPTYIES
          01         CENTRAL DEPOT
          02         CENTRAL DEPOT (W&S)
          11         EASTERN DEPOT
          12         EASTERN DPOT (W&S)

          Select Depot Code..

F3=Exit  F11=Delete
```

Fields:

Select Depot Code

Enter the code of the depot that you want to create, amend, or delete.

Press **Enter** to continue. The Depot Profile Maintenance Control Screen is displayed.

To define a new depot to the Sales Order Processing module, enter a new depot code and press **Enter**.

Depot Profile Maintenance Control Screen

This screen is displayed when you have entered a depot code on the Depot Profile Maintenance Selection Screen and enables the maintenance of control details for a selected depot or a new depot.

The existing data for the selected depot is displayed.

Fields:

Name And Address

Displays the name and address associated with this depot.

Post Code

This is the post code details.

Contact

Enter up to 35 characters for the name(s) of the contact(s) at the depot.

Delivery Note Printer

The default printer output queue used for delivery notes for this Depot.

Telephone Number

Enter up to 20 characters for the depot telephone number.

Pick List Printer

The default printer output queue used for pick lists for this depot.

Output Queue

The default printer output queue for this depot. Used for a number of reports.

Bulk List Printer

The default printer output queue used for bulk pick lists printing for this depot.

Calendar Code

Enter the Calendar Code as set up in Distribution Requirements Planning which specifies which days are working days.

Label Printer

The default printer output queue used for Label printing for this depot.

New Page On Bulk Pick

This field is not used in Drinks.

Empties Stockroom

The stockroom which will hold container returns.

Maximum Label Count

The maximum number of labels to be printed when producing picking lists.

Additional Labels

Picking List Print will normally produce a pair of labels for each carton. An extra contingency number of additional labels will be produced according to this parameter.

Allocation Priority

This is the normal priority code for orders from this depot. (Reserved for future development).

Allocation Time Fence

The number of days in advance of the due date that orders from this depot can be allocated. All depots in a hunt group should, ideally, have the same time fence.

Acknowledgement Minimum Value

The minimum value of an order for which an acknowledgement will be printed from this depot. This is not used at present and is reserved for future development.

Acknowledgement Time Fence

The number of days in advance of the due date that an acknowledgement will be printed for an order from this depot. (Reserved for future development).

Functions:**F14**

Document Prep. Determines the type of picking documents which may be produced.

F16

Hunt Group. This specifies the sequence in which stockrooms will be searched for stock when this Depot cannot fully supply.

Press **Enter** to confirm the data and update the database.

Depot Profile Maintenance Document Production (F14)

This option, accessed by pressing **F14=Document Prep** from the Depot Profile Maintenance Control Screen, dictates the details required to produce the Pick Notes.

The item group is defined against inventory description code DOCG. This consists of either the item type alone or the item type and item class combination. Where an item class is not defined, the item type alone is used.

Note: Do not define a bulk picking sequence if you are not using Transport Planning. Bulk pick items can only be bulk picked and are never picked by order number, unless the order is customer collect.

DE090	HW - Handy Wholesalers Ltd	USER GALBRAIJ	2/08/95
			10:43:59
Depot Profile Maintenance

C BB	Big bott	1	0
C CC	Standard	1	0
C 2	Spirits	1	0
C 3	sam test	1	0
			+
F3=Exit F12=Previous			

Fields:

Picking Note

Enter a number between 1 and 9 to determine the sequence in which the items print on the pick note.

If there is no item type, and only the group exists, the pick sequence will default to 1.

Note: The print sequence is Sequence number/Bin number/Item number.

Labels

This determines whether labels are produced for this group for any items with associated containers with group HAY cartons.

0 - No.

1 - Yes.

Note: Labels are only printed for associated cartons.

Bulk Pick

Enter 1 to 9 against those Item Groups which will be included in Bulk Picking.

Items in Groups with the same number, 1-9, are put on the same bulk pick, otherwise separate bulk picks are produced.

Note: Entry in this field overrides the Pick Note field.

Note: A change of Bulk Picking Sequence causes a new bulk pick line to be generated. There is a limit of 99 pick notes on an order.

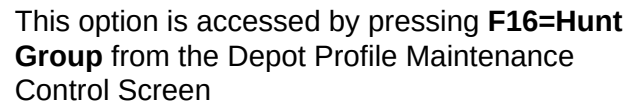

Note: To use bulk picking, you must plan your orders onto Transport Planning loads. Therefore you should not set bulk picking for Depots which are either:

warehouse controlled

do not use Transport Planning.

Press **Enter** to return to the Depot Profile Maintenance Control Screen.

```

WARNING: It is recommended that all stockrooms in a hunt group have the same calendar code and allocation time fence days.

Hunt Group Processing

One of two types of Hunt Group processing can be used, determined by the parameter selection on the Company Profile Operation Defaults Screen for Multiple Stockroom Allocation. The following can be selected:

- Multiple Stockroom Allocation = 0 No.
- Multiple Stockroom Allocation = 1 Yes.

If Multiple Stockroom Allocation = 0, the following rules apply:

If the depot defined for the customer cannot fully source an item, then each depot on the Hunt Group will be investigated in turn. Any depot holding stock of this item that can *fully* satisfy the requirement will be used.

If none of the stockrooms have sufficient stock then the first stockroom in the Group that has the item defined to it will be used for processing according to the standard rules. These standard rules use Back Order and or Part Delivery during allocation to determine the outcome of this order line, but results will affect the depot assigned to the line only.

If Multiple Stockroom Allocation = 1, the following rules apply:

If the depot defined for the customer cannot fully source an item then any available stock will be taken in turn from *each* stockroom in the Hunt Group until the requirement is satisfied. This can result in one customer requirement entered for an item, generating several order lines from various depots. Should there still be an outstanding amount after all available stock is taken from each depot in the Hunt Group, then the *first* depot in the group that has the item defined will be used for processing according to standard rules regarding Back Order etc.

Customer Container Tracking Maintenance

1... **2...** 7/DOM

This maintenance option allows the update of container balances for specific customers. Container items are defined on Drinks Inventory Management Item Master file, as Item type H. Item group major on Drinks Inventory Management Item Maintenance will be either 1, 2, or 3 to dictate whether the container is monitored and, therefore, for all deliveries of stock the system will keep track of any associated containers sent.

This option displays those monitored containers that are still with a customer, also allowing amendments to the balance for any that will not be returned.

Account Container Tracking Maintenance Selection Screen

Select the Customer Container Tracking option
from the Maintenance option.

This screen enables the selection of an account code and type.

Container

This is the container item number selected for amendment or a new container item number for entry of a balance not already displayed.

Balance

The balance to be amended for existing containers, or new balance for containers not displayed.

Press **Enter** to save the changes you have made.

Delivery Note Messages Maintenance

8/DOM

This maintenance option allows special messages to be set up for printing exclusively on delivery notes. These messages may be for a specific customer attribute such as:

1. Region.
2. Territory.
3. Delivery Depot.
4. Division.

At least one of the above attributes must be entered. Only certain combinations of more than one attribute is allowed. The valid combinations are:

- Region only.
- Division only.
- Depot only.
- Region & Territory.
- Region & Division.
- Region & Territory & Division.
- Depot & Division.

Maintain Delivery Special Messages Selection Screen

Select the Delivery Note Messages option.

This screen allows the selection of a combination of one or more attributes, according to table, priority and start/end date for which that message will be effective.

Depot
State
Priority

Start Date

End Date

Message

This is a 2 * 30 character field, split over 2 lines, for input of message.

Tip. This is two fields and will be printed as two lines on the Delivery Note.

Note: Subsequent messages can be added for either the same attributes and a different priority, or a change of attributes.

Press **Enter** to confirm the details you have entered.

Trailer Details Maintenance

9/DOM

Note: The tracking of these trailers only applies if Drinks Distribution Requirements Planning (DRP) is attached.

This maintenance option allows the set up of Trailers along with its number, owning centre and service details.

In conjunction with DRP, this option displays information regarding the last two locations and associated dates of any trailer. This then enables the user to know when a trailer is due a service, which internal depot holds the said trailer.

If DRP is not attached, the trailer number can be used at Confirm Assembly time to note which trailer orders/loads were used. The number entered during Confirmation of Assembly will consequently print on the Delivery Note.

Trailer Details Maintenance Selection Screen

Select the Trailer Detail option.

The system displays a screen which enables selection of a trailer number.

```

0E865              HW - Handy Wholesalers Ltd      User GALBRAIJ      3/08/95
                                                    13:41:14

Trailer Details Maintenance

Trailer number... XB24

F3=Exit

```

Fields:

Trailer Number

Enter a four digit number. If this trailer number already exists, the Detail Screen displays its details. If this is a new number, the Detail Screen is displayed with blank fields for new details.

Press **Enter** to display the Trailer Details Maintenance Screen.

Trailer Details Maintenance Screen

This screen is displayed when you have selected a valid trailer number from the Trailer Details Maintenance Selection Screen.

This screen displays either existing information, or blank fields for additions.

F3=Exit F15=Description code details			

Fields:

Major Type

Enter the major type to be displayed.

Description Code

Your entry in this field depends on what you want to view:

- Leave blank and press **Enter** to display the description of the major type code.
- Leave blank and press **F15=Description Code Details** to display all description codes set up for the major type.
- Enter a description code and press **F15=Description Code Details** to display details of the description code.

Functions:

F15

Description code details. Displays the list of description codes for the selected major type

Roll keys can be used to page up and down through the major types. The description code list will be displayed after **F15=Description**

Code Details is pressed.

Descriptions Enquiry Description Codes Screen (F15)

This screen is displayed when **F15=Description Code Details** is pressed after entering a description code on the Select Major Type Screen.

This screen displays a list of description codes for a selected major type, along with their descriptions.

The description and any parameters are listed. The meaning of these parameters will depend upon the major type. In most cases there are no parameters, unless the codes correspond to numeric values.

Fields:

Select

This field is not named on the screen. Enter 1 next to the description code you want.

Tip: This includes the rate of the minor type and whether it is a value or percentage rate.

Press **Enter** to display the format of the data on the top of the screen.

Press **F3=Exit**.

Customer Maintenance Enquiry

1...
2...

22/DOM

The customer enquiry enables the display of all of the details of a customer which may be relevant to the administration of sales orders. The format of the screens is exactly the same as in the Maintenance procedure. The details of Invoice, Delivery and Sales details may be displayed. The meaning of each field is fully discussed in the Customer Maintenance section of this Product Information.

Customer Enquiry Selection Screen

Select the Customers option. The system will display a selection screen which will provide access to all the Customer enquiry screens.

Fields:

Customer Code

Enter the customer code.

Detail required

Select which customer screen you want to display.

Press **Enter** to display the screen you have requested.

Customer Enquiry Invoice Account Screen (Option 1)

This screen is displayed when 1 is entered in the detail required field on the Customer Enquiry Selection Screen and provides details of the invoice account address details.
