Picking and Despatching Overview

A company will develop, over time, a set of procedures to control and produce the paper work for picking stock, assembling it, and confirming delivery. These procedures will take into account the formality of the organisation, the likelihood of an item being out of stock and the requirement for the opportunistic despatch of items which may only be available late in the pick despatch cycle.

Drinks Inventory Management has the ability to take stock out of one stockroom but deliver it to the customer from another stockroom.

This enables the system to take an order for different product lines (e.g. Beer, Wines, Spirits), source them from several stockrooms, marshal them in a single stockroom, then deliver the whole order to a customer.

The stockroom from where the goods are obtained is termed the *Assembly* stockroom. The stockroom from where the goods are delivered is termed the *Delivery* Stockroom.

The general sequence of events followed by the system is:

- The stock is allocated to the order (maybe from several different stockrooms).
- The picking note is requested and printed - either for a single pick note or for Bulk Pick Lists by Load number.
- In addition, for stockrooms which are defined as active warehouses in the warehousing module:
- The location of the stock in the warehouse is identified and printed on a Warehousing picking list.
- The stock is confirmed as picked in warehousing.
- After picking, an activity called Confirmation of Assembly is carried out for each stockroom from which goods are taken. This enables the various quantities to be amended and the stock balances to be downstocked. When carrying this out, a delivery sequence is entered, to identify the delivery.

Note: If Drinks Warehousing is attached then Warehousing Confirm Assembly replaces Drinks Sales Order Processing Confirmation of Assembly.

- Following Confirmation of Assembly a Delivery Note is printed - reflecting the quantities assembled actually picked from the assembly stockroom.
- Later Confirmation of Delivery is carried out to confirm the actual delivery to the customer. This will produce invoice details - so some companies would carry out this function based on Proof of Delivery.

Tip: You have to run picking for each stockroom on an order. One option produces individual order despatch notes and a second option provides bulk pick lists for all orders on a load.

Picking can be used with or without Transport Planning.

Without Transport Planning

You can select a range of orders, or all orders up to a delivery date.

With Transport Planning

Can select a load (produces all orders for each assembly stockroom), or all loads up to a delivery date.

Bulk Pick lines are created sequenced by:

- Document preparation (pick) sequence.
- Item Type.
- Bin Number.
- Item Number.

Non Bulk Pick lines are printed sequenced the same, but minus the item type.

Variations

There are several variations which can be applied to the basic process which has been described above.

These are discussed in detail in the various sections of this manual. Some of the functions which can take place are:-

- A single customer order line for an item may give rise to several order lines sourcing the same item from several stockrooms. (Multiple Stockroom Allocation - see Company Profile, Depot Profile Hunt Group, and Order Entry).
- Picking may be by single note or by Bulk Pick. The latter is set up in Transport Planning where a load is Built and Released. A single transport load can cover several orders.
- It is possible to carry out Confirmation of Assembly and Delivery in one step (Invoice at Assembly - see Company Profile). This action will carry out downstocking and invoice generation at the same time. So Confirm Delivery is not required as a second function.
- It is possible during Confirm Assembly to amend quantities and to determine by Reason Code whether an outstanding quantity is put on Back Order or cancelled.
- Container item quantities are calculated and displayed during Confirm Assembly - they may be amended. Container deliveries are confirmed during Confirm Delivery and container returns may also be entered then.
- Confirm Assembly may be carried out interactively or in batch.
- With Warehousing control:
 - Warehouse picking lists are requested and confirmed in that module.
 - Warehousing Confirmation of Assembly is carried out to downstock and optionally to produce Invoice Details.
 - SOP Confirmation of Assembly is NOT used.
 - SOP Confirmation of Delivery is optional (depends on Invoice at Assembly parameter).

Constraints

- Bulk Picking Lists can only be produced for orders planned into a Transport Planning load.
- Items on an order delivered from a non Transport Planning stockroom should not include items that may be bulk picked. Care needs to be taken in setting up hunt groups in an environment where some stockrooms are Transport Planned, and some are not. In this scenario DRP or item transfers should be used.
- Although Loads do not need to be planned, it is still necessary to have Transport Planning installed, and a Transport Company and Transport Centre defined.

Picking Notes Print

2/DOB

Tip: Manual pick lists do not exist in the Drinks product.

Once stock has been allocated to an order, it is possible to request its despatch, either by printing a picking note, or if the stockroom is a warehouse, by transferring the request to the Warehousing module. It is only necessary to print those despatches which have to be made in the near future.

Any allocated stock which is outside the time fence, will not normally be included on the picking notes.

If an order is to be satisfied from more than one stockroom then a picking note will be printed for each Assembly Stockroom. This is to simplify the control of the documents at the depots. In addition to defining the Assembly Stockroom where the stock comes from, it is also necessary to define a Delivery Stockroom - at which the various parts of the despatch are gathered and from where delivery to the customer takes place.

All outstanding allocations inside the time fence, irrespective of the method and the timing of the allocation will be included on a picking note.

With the Transport Planning module attached, it is possible to create a transport load for a delivery depot. Several orders may be attached to the load (see Drinks Transport Planning Product Information).

Note: Great care must be taken not to run the picking procedure for the same stockroom and at the same time as the print picking list procedure in the Warehousing module.

There are two main methods of producing Picking Lists:

- By single note number (order/despatch) or single load.
- By Bulk Pick.

Request Picking Note Screen

Select the Pick Notes option.

The Selection Screen is displayed and enables the specification of single picking notes to be printed.

Note: Single picking notes can be generated for either a load number or an order number. When a load number is selected, a single note is produced for each order on that load (at the assembly stockroom). In fact, the load number can be left blank and this will produce several single picking notes for all the orders on all the loads with a specified Delivery Due date from the assembly stockroom.

Fields

Assembly Stockroom

Enter the stockroom from which the Goods will be taken (downstocked).

And

Load Number

Enter the load number that this despatch has been assigned to in Transport Planning.

Note: the format is one alpha character and six numeric figures.

Deliveries Due Date

The date on which the delivery is due to be made.

Delivery Stockroom

The stockroom from which delivery is to be made, which can be different from the Assembly Stockroom.

OR

Order Number From / To

Enter the sales order number range.

OR

All Deliveries Due Up To

Enter a date. The system will print all pick notes due to be delivered prior to and including this date.

Type in the required details and press **Enter** to validate. Press **F8=Submit** to print the pick note.

Bulk Pick List Print

1... **2...** 3/DOB

A Bulk Picking List is one which covers several orders and where each item line has the accumulated quantity. Bulk picking can only be used with Transport Planning and should not be used if the stockroom is warehouse controlled. You can select a load (produce all bulk pick lines for all orders) or all loads up to delivery date. It is restricted to a selected delivery stockroom.

Bulk Pick Lists can only be produced by using Transport Planning and Building a Load. Moreover a load in Transport Planning can be designated a Bulk Pick Load. There is however the ability to use Transport Planning and Build loads but produce single picking lists for one or more orders.

For stockrooms where items are nominally bulk picked the Depot Profile has document preparation parameters by item type and class. This forces bulk pick which must be requested by load number, rather than having to set up the load as bulk pick.

Request Bulk Pick Lists Screen

Select the Bulk Pick List option. The Request Bulk Pick Lists Screen is displayed.

0E880	HW - Handy Wholesalers Ltd	User GALBRAIJ	4/08/95 13:02:17

Fields:

Assembly Stockroom

Enter the stockroom from which the Goods will be taken i.e. downstocked.

Either

Load Number

Enter the load number from Transport Planning.

Note: The format is one alpha character and six numeric figures.

Deliveries Due Date

The date on which the delivery is due to be made.

Delivery Stockroom

Enter the stockroom from which delivery is to be made, which can be different from the Assembly stockroom.

OR

Request Additional Bulk Pick Lists

This allows items to be moved from one load to another in Transport Planning, to have new pick lists printed.

Bulk Pick List Number

Enter a bulk pick list number.

Delivery Stockroom

The stockroom from which delivery will be made.

Note: Customer collect orders are forced to be non bulk pick even when the item is supposed to be bulk picked and all items have a sequence of 1.

Note: Bulk pick loads ignore the document preparation file and force everything to have a pick sequence of 1.

Press **Enter** to validate the screen, and **F8=Submit** to send the list to print.

Delivery Notes Print

4/DOB

The delivery note document shows the items and quantities set up during Confirmation of Assembly.

Tip: The Delivery Note Print option also prints Uplift Notes and Tagged Goods Notes.

Subsequently a routine called Confirmation of Delivery is used to define the quantities actually delivered to the customer. (Changes to items or quantities might have occurred because of breakages or cancellations).

Confirmation of Delivery produces the invoice details. The following points should be noted:

- In the US environment state references are printed if State Profile In Use is activated at company profile level.
- On the item master file there are three special values. Drinks uses the first special value for a alcohol per volume figure. This is printed on the delivery note if set up.
- Bottles per case factor for saleable items are printed.
- Chargeable containers and gas cylinders are printed.
- Special delivery messages are printed.
- Borders are not printed.

Request Delivery Note Print Screen

Select the Delivery Notes option This screen displayed is used to request a Delivery Note.

0E898	HM - Handy Wholesalers Ltd	User PGMR1	18/11/96 12:44:58

Depot

Enter the Delivery Depot code.

AND

Load Number

Enter the load number (or blank for all) - must be a valid released load.

Deliveries Due Date

Enter the Delivery Due Date.

OR

Order Number From / To

Enter the order number range - must be valid, not completed, and valid for the delivery depot.

OR

All Deliveries Due Up To

Enter a date. The system will print all pick notes due to be delivered prior to and including this date.

Note: Load and Order Number are mutually exclusive.

Note: Delivery Note Print prints all pick notes for

*an order, that have not already been printed.
Where multiple stockroom allocation is in use,
items which have been sourced from multiple
stockrooms are accumulated and printed on a
single delivery note.*

Press **Enter** to validate the entries and then
press **F8=Submit** to submit the job to print.

Invoices / Credit Note Print

5/DOB

This job can be run by selecting Invoices / Credit Note from the Document Preparation area of the Document & Batch Menu.

This is a batch procedure, preparing and printing the Invoice and Credit Note documents for all transactions since the previous run.

Press **F8=Submit** to submit the job from the Invoice / Credit Note Screen.

A job is submitted to the batch queue and the following actions are performed:

- For orders priced at the time of despatch the invoice is priced using the prices and exchange rate applicable at the date of despatch / delivery. If the order is not complete the residual order is re-valued using the despatch price.
- Invoice documents are generated.
- Credit notes are generated.
- Accounts Receivable is updated (if attached).
- A summary posting report is generated for the Accounts Receivable update
- The Account Summary balance Goods Despatched Not Invoiced is reduced by the value of the Goods Despatched.
- If a summary or credit line has no price because one did not exist in the price list the time the document was entered, pricing will be attempted. If this fails, the document will not be printed, the Ledgers will not be updated and an error will be written to the Invoice not Priced report.

The following documents and reports are output:

- Invoices.
- Credit notes.
- Non-unique references.
- Accounts office posting listing (if Accounts Receivable is attached).

Tip: Additional reports may be produced if World Trade is in use. Also, additional reports may be produced if Advanced Financial Integrator is in use.

Pick Notes Re-Print

1...
2...

11/DOB

*Note: Re-printed Pick Notes are stamped with the text ***REPRINT****

Select the Pick Notes option.

The Pick Notes Re-Print Screen enables the specification of single picking notes to be printed.

```

Press **Enter**. Once the details have been validated, press **F8=Submit** to print the invoices.

Batch Allocation

1... **21/DOB** **2...**

This procedure reviews all outstanding orders and endeavours to allocate stock. This is a complex decision and a number of factors must be considered:

- The relative priority of orders.
- The required due date.
- Credit control modules.
- Is part shipment of the order acceptable?
- Are back orders allowed?

These obviously interact with each other in contributing to the allocation decision. (The following decision table shows how this is done).

Orders are considered for allocation by reviewing them in priority and then due date sequence. They are excluded from allocation if any of the following is true:

- The due date is beyond the allocation time fence (this is a forwarded order).
- The customer is on credit stop.
- The credit limit is exceeded prior to allocation commencing.
- The order is suspended prior to allocation.

The order is suspended if either of the credit checks fail before allocation is attempted.

The system will automatically change the delivery date of an order if it has not been allocated and the date would become earlier than today.

Direct Delivery (Assembly = Delivery Depot)

The system uses the next available working day for delivery.

Indirect Delivery (Assembly does not equal Delivery Depot)

The system uses the next available working day for the assembly stockroom.

Note: This does not happen if a Transport Planning profile exists. The date will be set to the next day that the customer expects deliveries to be made, even if it is a non working day for the assembly stockroom.

The action taken by the batch allocation run is shown in the Decision Table:

Batch Allocation - Decision Table													
Order fully allocated?	Y	Y	Y	Y	Y	N	N	N	N	N	N	N	N
Credit Limit exceeded by allocation?	N	Y	Y	Y	Y	N	N	N	N	Y	Y	Y	Y
Part delivery allowed?		Y	Y	N	N	Y	Y	N	N	Y	Y	N	N

Back orders allowed?		Y	N	Y	N	Y	N	Y	N	Y	N	Y	N
Fully allocate?	X												
Partly allocate (S = to stock limit)?							S	S					
Exclude from allocation?		X		X				X		X		X	
Cancel order?			X		X				X		X		X
Cancel line balance?							X						
Credit exception report		X	X	X	X					X	X	X	X
Stock exception report						X	X	X	X				

The procedure is submitted directly to the job queue.

If Multiple Stockroom Allocation is not set, Batch Allocation carries out Hunt Group processing (see Depot Profile Maintenance, earlier in this Guide).

It will try to fully allocate the line from each stockroom in the Hunt Group in turn. If it cannot fully allocate, then it will partially allocate on the first stockroom in the Hunt Group (providing the Decision table permits partial allocation).

The credit check performed is:

Credit check ledger balance + allocated orders

Once an allocation has been performed, the allocated order balance is increased. Orders are not suspended by the allocation routine, but excluded and reported on the appropriate report.

Batch Allocation Reports Produced

Three reports are produced from the run:

Credit Exception Report

Showing a list of orders where allocations have been prevented because a credit exception has arisen.

Stock Exception Report

Showing a list of orders where allocations have been prevented by insufficient stock being available.

Allocation Audit Report

Showing a list of orders where allocation has been done.

Batch Allocation Selection Screen

Select the Batch Allocation option.

The Batch Allocation Selection Screen is displayed which allows you to select a stockroom. This job then reviews all outstanding orders and endeavours to allocate stock, for a specific depot.

```
0E315                HW - Handy Wholesalers Ltd      USER GALBRAIJ    4/08/95
                                                           11:55:43
Batch Allocation
Stockroom.....?..
EITHER Enter a specific stockroom to process,
OR   leave blank to select all locations.

F3=Exit  F4=Prompt
```

Fields

Stockroom

Enter the Depot / Warehouse code. Enter a specific stockroom to process, or leave blank to select all locations.

Press **Enter** to submit the job.

Picking Note Cancellation

22/DOB

This procedure enables a previously printed picking note to be cancelled. The stock which was allocated on the picking note remains allocated.

Note: Once a picking note has been cancelled it cannot be confirmed as despatched.

It is important that picking notes which are cancelled are either destroyed or defaced in such a way as to render their use as an authority to despatch impossible. If a picking note was raised for a stockroom which is defined to the Warehousing module as a warehouse, it may only be cancelled up to the time that it is selected for picking action and printed on a picking list by Warehousing.

Picking notes are cancelled in the same way whether they have been produced by single note or by bulk pick.

Picking Note Cancellation Selection Screen

This job is run by selecting Picking Note Cancellation option.

This screen enables the selection of the picking note that is to be cancelled.

Warning: It is very strongly recommended that access to this procedure is restricted and that it is only performed when the operator actually has the document to hand.

0E355	HW - Handy Wholesalers Ltd	USER PGMR1	18/11/96
			12:46:47
Picking Note Cancel			
Enter order number.....			
and picking note.. 00

Order Number

Enter the order number of the picking note to be cancelled.

Picking Note

Enter the picking note sequence number.

Press **Enter** to ensure that there is an outstanding picking note and that it is in a state that can be cancelled, (i.e. if the stockroom is a warehouse, the picking list has not yet been generated).

Picking Note Cancellation Confirmation Screen

This screen is displayed after selecting a valid picking note on the Selection Screen and enables you to confirm that the picking note displayed should be cancelled.

The details of the picking note are displayed, including the list of items and the quantities to be despatched. Only the complete note may be cancelled.

Functions

F11

Cancel. Use this function to flag the picking note as cancelled. The allocated stock remains allocated to the order such that if a new picking note was requested immediately, the items would be included on it.

Press **F11=Cancel** to cancel the picking notes listed.

Day End Processing

23/DOB

This option submits a batch job to perform all required updates for the Day.

This option performs two tasks:

- One produces a report listing all orders input to the system since the option was last run, regardless of current status.
- One checks that order headers are set to complete or cancelled, if there are no outstanding order lines.

The report shows the order number, header details, line details and trailer details. It is a useful way to check which orders have been entered in the system.

It generates the List of Orders Report (accessible from the Reports Menu) but does not check the order header.

Following the selection from the menu, the standard screen to confirm processing a batch job is displayed.

Press **F8=Submit** to run the batch job.

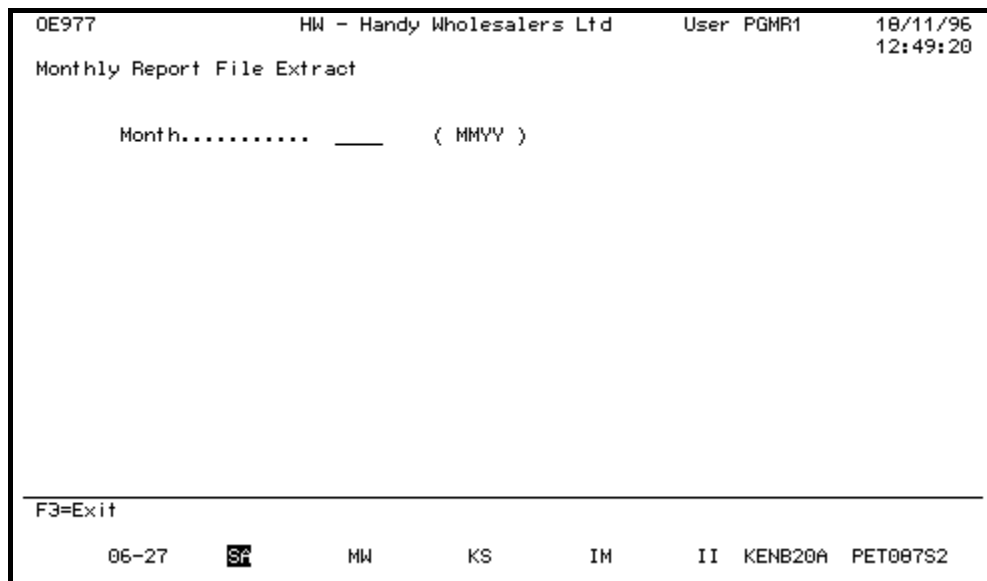

Monthly Report File Extract

24/DOB

This options extracts data from the invoice details held on file for processing by state tax reports in the US environment.

 Select the Monthly Report File Extract option.

The system displays a screen which allows you to select a month (in the format MMYY) on which to report.

The screenshot shows a terminal window with the following content:

```
