## Chapter 2

### Processing

# Drinks Sales Order Processing Processing Functions

The Drinks modules provide three ways of recording sales orders. These are:

## **Telesales**

Drinks Telesales is designed to capture orders over the telephone (see the Drinks Telesales Product Information).

## **Sales Order Entry**

Drinks Sales Order Processing provides a facility to capture orders either via a dialogue or from forms.

During the process of recording orders in Drinks Sales Order Processing a number of additional activities take place:

- Order pricing and discounting.
- Stock allocating.
- Credit checking.
- Multiple Stockroom Allocation.

The order is then progressed by generating the necessary documents to instruct the stores to pick and despatch the order. This is followed by the preparation of invoices and the subsequent updating of the accounting and analysis modules.

Additional facilities are provided to raise sundry invoices and credit notes.

*Note: If Bond and Inventory is installed, order entry is prohibited if a default delivery type has not been established on the Inventory Description file. Please refer to the Drinks Inventory Management Product Information.*

## **EDI**

EDI is designed to capture orders from data transmitted electronically from customers (see the Drinks EDI Product Information).

## **Sales Order Processing And EMU**

Currency rates are stored on transactions within System 21. With the introduction of the Euro and European Monetary Union (EMU) in 1999, the way in which we process any monetary transaction will change.

There are now three scenarios to determine the currency conversion rate to be used in this case.

- Sundry Invoices and Credits use the customer order date entered on the credit, invoice screen.
- Credit Notes that are not based on an original invoice retrieves the conversion rate which is applicable to the pricing date entered on the screen.

- Credit Notes that are based on an original invoice retrieves the conversion rate applicable to the date on that original document. If the rate was fixed, that is part of the Euro, then it is retrieved and used on the credit note.

Each time the system calculates an invoice line value from the prime currency to the base currency, the value is converted by taking into account these Euro considerations.

Base Invoice Header Values are calculated from the Invoice Header Prime Values by accumulating all the base goods, VAT and charge totals.

If both currencies are defined as IN Currencies, that is defined to the Euro then the Prime Grand Total is converted to the Base Grand Total.

Any discrepancies between this new base value and the sum of the base goods, VAT and charge totals are written to a special Euro Rounding Account via the System 21 Financial applications.

# Sales Order Entry

## 1/DOP

*Note: Force allocation is not supported in Order Entry.*

Order entry can be broken down into the following tasks:

- Identify the customer.
- Delivery Date and Booking In Reference.
- Determine defaults to condition order processing.
- Enter and maintain order text.
- Details of products and quantities.
- Pricing and discounting.
- Stock allocation and Stockroom Sourcing.
- Credit checking.
- Extra charges and order close.
- Order Text.

## Order Entry Select Customer Screen

Select the Order Entry option.

This is the initial screen for order entry and is used to enter the customer, the order dates, the customer order reference and optionally Delivery Date and Booking In details. As different defaults can be set up for different delivery points, it is not only necessary to identify the account, but also the delivery address. To assist in this a name search is provided. The search, however, can be performed on any two characteristics of the customer. These are determined when the module is installed.

|                       |                            |                    |          |

| Booking In Reference. |                            | Time.....          |          |
| F3=Exit F4=Prompt     |                            |                    |          |

### Fields:

#### Customer Number

Enter the account code of the address to which the goods are to be shipped. The code is in two parts, both must be entered. If the name search is used, the customer is selected from the displayed list.

#### Customer Order Reference

Enter the customer's order reference or sales order number. This is mandatory if the customer sales information condition of order reference is set to 1.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the delivery date required. It may not be prior to the current date. If left blank, the system calculates the delivery date using the Customer Lead Time (in working days) in accordance with the DRP calendar.

The customer lead time used to calculate delivery dates is taken from the customer delivery sequence entered on the default specified at SOP Company Profile level, if no entry is made against the customer.

The delivery date will be used for all order lines (it cannot be overridden at line level).

### **W/C Date**

This is the week commencing date. Orders are not allocated until an actual delivery date is entered. This is achieved by changing, in Order Amend, the week commencing date to an actual delivery date and changing the W/C date indicator to 0.

0 - No, the delivery will take place on the delivery date.

1 - Yes, the Delivery Date signifies a week commencing date.

### **Booking In Reference / Time**

Enter a reference number and a time for customers requiring a Booking In Reference before accepting delivery. (Parameter setting in customer sales details). If booking in reference and time are not entered for such customers, stock will not be allocated on this order.

### **State Reference**

Set this flag to determine if state reference is to be used.

0 - No.

1 - Yes.

Press **Enter** to retrieve and display the defaults for the selected delivery address on the Order Entry Customer Defaults Screen.

## Order Entry Customer Defaults Screen

This screen is displayed when you have made valid entries into the Order Entry Select Customer Screen and pressed **Enter**.

This screen displays, for confirmation or amendment, the parameters that will be used to control the processing of the order during its life, and is displayed when selections have been made on the Select Customer Screen.

|                                                                           |   |                                |                                  |               |                      |

| MA                                                                        | a | MW                             | 12/033                           |               |                      |

### Fields:

#### Invoice Name And Address

The name and address to which the invoice will be sent. Enter any change required for this order.

#### Delivery Name And Address

The name and address to which the goods will be delivered. Enter any change required for this order.

#### Stockroom

If the Customer Stockroom Default field is set to 1 on the Company Profile, this is the normal stockroom from which deliveries are made to this delivery address and is the default specified for the customer. If a change is required, enter the required delivery stockroom code. (This is not necessarily the stockroom from which the stock is assembled, i.e. sourced.)

If the Customer Stockroom Default field is set to 0 on the Company Profile, this field will be blank and must be entered by the user.

#### Cash With Order

This is the cash with order flag, and the default is set up on the Customer Sales Detail screen.

0 - No.

1 - Yes.

An order with this field set to 1 will be suspended with code CW and hence will not be allocated. (When the customer has sent in the cash, the order may then be released and processed.) If the Company Profile specified Proforma Invoice 1 (Yes), then a Proforma Invoice will be generated automatically.

*Note: A background batch job carries out the processing. The job can be started and stopped by options selected from the Utilities Menu.*

### **Customer Collection**

Orders for customer collection will not be passed to Transport Planning. If they are they become regular Sales Orders.

0 - No.

1 - Yes.

### **Priced At**

Order or Despatch. Orders may be priced at either order entry or despatch. This defaults to the method defined in the company profile. Enter the required method.

1 - Order.

2 - Despatch.

*Note: When the Priced At rule for an order is at despatch, the requested delivery date is initially used to price the order. When an invoice generated for the order is re-priced as part of an invoice run the delivery date is used to re-price the order lines.*

### **Cash Discount Code**

The cash settlement terms are displayed. This is defined in the customer sales details. It can be overridden.

### **Priority**

The priority to be used for the order in any back order batch allocation run is displayed. This is the default allocation priority assigned to each new line added to the order. Enter the new priority if a change is required.

99 - Force Allocation (Batch Allocation).

00 - Manual Allocation.

### **Order Subtype**

The order subtype is used to control order pricing. Please refer to the Pricing Section.

Enter the order subtype. These are user controlled and defined in the inventory descriptions file ORST.

*Note: The VAT code on the description file indicates whether or not it is an import order and therefore different payment terms may apply.*

### **Currency Code**

The currency code defaulted from Accounts Receivable. This may be overridden for multi-currency customers.

### **Currency Rate Code**

This will default from the customer sales details but can be overridden.

*Note: The currency rate code is associated with a currency rate. These can only be set up and maintained within General Ledger.*

### **Currency Rate**

The currency exchange rate and type (1 or 2) associated with the currency rate code to be used for the conversion.

1 - The currency rate will be used to multiply the transaction value to get the base value.

2 - The currency rate will be used to divide the transaction value to get the base value.

*Note: The system performs a credit check. Where the credit check is failed the order is suspended. This can be suppressed by making an entry in the Credit Agency Code on the Accounts Receivable Screen. An entry of M or H prevents credit checking throughout order taking. An entry of W issues warnings but allows you to continue, without automatic suspension of the order.*

## **Functions:**

### **F13**

Payment Details. Display the Payment Details Window.

### **F14**

Additional Details. Display the Additional Details Screen.

### **F15**

Tax Overrides. Display the Tax Overrides Screen.

### **F17**

Commission Det. Display the Customer Overrides Maintenance Window to override the default salesperson information for the order header.

### **F19**

Currency Det. Use this function to override currency details for transactions where currencies are not linked to the EURO.

### **F21**

Internal text. Enter text to be printed on reports and displayed on enquiry screens.

**F22**

External text. Enter text to be printed on external documents.

Press **Enter** to validate the data and display the  
Order Entry Line Entry Screen.

## Order Entry Payment Details Window (F13)

This window is displayed when you have pressed  
**F13=Payment Details** from the Order Entry  
Customer Defaults Screen.

### Fields:

*Note: These fields are defaulted from the  
customer statement account.*

### Payment Terms

There are 4 parts to this field but not all of them are necessarily used at once.  
The first part of the code can be any of the following:

D - Number of days from invoice date.

M - Net monthly account.

P - Periodic range.

T - Extended payment terms.

The second part of the code identifies the range if a Periodic range has been selected. The third part of the code is used to specify either the payment date for monthly (M) or periodic (P) selections, or the number of days to add to the invoice date for a daily (D) selection.

The fourth part is only used if Extended payment terms (T) is selected. It uses a settlement code that is defined by Cash Management which defines a payment pattern.

### Examples:

1. D 030 will give a payment date of 30 days after the invoice date.

2. M 210 will give a payment date as the 10th of the second month after the month the invoice was sent.

3. P 2019 206 will give all the invoices dated between the 20th of the next month and the 19th of the month after, a payment date of the 6th of the first month after the invoice is sent.

P 1110 105 will give all the invoices dated between the 11th of this month and the 10th of the month after, a payment date of the 5th of the first month following the month after.

4. T XXX where XXX would be a code identifying a payment pattern as defined in Cash Management.

### **Payment Method**

The method of payment is a code as defined in the Cash Management application.

Examples:

CHQ, STD.

Tip: Cash discount codes and staged discount codes are mutually exclusive.

### **Cash Discount Code**

A discount code is used to identify the type of discount and a single cash discount percentage. These are defined in the description file, major type CDSC and a prompt is available.

### **Staged Discount Code**

You can define multiple cash settlement discount percentages, allowing tiers of discount according to how soon the payment is received. These codes are pre-defined within Cash Management and a prompt is available.

Press **F8=Update** to save any changes.

## Order Entry Additional Detail Screen 1 (F14)

This screen is displayed when you have entered  
**F14=Additional Details** from the Order Entry  
Customer Defaults Screen.

### Fields:

#### Status Code

Enter the current status code for the shipment. This is validated against inventory description OSTS.

#### Original Requested Ship Date

Enter the date the shipment was originally requested for shipment.

#### Latest Requested Ship Date

This date is used for invoice pricing.

If the order is price at despatch, and this date is entered, then it is used as the date for pricing and discounting purposes. If it is blank then the despatch date is used.

If the order is price at order then the order date is used and this date is agreed.

#### Terms / Freight Type

Enter the terms / freight code. This is validated against inventory description FRTY.

#### FOB Code

Enter the Free On Board code. This is validated against inventory description FOBC

#### Ship Via Carrier

Enter the carrier code to be used for shipping. If Transport Planning is in use then this is validated against carriers defined in Transport Planning, otherwise it must be a valid supplier.

**Invoice Number**

Enter the invoice number.

**Container Type**

Enter the code for the container type used. This is validated against inventory description CNTD.

**Vessel Name (Main)**

Enter the primary vessel name.

**Vessel Type (Feeder)**

Enter the vessel type.

**Port Of Loading**

Enter code for the loading port. This is validated against inventory description PORT.

**Port Of Entry**

Enter the port of entry code. This is validated against inventory description PORT.

**Sailing Date**

Enter the scheduled sailing date.

**ETA**

Enter the estimated time of arrival date.

**Function:**

**F14**

Business Entities. Display the Business Entities Screen.

Press **Enter** to validate the entries and display  
Order Entry Additional Detail Screen 2.

## Order Entry Additional Detail Screen 2

This screen is displayed when you have pressed **Enter** on the Order Entry Additional Detail Screen 1.

### Fields:

*Note: These are all memo fields and are not used for processing within the system.*

#### Container Number

Enter the container number.

#### Container Seal Number

Enter the container seal number.

#### Commercial Invoice Date

The suppliers invoice date.

#### Bill of Lading Number

Enter the bill of lading number allocated.

#### Bill of Lading Date

Enter the bill of lading date.

#### Actual Arrival Date

Enter the actual arrival date.

#### Ready for Pickup Date

Enter the date the shipment is ready for collection by the customer.

#### Freight Invoice Number

Enter the freight invoice number.

**Freight Invoice Date**

Enter the freight invoice date.

**Function:**

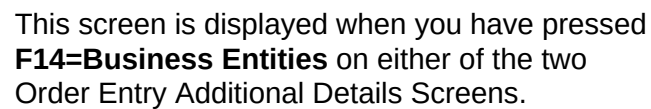

**F14**

Business Entities. Display the Business Entities Screen.

Press **F8=Update** the save any changes you have made.

## Customer Overrides Maintenance Window (F17)

 This screen is displayed when you press  
**F17=Commission Det.** in the Order Entry  
Customer Defaults Screen

The salesperson information for an order defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this order.

You use this screen to change the salesperson information on the order header so that a different salesperson receives the sales commission

*Note: You can override Sales commission information for individual order lines using the Customer Line Overrides Maintenance Window, accessed from the Order Entry Line Entry Screen.*

### Fields:

#### Salesperson

Enter the salesperson who will receive the sales commission for this order. Change the salesperson here if you do not want the sales commission to be paid to the default salesperson defined to the customer.

Press **F8=Continue** to save the update and continue with the order entry process

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det.** on the Order Entry Header Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det.** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

*Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.*

### Fields:

#### Rate Code

Select a rate code as set up in the Currency Rate Code option within the System 21 Financial applications.

#### Rate

Or. Enter a rate using up to 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

## Order Entry Internal And External Text Window

These screens are displayed when you press **F21=Internal Text** or **F22=External Text** on the Order Entry Customer Defaults Screen respectively.

You can attach text to an order, either for external or internal documentation. The text is limited to three lines.

Where text has been established at delivery sequence level, such text automatically becomes the external text for sales orders raised against the delivery sequence.

To add comments press **F21=Internal Text** or **F22=External Text** - a window is overlaid for entry of the required text.

*Note: The text lines do not automatically wrap text, therefore, if you wish to continue on another line, press the **Field Exit** key.*

Any existing text may be amended. Enter the external or internal text as required. While the window does not provide full text editing, lines may be added or deleted.

## Order Entry Line Entry Screen

This screen is displayed when you have pressed **Enter** to validate the entries on the Order Entry Customer Defaults Screen.

*Note: The minimum data is item code and quantity.*

### Fields:

#### (Untitled)

#### Order Entry - Extra Options

At the bottom of the Line Entry Screen there are a set of options that can be used to manipulate the order lines.

To use these options enter one of the characters against an order line and press **Enter**

- 1 - Amend. Amend the order quantity.
- 2 - Text. This allows entry of three lines of text to be printed on external documentation.
- 3 - Re-Price. Re-price line, displays windows and allows entry of Price type, manual price or discount details.
- 4 - Delete. Delete the line from the order.

*Note: You will not be asked to confirm this action. The line will be deleted immediately.*

- 5 - Source. Display the Order Entry Sourcing Items Screen to source the item from another location in the specified hunt group, or supply a substitute item.

7 - Availability. Display the Order Entry Stock Availability Screen to check the availability to estimate when it may be possible to satisfy the customer demand.

8 - Reserve. Allows existing reservations against sales orders to be reviewed and manipulated.

9 - Weight. Display the Order Entry Line Weights Window, which shows the weight and cube of the line selected.

C - Commission Details. Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the order line.

### Item

Enter the item code of the product to be sold.

*Note: Freeloader items may be added to an order. There are pricing implications as the freeloader quantity is NOT included for roll up discounts.*

*Tip: If a Telesales promotion is set up an item can be replaced with a promotion at order entry time. A separate line is set up for the promotion item.*

### Quantity

Enter the quantity ordered for delivery on the nominated delivery due date. Either a single integer value or a dual integer value may be entered depending on the entry made in the Sales Unit Indicator field on Item Maintenance - Screen 1 in Drinks Inventory Management.

0 - Means High level unit measure only (stock unit)

1 - Means either High or Low level or a mixture.

For Example: 5 = 5 cases, 5/6 = 5 cases and 6 bottles, /20 = 20 bottles.

Where the bottle quantity entered is greater than 1 case it is automatically converted by the system into the appropriate case / bottle quantity.

*Note: Manufactured raw materials may be sold so long as their issue to stock conversion factor for the item is 1.00000*

### Due Date

Enter the date the line is due.

### Stockroom

Enter the stockroom code for the item being ordered.

### Order Method

Enter the order method for the line. This field is defaulted from the ordering method defined against the item and validated against inventory description ORDM.

0 - or Blank is a normal order allocated from stock.

1 - Make to Order. This is not available in Drinks.

2 - Purchase to order. Hunting is used to find the first stockroom where the item is stocked, and on completion of the order line, a purchase requisition is created and the sales order line is reserved against the requisition.

3 - Direct Delivery This works the same as option 2, purchase to order, except that the receiving address on the Purchase Requisition is set to the Customer Delivery Address. This line cannot be changed to any other order method once the sales order line has been raised. A normal order can be changed to direct delivery providing the whole order line quantity is outstanding.

*Note: This method cannot be used against bonded stockrooms, and the hunt group processing will ignore any bonded stockrooms.*

4 - Reservation. The hunting operates as for the previous order methods, and on completion of the line the reservations window is displayed to allow the order line to be reserved against existing purchase orders. A single sales order line can have reservations against more than one purchase order, and vice versa.

*Note: Any reservations created are treated as allocations in terms of back order and part delivery processing, and the value of the reserved stock is included in the customer's on order balance for credit checking purposes.*

*Note: In kit processing a kit parent must have an ordering method of 0, normal, but kit components can have 2 and 4 but not 3, direct delivery. If an order is raised for a kit parent, the associated component lines are created as ordering method 0 and cannot be changed. Component reservations are treated as allocations in terms of how much of the kit parent can be delivered.*

### Promotion Indicator

The promotion indicator determines if the item is free of charge (i.e. Freeloader).

Changing the promotions indicator recorded against a line can change the roll-up discounts applied to both this line and other lines on the order.

*Note: The assembly stockroom and the delivery due date of the line are displayed. These cannot be amended.*

Press **Enter** to perform the following actions:

- Determine ordering method.
- Price the order line.
- Calculate the line level discount for the line. Roll-up and whole order discounts are not applied at this time.
- If the order priority is 00, no allocation is attempted.
- If the due date is greater than the current date plus the number of days for the Allocation Time Fence set for the sourcing stockroom, no allocation is attempted.

- If bond modules are attached duty status checks are performed when adding lines.
- The system will attempt to apply prices and discounts.

The system attempts to allocate stock according to the parameter setting on the Company Profile.

If Multiple Stockroom allocation is set to 1 (Yes), the Hunt Group specified on the Depot Profile (**F14=Hunt Group**) for the delivery stockroom will be used to provide stock from one or more stockrooms. It will allocate stock to the order as it moves down the hunt group list providing a separate line for each stockroom. The stockroom recorded against each of these lines is known as the assembly stockroom.

If no Multiple Stockroom allocation is to be used, the system attempts to source all stock from one stockroom within the Hunt Group. (If it fails in either case, the outstanding quantities will be held on the first stockroom which holds a Stock Balance for this item.)

The screen is re-displayed with one or more lines added to the order. Any stock shortages are highlighted. Suspension reasons are held at line level but are not displayed during order entry.

If the quantity is highlighted, it means that the allocation has been attempted, but there is insufficient stock.

## Functions:

### F13

Trailer. This accepts Order Lines, and allows you to complete the order and attach extra lines.

### F14

Header Price Overrides.

### F15

Restart - this returns to the first screen without creating the order.

### F21

Item / Quantity selection - uses Item Master Search to display a window with the ability to enter a quantity against each item displayed.

### F23

Control Totals

When all of the exception and override conditions have been dealt with the processing of the order trailer is performed by pressing **F13=Trailer**.

## Order Entry Control Totals (F23)

This window is displayed when you press  
**F23=Control Totals** on the Order Entry Line  
Entry Screen.

### Fields:

#### Total Stock / Issue Units

The total number of stock and issue units for the order.

*Note: The totals add high units and low units  
separately, for example:*

*If item 1 is 12 bottles / case, item 2 is 6 bottles /  
case, and item 3 is 3 cases / pallet.*

*Order for item 1 = 3/11, item 2 = 2/5, and item 3  
= 7/2.*

*Control total 12/18.*

*If the low units add up to more than 999 then \*\*\*\*  
is displayed.*

#### Total Weight

The total weight of the order.

The total weight = quantity in issue units \* weight per selling unit (from the item  
master).

#### Total Cube

The total cubage of the order.

Total cube = number of stock units \* volume per stocking unit (from the item master). Where:

The number of stock units = high units ordered (+1 if any issue units ordered).

E.g. order 6/1 (i.e. 6 cases 1 bottle), then the cube will be 7\*volume per stocking unit.

Press **F12=Previous** to return to the Order Entry  
Line Entry Screen

## Order Entry Sourcing Items Screen (Option 5)

This screen is displayed when you enter a 5 alongside the order line you wish to source on the Order Entry Line Entry Screen.

Stock sourcing is limited to stock rooms in the hunt group of the delivery stockroom.

Three sets of information are displayed:

- Firstly, the item at the requested depot is displayed, together with the available stock and the order position.
- This is followed by the depots where the item is stocked and the current stock and order positions.
- Finally, alternative products, their depots and stock positions are displayed.

### Fields:

#### Quantity

Alongside each depot is an entry field. On the first line is the original order quantity. Any numbers of quantities can be entered against any depot and any product. An order line will be generated for each order quantity.

If the quantity against the first line is zeroised the original line is deleted from the order.

*Note: Remember to alter the original order quantity if it is to be sourced from alternative depots or items.*

### Functions:

#### F15

Restart. Restart Order Entry

Press **F15=Restart** to restart the order entry program.

## Order Entry Stock Availability Screen (Option 7)

This screen is displayed when you enter 7 alongside the order line on the Order Entry Line Entry Screen.

This allows you to examine the item's availability.

The top part of the screen displays a summary of the stock position, including physical and available stock, supply orders and back orders. This is followed by a list of sales orders, purchase orders, works orders, and the resulting stock. The orders are listed in date sequence.

A line of asterisks and a date is printed to indicate the current date plus the lead time for the product. There should be little difficulty in satisfying an order with a delivery due date after the lead time line.

### Fields:

Two projected stock positions are calculated and shown for each order line. These are:-

#### Available

This assumes all sales orders are met, but no supply orders arrive.

#### Expected

This assumes all sales and supply orders occur as expected.

They are, in effect, the worst and best cases. Negative figures in the **Available** stock mean that supply is dependent upon promises for delivery being met, while a negative figure in **Expected** stock means that there will not be sufficient stock to meet this order.

If stock has been allocated to other orders, these can be displayed by pressing **F13=Allocations**.

## Functions:

### F13

Allocations. Any collected orders are displayed. This screen is described in more detail in the stock availability enquiry section.

Press **F15=Restart** to return to the order entry program.

## Order Entry Line Weights Window (Option 9)

This window is displayed when you enter 9 alongside the order line on the Order Entry Line Entry Screen.

```

```

### Fields:

#### Item

The item code.

#### Stock / Issue Units

The total number of stock and issue units for the order line.

*Note: The totals add high units and low units separately, for example:*

*If item 1 is 12 bottles / case, item 2 is 6 bottles / case, and item 3 is 3 cases / pallet.*

*Order for item 1 = 3/11, item 2 = 2/5, and item 3 = 7/2.*

*Control total 12/18.*

*If the low units add up to more than 999 then \*\*\*\* is displayed.*

#### Total Weight

The total weight of the order line.

The total weight = quantity in issue units \* weight per selling unit (from the item master).

### Total Cube

The total cubage of the order line.

Total cube = number of stock units \* volume per stocking unit (from the item master). Where:

The number of stock units = high units ordered (+1 if any issue units ordered).

E.g. order 6/1 (i.e. 6 cases 1 bottle), then the cube will be 7\*volume per stocking unit.

Press **F12=Previous** to return to the Order Entry  
Line Entry Screen

## Customer Line Overrides Maintenance Window (Option C)

This window is displayed when you enter C alongside the order line on the Order Entry Line Entry Screen.

The salesperson information for an order line defaults to blank. Unless this information is overridden here the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance will, by default, be paid any sales commission due for the order lines.

You use this screen to change the salesperson information on specific order lines so that a different salesperson receives the sales commission for the order line.

### Fields:

#### Salesperson

Enter the salesperson who will receive the sales commission for this order line. Change the salesperson here if you do not want the sales commission to be paid to the default salesperson for the customer.

Press **F8=Continue** to save the update and continue with the order entry process

## Order Entry Trailer Screen (F13)

When you select **F13=Trailer** from the Order Entry Line Entry Screen, the trailer screen is displayed.

It will show a code and a message if the order has been suspended for credit or pricing reasons (or Cash with Order). The order may also be suspended directly using the screen (for example if the order has been raised for quotation purposes).

*Note: Chargeable containers are added to invoices from line 900. If you have a particularly long order, this can cause problems.*

The system will suspend all allocation for suspended orders. The system will not hold stock for suspended orders.

A summary of the order value is displayed. Space is provided for up to three additional charges to be added. This is the only place you can enter them. A highlighted message may also appear at the bottom of the screen if a stock shortage occurs.

The total goods value is shown at the top of the screen. If the order is not in the base currency of Accounts Receivable, the currency value is identified and both transaction and base values are displayed. For charges to be added, they must already have been set up on the Descriptions file with the Major type SUNC. When this is done, a standard value may also be set up together with the normal VAT code.

When a charge is retrieved, the standard charge will be retrieved as well, provided that an entry has not been made in the amount column. The amount retrieved is assumed to be in the same currency as the order being raised.

If the customer is single currency only, no currency details are displayed.

## Fields:

### Suspend Code

Order processing may automatically place the order on hold, if for example, one item is not priced. In such circumstances, the suspend code and description will be displayed. A suspend code may be manually entered.

*Note: Only one suspension code is shown against the order.*

The suspension code hierarchy is as follows:

- Credit related.
- Cash with order.
- Pro-forma invoice required.
- State violation.
- Price related.
- Manually entered.

*Tip: Any system generated suspension code cannot be manually overridden.*

### Charge Code

Enter a valid charge code. It must have been set up on the descriptions file.

### Amount

If a charge exists against the charge code, on the descriptions file, it will be retrieved. The charge can be overridden.

*Note: The standard charge on the descriptions file is always on base currency, for transaction currency accounts the charge is converted to the order currency.*

### VAT Code

Enter the VAT code.

## Functions:

### F13

End order. This ends the order.

### F15

Restart - return to the order line entry screen.

### F21

Internal text. Insert internal text.

### F22

External text. Insert external text.

Press **Enter** to validate the order, then press

**F13=End Order** to complete the order. The system will display the Order Entry Completion Screen.

## Order Entry Completion Screen (F13)

This screen is displayed when **F13=End Order** is pressed when an order has been ended and is the same as the Select Customer Screen, with details of the order entered at the bottom of the screen.

### Fields:

#### Last Order Processed Was

This is the order number of the last order processed.

#### Suspend Code

If the order was suspended the description of the suspend code is displayed.

#### For Customer

This is the customer number.

#### Customer Order Reference

This is the customer order reference if one has been entered.

#### Date

This is the date of the order.

Press **F3=Exit**, or enter a customer code to enter another order.

# Uplift Order Entry

## **1...** **2/DOP**

This process is basically a returns order, where items are to be booked back into stock for resale. The purpose is to enable product items previously sold to a customer to be processed for Uplift - i.e. collected from a Customer's premises. These are entered in the same way as orders, and can be assigned to loads in Transport Planning, but do not require picking / assembling.

When Delivery notes are printed, the file transaction causes an Uplift Note to be printed. This may be used by Delivery staff as a document to collect and return goods from the customer's premises.

Note the following points:

- On Confirm Delivery (which is really Confirm Collection), a Credit Note is created.
- Several lines may be entered on an Uplift.
- Transport Planning requirements are created unless the uplift is flagged for customer collection (i.e. to be returned by the customer's transport).
- Allocation is not performed.
- Entry by state reference is allowed.
- Promotions processing is not performed.
- Uplift processing does not affect load weights and capacity calculations.

## Uplift Note Entry Selection Screen

Select the Uplift Order Entry option.

This screen is used to enter selection details.

### Fields:

#### Customer

Enter the account code of the address from which the goods are to be uplifted. The code is in two parts (Customer Number and Sequence Number), both must be entered.

#### Customer Order Reference

Enter the customer's order reference or purchase order number. This is mandatory if the customer sales information condition of order is set to 1.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the delivery date required. It may not be prior to the current date. This is really the collection date.

#### State Reference

Set this flag to determine if state reference is to be used. (For US customers only).

0 - No.

1 - Yes.

Press **Enter** to display the Uplift Note Entry

Customer Defaults Screen.

## Uplift Note Entry Customer Defaults Screen

This screen is displayed when you have made valid selections from the Uplift Note Entry Selection Screen and displays customer default details for confirmation or amendment.

The names and addresses for invoicing and delivery are displayed together with the processing parameters. The details of the currency and exchange rates are displayed in the lower part of the screen. These details are not displayed if the customer does not allow multi currency processing.

All the parameters, including the names and addresses, may be overridden. The currency code of the uplift can be altered.

### Fields:

#### Invoice Name And Address

The name and address to which the invoice will be sent. Enter any change required for this order.

#### Delivery Name And Address

The name and address to which the goods will be delivered. Enter any change required for this order.

#### Stockroom

The normal stockroom from which deliveries are made to this delivery address. If a change is required, enter the required stockroom code to which the returns will be receipted.

#### Cash With Order

This field is not used for Uplift Orders.

### **Customer Collection**

This field can be used to indicate that a customer is bringing goods back themselves. This prevents the Uplift being planned into a Transport Planning load.

0 - No.

1 - Yes. Not recommended for Uplift orders.

### **Priced At**

This indicates whether pricing takes place when the Uplift Order is raised, or when it is booked back into stock.

1 - When the uplift order is raised.

2 - When booked in.

### **Cash Discount Code**

The cash settlement terms are displayed. This is defined in the customer sales details. It can be overridden.

### **Priority**

This is not used for Uplift Orders

### **Currency Code**

The currency code defaulted from Accounts Receivable. This may be overridden for multi-currency customers.

### **Currency Rate Code**

This will default from the customer sales details but can be overridden.

The currency rate code is associated with a currency rate. These can only be set up and maintained within General Ledger.

### **Currency Rate**

The currency exchange rate associated with the currency rate code to be used for the conversion.

1 - The currency rate will be used to multiply the transaction value to get the base value.

2 - The currency rate will be used to divide the transaction value to get the base value.

### **Functions:**

#### **F17**

Commission Det. Display the Customer Overrides Maintenance Window to override the default salesperson information for the uplift note header.

#### **F19**

Currency Det. Use this function to override currency details for transactions where currencies are not linked to the EURO.

Press **Enter** to validate the details and display the Line Entry Screen.

## Customer Overrides Maintenance Window (F17)

This screen is displayed when you press  
**F17=Commission Det.** in the Order Entry  
Customer Defaults Screen

The salesperson information for an order defaults to the salesperson which is defined to the customer, in Sales Order Processing Customer Details Maintenance. Unless overridden here, the credit for this order will affect the sales commission due to this salesperson.

You use this screen to change the salesperson information on the order header so that a different salesperson receives the sales commission.

*You can override Sales commission information for individual order lines using the Customer Line Overrides Maintenance Window, accessed from the Uplift Note Entry Line Entry Screen.*

### Fields:

#### Salesperson

Enter the salesperson whose commission will be affected by this credit. Change the salesperson here if you do not want this credit to affect the commission payments for the default salesperson for the customer.

Press **F8=Continue** to save the update and continue with the order entry process

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det.** on the Order Entry Header Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det.** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

*Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.*

|                                                                           |                                |                                  |                  |                      |

### Fields:

#### Rate Code

Select a rate code as set up in the Currency Rate Code option within the System 21 Financial applications.

#### Rate

Or. Enter a rate using up to 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

## Uplift Note Entry Line Entry Screen

This screen is displayed when the **Enter** key is pressed from the Customer Defaults Screen. This screen is displayed to enter the lines for the Uplift.

*Note: The entry of the line is similar to the Order Entry function, however, there are some elements that are irrelevant to Uplift orders:*

*Stock not allocated*

*Sourcing not relevant*

*Note: Pricing is based on the required delivery date.*

### Fields:

#### (Untitled)

#### Order Entry - Extra Options

At the bottom of the Line Entry Screen there are a set of options that can be used to manipulate the order lines.

To use these options enter one of the characters against an order line and press **Enter**

- 1 - Amend. Amend the order quantity.
- 2 - Text. This allows entry of three lines of text to be printed on external documentation.
- 3 - Re-Price. Re-price line, displays windows and allows entry of Price type, manual price or discount details.

4 - Delete. Delete the line from the order.

*Note: You will not be asked to confirm this action. The line will be deleted immediately.*

5 - Source. Display the Order Entry Sourcing Items Screen to source the item from another location in the specified hunt group, or supply a substitute item.

7 - Availability. Display the Order Entry Stock Availability Screen to check the availability to estimate when it may be possible to satisfy the customer demand.

8 - Reserve. Allows existing reservations against purchase orders to be reviewed and manipulated.

9 - Weight. Display the Order Entry Line Weights Window, which shows the weight and cube of the line selected.

C - Commission Details. Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the line.

### Item

Enter the item code to be returned.

### Quantity

Enter the amount being returned using dual unit format.

### Promotion Indicator

Enter a promotions indicator if the returned item is a freeloader.

Press the **Enter** key to confirm the line. The line will be moved up to the main body of the screen, enabling you to enter another line if required.

*Note: Hunting is performed, and will look for the first stockroom in the hunt group with a stock balance for this item. If the system can't find one, it will not allow you to continue.*

## Functions:

### F13

Trailer. This accepts uplift order lines, and allows you to complete the order.

### F14

Header Price Overrides.

### F15

Restart. This returns to the first screen without updating the order.

### F21

Item / Quantity Selection. This uses item master search to display a window with the ability to enter quantity.

When all of the exception and override conditions have been dealt with the processing of the order trailer is performed by pressing **F13=Trailer**. The Uplift Note Entry Trailer Details

Screen is then displayed.

This window is displayed when you enter C alongside the order line on the Order Entry Line Entry Screen.

## Customer Line Overrides Maintenance Window (Option C)

This window is displayed when you enter C alongside the order line on the Uplift Note Entry Line Entry Screen.

The salesperson information for an uplift note line defaults to blank. Unless this information is overridden here the commission paid to the salesperson defined to the customer in Sales Order Processing Customer Details Maintenance will, by default, be affected by the credit due for the order lines.

You use this screen to change the salesperson information on specific lines so that a different salesperson receives the sales commission for that line.

### Fields:

#### Salesperson

Enter the salesperson whose commission will be affected by this credit. Change the salesperson here if you do not want this credit to affect the commission payments for the default salesperson for the customer.

Press **F8=Continue** to save the update and continue with the order entry process

## Uplift Note Entry Trailer Details Screen (F13)

On taking **F13=Trailer** from the Uplift Note Entry Line Entry Screen, the Trailer Details Screen is displayed showing a summary of the order value.

Space is provided for up to three additional charges to be added. This is the only place you can enter them.

The total goods value is shown at the top of the screen. If the order is not in the base currency of Accounts Receivable the currency value is identified and both transaction and base values are displayed. For charges to be added, they must already have been set up on the Descriptions file with the Major type SUNC. When this is done, a standard value may also be set up together with the normal VAT code.

When a charge is retrieved, the standard account will be retrieved as well, provided that an entry has not been made in the amount column. If the customer is single currency only, no currency details are displayed.

```

```

### Fields:

#### Suspend Code

Order processing may automatically place the order on hold, if for example, the item is not priced. In such circumstances, the suspend code and description will be displayed. A suspend code may be manually entered. The suspension code hierarchy is as follows:

- State violation.
- Price related.
- Manually entered.

## Charge Code

Enter a valid charge code. It must have been set up on the Descriptions file.

## Amount

If a charge exists against the charge code, on the Descriptions file, it will be retrieved. The charge can be overridden.

*Note: The standard charge on the Descriptions file is always on base currency, for transaction currency accounts the charge is converted to the order currency.*

*Note: Transport Planning requirements will be produced if the customer is normally Transport Planned. This does not affect the weight of the load, and does not guarantee that there will be room on the lorry for the goods when they arrive. You can change the load sequence by making it the last drop.*

*Note: You can amend an uplift order. However if you have printed delivery notes, you cannot see the new delivery details with the amendments. Therefore it is advisable to make any changes before delivery notes are printed.*

## Functions:

### F13

End order. To complete the order.

### F15

Restart - return to the order line entry screen.

### F21

Internal text. Insert internal text.

### F22

External text. Insert external text.

Press **Enter** to validate the order, then press **F13=End Order** to complete the order. The Completion Screen is then displayed.

# Tagged Goods Returns

## **1...** **2...** 3/DOP

This process is used for goods which are bad or have been damaged (for example Beer). It enables product items previously sold to a customer to be "tagged" (assigned a code) and to create a file transaction on the system.

They operate in a similar way to Uplift Orders, in that they can still be allocated to Transport Loads, but picking and assembly is not required. However they are different to Uplifts in that:

- There can only be one item.
- The credit, if applicable, is raised at order entry.
- Associated containers are returned to the empties stockroom, not the item.

When Delivery notes are printed, the file transaction will cause a Tagged Goods Return Note to be printed. This may be used as a document by delivery staff to collect and return the goods from the customer's premises.

It should be noted that only one line can be entered for each Tagged Goods Return note.

*Note the following features:*

- Only one saleable goods item can be entered.
- Hunting derives the stockroom against which the order is raised.
- Allocation is not performed.
- Entry by state reference is allowed.
- Promotion processing is not performed.
- Associated container items must exist for the item returned in the appropriate empties stockroom.
- Chargeable containers are not included on the generated credit.
- Transport Planning requirements are created, but not if the Tagged Goods are flagged for customer collection.

## Tagged Goods Returns Header Details Screen

Select the Tagged Good Returned option.

### Fields:

#### Customer

Enter the account code of the address to which the goods are to be shipped. The code is in two parts (Customer Number and Sequence Number), both of which must be entered.

#### Customer Order Reference

Enter the customer's order reference or purchase order number. This is mandatory if the customer sales information condition of order is set to 1.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the delivery date required. It cannot be prior to the current date. In the case of tagged goods this is effectively the collection date.

#### Tag Number

Enter a Tag number for the return. The first character must be alphabetic, the rest numeric.

**Warning: If the first character is Y then a Credit will be created on the Invoice / Credit file at order entry time. The generated credit does not include the value of chargeable**

***containers.***

***If the first character is not Y, then a credit is not raised at all.***

### **Job Card**

Enter a second reference number.

Press **Enter** to retrieve the defaults for the selected delivery address and display them on the Tagged Goods Returns Customer Defaults Screen.

## Tagged Goods Returns Customer Defaults Screen

This screen is displayed when **Enter** has been pressed on the Tagged Goods Returns Header Details Screen. This screen displays details for confirmation or amendment.

The names and addresses for invoicing and delivery are displayed together with the processing parameters. The details of the currency and exchange rates are displayed in the lower part of the screen. All of the parameters including the names and addresses may be overridden.

The currency code of the account can be altered.

### Fields:

#### Invoice Name And Address

The name and address to which the invoice will be sent. Enter any change required for this order.

#### Delivery Name And Address

The name and address to which the goods will be delivered. Enter any change required for this order.

#### Stockroom

The normal stockroom from which deliveries are made to this delivery address. However, the returned containers will actually be booked into the empties stockroom.

#### Cash With Order

This is not applicable to Tagged Goods Returns.

### **Customer Collection**

This field can be used to indicate that a customer is bringing goods back themselves. This prevents the Uplift being planned into a Transport Planning load.

0 - No.

1 - Yes.

### **Priced At**

This is not applicable to Tagged Goods Returns.

### **Cash Discount Code**

The cash settlement terms are displayed. This is defined in the customer sales details. It can be overridden.

### **Priority**

This is not applicable to Tagged Goods Returns.

### **Currency Code**

The currency code defaulted from Accounts Receivable. This may be overridden for multi-currency customers.

### **Currency Rate Code**

This will default from the customer sales details but can be overridden.

The currency rate code is associated with a currency rate. These can only be set up and maintained within General Ledger.

### **Currency Rate**

The currency exchange rate associated with the currency rate code to be used for the conversion.

1 - Use the currency rate to multiply the transaction value to get the base value.

2 - Use the currency rate to divide the transaction value to get the base value.

### **Functions:**

#### **F17**

Commission Det. Display the Customer Overrides Maintenance Window to override the default salesperson information for the tagged goods returns header.

#### **F19**

Currency Det. Use this function to override currency details for transactions where currencies are not linked to the EURO.

#### **F21**

Internal Text. Insert internal text.

#### **F22**

External Text. Insert external text.

Press **Enter** to validate the data and display the Tagged Goods Returns Line Entry Screen.

## Customer Overrides Maintenance Window (F17)

This screen is displayed when you press  
**F17=Commission Det.** in the Tagged Goods  
Returns Customer Defaults Screen

The salesperson information for tagged goods returns defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, any credit for this order will affect the sales commission due to this salesperson.

You use this screen to change the salesperson information on the document header so that a different salesperson receives the sales commission.

*You can override Sales commission information for individual order lines using the Customer Line Overrides Maintenance Window, accessed from the Uplift Note Entry Line Entry Screen.*

### Fields:

#### Salesperson

Enter the salesperson whose commission will be affected by this credit. Change the salesperson here if you do not want this credit to affect the default salesperson for the customer.

Press **F8=Continue** to save the update and  
continue with the order entry process

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det.** on the Tagged Goods Returns Customer Defaults Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det.** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

*Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.*

### Fields:

#### Rate Code

Select a rate code as set up in the Currency Rate Code option within the System 21 Financial applications.

#### Rate

Or. Enter a rate using up to 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

## Tagged Goods Returns Line Entry Screen

This screen is displayed when you have validated the entries on the Tagged Goods Returns Customer Defaults Screen.

This screen is displayed to enter the line for the Tagged Goods.

*Note: You can only enter one line on a Tagged Goods Return.*

*Note: The entry of the line is similar to the Order Entry function, however, there are a few elements that are relevant to Tagged Goods returns:*

*There is no allocation.*

*Line sourcing is irrelevant.*

### Fields:

(Untitled)

### Order Entry - Extra Options

At the bottom of the Line Entry Screen there are a set of options that can be used to manipulate the lines.

To use these options enter one of the characters against an order line and press **Enter**

1 - Amend. Amend the order quantity.

2 - Text. This allows entry of three lines of text to be printed on external documentation.

3 - Re-Price. Re-price line, displays windows and allows entry of Price type, manual price or discount details.

4 - Delete. Delete the line from the order.

*Note: You will not be asked to confirm this action. The line will be deleted immediately.*

5 - Source. Display the Order Entry Sourcing Items Screen to source the item from another location in the specified hunt group, or supply a substitute item.

7 - Availability. Display the Order Entry Stock Availability Screen to check the availability to estimate when it may be possible to satisfy the customer demand.

8 - Reserve. Allows existing reservations against purchase orders to be reviewed and manipulated.

9 - Weight. Display the Order Entry Line Weights Window, which shows the weight and cube of the line selected.

C - Commission Details. Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the line.

### Item

Enter the code to be returned.

### Quantity

Enter the amount being returned using the dual unit format.

### Promotion Indicator

Enter a promotions indicator if the returned item is a freeloader.

Press the **Enter** key the confirm the line.

*Note: Hunting is performed, and will look for the relevant stockroom.*

## Functions:

### F13

Trailer. This accepts the tagged order line, and allows you to complete the order.

### F14

Header Price Overrides.

### F15

Restart. This returns to the first screen without updating the order, allowing you the restart the tagged goods return.

### F21

Item / Quantity Selection. This uses item master search to display a window with the ability to enter quantity.

When all of the exception and override conditions have been dealt with the processing of the order trailer is performed by pressing **F13=Trailer**.

## Customer Line Overrides Maintenance Window (Option C)

This window is displayed when you enter C alongside the order line on the Tagged Goods Returns Line Entry Screen.

The salesperson information for an individual line defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, the credit for this order will affect the sales commission due to this salesperson.

You use this screen to change the salesperson information on the line so that a different salesperson receives the sales commission for this line.

### Fields:

#### Salesperson

Enter the salesperson whose commission will be affected by this credit. Change the salesperson here if you do not want this credit to affect the default salesperson for the customer.

Press **F8=Continue** to save the update and continue with the order entry process

## Tagged Goods Returns Trailer Details Screen (F13)

This screen, accessed by pressing **F13=Trailer** at the Tagged Goods Returns Line Entry Screen is used to enter the trailer details for the Tagged Goods Return.

A summary of the order value is displayed. Space is provided for up to three additional charges to be added. This is the only place you can enter them.

The total goods value is shown at the top of the screen. If the order is not in the base currency of Accounts Receivable the currency value is identified and both transaction and base values are displayed. For credits to be added, they must already have been set up on the Descriptions file with the Major type SUNC. When this is done, a standard value may also be set up together with the normal VAT code.

When a credit is retrieved, the standard credit will be retrieved as well, provided that an entry has not been made in the amount column.

If the customer is single currency only, no currency details are displayed.

```

### Fields:

#### Suspend Code

This is not used in Tagged Goods Returns.

#### Charge Code

Enter a valid charge code. It must have been set up on the Descriptions file.

#### Amount

If a charge exists against the charge code, on the Descriptions file, it will be retrieved. The charge can be overridden.

*Note: The standard charge on the Descriptions file is always on base currency, for transaction currency accounts the charge is converted to the order currency.*

*Note: Transport Planning requirements will be produced if the customer is normally Transport Planned. This does not affect the weight of the load, and does not guarantee that there will be room on the lorry for the goods when they arrive. You can change the load sequence by making it the last drop.*

*Note: You cannot amend a Tagged Goods order.*

## Functions:

### F13

End order. To complete the process.

### F15

Restart - return to the order line entry screen.

### F21

Internal text. Insert internal text.

### F22

External text. Insert external text.

Press **Enter** to validate the order, then press **F13=End Order** to complete the order. The system will display the Tagged Goods Returns Completion Screen.

# Manual Allocation

## 4/DOP

Even though most allocation will be performed interactively as part of order entry or as part of a batch run, it is sometimes necessary to explicitly allocate or de-allocate stock to orders. This can either be to a whole order or to an individual line.

If it is done at line level, then the amount to be actioned may be defined.

Manual allocation may be required in a number of circumstances, for example:

- A customer order has been released after being suspended, for example, for credit checking.
- The allocation priority of the order was set to 00 which ensured manual allocation will take place.

This may be used for export or large orders where normal allocation would cause a disruption in the normal pattern of stock availability. Manual de-allocation can be used to re-assign stock when a decision has been made that better use may be made of it. Stock which is listed on a picking document may not be de-allocated. If this is to be re-assigned the despatch procedure must be completed with a short or zero despatch. This will normally back order the short shipment and release the allocated stock.

*Note: Where multiple stockroom allocation is in use de-allocation means stock becomes available for other orders. Re-allocation generates another hunt which will almost always give a different result.*

# Manual Allocation Selection Screen

Select the Manual Allocation option.

This procedure may be used to perform all of the manual procedures associated with manual allocation. Three functions may be performed from this option:

- Allocate stock to all order lines.
- De-allocate stock from all lines on the order which have stock allocated.
- Select a line for display and action.

There is a simple order select screen which enables the required order number to be entered.

```

Manual Allocation

Order number..... 0001237

FG=Exit

```

**Fields:**

**Order Number**

Enter the number of the order to be displayed. Tagged Goods and Uplift Orders may be selected.

Press **Enter**, to display the Manual Allocation Order Processing Screen.

## Manual Allocation Order Processing Screen

This screen is displayed when **Enter** is pressed from the Manual Allocation Selection Screen.

The summary order data is displayed at the top of the screen. Processing is then for the whole order or by individual line depending upon the option taken. If whole order allocation is attempted but there is insufficient stock to complete this, then each line must be processed separately.

### Fields:

#### Line Number

Enter the code of the line to be displayed.

### Functions:

#### F13

Allocate all order lines. If there is insufficient stock, allocation must be at line level.

#### F14

De-allocate all order lines.

Press **Enter**. The requested allocation action is performed and the Manual Allocation Select Order Screen is displayed when the process is complete. Stock which has been allocated and printed on picking notes may not be de-allocated. If despatch has not been confirmed, the picking note may be cancelled and the stock de-allocated. This function is only available for depots which are not warehouses (i.e. defined as

such in Drinks Warehousing).

## Manual Allocation Line Processing Screen

This screen is accessed by selecting a valid line number from the Manual Allocation Order Processing Screen.

It enables allocation and de-allocation to be performed for an individual order line. It also enables part allocation or de-allocation.

*Note: The order summary data is displayed at the top of the screen. This is followed by the line details for the selected order line. The available stock for the depot is shown. If the quantity is a minus, the stock is over committed.*

### Fields:

#### Negativity

This is only for the Assembly stockroom. If a Negativity quantity is stated for the item, the available figure may go negative, as this quantity will be included in the allocation.

#### Available

This includes all the available stock in the hunt group excluding negative available stock in any hunt group stockroom when multiple stockroom allocation is switched on.

*Note: Hunt group processing is only performed for the outstanding quantity if insufficient stock is available in the assembly stockroom and multiple stockroom allocation is switched on.*

#### Action Quantity

Enter the quantity to be allocated or de-allocated.

### Next Line Number

Enter the next line number to be displayed. The next line to be processed or reviewed may be entered. It will then be displayed following the action requested for the displayed line.

*Note: Stock which has been allocated and for which a picking note has been requested may not be de-allocated*

**Warning: If the depot is not defined to the Warehousing module as a warehouse, picking notes may be cancelled. The stock may then be de-allocated.**

### Functions:

#### F13

Allocate. Allocate the action quantity

#### F14

De-allocate. De-allocate the action quantity

#### F15

Restart. Restart at Order Select

A quantity is entered and then the action taken as indicated by the function key; **F13=Allocate** to allocate, **F14=De-Allocate** to de-allocate. The requested allocation is carried out.

# Order Cancellation

## 5/DOP

This procedure enables cancellation of part or all of an order. An order or a line raised and not yet delivered may be cancelled, unless an outstanding pick note, or transport requirements exist for it. An error message will display in these instances, preventing further processing.

*Note: It is not possible to cancel order lines which have reservations against Purchase Orders. The reservations must be removed in Order Amend before the line can be cancelled. If an order line has reservations against a Requisition, then a warning will be displayed, but the line can be cancelled.*

## Order Cancellation Selection Screen

Select the Order Cancellation option.

An initial screen enables the entry of the number of the order to be cancelled.

Key in an order number and press **Enter**.

## Order Cancellation Header Screen

This screen is displayed when a valid order number has been entered on the Order Cancellation Selection Screen

This screen enables either the cancellation of the order or of individual order lines. The summary order data is displayed at the top of the screen. Processing is either then for the whole order or by individual line depending on the option taken.

|                                                                                                 |                            |                                                                                                  |                     |

### Fields:

#### Line Number

Enter the number of the order line that you wish to view or cancel. Pressing the Enter key rolls through the order lines on the order line display.

#### Cancellation Reason

The cancellation reason code indicates why the order is cancelled.

### Functions:

#### F13

Cancel whole order.

Enter a line number to be cancelled and press **Enter**. If a line number is entered, the next screen output will detail any requested pick notes and line details of Item, Description and Quantities.

If the whole order cancellation is required press **F13=Cancel Whole Order**, an error message

will display if the order has outstanding pick notes, or has been transport planned. Further processing is halted.

## Order Cancellation Line Cancellation Screen

This screen is displayed when cancellation of a specific order line is requested from the Order Cancellation Header Screen.

In addition to summary details of the order header and requested picking notes, the status of the requested line is output.

*Note: Cancellation is not allowed if the line has been picked or transport planned and not yet delivered.*

*Note: The cancellation reason code used may affect pricing. If the line has been partially delivered or the VAT code associated with the reason on the inventory description file is set to 1, then the order line is flagged as complete, rather than cancelled, and the order quantity will be included in any order level or item group discounts. Otherwise the order line is flagged as cancelled and the quantity is not included in any discounts.*

### Fields:

#### Line Number

Enter the next line number to be displayed.

#### Cancellation Reason

Enter the cancellation reason code associated with the line cancellation.

If a line number is present when **F13=Cancel Line** is pressed, the line will be cancelled and the new requested line displayed. If no line is requested control returns to the order select screen.

### Functions:

#### F13

Cancel the line. If a line number is present it will be displayed following the cancellation of the requested line.

Press **F13=Cancel Line** to cancel the line.

# Order Amendment

## **1...** **2...** 6/DOP

Existing orders may be amended once they have been entered. Some of these changes are achieved by specific single function procedures, such as cancellation, allocation and release from suspension. If however, it is required to change the details of the customers' requirements or the trading agreement, this is done using the order amendment procedure.

As with order entry, there are three phases of amendment, but in this instance it is only necessary to perform the required phase. Thus, if an additional charge is to be added, only the order trailer need be processed.

It is not possible to amend the Order Header or Trailer if any Pick Notes have been produced. Also any lines on the order that have outstanding Pick Notes, unless they have a status of Cancelled. This also applies if the Order has been transport planned, where even the lines are prohibited from amendment. Apart from reasonable constraints everything can be amended, including assigning additional items to the order.

Hunting is only performed for lines added to the order where the assembly depot is either the same as the delivery depot or blank.

## Order Amendment Selection Screen

Select the Order Amend option.

Two functions can be performed from this screen. These are:

- Selection of the order to be amended
- Identification of the type of amendment to be made

```

5-27  SA  MW  KS  CL  IM  DM  II  KENB20A  KB  PET087S1
```

### Fields:

#### Order Number

Enter the number of the order to be amended.

#### Detail Required

Enter one of the following:

- 1 - Amend order header details
- 2 - Amend existing order lines and add new ones
- 3 - Amend and add additional charges.
- 4 - Amend and add additional details.

Press **Enter** to display the Detail Screen for the selected option.

# Order Amendment Header Screen (Option 1)

This screen is displayed when you select option 1 in the Detail Required field of the Order Amendment Selection Screen

The screen displays for amendment the parameters that are used to control the processing of the order through the remainder of its life. However, certain fields are protected, as amendment at this stage may cause the order to change identity. The existing order header information is displayed on the screen.

## Fields:

### Order Reference

Enter the new customer's order reference or purchase order number.

### Order Date

Enter the date of the customer's order if a change is required.

### Invoice Name And Address

Enter the required changes to the name and address to which the invoice will be sent.

### Delivery Name And Address

Enter any changes to the name and address to which the goods will be delivered.

### Stockroom

Enter the new stockroom from where the deliveries will be made for this order, it will not amend existing lines on the order but will be used for any new lines added to this order.

*Note: This will become the delivery stockroom, for hunt group processing and should not be changed once pick notes have been produced.*

### **Booking-In Reference**

Enter the booking-in reference for those customers who have recorded that booking-in be recorded by way of a reference number. This requirement is set up as a flag on the Customer Maintenance - Sales Details Screen 2

### **Time**

If you have entered a booking-in reference, enter a booking-in time.

### **W/C Date**

This is the Week Commencing date. This field indicates whether the delivery date is the true delivery date, or a week commencing date.

0 - No.

1 - Yes.

### **Customer Collection**

This field indicates if the goods are to be collected by the customer.

0 - No.

1 - Yes.

### **Priced At**

This flag determines whether the goods are priced at order or despatch.

1 - Order.

2 - Despatch.

### **Cash Discount Code**

The cash discount percentage is displayed and can be changed. This is defined in the customer sales details.

### **Order Subtype**

The order subtype is used to control order pricing. Please refer to the Pricing Section.

Enter the order subtype. These are user controlled and defined in the inventory descriptions file ORST.

*Note: The VAT code on the description file indicates whether or not it is an import order and therefore different payment terms may apply.*

### **Priority**

Enter the priority to be used for subsequent allocation action. The higher the priority number the higher the priority.

99 - Force allocate (during batch allocation).

00 - Manual allocation.

01 to 98 normal order priorities.

### **Delivery Date**

Enter the new default delivery date for order lines. If any change is made to the delivery due date, it cannot be earlier than the current date. This does affect the delivery date on an exiting line. It is the default delivery date assigned to all new lines added to the order.

### **Currency Code**

The currency code defaulted from Accounts Receivable. This may be overridden for multi-currency customers.

### **Currency Rate Code**

This will default from the customer additional detail but may be overridden.

The currency rate code is associated with a currency rate and the option exists to set up different codes to allow for different rates. These codes are set up in General Ledger.

### **Currency Rate**

The currency exchange rate (and conversion type - Multiply or Divide) associated with the currency rate code that is to be used for the conversion:

- 1 - To multiply the transaction value to get the base value.
- 2 - To divide the transaction value to get the base value.

### **Functions:**

#### **F13**

Payment Details. Display the Order Amendment Payment Details Window

#### **F17**

Commission Det. Display the Customer Overrides Maintenance Window to override the default salesperson information for the order header.

#### **F19**

Currency Det. Use this function to override currency details for transactions where currencies are not linked to the EURO.

#### **F21**

Internal Text. Insert internal text.

#### **F22**

External Text. Insert external text.

Press **Enter** to write the details to the database.

## Order Amendment Payment Details Window (F13)

This window is displayed when you have pressed **F13=Payment Details** from the Order Amendment Header Screen (Option 1).

### Fields:

*Note: These fields are defaulted from the customer statement account.*

### Payment Terms

There are 4 parts to this field but not all of them are necessarily used at once. The first part of the code can be any of the following:

D - Number of days from invoice date.

M - Net monthly account.

P - Periodic range.

T - Extended payment terms.

The second part of the code identifies the range if a Periodic range has been selected. The third part of the code is used to specify either the payment date for monthly (M) or periodic (P) selections, or the number of days to add to the invoice date for a daily (D) selection.

The fourth part is only used if Extended payment terms (T) is selected. It uses a settlement code that is defined by Cash Management which defines a payment pattern.

### Examples:

1. D 030 will give a payment date of 30 days after the invoice date.
2. M 210 will give a payment date as the 10th of the second month after the month the invoice was sent.
3. P 2019 206 will give all the invoices dated between the 20th of the next month and the 19th of the month after, a payment date of the 6th of the first month after the invoice is sent.
- P 1110 105 will give all the invoices dated between the 11th of this month and the 10th of the month after, a payment date of the 5th of the first month following the month after.
4. T XXX where XXX would be a code identifying a payment pattern as defined in Cash Management.

### **Payment Method**

The method of payment is a code as defined in the Cash Management application.

Examples:

CHQ, STD.

Tip: Cash discount codes and staged discount codes are mutually exclusive.

### **Cash Discount Code**

A discount code is used to identify the type of discount and a single cash discount percentage. These are defined in the description file, major type CDSC and a prompt is available.

### **Staged Discount Code**

Multiple cash settlement discount percentages, allowing tiers of discount according to how soon the payment is received, can be defined. These codes are pre-defined within Cash Management and a prompt is available.

Press **F8=Update** to save any changes.

## Customer Overrides Maintenance Window (F17)

This screen is displayed when you press  
**F17=Commission Det.** in the Order Amendment  
Header Screen (Option 1).

The salesperson information for an order defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this order.

You use this screen to change the salesperson information on the order header so that a different salesperson receives the sales commission.

### Fields:

#### Salesperson

Enter the salesperson who will receive the sales commission for this order. Change the salesperson here if you do not want the sales commission to be paid to the default salesperson defined to the customer.

Press **F8=Continue** to save the update and  
continue with the order entry process

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det.** on the Tagged Goods Returns Customer Defaults Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det.** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

*Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.*

|                                                                                                                                                                                                                                                                                                                                                      |                          |                                  |                     |                        |

### Fields:

#### Rate Code

Select a rate code as set up in the Currency Rate Code option within the System 21 Financial applications.

#### Rate

Or. Enter a rate using up to 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

## Order Amendment Line Details Screen (Option 2)

To amend line details, select option 2 in the Detail Required field on the Order Amendment Selection Screen.

Although additional lines can be defined, amended and deleted, existing lines cannot be deleted. Also any lines that have an outstanding pick note cannot be amended.

*Note: To delete existing lines, the order cancellation option must be used, whereby an order line can be cancelled.*

The current status of the order lines is displayed. **Page Up** and **Page Down** keys can be used to scroll through the order.

*Note: Order lines can be added to the order in exactly the same manner as order entry, or amendment can be performed on existing lines.*

### Fields:

(Untitled)

### Order Entry - Extra Options

At the bottom of the Line Entry Screen there are a set of options that can be used to manipulate the order lines.

To use these options enter one of the characters against an order line and press **Enter**

1 - Amend. Amend the order quantity.

2 - Text. This allows entry of three lines of text to be printed on external documentation.

3 - Re-Price. Re-price line, displays windows and allows entry of Price type, manual price or discount details.

4 - Delete. Delete the line from the order.

*Note: You will not be asked to confirm this action. The line will be deleted immediately.*

5 - Source. Display the Order Entry Sourcing Items Screen to source the item from another location in the specified hunt group, or supply a substitute item.

7 - Availability. Display the Order Entry Stock Availability Screen to check the availability to estimate when it may be possible to satisfy the customer demand.

8 - Reserve. Allows existing reservations against purchase orders to be reviewed and manipulated.

9 - Weight. Display the Order Entry Line Weights Window, which shows the weight and cube of the line selected.

C - Commission Details. Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the order line.

### **Item**

The item number cannot be amended.

### **Quantity**

Enter the quantity for delivery on the nominated delivery due date. Either a single integer value or a dual integer value may be entered.

### **Due Date**

Enter the requested delivery date to the customer. Stock will be allocated or de-allocated for the order line dependant upon the relationship of this date to the allocation time fence of the stockroom.

### **Stockroom**

Enter the stockroom code from which the order line is to be sourced. This does not have to be a stockroom in the delivery stockrooms hunt group.

### **Order Method**

Enter the order method for the line. This field is defaulted from the ordering method defined against the item and validated against inventory description ORDM.

0 - or Blank is a normal order allocated from stock.

1 - Make to Order. This is not available in Drinks.

2 - Purchase to order. Hunting is used to find the first stockroom where the item is stocked, and on completion of the order line, a purchase requisition is created and the sales order line is reserved against the requisition.

3 - Direct Delivery This works the same as option 2, purchase to order, except that the receiving address on the Purchase Requisition is set to the Customer Delivery Address. This line cannot be changed to any other order method once

the sales order line has been raised. A normal order can be changed to direct delivery providing the whole order line quantity is outstanding.

*Note: This method cannot be used against bonded stockrooms, and the hunt group processing will ignore any bonded stockrooms.*

4 - Reservation. The hunting operates as for the previous order methods, and on completion of the line the reservations window is displayed to allow the order line to be reserved against existing purchase orders. A single sales order line can have reservations against more than one purchase order, and vice versa.

*Note: Any reservations created are treated as allocations in terms of back order and part delivery processing, and the value of the reserved stock is included in the customer's on order balance for credit checking purposes.*

*Note: In kit processing a kit parent must have an ordering method of 0, normal, but kit components can have 2 and 4 but not 3, direct delivery. If an order is raised for a kit parent, the associated component lines are created as ordering method 0 and cannot be changed. Component reservations are treated as allocations in terms of how much of the kit parent can be delivered.*

### Promotion Indicator

Enter the freeloader promotion type applicable to this line. An entry in this field effectively makes the item free of charge.

### Functions:

#### F14

Header Price Overrides.

#### F21

Item / Quantity selection. This uses item master search to display a window with the ability to enter quantity.

#### F23

Control Totals

Press **F8=Update** to update the file.

## Customer Overrides Maintenance Window (Option C)

This window is displayed when you enter C alongside the order line on the Order Amendment Line Details Screen (Option 2).

The salesperson information for an order line defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this order line.

You use this screen to change the salesperson information on the order line so that a different salesperson receives the sales commission for this order line.

### Fields:

#### Total Stock / Issue Units

The total number of stock and issue units for the order.

*Note: The totals add high units and low units  
separately, for example:*

*If item 1 is 12 bottles / case, item 2 is 6 bottles /  
case, and item 3 is 3 cases / pallet.*

*Order for item 1 = 3/11, item 2 = 2/5, and item 3  
= 7/2.*

*Control total 12/18.*

*If the low units add up to more than 999 then \*\*\*\*  
is displayed.*

#### Total Weight

The total weight of the order.

The total weight = quantity in issue units \* weight per selling unit (from the item master).

#### Total Cube

The total cubage of the order.

Total cube = number of stock units \* volume per stocking unit (from the item master). Where:

The number of stock units = high units ordered (+1 if any issue units ordered).

E.g. order 6/1 (i.e. 6 cases 1 bottle), then the cube will be 7\*volume per stocking unit.

Press **Enter** to return to the Order Amendment  
Line Details Screen.

## Order Amendment Trailer Details Screen (Option 3)

This screen is accessed by selecting 3 in the Detail Required field on the Order Amendment Selection Screen.

It enables extra charge details for the order to be added and maintained. An order summary is displayed showing goods total, additional charges and tax. If the order has been suspended, the reason is given. Orders in transaction currency are displayed in base and transaction currencies.

*Note: This option is not allowed if Transport Planning requirements exist for an order, or for order with pick notes unless they have a status of Cancelled.*

*Note: Single currency customers have no currency details displayed.*

```

### Fields:

#### Suspend Code

Order processing may automatically place the order on hold, if for example, the item is not priced. In such circumstances, the suspend code and description will be displayed. A suspend code may be manually entered. The suspension code hierarchy is as follows:

- State violation
- Credit related
- Cash with order

- Pro-forma invoice required
- Price related
- Manually entered

Manually suspending an order will result in the de-allocation of any stock allocated to it. Any automatically set suspension code will not be available for override by the user.

### **Charge Code**

Enter a valid charge code. It must have been set up on the descriptions file.

### **Amount**

If a charge exists against the charge code, on the descriptions file, it will be retrieved. The charge can be overridden.

*Note: The standard charge on the descriptions file is always in base currency, for transaction currency accounts the charge is converted to the order currency.*

### **Functions:**

#### **F21**

Internal Text. Insert internal text.

#### **F22**

External Text. Insert external text.

Press **Enter** after these recalculations to accept the changes and re-display the Order Amendment Selection Screen.

## Order Amendment Additional Detail Screen 1 (Option 4)

This screen is displayed when you have entered Option 4 in the Detail Required field of the Order Amendment Selection Screen.

### Fields:

#### Status Code

Enter the current status code for the shipment. This is validated against inventory description OSTs.

#### Original Requested Ship Date

Enter the date the shipment was originally requested for shipment.

#### Latest Requested Ship Date

This date is used for invoice pricing.

If the order is price at despatch, and this date is entered, then it is used as the date for pricing and discounting purposes. If it is blank then the despatch date is used.

If the order is price at order then the order date is used and this date is agreed.

#### Terms / Freight Type

Enter the terms / freight code. This is validated against inventory description FRTY.

#### FOB Code

Enter the Free On Board code. This is validated against inventory description FOBC

### **Ship Via Carrier**

Enter the carrier code to be used for shipping. If Transport Planning is in use then this is validated against carriers defined in Transport Planning, otherwise it must be a valid supplier.

### **Invoice Number**

Enter the invoice number.

### **Container Type**

Enter the code for the container type used. This is validated against inventory description CNTD.

### **Vessel Name (Main)**

Enter the primary vessel name.

### **Vessel Type (Feeder)**

Enter the vessel type.

### **Port Of Loading**

Enter code for the loading port. This is validated against inventory description PORT.

### **Port Of Entry**

Enter the port of entry code. This is validated against inventory description PORT.

### **Sailing Date**

Enter the scheduled sailing date.

### **ETA**

Enter the estimated time of arrival date.

### **Function:**

#### **F14**

Business Entities. Display the Order Amendment Business Entities Screen.

Press **Enter** to validate the entries and display  
Order Entry Additional Detail Screen 2.

## Order Amendment Additional Detail Screen 2

This screen is displayed when you have pressed **Enter** on the Order Amendment Additional Detail Screen 1.

Enter a code for the business entity.

Press **F8=Update** to save any changes to file.

# Amend Order Delivery Date

## 7/DOP

From time to time it may be necessary to change the date on which an order is due to be delivered. Customers may request this change, or it may be more cost effective to include orders onto one load for delivery. This option allows the amendment of the delivery date for orders of a given *old* delivery date.

- If the new delivery date takes the order outside the allocation timefence, the allocation will be unchanged.
- If the new delivery date brings the order within the allocation time fence, stock is not allocated until the next batch allocation run.

## **F9**

### Submit-Date & Allocation Change

- If the new delivery date takes the order outside the allocation timefence, the stock is deallocated.
- If the new delivery date brings the order within the allocation time fence, stock allocation is performed in a background process.

Type in the old and new delivery dates required, together with all order numbers and optionally pick note numbers that you wish to change for those dates, and press **Enter**.

Use either **F8=Submit-Date Change Only** or **F9=Submit-Date & Allocation Change** to make the changes. This enables you to control whether allocations should be affected by the date amendments which take the order into or outside the allocation time fence.

# Suspended Order Release

## **1...** **2...** 8/DOP

Orders may be suspended for a number of reasons. This may be done automatically, because a non-standard situation has arisen during order entry, or by the operator. The automatic actions are caused by the following situations:

- State violation. (US function).
- Customer on credit stop.
- Customer on litigation.
- Credit limit exceeded.
- An override price entered requiring authorisation.
- No price in the price list or a zero price.

Additional reasons can be set up in the Descriptions file to be used for manual order suspension. One possible use is to record and price orders with reason code Q for quotations. Acknowledgement could then be used as Quote and Suspend Order Release, used to convert the quote into an order.

Tip: The user must be authorised as a Credit Controller.

## Suspended Order Release Selection Screen

Select the Suspend Order Release option.

This screen enables an order to be selected for release. This can be done by Order Number or Credit Controller.

Further selections can be made for the type of suspension in respect of credit stopped etc. or individual suspend codes.

| F3=Exit                                                   |                            |                |                     |

### Fields:

#### Order Number

Enter an individual order number or leave blank for all.

#### Credit Controller

Orders suspended for credit reasons, such as Credit Stopped or Credit Exceeded, can only be released by an authorised controller. If order number and credit controller are entered, the order will display if this combination is valid. If order number is left blank and controller entered, then all orders suspended for the controller will display.

#### Either

#### Credit Stopped Only

Enter one of the following:

- 0 - Both. Display all orders suspended whatever the reason.
- 1 - Yes. Display orders suspended for credit reasons only.
- 2 - No. Display orders that were suspended for reasons other than credit.

**Or**

### **Suspend Reason Code**

Enter an individual suspend code to display only those orders suspended for a particular reason.

Press **Enter**. The screen displays a list of orders fitting the selection criteria of the screen.

*Note: This screen will not appear if an individual order was selected.*

The details displayed include the available credit for the customer and the value of that particular order. **Page Up** and **Page Down** keys may be used to scroll through the list of orders, if required.

*Note: When an order is released from:*

*Credit Stop*

*Credit Limit Exceeded*

*Cash With Order*

*a flag is set on the order header to prevent the order being suspended for credit reasons a second time in batch and automatic allocation. Order amend will re-suspend the order if the credit limit is still exceeded or the other conditions are met.*

*Note: Automatic allocation is requested when an order is released.*

Select orders for release by placing a 1 against the required line(s).

Press **F8=Update** to release the orders.

## Suspended Order Release Confirmation Screen

This screen is displayed when a single order is selected for release on the Suspended Order Release Selection Screen.

This screen enables the confirmation of the release of a single selected order. The summary of the selected order details is displayed.

|                                                                                       |                            |                                                                                        |                     |

### Functions:

#### F13

Release the suspended order

Press **F13=Release** to release the suspended order.

## Orders Not Booked-In

### **1...** **2...** 9/DOP

This maintenance option is similar to the Amend Booking In details, whereby orders requiring booking in reference etc. can be changed. However, this option also allows you to view all outstanding orders for a depot that are still missing their booking in details, and therefore, are not eligible for allocation.

## Orders Not Booked-In Selection Screen

Select the Orders Not Booked-In option.

On the first screen, enter the Depot Code on which you wish to enquire, and press **Enter**. The Orders Not Booked-In List Screen is then displayed.

*Note: The selection may take some minutes to complete.*

The system searches for all Non-Booked-In orders for the selected Depot, and displays a list on screen.

## Orders Not Booked-In List Screen

This screen is displayed when you have selected a valid Depot Code from the Orders Not Booked-In Selection Screen.

This screen provides the option of selecting any number of the displayed orders for amendment.

### Fields:

#### Delivery Date

Alter the original delivery date (shown) to the new delivery date required.

#### Delivery Time

Enter a delivery time, if required.

#### W/C Date (1 / 0)

This is the Week Commencing date. The flag is used to indicate whether the date is a week commencing date or an actual date.

1 - Date is a Week Commencing Date

0 - Date is not a Week Commencing Date (Default).

#### Booking-In Ref

Enter (or alter) the Booking-In Reference, if required.

You are returned to the selection screen for further alterations, if required. If no further changes are required press **F3=Exit**.

*Note: Automatic allocation is requested when a booking in reference and delivery time are specified for a non week commencing date order.*

*Note: As part of this process the delivery dates are changed to become the entered date.*

Type in the required details and press **Enter** to process the changes.

## Amend Booking-In Details

### 10/DOP

This allows the amendment to booking-in details and delivery date. Stock will not be allocated to an order that requires booking-in details, therefore, any orders that are entered with these fields left blank need to be updated once the relevant information is known.

Only those orders not yet on picking documentation or with planned transport can be maintained.

## Amend Booking-In Details Selection Screen

Select the Amend Booking-In Details option.

The initial screen enables the selection of an order number.

### **Fields:**

#### **Order Number**

Enter a valid order number. The order must be for a customer that requires booking-in details. This is determined by the Booking in Delivery flag on the Customer Maintenance Sales Details Screen 2 being set to 1.

Type in an Order Number and press **Enter**.

## Amend Booking-In Details Screen

This screen is displayed when a valid Order Number has been entered into the Amend Booking-In Details Screen and displays Summary Order Data at the top, this enables you to alter the Booking-In details, as required.

### Fields:

#### Delivery Date

Alter the original Delivery Date (shown) to the new Delivery Date required.

#### Delivery Time

Enter a Delivery Time, if required.

#### W/C Date (1 / 0)

To indicate whether the date is a week commencing date or an actual date.

1 - Date is a Week Commencing Date

0 - Date is not a Week Commencing Date (Default).

*Note: Allocation will not occur until an actual delivery date is entered.*

#### Booking-In Ref

Enter (or alter) the Booking-In Reference, if required.

Type in the required details and press **Enter** to process the changes.

You are returned to the selection screen for further alterations, if required. If no further

changes are required press **F3=Exit**.

## Confirmation Of Order Despatch

Confirmation of Assembly followed by Confirmation of Delivery provides a two step process for confirmation of despatch. This enables the creation of invoices for goods actually delivered to a customer, and allows for under deliveries, over deliveries and breakages. It reduces the need to raise credit notes for assembly and delivery discrepancies.

- Confirmation of Assembly reviews and amends stock despatches.
- Confirmation of Delivery reviews and amends actual deliveries to the customer and generates invoice details.

Both procedures use the principle that only lines requiring change need to be entered.

It is possible to set a parameter on the Company Profile to say Invoice at Assembly = Yes. This will cause Confirmation of Delivery to occur automatically after Confirm Assembly (with no changes to the quantities).

## Confirmation Of Assembly

Confirmation of Assembly performs the relevant stock updates and movements generated for all saleable items despatched to a customer. It also updates container tracking details for CHEP pallets shipped to a haulier.

## Confirmation Of Delivery

Confirmation of Delivery generates a sales invoice for saleable items and chargeable containers based upon quantities actually delivered to a customer. It also updates container tracking details for monitoring containers, except CHEP pallets which are monitored against hauliers at assembly time. Confirmation of Delivery enables the entry of container returns.

### **Uplift Goods**

Where Confirmation of Delivery is used for Uplift Goods this is really Confirmation of Collection. Bulk picking is ignored. Saleable goods are booked back into stock.

Warehouse losses should be entered using a reason code 43. The system will raise a credit note, but not book stock back into stock.

At the Amend Despatch Quantities stage **F13=Cancel Document** will cancel the uplift completely, whereas **F8=Update** will raise a credit note.

### **Tagged Goods**

- Saleable goods are not booked into stock, only associated containers into the empties stockroom.
- Only under delivery adjustments are allowed. Only 77 can be entered, otherwise you must cancel.
- Total quantity must be specified on any adjustments.
- Any credit generated at line entry is not cancelled if the tagged goods quantity is cancelled. If cancelled, the credit note must be cancelled manually.
- No credit note is generated. This was done at entry time if appropriate.

## Direct / Indirect Balances

Delivery to a customer can be direct or indirect, and this is governed by the stockroom. If the assembly stockroom is the same as the delivery stockroom it is direct. When the order header stockroom is the delivery stockroom it is direct. If the assembly stockroom is not the delivery stockroom it is indirect. The system assumes that stock is transferred from assembly to delivery stockroom at the time of despatch from the delivery stockroom and loaded directly onto Transport. No stockroom transfers are involved. Any discrepancies in indirect deliveries are handled by expense accounts.

In order to record these stock movements between stockrooms, an expense account is used to track these movements.

## Expense Accounts

Expense Accounts are used to record the movement of stock between stockrooms as a result of direct and indirect deliveries.

There is a limit of seven accounts per item / stockroom. The quantities held are:

- This week balance
- Next week balance
- This period balance
- This year balance

Expense account types are defined on the Inventory Descriptions file against parameter type BADJ. You can specify any types as long as they are two character codes. Six account types are mandatory:

- AV - Free Stock. (Balances not held)
- QC - Frozen Stock (Balances not held)
- CD - Count Differences
- BT - Broken In Transit
- ID - Indirect Deliveries
- WL - Warehouse Losses

The parameter limit defined against each of these codes is used to validate to and from combinations in expense account adjustment to determine if the process is valid.

No expense account balances are held for available and free stock. Any adjustments to these expense accounts effect free and frozen stock balances.

Certain processes generate postings to specific expense accounts:

- Confirmation of Assembly - if physical stock is to go negative, it will post negative stock to CD, (count differences).
- Confirmation of Delivery - this uses one of the following:
  - BT - Broken in Transit
  - ID - Indirect Delivery
  - WL - Warehouse losses used for uplifts, i.e. stock that comes back from the customer to the stockroom which is good stock which can be resold.
- The expense account used is dependant upon the adjustment reason entered.
- Cycle Counting - will adjust to CD (count differences) automatically.

### **Bond Exceptions**

When delivery adjustments are entered against despatches from a bonded stockroom, stock adjustments and expense account postings are not generated for the adjustments made. In their place bond exceptions are generated. Such exceptions are reported in Bonded Inventory.

### **Day End Processing**

The system will produce a list per stockroom of all expense account postings made that day. Someone authorised to the stockroom should reconcile these balances each day.

### **Expense Account Adjustments**

This is where the accounts are reconciled, otherwise stock would be held in these accounts indefinitely. Valid to and from expense combinations are determined by adding the parameter limit values of the two codes entered. The sum of the two values must be greater than three. Expense accounts AV (free stock) and QC (frozen stock) effect physical and frozen stock balances and generate stock movements.

### **Week End Processing**

This is where the this week balance is dropped from the file. The next week balance is brought forward into this week, period and year.

# Assembly By Pick Note

## 21/DOP

You can specify the order number and despatch note, but the system will not allow you to assemble any bulk items.

## Assembly By Pick Note Selection Screen

Select the Assembly by Pick Note option.

This screen is used to enter the despatch to be confirmed.

### Fields:

#### Enter The Order Number

Enter the sales order number.

#### Picking Note

Enter the picking note sequence number.

#### Enter The Despatch Method

Enter the Despatch Method, Default M (World Trade Orders Only).

Press **Enter** to display the Assembly by Pick Note Quantities Screen.

## Assembly By Pick Note Quantities Screen

This screen is displayed when a valid Order Number and Pick Note is entered onto the Assembly by Pick Note Selection Screen.

The purpose of this screen is to amend, by exception, the requested despatch quantity. The order of saleable items displayed for assembly is as per pick note sequence.

|                                                                             |                                |                |              |                            |  |          |  |

| 10-65      *      KS CL IM DM II      EDN400A      KB      ST0672S1         |                                |                |              |                            |  |          |  |

At the top of the screen the customer's Account Number, Delivery Sequence and the Order Reference are displayed for confirmation.

Also displayed for input are details relating to the despatch (Trailer/Haulier/Number of Cartons) plus the Delivery Date.

*Note: The Trailer number is used for Distribution orders (internal orders) for Trailer tracking processing.*

*Note: The number of cartons is the total cartoon quantity for the selected pick note.*

This is followed by a list of the lines as printed on the picking note. At the right hand end of each line are two quantities. The first is the quantity which should be despatched and the second is the actual quantity. This is the assembly quantity which will be used in subsequent stock updates.

A line is displayed for each associated container for the sales items on a pick note. No adjustment of these lines is allowed. The container quantities being automatically adjusted by making adjustments to the items assembled.

### Assembly Quantity

If the despatched quantity differs from the requested quantity, enter the actual quantity despatched. The actual quantity may exceed the requested quantity.

The unit of measure is shown in dual units (Cases and Bottles) where applicable.

## **R?**

When the assembly quantity is different to the requested quantity, an Assembly Reason code must be entered. Enter a code conforming to Major Type ASRS in the Descriptions file.

*Note: The parameter limit of each code will determine if the balance is cancelled (1) or put on Back Order (0).*

## **Lot**

This field displays for lot controlled items only. Enter the lot number despatched. It is necessary to indicate from which lot the item has been taken.

Where a despatch is from a bonded stockroom, entry of lot numbers for all assembled items will be forced unless the stockroom profile indicates that rotation numbers should not be entered at despatch for despatches from the stockroom.

## **More**

This field displays for lot controlled items only. Enter a 1 for multiple lots.

*Note: Physical stock balances in the assembly stockroom will not be sent negative at assembly time where over allocation has occurred as a result of negativity. The stock balance will be zero, and expense account balances updated.*

*Note: In a US Bond environment the quantity shipped cannot be greater than the available stock. This does not apply to a UK Bond or non-bonded environment.*

*Note: Expense account posting is generated that resets physical stock to zero.*

## **Functions:**

### **F13**

Confirm quantities. Confirm that the quantities currently displayed in the assembly quantity column are those that were despatched.

### **F14**

Additional Details. Display the Confirm Assembly - Additional Details Screen 1 to enter additional details about the delivery. You can enter these details during Order Entry but they can be modified here. For more information, see Order Entry Additional Detail Screen 1.

### **F16**

Add Item. Add new Item Line to the despatch. This will generate new lines on the sales order and new container lines. For added items the system calls Advanced Pricing but does not apply roll up or whole order discounting. You can only get these discounts applied if orders are priced at despatch.

-  Press **Enter** to ensure that any quantity that has been changed does not exceed the available quantity. Lot numbers are validated and the quantity of the batch is checked.
-  Press **F16=Add Item** to display a window enabling an extra item(s) to be added.

## Multiple Lot Entry Window (Option 1)

This window is displayed when you enter a 1 in the More field, against a lot controlled item, and press **Enter**

You use this screen to add multiple lot numbers if the delivery quantity is taken from more than one lot.

### Fields:

#### Batch

Enter the Lot or Batch numbers that the item quantities are taken from.

#### Quantity

Enter the corresponding quantities against the individual Lot or Batch numbers.

### Functions:

#### F5

Refresh. Refresh the screen. Returns the lines to the values first entered.

#### F14

Purge Blanks. You use this to remove any blank lines from the list you have entered.

#### F16

Quantity. You use this to display the sum of the quantities you have entered.

Press **F8=Update** to update the pick note with the information you have entered and return to the Assembly by Pick Note Quantities Screen.

## Entry Of Additional Item Window (F16)

This window is displayed when you press  
**F16=Add Item** in the Assembly by Pick Note  
Quantities Screen

You use this window to add a new item line to the despatch. This will generate new lines on the sales order and new container lines. For added items the system calls Advanced Pricing but does not apply roll up or whole order discounting. You can only get these discounts applied if orders are priced at despatch.

Commission Details. Display the Customer Overrides Maintenance Window to override the default salesperson information for this addition.

*This function is only displayed when you have entered an item and quantity and pressed **Enter**.*

Press **Enter** to add the item to the Picking Note

## Customer Overrides Maintenance Window (F17)

This window is displayed when you press  
**F17=Commission** Details in the Entry Of  
Additional Item Window.

The salesperson information for additional item defaults to the salesperson defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this addition.

You use this screen to change the salesperson information for an additional item so that a different salesperson receives the sales commission for this addition.

### Fields:

#### Salesperson

Enter the salesperson who will receive the sales commission for this additional item. Change the salesperson here if you do not want the sales commission to be paid to the default salesperson for the customer.

Press **F8=Continue** to save the update and  
continue with the order entry process

## Lot / Batch / Serial Despatch

If the item despatched is lot, batch or serial controlled then specific references must be entered for each one despatched.

### Single Lot Entry

If the line is satisfied by a single lot, batch or serial number, its location must be specified in the lot field. To select a list of valid lots the **F4=Prompt** key can be used.

When despatch is confirmed by pressing the **F13=Confirm Quantities** key, the validation is repeated and the despatch actioned as follows:

- Stock is reduced, by the actual quantity assembled.
- Allocated stock is reduced, by the original pick note quantity.
- The lot or batch records are reduced.
- The cost of the inventory movement is calculated based on the costing method associated with the items.
- Inventory movements are written to the movement history file.
- The usage for the despatched items is increased.
- The last issue date for the despatched items is updated.
- The order is changed to reflect the quantity assembled.
- Customer account balance for allocated not despatched is decreased by any line balance that has been cancelled or back ordered.

*Note: If the General Ledger is not active, the VAT Code is validated against the Inventory Descriptions File. Cash discount will be deducted from VAT.*

*If the General Ledger is active, EURO VAT will be catered for. VAT details are kept and maintained in the General Ledger. The facility exists for cash discount to be deducted at either order time, or payment time, or cash discount to be ignored.*

*If Extra VAT applies, e.g. in Spain, then the extra VAT is kept against the VAT Code in the General Ledger.*

*Note: If World Trade is attached, the movement is analysed. This is necessary to establish if it is an EC movement or not, and as such if it needs to be included on the Intrastat and ESL reports. (For more information on Intrastat and ESL see World Trade.) It can be seen that a large amount of processing is performed and a noticeable delay will occur, particularly if there are many*

*lines on the despatch note. In this case, every effort should be made to use the fast batch method of confirm despatched.*

## Assembly By Pick Note Confirmation Screen

Following the completion of confirmation, when you have pressed **F13=Confirm Quantities**, the select screen is re-displayed, but it now includes confirmation of the assembly just made.

This should be written on the despatch note copy, to aid manual reconciliation if necessary.

## Assembly By Bulk Pick List

**1...** 22/DOP  
**2...**

This option allows you to confirm assembly for bulk pick lists.

## Assembly By Bulk Pick List Selection Screen

Select the Assembly by Bulk Pick List option.

This screen is used to enter the bulk pick list to be assembled.

### Fields:

#### Load Number

Enter the load number (Bulk Pick List Number = Load Number)

#### Sequence Number

Enter the bulk pick list sequence number.

#### Despatch Method

Enter the despatch method, Default M. (World Trade Orders Only.)

Press **Enter** to display the Assembly by Bulk  
Pick List Select Despatch Screen.

## Assembly By Bulk Pick List Select Despatch Screen

This screen is displayed when a valid despatch has been selected on the Assembly by Bulk Pick List Selection Screen and enables the selection of one or more despatches on the Bulk Pick.

All pick notes on the selected bulk pick list are displayed.

### Fields:

#### Sel

Select the despatch you want as follows:

- 1 - For unamended despatches.
- 2 - For amended despatches.

Press **F8=Update**. This has the following effect:

- 1 - Unamended processing sets up the despatch ready for Batch Processing. The assembly batch update process must be run to update the files.
- 2 - Amended processing causes despatch lines to be displayed for amendment of details as if assembly by pick note were requested.

## Assembly By Bulk Pick List Quantities Screen (Option 2)

This screen is displayed when a despatch has been selected with option 2 on the Assembly by Bulk Pick List Select Despatch Screen.

The purpose of this screen is to amend, by exception, the requested despatch quantity. At the top of the screen, the customer's account number, delivery sequence and the order reference are displayed so they can be checked.

Also displayed for input are details relating to the despatch (Trailer / Haulier / Number of Cartons) plus the Delivery Date.

*Note: The Trailer number is used for Distribution orders (internal orders) for Trailer tracking processing.*

*Note: The number of cartons is the total carton quantity for the selected pick note.*

This is followed by a list of the lines as printed on the picking note. At the right hand end of each line are two quantities.

- The quantity which should be despatched
- The second is the actual quantity. This is the assembly quantity which will be used in subsequent stock updates.

A line is displayed for each associated container for all the sales items on a pick note. No adjustment of these items is allowed. The container quantities being automatically adjusted by making adjustments to the items assembled.

|                                                                    |                               |                      |                           |

### Fields:

### Assembly Quantity

If the despatched quantity differs from the requested quantity, enter the actual quantity despatched. The actual quantity may exceed the requested quantity.

The unit of measure is shown in dual units (cases and bottles) where applicable.

#### R?

When the assembly quantity is different to the requested quantity, an Assembly Reason code must be entered.

Enter a code from descriptions file, Major Type ASRS.

*Note: The parameter limit of each code will determine if the balance is cancelled (1) or put on Back Order (0).*

#### Lot

If the item is lot controlled, enter the lot number despatched. This only appears for lot controlled items. It is necessary to indicate from which lot the item has been taken.

Where a despatch is from a bonded stockroom, entry of lot numbers for all assembled items will be forced unless the stockroom profile indicates that rotation numbers should not be entered at despatch for despatched from the stockroom.

#### More

Enter a 1 to enter multiple lots.

### Functions:

#### F13

Confirm quantities. Confirm that the quantities currently displayed in the assembly quantity column are those that were despatched.

#### F16

Add Item. Add a new Item Line to the despatch. This will generate new lines on the sales order and new container lines. For added items the calls Advanced Pricing but does not apply role up or whole order discounting. You can only get these discounts applied if orders are priced at despatch.

Press **Enter** to ensure any quantity that has been changed does not exceed the available quantity.

Lot numbers are validated and the quantity of the batch is checked.

Press **F16=Add Item** to display a window enabling an extra item(s) to be added.

## Assembly By Bulk Pick List Lot / Batch / Serial Despatch

If the item despatched is lot, batch or serial controlled then specific references must be entered for each one despatched.

### Single Lot Entry

If the line is satisfied by a single lot, batch or serial number its location must be specified in the lot field. To select a list of valid lots the lot field can be prompted.

When despatch is confirmed by pressing the **F13=Confirm Quantities** key, the validation is repeated and the despatch actioned.

- Stock is reduced by the actual quantity assembled.
- Allocated stock is reduced by the original pick note quantity.
- The lot or batch records are reduced.
- The cost of the inventory movement is calculated based on the costing method associated with the items.
- Inventory movements are written to the movement history file.
- The usage for the despatched items is increased.
- The last issue date for the despatched items is updated.
- The order is changed to reflect the quantity assembled.
- Customer account balance for allocated not despatched is decreased by any line balance that has been cancelled or back ordered.

*Note: If World Trade is attached, the movement is analysed. This is necessary to establish if it is an EC movement or not, and as such if it needs to be included on the Intrastat and ESL reports. (For more information on Intrastat and ESL refer to the World Trade Product Guide.) It can be seen that a large amount of processing is performed and a noticeable delay will occur, particularly if there are many lines on the despatch note. In this case, every effort should be made to use the fast batch method of confirm despatched.*

*Note: If the General Ledger is not active, the VAT Code is validated against the Inventory Descriptions File. Cash discount will be deducted from VAT.*

*If the General Ledger is active, EURO VAT will be catered for. VAT details are kept and maintained in the General Ledger. The facility exists for cash discount to be deducted at either*

*order time, or payment time, or cash discount to be ignored.*

*If Extra VAT applies, e.g. in Spain, then the extra VAT is kept against the VAT Code in the General Ledger.*

## Assembly By Bulk Pick List Confirmation Screen

When you have pressed **F13=Confirm Quantities** following the completion of confirmation, the select screen is displayed.

The list of unprocessed pick notes is re-displayed.

# Assembly Batch Data Entry

## 23/DOP

This method of confirm assembly is designed to minimise the time taken to request assembly confirmation. It is essentially a batch process where a number of despatches are entered into a batch and then a separate job is requested to perform the updating. The following should be done:

- Check that all items were despatched as requested, i.e. no quantities require changing.
- Sort into batches where the despatch depot and the despatch date are the same.

## Assembly By Batch Data Entry Input Screen

Select the Assembly Batch Data Entry option.

Only one screen is displayed for this option.

[illegible]

**Fields:**

## Depot

### Delivery Date

### Picking Note

*Note: Pick notes containing Lot, Batch, Serial or controlled items are rejected by this process.*

*Note: Pick notes raised by bonded stockrooms (deemed to be lot controlled) are rejected by this process unless the stockroom is an EPD bond for which rotation details do not have to be entered at despatch time.*

*Note: Following entry of data, the assembly Batch Update Program must be run to update the files.*

Press **Enter** to validate the entries you have made.

# Assembly Batch Update

## 24/DOP

This option submits a batch job to carry out the detailed confirmation of Assembly processing for a particular depot. This will already have been input using the Assembly Batch Date Entry option, this option just submits the job.

The despatches processed are either:

- Despatches previously defined using batch data entry.
- Despatches processed by assembly by bulk pick list with option = 1 (i.e. unamended).

## Assembly Batch Update Selection Screen

Select the Assembly Batch Update option.

### Fields:

#### Depot

Enter the Assembly Depot.

Press **F8=Submit** to submit the batch job.

## Delivery By Pick Note

### 25/DOP

This is used to record actual delivery quantities for a selected pick note and to track monitored containers against customers. It is also used to confirm collection of uplift and TGR orders.

## Delivery By Pick Note - Selection Screen

Select the Delivery by Pick Note option.

This is used to select a delivery by Picking Note.

### Fields:

#### Enter The Order Number

Enter the sales order number.

#### Picking Note

Enter the picking despatch sequence number

#### Delivery Date

Enter the delivery due date (defaults to current date) - a warning will be given if the delivery is due on another date.

*Note: This is used as the invoice date and the document date for transactions posted to Accounts Receivable and General Ledger.*

Press **Enter** to display the Delivery by Pick Note Container Returns Screen.

This displays the quantity returned.

## Functions:

### F8

Update. Update the container details and display the quantities screen.

Amend any lines which require changing, then  
press **F8=Update** to display the Delivery by Pick  
Note Amend Despatch Quantities Screen.

## Delivery By Pick Note Amend Despatch Quantities Screen

This screen is accessed via the **F8=Update** key from the Delivery by Pick Note Container Returns Screen, or displayed when you have selected a valid uplift or Tagged Goods Receivable on the delivery by pick note selection screen.

The screen is used to amend any despatch quantities and enter a reason code.

The item number, description, promotion indicator and quantity delivered are displayed for information purposes.

*Note: Container lines have a C against them and cannot be selected for amendment.*

| OE907                                                            |                                | DK - QA Drinks |     | User GBJBAIMS      |           | 6/02/98<br>12:59:21 |             |

### Fields:

#### Amend New Balance

Enter a 1 to amend the quantity. Adjustments can be made to the delivered quantity of assembled saleable items not associated containers.

*Note: The rest of the fields are display only - for information purposes.*

### Functions:

#### F13

Cancel doc. Cancel document. This cancels the whole of the delivery.

#### F16

Add Items. Display the Confirm Delivery - Additional Items Screen to add a new Item.

**F18**

Rets. Re-process container returns.

**F23**

Control Totals. Display the quantity of stock units per issue unit and the weight and volume of one stock unit, for the selected item.

Enter 1 next to the line you want to amend.

## Confirm Delivery - Additional Items Screen (F16)

This screen is displayed when you press  
**F16=Add Item** in the Delivery by Pick Note  
Amend Despatch Quantities Screen

You use this window to add a new item line to the despatch. This will generate new lines on the sales order and invoice and new container lines. For added items the system calls Advanced Pricing but does not apply roll up or whole order discounting. You can only get these discounts applied if orders are priced at despatch.

### Fields:

#### Ref

The reference number of the line. This defaults to the next line number on the screen, if you are entering a new line.

You can use this field to select an existing line to display it for modification.

To amend an existing line, enter the reference  
number and press **Enter**.

#### Item

Enter the item you want to add.

#### Quantity

Enter the item quantity.

#### Lot

Enter the lot number for lot controlled items.

### **Adj Qty.**

Enter the difference between the quantity ordered and the actual delivery quantity. This is usually the quantity broken in transit.

### **Commission Details**

1 - Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the item line.

When you press **F8=Update** on the Delivery by Pick Note Amend Lines screen, is as follows:

Press **F8=Update** to update the file. See the topic Processing and File Updates, for more information

## Display Control Totals Window (F23)

This window is displayed when you press  
**F23=Control Totals** in the Delivery by Pick Note  
Amend Despatch Quantities Screen

This screen displays, for the item selected in the Delivery by Pick Note Amend Despatch Quantities Screen:

- The total quantity of stock units and issue units being delivered.
- The total weight and volume of the items being delivered.

## Customer Line Overrides Maintenance Window (Option 1)

This Window is displayed when you enter 1 in the Commission Details field of the Confirm Delivery - Additional Items Screen and press **Enter**

The salesperson information for an additional line defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this additional line.

You use this screen to change the salesperson information on the additional line so that a different salesperson receives the sales commission for this line.

### Fields:

#### Ref

Enter the line reference you want to amend.

#### Adjustment Quantity

The adjustment (it is entered as a quantity without sign; the system determines whether it is a plus or minus from the Reason Code).

Each adjustment quantity must be given an associated reason code.

#### Reason

Enter a Reason Code, it must be a valid value from the Description parameter DLRS. The codes have special processing functions as described in the Processing and File Updates Section.

Valid reason codes are:

33 - Broken in Transit. Stock is booked in and then out of the assembly stockroom. Expense account postings are generated against expense account BT. Normal FIFO costing rules are not followed for these stock adjustments.

43 - Under delivery for a warehouse controlled stockroom. In this case stock is not updated, and must be updated manually. Expense account postings are generated against expense account WL.

66 - Over Delivery Adjustments. There must be sufficient available stock in the assembly stockroom to allow for over delivery adjustments. Stock is booked out of the assembly stockroom. The stock is booked in again and an expense account posting is generated to expense account ID (Indirect Deliveries) if the selected pick note is an indirect delivery.

*Note: Code 66 cannot be used for warehouse controlled stockrooms.*

77 - Under Delivery Adjustments. Stock is booked back into the assembly stockroom. It is booked out again and an expense account posting is generated against expense code ID if the pick note selected is an indirect delivery.

*Note: Bond Exceptions. If the assembly stockroom is duty suspended (i.e. bonded) then bond exceptions are generated and no stock or expense accounts are updated. The Bond exceptions report is used to update the stock situation manually.*

*Note: Any items added are added at delivery time which will have pricing implications - no roll ups, no whole order discounts, if pricing at order is used.*

*Note: Bond Exceptions: There are no adjustments, no stock movements, and no expense account records.*

## Functions:

### F8

Update. Update the quantities and re-display the line quantities.

Press **F8=Update** to confirm the quantities, and update the file, this returns you to the Delivery by Pick Note Amend Despatch Quantities Screen.

Press **F8=Update** again to save all changes and return to the Delivery By Pick Note Selection Screen.

## Processing And File Updates

When you press **F8=Update** on the Delivery by Pick Note Amend Lines screen, the file is updated as follows:

- A credit note is generated for an uplift confirmation.
- The Invoice is generated based on the new quantities for goods and chargeable containers, i.e.
  - Major type 2 - chargeable containers
  - Major type 3 - gas cylinders (this generates a rental charge based on days)
  - Container lines on an invoice have line numbers of 900 and above.
- Consolidation of invoices occurs based on the consolidation level specified at invoice / delivery level. Credit notes generated by confirming uplifts are not consolidated.
- Order lines are updated with the quantity delivered field increased by the confirmed quantity. The quantity assembled will be reduced by the original assembled quantity.
- Any additional lines added to the order file using the next sequential order line number.
- The Pick/Delivery note file is updated with the quantity delivered and down dated with the quantity assembled. Any additional lines are added.
- Container returns are not added to the pick note or the order.
- Stockroom Balance file
  - For original lines any amendments will be reflected in the physical, allocated, available balances - but for **Direct Deliveries** only where the Delivery Depot is equal to the Assembly Depot.
- Stock Movements File
  - For any amendments which affect physical stock, customer order issue movements will be generated. Any adjustment to the Broken in Transit expense account will be reflected in the expense account adjustment file.
- The Sales Ledger (Accounts Receivable) Account Summary Balance file will be updated with the value of the invoice being added to the Goods Despatched Not Invoiced balance and the allocated orders value being reduced by the value of the assembled delivery.
- The Customer Container tracking file will be updated for the balance of monitored containers delivered less returned. Except CHEP pallets which are monitored against the haulier at assembly.
- If a haulier code was not entered at Confirm Assembly the customer container file will be updated. Otherwise if a haulier code was entered, the

haulier code will be updated for CHEP pallets (item type H, class AZ) and the customer for the others.

- Containers are tracked against the customer unless a haulier code was entered at assembly time when they are tracked against hauliers.
- The Expense Account balances will be updated. The Reason Code determines whether stock is affected or not, and Direct Delivery or Indirect Delivery determines what action is taken. (Direct Delivery means Delivery Stockroom = Assembly Stockroom).

## Delivery By Load Number

**1...** 26/DOP  
**2...**

This is used to confirm delivery by load number.

## Delivery By Load Number Selection Screen

Select the Delivery by Load Number option.

You can use this screen to select:

- All deliveries for a specific load number.
- All deliveries assembled in a selected stockroom, but not allocated to a load.
- All deliveries for a selected stockroom and date.

### Fields:

#### Enter The Load Number

Enter the transport planning load number used for Bulk Pick List processing.

Leave this field blank and press **F16=All Orders** to list all delivery notes for the selected delivery stockroom which have been confirm assembled, irrespective of whether or not they are planned onto a load.

#### Delivery Location

Enter the delivery stockroom, this is a mandatory field.

#### Delivery Date

Enter the delivery due date. A warning will be given if the date is not the same as that on the Picking Notes on the load.

*Note: All deliveries on a load should be for the same date.*

### Functions:

#### F16

All Orders. To use this option, leave the Enter The Load Number field blank and press **F16=All Orders**. The screen will display all assembled delivery notes for the selected stockroom which have been confirm assembled, irrespective of whether or not they are planned onto a load.

Press **Enter** to display the Delivery By Load  
Number Selection of Pick Notes On The Load  
Screen.

## Delivery By Load Number Selection Of Pick Notes On The Load Screen

This screen is displayed when you have selected a valid load from the Delivery by Load Number Selection Screen.

This screen is displayed when you leave the Enter The Load Number field blank and press **F16=All Orders**, on the Delivery by Load Number Selection Screen.

You use this screen to select an unconfirmed Picking Note. The Load Number Delivery Location Code and Name, and the Delivery Date are displayed for information.

Where uplift and tagged goods orders are planned onto the selected load, these are also displayed for selection assuming the appropriate documentation has been generated.

### Fields:

#### Sel

Select one of the following options:

1 - for unamended (confirms the assembled quantities). You delivered what was assembled or collected what was expected - uplifts and tagged goods. Updates performed in batch delivered quantities of saleable items and associated containers match the assembled quantities.

2 - for amended. Delivery by pick note is invoked for those pick notes selected for amended delivery. You must use this for pick notes with lot controlled uplift and tagged goods items.

3 - for cancel (cancels the delivery). This is where the customer didn't want the goods when you arrived on site. Updates are performed in batch. This is not allowed if the selected pick notes contain lot, batch or serial controlled items or where the assembly stockroom is duty suspended. Where the selected pick note is for an uplift or tagged goods this option cancels the document without return of any stock.

### Functions:

#### **F8**

Update. Process the selected picking notes in turn.

#### **F13**

Cancel. Cancel all picking notes which have a 3 against them.

#### **F16**

Select All (Unamended). You use this option to select all displayed delivery notes for unamended delivery confirmation.

This option is only displayed if you use **F16=All Orders** on the Delivery by Load Number Selection Screen.

Press **F8=Update** to process the selected picking notes.

## Delivery By Pick Note Selection of Pick Notes On The Load Screen (Option 2)

On selecting a line with a 2 on the Delivery by Load Number Amend Despatch Quantities Screen, a screen is displayed to enable Quantity Adjustment and Reason.

| F8=Update                        | F12=Previous                  |                      |             |

### Fields:

#### Ref

Enter the line reference you want to amend.

#### Adjustment Quantity

The adjustment (it is entered as a quantity without sign; the system determines whether it is a plus or minus from the Reason Code).

Each adjustment quantity must be given an associated reason code.

#### Reason

Enter a Reason Code, it must be a valid value from the parameter DLRS. The codes have special processing functions as described in the Processing and File Updates Section.

Valid reason codes are:

33 - Broken in Transit. Stock is booked in and then out of the assembly stockroom. Expense account postings are generated against expense account BT. Normal FIFO costing rules are not followed for these stock adjustments.

43 - Under delivery fro a warehouse controlled stockroom. In this case stock is not updated, and must be updated manually. Expense account postings are generated against expense account WL.

66 - Over Delivery Adjustments. There must be sufficient available stock in the assembly stockroom to allow for over delivery adjustments. Stock is booked out of the assembly stockroom. The stock is booked in again and an expense account posting is generated to expense account ID (Indirect Deliveries) if the selected pick note is an indirect delivery.

*Note: Code 66 cannot be used for warehouse controlled stockrooms.*

77 - Under Delivery Adjustments. Stock is booked back into the assembly stockroom. It is booked out again and an expense account posting is generated against expense code ID if the pick note selected is an indirect delivery.

*Note: Bond Exceptions. If the assembly stockroom is duty suspended (i.e. bonded) then bond exceptions are generated and no stock or expense accounts are updated. The Bond exceptions report is used to update the stock situation manually.*

*Note: Any items added are added at delivery time which will have pricing implications - no roll ups, no whole order discounts, if pricing at order is used.*

*Note: Bond Exceptions: There are no adjustments, no stock movements, and no expense account records.*

## Functions:

### F8

Update. Update the quantities and re-display the line quantities.

Press **F8=Update** to confirm the quantities, and update the file, this returns you to the Delivery by Pick Note Amend Despatch Quantities Screen.

Press **F8=Update** again to save all changes and return to the Delivery By Pick Note Selection Screen.

## Processing And File Updates (F8)

When you press **F8=Update** on the Delivery by Pick Note Amend Lines screen, the file is updated as follows:

- A credit note is generated for an uplift confirmation.
- The Invoice is generation based on the new quantities for goods and chargeable containers, i.e.
  - Major type 2 - chargeable containers
  - Major type 3 - gas cylinders (this generates a rental charge based on days)
  - Container lines on an invoice have line numbers of 900 and above.
- Consolidation of invoices occurs based on the consolidation level specified at invoice / delivery level. Credit notes generated by confirming uplifts are not consolidated.
- Order lines are updated with the quantity delivered field increased by the confirmed quantity. The quantity assembled will be reduced by the original assembled quantity.
- Any additional lines added to the order file using the next sequential order line number.
- The Pick/Delivery note file is updated with the quantity delivered and down dated with the quantity assembled. Any additional lines are added.
- Container returns are not added to the pick note or the order.
- Stockroom Balance file
  - For original lines any amendments will be reflected in the physical, allocated, available balances - but for **Direct Deliveries** only where the Delivery Depot is equal to the Assembly Depot.
- Stock Movements File
  - For any amendments which affect physical stock, customer order issue movements will be generated. Any adjustment to the Broken in Transit expense account will be reflected in the expense account adjustment file.
- The Sales Ledger (Accounts Receivable) Account Summary Balance file will be updated with the value of the invoice being added to the Goods Despatched Not Invoiced balance and the allocated orders value being reduced by the value of the assembled delivery.
- The Customer Container tracking file will be updated for the balance of monitored containers delivered less returned. Except CHEP pallets which are monitored against the haulier at assembly.
- If a haulier code was not entered at Confirm Assembly the customer container file will be updated. Otherwise if a haulier code was entered, the

haulier code will be updated for CHEP pallets (item type H, class AZ) and the customer for the others.

- Containers are tracked against the customer unless a haulier code was entered at assembly time when they are tracked against hauliers.
- The Expense Account balances will be updated. The Reason Code determines whether stock is affected or not, and Direct Delivery or Indirect Delivery determines what action is taken. (Direct Delivery means Delivery Stockroom = Assembly Stockroom).

# Proof of Delivery

## 27/DOP

This is used to record that customers have received deliveries when Invoice at Assembly is activated. This will only work if Multiple Stockroom Allocation is turned on.

The function of this option is only valid in conjunction with Hunt Group Processing.

When a Hunt Group is used, the delivery note produced will consolidate all assembly confirmed pick notes for the order. One line per item is printed on the delivery note and a Consignment Reference number is assigned and also printed on the delivery note. This consignment reference number is unique, and increments by one after each run.

If Invoice at Assembly parameter setting on the company profile is equal to 1 then confirmation of delivery is not used. Therefore, Proof of Delivery is the method used to record the fact that the customer received the goods.

## Proof Of Delivery Selection Screen

Select the Proof of Delivery option.

|                           |                            |               |                     |

|                           |                            |               |                     |
| F3=Exit                   |                            |               |                     |

### Fields:

#### Order Number

The order number.

#### Consignment Reference

The reference assigned to the Delivery Note associated with this order number and held on the pick note header. It is assigned by the confirmation of delivery process that runs when you have multiple stockroom allocation turned on.

*Note: An error is displayed if:*

There are no pick notes for this order with the entered consignment reference. **OR**

The pick note has not been confirm delivery. **OR**

The order / consignment reference has been previously PODd

Valid Pods are written to a file but not processed elsewhere on the system.

Enter *both* the required Order Number and the associated Consignment Reference, then press **Enter** to process the request.

# Invoices And Credits

Invoices and Credit Notes are raised automatically when you perform confirmation of delivery. It is possible to raise Invoices and Credit Notes using the Enter Sundry Invoices or Enter Credit Notes options. There are two types of Sundry Invoices or Credit Notes that can be raised:

- The first is for purely financial (non-stock) transactions. For example, where an under charge on an original Invoice has to be corrected. Use Invoice without stock update.
- The second includes the corresponding stock update. For example, a direct sale at a trade counter would require an Invoice with stock update to record the sale and the stock issue.

Sundry Invoices and Credit Notes are raised and printed on the basis of one document for one action; that is, one Sundry Invoice or Credit Note per request. Credit Notes, rather than Invoices, are produced for both Uplift Orders and, where applicable, for Tagged Goods Returns.

There are two stages in the production of an Invoice or Credit Note:

1. Generate the Invoice or Credit Note.
2. Print the document and update the Ledgers.

This may be done at any time, but should be run at least once per day.

Orders can be priced at the time of order entry or at despatch. However, re-pricing occurs for orders priced at despatch when the Invoice is printed and the Ledgers are updated.

*Note: All Invoices and Credit Notes are raised and printed in the currency of the customer.*

*Note: Sundry Invoices and Credit Notes will not be consolidated with Invoices generated as the result of despatch of a sales order.*

In order to simplify the auditing of Invoices, a single number sequence is used for each sales company. This number sequence includes both Invoices and Credit Notes.

## **Sundry Invoices And Credit Notes Entry**

The facilities for the identification and selection of a customer are the same as for order entry. Similarly, special addresses may be entered together with any necessary explanatory text for the document or the document lines.

It is possible to reverse an Invoice (create a Sundry Credit) by entering its number in the Original Document Reference field. This will create a reverse entry of the original Invoice re-priced and valued based upon either current or original pricing information.

There are four options for entering Sundry Invoices and Credit Notes, each calls a common procedure, but performs the updating described in its option. These are as follows:

# Enter Credit Notes

There are two options that you can use to enter credit notes. Both display the same screens but perform slightly different background processes.

## **Enter Credit Notes (No Stock Update)**

**1...** 28/DOP  
**2...**

You use this option to enter Credit Notes that do not require a stock update. For example, a customer may have been overcharged for some goods, so only a financial adjustment is needed.

## **Enter Credit Notes (Stock Update)**

**1...** 30/DOP  
**2...**

You use this option to enter Credit Notes with a stock update. For example, a customer has returned some goods in good condition, so both a financial adjustment and a stock adjustment are needed.

## Select Customer Screen

Select the Enter Credit Note option.

You use this screen to enter the details of the customer for whom the Credit Note is to be raised.

```
OE130          DD - DD   Drinks - Specimen Data   USER GBJBALTW   20/05/98

```

### Fields:

#### Customer Code

Enter the customer code.

#### Customer Order Reference

Enter the reference number of the customer's order. This may be set as mandatory on the customer sales details.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the date that delivery was made to the customer. The default is the current date.

*Note: This becomes the document date of the generated document.*

Press **Enter** to validate the data and display the Customer Defaults Screen.

## Customer Defaults Screen

This screen is displayed when you have made valid entries on the Select Customer Screen and pressed **Enter**.

This screen displays the processing defaults associated with the selected customer account, for confirmation and amendment. If the account is for any currency other than the Accounts Receivable base currency, the details of the currency are also displayed.

**Tip:** You must be authorised to the stockroom you wish to process.

**Note:** You can change any of the standard defaults for the customer.

### Fields:

#### Invoice And Delivery Name And Address

The Invoice and delivery name and address for the customer are displayed. These may be amended if differing addresses apply to this Credit Note.

#### Original Doc. Ref.

If an existing Invoice is to be credited, enter the Invoice number. A Credit Note mirroring the Invoice will be presented on the subsequent screens for review, amendment and acceptance.

#### Keep As Original

This flag allows you to keep the original prices if required. When this flag is used, items cannot be added, when using the original prices, although the quantity can be changed. If quantities are changed, the unit price of the original item will be used to calculate the new price.

If the original document is not yet printed and is flagged as Price at Despatch then a warning message will be issued stating that the original document is not yet printed and the price may change. Any change in price on the original document, when the Invoice is printed, will not be reflected in the document being raised.

Where re-pricing is not to take place, the document header will be flagged as Price at Order to ensure the Invoice print process will not re-price the document.

Tip: If an original document reference is used and the header price is overridden, the header price override will take precedence over any original pricing records that would have been retrieved.

Where a Credit Note, based on an original Invoice is raised, a check is made to ensure the value of the credit does not exceed the value of the original Invoice, and if the value is exceeded a warning message is issued.

### **Stockroom**

The normal stockroom from which deliveries are made is displayed. This may be changed to any valid stockroom.

*Note: You must be authorised to this stockroom.*

### **Reason Code**

A reason must be given for this type of transaction. Enter the code or select it from a prompt.

### **Subtype**

The order subtype is used to control order pricing. Please refer to the Pricing Section.

Enter the order subtype. These are user controlled and defined in the inventory descriptions file ORST.

*Note: The VAT code on the description file indicates whether or not it is an import order and therefore different payment terms may apply.*

### **Period Number**

The applicable period in the format YYPP.

### **Cash Discount Code**

The code of the cash settlement discount to be used for the document. The customer's standard discount is displayed. It may be changed to any valid settlement terms.

### **For currency accounts:**

#### **Currency Code**

The default currency code from Accounts Receivable. This may be overridden for multi-currency customers.

#### **Currency Rate Code**

This will default from the customer sales detail but may be overridden. The currency rate code is associated with a currency rate and the option exists to set up different codes to allow for different rates. The codes are set up in General Ledger.

### **Currency Rate**

The currency exchange rate associated with the currency rate code to be used for the conversion.

1 - Is specified, the transaction value will be multiplied by the currency value to get the base value.

2 - Is specified, the transaction value will be divided by the currency rate to get the base value.

*Note: Text may be added to a document, either to be printed or to act as an internal explanation. This is achieved by taking the appropriate function key. On completion of this, a screen allowing the entry of the line details is displayed.*

### **Functions:**

#### **F13**

Payment Details. Display the Payment Details Window.

#### **F17**

Commission Det. Display the Customer Overrides Maintenance Window to override the default salesperson information for the Invoice header.

#### **F19**

Currency Details. Use this function to override currency details for transactions where currencies are not linked to the EURO.

#### **F21**

Internal Text. Insert internal text.

#### **F22**

External Text. Insert external text.

Press **Enter** to display the Document Lines Screen.

## Payment Details Window (F13)

This window is displayed when you have pressed  
**F13=Payment Details** from the Credit Notes  
Customer Defaults Screen.

You use this window to override the default discount codes for the customer.

### Fields:

*Note: These fields are defaulted from the  
customer statement account.*

### Cash Discount Code

A discount code is used to identify the type of discount and a single cash discount percentage. These are defined in the description file, major type CDSC and a prompt is available.

### Staged Discount Code

Multiple cash settlement discount percentages, allowing tiers of discount according to how soon the payment is received, can be defined. These codes are pre-defined within Cash Management and a prompt is available.

Press **F8=Update** to save any changes.

## Customer Overrides Maintenance Window (F17)

 This screen is displayed when you press **F17=Commission Det.** in the Credit Notes Customer Defaults Screen

The salesperson information for additional item lines defaults to the salesperson defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, any sales commission due to this salesperson will, by default, be adjusted for this credit.

You use this screen to change the salesperson information for an additional item line so that the sales commission for a different salesperson is adjusted for this credit.

### Fields:

#### Salesperson

Enter the salesperson whose sales commission will be adjusted for this additional line. Change the salesperson here if you do not want the sales commission to be adjusted for the default salesperson for the customer.

 Press **F8=Continue** to save the update and continue with the order entry process

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det.ails** on the Customer Defaults Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det.** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

*Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.*

### Fields:

#### Rate Code

Select a rate code as set up in the Currency Rate Code option within the System 21 Financial applications.

#### Rate

Or. Enter a rate using up to 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

# Document Lines Screen

This screen is displayed when you press **Enter** on the Customer Defaults Screen.

You use this screen to enter details of the items for which the Credit Note is to be raised. The minimum detail required is the item code and the quantity. The advanced discounting and pricing rules will then be applied. Since an explicit stock movement may be made, there is a facility to enter a lot number.

*Note: For any line there are two mandatory entries; the item number and the quantity, other entries are only made to override the defaults.*

## Fields:

### Sel

3 - Re-price. Display the Credit Note Line Overrides Window to change the pricing and discount information for the Credit Note line.

C - Commission Details. Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the Credit Note line.

### Item

Enter the item code.

### Quantity

A quantity must be entered. If a value is to be credited against a delivery it should be divided by the despatch quantity and the resulting price should be entered in the price override fields as a net price and the despatch quantity in this field.

*Note: All other fields are optional.*

### Depot

Enter a depot code.

### **Rsn**

Enter a valid Reason Code from descriptions file Major Type CRRS. This causes expense account processing to occur. For direct deliveries any code can be used. For indirect deliveries only WL, BT, or ID can be used.

### **Lot**

If the Credit includes a stock movement then this must be entered for Lot, Batch or Serial controlled items. For both credits and Invoices the lot number must be present in the system.

### **Prom**

This is the Promotions Indicator. This is validated against the inventory description FRTP. If the promotion indicator is entered then the item is free of charge, but VAT may be charged if the limit on the Drinks Inventory Management Descriptions file is set to 1.

### **Outer**

Enter a 1 to override the quantity of outer containers. A window is displayed to enable you to enter the quantity.

*Note: Only primary containers will automatically be included on a Credit Note raised in this manner. Secondary containers must be specifically requested.*

## **Functions:**

### **F15**

Restart. This returns to the first screen without updating the credit.

### **F14**

Header Price Override. Display the Credit Note Header Overrides Window to change the pricng and discounting details for the whole document.

Press **Enter** to display the lines for review, then press **Enter** again to continue with the process.

## Credit Note Line Overrides Window (Option 3)

This window is displayed when you enter 3 against an item line on the Document Lines Screen and press **Enter**.

You use this window to change the pricing and discounting details for specific item lines.

### Fields:

#### Price Type

Enter a new price type for the item. This overrides the price attached to the item.

#### Manual Price

Enter a manual price for the item.

Tip: Enter either a Price Type or a Manual Price for the item. You cannot enter both.

### Discounts

Only certain combinations of the following four fields are allowed.

You can enter either:

- A Discount Type
- A Discount % and Discount Presentation
- A Discount Value.

#### Discount Type

Up to 4 valid discount types can be entered. These override the discounts attached to the customer or item. Any types entered must be valid price types with a pricing function of 1 - Discounts.

### **Discount %**

Up to 4 discount percentages can be entered. Discount percentages may not be entered if discount types have been entered.

### **Presentation**

A discount presentation must be entered if a discount percentage has been specified.

0 - Nett.

1 - Gross.

### **Discount Value**

Enter a fixed value discount for the item line.

Press **Enter** to save the changes and return to the Document Lines Screen.

## Customer Line Overrides Maintenance Window (Option C)

This window is displayed when you enter C alongside the order line on the Sundry Invoices & Credit Notes Document Lines Screen.

The salesperson information for an Credit Note line defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, any sales commission due to this salesperson will, by default, be adjusted for this credit.

You use this screen to change the salesperson information on the Credit Note line so that the sales commission for a different salesperson is adjusted for this credit.

### Fields:

#### Invoice Entry

Order processing may automatically place the document on hold, if an item is not priced.

#### Charge Code

Enter a valid charge code. It must have been set up on the Descriptions file.

#### Amount

If a charge exists against the charge code, on the Descriptions file, it will be retrieved. The charge can be overridden.

*Note: The standard charge on the Descriptions file is always on base currency, for transaction currency accounts the charge is converted to the order currency.*

#### VAT Code

Enter the VAT code.

### Functions:

**F15**

Restart. Restart the Credit Note entry.

Press **Enter** to confirm your entries and complete the credit. The Credit Notes Selection Screen is then displayed.

## Document Trailer Screen

This screen is displayed when you have pressed **Enter** on the Credit Notes Document Lines Screen, or when you press **Enter** on the Credit Notes Extended Analysis Screen.

You use the screen to review the details of the Credit Note before completing it.

```

### Fields:

*Note: When a credit is based on an original document, the sundry charges are not copied onto the new document unless **F16=Complete Credit** is used to view or create them.*

### Functions:

#### F16

Complete Credit.

#### F23

Control Totals.

Press **F12=Previous** if you want to make any amendments to the Credit Note, otherwise press **F16=Complete Credit** to complete the Credit.

## Control Totals Window (F23)

This window is displayed when you have pressed **F23=Control Totals** on the Credit Notes Document Trailer Screen.

You use this screen to view the total units, weight and volume for this credit.

### Fields:

#### Total Stock / Issue Units

The total number of stock and issue units for the order.

*Note: The totals add high units and low units separately, for example:*

*If item 1 is 12 bottles / case, item 2 is 6 bottles / case, and item 3 is 3 cases / pallet.*

*Order for item 1 = 3/11, item 2 = 2/5, and item 3 = 7/2.*

*Control total 12/18.*

*If the low units add up to more than 999 then \*\*\*\* is displayed.*

#### Total Weight

The total weight of the order.

The total weight = quantity in issue units \* weight per selling unit (from the item master).

#### Total Cube

The total cubage of the order.

Total cube = number of stock units \* volume per stocking unit (from the item master). Where:

The number of stock units = high units ordered (+1 if any issue units ordered).

E.g. order 6/1 (i.e. 6 cases 1 bottle), then the cube will be 7\*volume per stocking unit.

Press **F12=Previous** to return to the Credit  
Notes Document Trailer Screen.

# Enter Sundry Invoices

There are two options that you can use to enter sundry invoices. Both display the same screens but perform slightly different background processes.

## **Enter Sundry Invoices (No Stock Update)**

**1...**  
**2...**

**29/DOP**

You use this option to enter Sundry Invoices that do not require a stock update. For example, a customer has been undercharged for some goods, so only a financial adjustment is needed.

## **Enter Sundry Invoices (Stock Update)**

**1...**  
**2...**

**31/DOP**

You use this option to enter Sundry Invoices with a stock update. For example, a customer might buy goods at a trade counter, so there is no need to use the order entry facility. However stock adjustments have to be made and an Invoice produced.

## Select Customer Screen

Select the Enter Sundry Invoice option.

You use this screen to enter the details of the customer for whom the Invoice is to be raised.

### Fields:

#### Customer Code

Enter the customer code.

#### Customer Order Reference

Enter the reference number of the customer's order. This may be set as mandatory on the customer sales details.

#### Customer Order Date

Enter the date of the customer's order. The default is the current date.

#### Delivery Date

Enter the date that delivery was made to the customer. The default is the current date.

*Note: This becomes the document date of the generated document.*

Press **Enter** to validate the data and display the Sundry Invoices Customer Defaults Screen.

## Customer Defaults Screen

This screen is displayed when you have made valid entries into the Sundry Invoice Customer Screen and pressed **Enter**.

The screen displays the processing defaults associated with the selected customer account, for confirmation and amendment. If the account is for any currency other than the Accounts Receivable base currency, the details of the currency are also displayed.

**Tip:** You must be authorised to the stockroom you wish to process.

**Note:** You can change any of the standard defaults for the customer.

### Fields:

#### Invoice And Delivery Name And Address

The Invoice and delivery name and address for the customer are displayed. These may be amended if differing addresses apply to this Sundry Invoice.

#### Original Doc. Ref.

This can be used in two ways:

If a Sundry Invoice is to be raised as a supplement to a normal Invoice, then enter the number to aid cross-reference.

#### Keep As Original

This flag allows you to keep the original prices if required. When this flag is used, items cannot be added, when using the original prices, although the quantity can be changed, this being the case, the unit price of the original item will be used to calculate the new price.

If the original document is not yet printed and is flagged as Price at Despatch then a warning message will be issued stating that the original document is not yet printed and the price may change. Any change in price on the original document, when the Invoice is printed, will not be reflected in the document being raised.

Where re-pricing is not to take place, the document header will be flagged as Price at Order to ensure the Invoice print process will not re-price the document.

Tip: If an original document reference is used and the header price is overridden, the header price override will take precedence over any original pricing records that would have been retrieved.

To facilitate consolidated Invoices, the Invoice pricing results files store the Order Number and the Despatch Note Number. This ensures that where a consolidated Invoice is being processed, the correct pricing results records will be retrieved and the correct items will be displayed in the subfile. It will also avoid incorrect prices being generated on the new document because of quantity break differences.

*Note: When a credit or Invoice is based on an original document, the Sundry charges are not copied onto the new document unless **F16** is used to view or create them.*

### Stockroom

The normal stockroom from which deliveries are made is displayed. This may be changed to any valid stockroom.

*Note: You must be authorised to this stockroom.*

### Reason Code

A reason must be given for this type of transaction. Enter the code or select it from a prompt.

### Subtype

The order subtype is used to control order pricing. Please refer to the Pricing Section.

Enter the order subtype. These are user controlled and defined in the inventory descriptions file ORST.

*Note: The VAT code on the description file indicates whether or not it is an import order and therefore different payment terms may apply.*

### Period Number

The applicable period in the format YYPP.

### Cash Discount Code

The code of the cash settlement discount to be used for the document. The customer's standard discount is displayed. It may be changed to any valid settlement terms.

**For currency accounts:**

**Currency Code**

The default currency code from Accounts Receivable. This may be overridden for multi-currency customers.

**Currency Rate Code**

This will default from the customer sales detail but may be overridden. The currency rate code is associated with a currency rate and the option exists to set up different codes to allow for different rates. The codes are set up in General Ledger.

**Currency Rate**

The currency exchange rate associated with the currency rate code to be used for the conversion.

1 - Is specified, the transaction value will be multiplied by the currency value to get the base value.

2 - Is specified, the transaction value will be divided by the currency rate to get the base value.

*Note: Text may be added to a document, either to be printed or to act as an internal explanation. This is achieved by taking the appropriate function key. On completion of this, a screen allowing the entry of the line details is displayed.*

**Functions:**

**F13**

Payment Details. Display the Payment Details Window.

**F17**

Commission Det. Display the Customer Overrides Maintenance Window to override the default salesperson information for the Invoice header.

**F19**

Currency Details. Use this function to override currency details for transactions where currencies are not linked to the EURO.

**F21**

Internal Text. Insert internal text.

**F22**

External Text. Insert external text.

Press **Enter** to display the Sundry Invoices Document Lines Screen.

## Payment Details Window (F13)

This window is displayed when you have pressed  
**F13=Payment Details** from the Sundry Invoices  
Customer Defaults Screen.

### Fields:

*Note: These fields are defaulted from the customer statement account.*

### Payment Terms

There are 4 parts to this field but not all of them are necessarily used at once. The first part of the code can be any of the following:

D - Number of days from Invoice date.

M - Net monthly account.

P - Periodic range.

T - Extended payment terms.

The second part of the code identifies the range if a Periodic range has been selected. The third part of the code is used to specify either the payment date for monthly (M) or periodic (P) selections, or the number of days to add to the Invoice date for a daily (D) selection.

The fourth part is only used if Extended payment terms (T) is selected. It uses a settlement code that is defined by Cash Management which defines a payment pattern.

### Examples:

1. D 030 will give a payment date of 30 days after the Invoice date.

2. M 210 will give a payment date as the 10th of the second month after the month the Invoice was sent.

3. P 2019 206 will give all the Invoices dated between the 20th of the next month and the 19th of the month after, a payment date of the 6th of the first month after the Invoice is sent.

P 1110 105 will give all the Invoices dated between the 11th of this month and the 10th of the month after, a payment date of the 5th of the first month following the month after.

4. T XXX where XXX would be a code identifying a payment pattern as defined in Cash Management.

### **Payment Method**

The method of payment is a code as defined in the Cash Management application.

Examples:

CHQ, STD.

Tip: Cash discount codes and staged discount codes are mutually exclusive.

### **Cash Discount Code**

A discount code is used to identify the type of discount and a single cash discount percentage. These are defined in the description file, major type CDSC and a prompt is available.

### **Staged Discount Code**

Multiple cash settlement discount percentages, allowing tiers of discount according to how soon the payment is received, can be defined. These codes are pre-defined within Cash Management and a prompt is available.

Press **F8=Update** to save any changes.

## Customer Overrides Maintenance Window (F17)

This screen is displayed when you press  
**F17=Commission Det.** in the Sundry Customer  
Defaults Screen

The salesperson information for additional item lines defaults to the salesperson defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this addition.

You use this screen to change the salesperson information for an additional item line so that a different salesperson receives the sales commission for this additional line.

### Fields:

#### Salesperson

Enter the salesperson who will receive the sales commission for this additional line. Change the salesperson here if you do not want the sales commission to be paid to the default salesperson for the customer.

Press **F8=Continue** to save the update and  
continue with the order entry process

## Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det.ails** on the Customer Defaults Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det.** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

*Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.*

### Fields:

#### Rate Code

Select a rate code as set up in the Currency Rate Code option within the System 21 Financial applications.

#### Rate

Or. Enter a rate using up to 5 decimal places.

#### Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

You use this screen to enter details of the items for which the Sundry Invoice is to be raised. The minimum detail required is the item code and the quantity. The advanced discounting and pricing rules will then be applied. Since an explicit stock movement may be made, there is a facility to enter a lot number.

*Note: For any line there are two mandatory entries; the item number and the quantity, others are only made to override the defaults.*

[illegible]

### Fields:

## Sel

3 - Re-price. Display the Invoice Line Overrides Window to change the pricing and discount information for the Invoice line.

C - Commission Details. Display the Customer Line Overrides Maintenance Window to override the default salesperson information for the Invoice line.

## Item

Enter the item code.

## Quantity

A quantity must be entered. If a value is to be credited against a delivery it should be divided by the despatch quantity and the resulting price should be entered in the price override fields as a net price and the despatch quantity in this field.

*Note: All other fields are optional.*

### **Depot**

Enter a depot code.

### **Rsn**

Enter a valid Reason Code from descriptions file Major Type CRRS. This causes expense account processing to occur. For direct deliveries any code can be used. For indirect deliveries only WL, BT, or ID can be used.

### **Lot**

If the credit or Invoice including a stock movement then this must be entered for Lot or Serial controlled items. For both credits and Invoices the lot number must be present in the system. For Invoices with stock update there must be sufficient available stock.

### **Prom**

This is the Promotions Indicator. This is validated against the inventory description FRTP. If the promotion indicator is entered then the item is free of charge, but VAT may be charged if the limit on the Drinks Inventory Management Descriptions file is set to 1.

### **Outer**

Enter a 1 to override the quantity of outer containers. A window is displayed to enable you to enter the quantity.

## **Functions:**

### **F15**

Restart. This returns to the first screen without updating the order / credit.

### **F14**

Header Price Override. Display the Invoice Header Overrides Window to change the pricing and discounting details for the whole document

Press **Enter** to display the lines for review, then press **Enter** again to display the trailer screen.

## Invoice Line Overrides Window (Option 3)

This window is displayed when you enter 3 against an item line on the Document Lines Screen and press **Enter**.

You use this window to change the pricing and discounting details for specific item lines.

### Fields:

#### Price Type

Enter a new price type for the item. This overrides the price attached to the item.

#### Manual Price

Enter a manual price for the item.

Tip: Enter either a Price Type or a Manual Price for the item. You cannot enter both.

### Discounts

Only certain combinations of the following four fields are allowed.

You can enter either:

- A Discount Type
- A Discount % and Discount Presentation
- A Discount Value.

#### Discount Type

Up to 4 valid discount types can be entered. These override the discounts attached to the customer or item. Any types entered must be valid price types with a pricing function of 1 - Discounts.

### **Discount %**

Up to 4 discount percentages can be entered. Discount percentages may not be entered if discount types have been entered.

### **Presentation**

A discount presentation must be entered if a discount percentage has been specified.

0 - Nett.

1 - Gross.

### **Discount Value**

Enter a fixed value discount for the item line.

Press **Enter** to save the changes and return to the Document Lines Screen.

The salesperson information for an Invoice line defaults to the salesperson which is defined to the customer in Sales Order Processing Customer Details Maintenance. Unless overridden here, this salesperson will, by default, be paid any sales commission due for this line.

Enter a valid price type to be used to price this line.

#### Discount Types

Up to 4 valid discount types can be entered. These override the discounts attached to the customer or item. Any types entered must be valid price types with a pricing function of 1 - discounts.

#### Discount %

Up to 4 discount percentages can be entered. A discount may not be entered if discount types have been entered.

#### Presentation

A discount presentation must be entered if a discount percentage has been specified.

0 - Nett.

1 - Gross.

Press **Enter** to save the changes and the Sundry Invoices & Credit Notes Selection Screen will be redisplayed.

## Extended Analysis Screen

This screen is displayed when you have pressed **Enter** on the Sundry Invoice Document Lines Screen, if the Extended Analysis flag on the Sales Order Processing Company Profile is set to 1.

You use this screen to enter extended text for each item line on the Invoice.

### Fields:

#### Invoice Entry

Order processing may automatically place the Invoice on hold, if an item is not priced.

#### Charge Code

Enter a valid charge code. It must have been set up on the Descriptions file.

#### Amount

If a charge exists against the charge code, on the Descriptions file, it will be retrieved. The charge can be overridden.

*Note: The standard charge on the Descriptions file is always on base currency, for transaction currency accounts the charge is converted to the order currency.*

#### VAT Code

Enter the VAT code.

### Functions:

#### F15

Restart. Restart the Invoice entry.

Press **Enter** to confirm your entries. The Document Trailer Screen is then displayed.

## Document Trailer Screen

This screen is displayed when you have pressed **Enter** to validate entries on the Sundry Invoices Document Lines Screen, or on the Sundry Invoices Extended Analysis Screen if the extended analysis flag on the Sales Order Processing Company Profile is set to 1..

You use this screen to review the details of the Invoice before completing it.

### Fields:

#### Total Stock / Issue Units

The total number of stock and issue units for the order.

*Note: The totals add high units and low units separately, for example:*

*If item 1 is 12 bottles / case, item 2 is 6 bottles / case, and item 3 is 3 cases / pallet.*

*Order for item 1 = 3/11, item 2 = 2/5, and item 3 = 7/2.*

*Control total 12/18.*

*If the low units add up to more than 999 then \*\*\*\* is displayed.*

#### Total Weight

The total weight of the order.

The total weight = quantity in issue units \* weight per selling unit (from the item master).

#### Total Cube

The total cubage of the order.

Total cube = number of stock units \* volume per stocking unit (from the item master). Where:

The number of stock units = high units ordered (+1 if any issue units ordered).

E.g. order 6/1 (i.e. 6 cases 1 bottle), then the cube will be 7\*volume per stocking unit.

Press **F12=Previous** to return to the Sundry  
Invoices Document Trailer Screen.
