Chapter 6

Advanced Pricing

Advanced Pricing Logic

Advanced Pricing the authorisation of users, the maintenance of price and discount lists, global pricing, enquiries and a pricing report.

Pricing and quantity breaks in Drinks are in stock maintenance units.

For each order line price types are retrieved in the following sequence:

Price (Price Type 2)

Apply price overrides. This includes any fixed price and stop discounts.

If the Price at Delivery Point flag is set to 1 (on), the system will apply the price restrictions for the customer delivery sequence. Price restrictions are maintained as described in Customer Maintenance.

If no price is found, or the Price at Delivery Point flag is set to 0 (off), then the system will apply the price restrictions for the customer 000 account.

The system will read price types, lowest sequence first, until a valid customer / item combination is retrieved. The first valid, effective, price found is used.

Discount (Price Type 1 & 7)

Apply discount overrides. This includes any fixed discounts.

Apply restrictions for the customer delivery sequence. Customer restrictions maintenance is detailed previously.

Apply restrictions from the customer 000 delivery account. If no restrictions exist for the customer delivery sequence then retrieve any that exist against the 000 delivery account.

No details found then use automatic search. Discounts are retrieved in the following way:

By Sequence (Discount application - 1)

Read price types lowest sequence first. All valid customer / item combinations are applied.

Price / Discount Application

- If any discounts have been defined as price overrides then these, and only these are applied.
- If discounts have been defined against the delivery address, or delivery point 000 address, as price restrictions, or if price at delivery address is set to 0 (off) , then these and only these are applied in the sequence of the price restrictions.
- The price profiles are then processed for type 1 discounts, in price sequence order for the delivery address. All effective discounts are applied in sequence. In the case of item group discounts the actual discount is evaluated at the end of an order. This process is repeated for type 7.
- The discounts are then processed again for delivery sequence 000. Thus a delivery address will get all the discounts applicable to itself, plus any

discounts applicable to the head office. If a discount is applicable to both delivery address and head office, it is applied only once.

- The price profiles are then processed for type 5, whole order discounts. If a customer is eligible for a whole order discount, based on value, or equivalent case factor quantities, then the discount is applied to each individual line on the order. Again once the delivery address is processed, the process is repeated for the head office.

Note: The 000 point records are attempted if:

Price at delivery level is 0.

If no record is found for the customer delivery point for the customer group.

Tip: The customer group / price restrictions logic applies to prices as well.

Price Authority Maintenance

1/DOA

This function enables the maintenance of a price authority for a user profile.

Price Authority Maintenance User Profile List Screen

Select the Price Authority option.

The maintenance of the pricing types depends on Price Authority in the range 1 - 9, 1 being the lowest, 9 being the highest. So a user with an authority of 5 can maintain pricing types with an authority of 5 or less.

The current list of User Profiles is displayed:

0E362	HW - Handy Wholesalers Ltd	User GALBRAIJ	2/08/95 12:09:07
Price Authority Maintenance			
1	User Profile	Description	Authority
	GALBRAIJ	Jeanette Galbraith - Studley	9

	GBJBAGDO	George Davies - SDU Plymouth	9
	GBJBAGJO	Graham Johnson - SDU Plymouth	7
1=Select 4=Delete			
Position to		Select User Profile ..?..	GALBRAIJ
F3=Exit F4=Prompt F10=Add			

Fields:

User Profile

User profile.

Description

The user profile description.

Authority

The current authority - a number in range 1 to 9 (where 1 is the lowest authority, 9 the highest).

Select

Select an existing profile.

1 - Select a user to review the user profile.

4 - Select a user to delete the user profile.

Position To

Optionally, enter a user profile to be at the top of the screen.

Select User Profile

Enter a user profile to amend, or a new user profile to create an authority profile.

Functions:

F10

Add. Add a new user authority profile.

Press **Enter** to review the user profile.

Pricing Authority Maintenance Amend Authority Class Window

This window is displayed when you select a valid user on the Pricing Authority Screen and press **Enter**, or press **F10=Add** to add a new user.

0E362	Z1 - UK Demonstration Company	User GBJBALTW	5/05/98 10:43:56

F12=Previous			
1=Select 4=Delete			
Position to Select User Profile ..?..			
F3=Exit F4=Prompt F10=Add			
MA a 04/049			

Fields:

User

If not entered in the User Profile field or selected explicitly, enter the user profile to amend or add. The profile will be displayed and will be non maintainable if selected on the previous screen.

Description

Displays the user's name.

Authority

Enter an authority level which is a number in range 1 to 9 (where 1 is the lowest authority, 9 the highest).

Add the authority and press **Enter** twice. The authority is validated and the User Profile is added to the list.

Pricing Type Profile Maintenance

2/DOA

This function enables the maintenance of pricing type profiles.

Pricing Type Profile Maintenance Selection Screen

Select the Price Type Profile option.

This screen enables you to select the Pricing Type profile you want to maintain.

0E361	HW - Handy Wholesalers Ltd	User GALBRAIJ	2/08/95 12:34:43
Pricing Type Profile Maintenance			
Pricing type.....?	WPL		
Currency code.....?	GBP		
Price function.....?	2		
F3=Exit F4=Prompt			

Fields:

Pricing Type

Three character alphanumeric code for the Pricing type.

Note: A price type ZZZ = Free. This should not be set up for anything other than free of charge.

Tip: Discounts are applied in price type and should not have any details within sequence number order.

Currency Code

Three character alphanumeric code for the Currency type, as defined in the Descriptions File.

Tip: A price type may have many currencies defined to it. Quantity discounts must be set up for each currency to which you want them to apply.

Price Function

The pricing function as defined on the descriptions file against major type PRTP (Discount list, price list etc.)

1 - Discount.

2 - Price.

5 - Whole order discount.

6 - Retrospective discount.

7 - Special allowance discount.

Type in the required codes and press **Enter** to display further details.

Pricing Type Profile Maintenance Details Screen

This screen is displayed when you have selected and appropriate price type on the Price Type Profile Screen and pressed **Enter**.

You use this screen to enter or maintain the header information for the selected type.

0E361	DK - QA Drinks	User GBJBA1MS	18/05/98 14:40:25
Pricing Type Profile Maintenance			
Price type.....	AD3

	Item level..... 1	(1=Item,2=Item group,3=Pallet)	
F3=Exit F4=Prompt F12=Previous			
MA	a		08/027

Fields:

Discount Class

Enter the discount class. The discount class must be a valid Descriptions file entry under parameter DCLS and determines whether all discounts are applied or only the first discount found as follows:

0 - All discounts are applied.

1 - Only the first discount found is applied.

The discount class is passed through the pricing results file, to the invoice pricing results, to enable subsequent analysis of discount take up.

Sequence Number

The sequence in which the function will be searched to see if it applies to a particular order line. The lower the sequence the earlier it will be applied.

Tip: It is suggested that restricted discounts are given low sequence numbers so that they are retrieved first.

No Of Break Points

Break points are the levels up to which prices or discounts apply. This parameter determines how many levels there are.

Note: For free goods only one breakpoint should be defined; if more than one is defined, only the first one is used.

No Of Values

Discount Lists Only. Number of value discounts. Each and every value will be applied to the current price.

This field is only displayed if the Price Function entered on the Pricing Type Profile Maintenance Selection Screen is **1=Discount List**.

No Of Percentages

Discount Lists Only. Number of percentage discounts. (These will be displayed in pairs against each value line).

This field is only displayed if the Price Function entered on the Pricing Type Profile Maintenance Selection Screen is **1=Discount List**.

Authorisation

The minimum user authorisation level which is required to be able to maintain this pricing type.

Description

The description of the list.

Order Subtype

Enter the order subtype.

Each Sales Order can be allocated a sub type, which can then be used in pricing to enable different prices by order sub type. This would typically be used where, for example, the same product could be sourced locally or imported; if the sales requirement is to be satisfied by an Import order then the price could be higher than if satisfied locally.

The Order Subtype is also used to identify Import Orders and Direct Import Orders. Valid order subtypes are defined on the descriptions file, Major Type ORST, and the VAT code associated with the subtype is used to determine whether the subtype relates to Normal orders, Import orders (VAT code=1), or Direct Import orders (VAT code=2)

Price Type Maintenance enables a price type to be associated with an order subtype. A blank subtype is allowed and this means that the price type is valid for all order subtypes. This means that installation of this change does not affect the current pricing used on existing sites. The pricing type sequence still determines the order in which prices will be applied, such that if a Price Type with a blank subtype it will be used in preference if it has a lower sequence number than a Price Type with a subtype which matches the order subtype. In the case of discounts, both blank subtypes, and subtype specific discounts are be applied.

As part of the additional details which can be recorded against an order, you can enter a last requested ship date. If this field is entered, it will be used as the pricing date, rather than the delivery date, when pricing at despatch. If the field is left blank, then the delivery date will be used, as before. This field has no effect

when using price at order. For example, for import orders, it will be possible to price the invoice at the date the goods are loaded onto the ship, rather than the date they are actually delivered to the customer. This feature could also be used to hold prices on specific orders where prices are due to rise before the delivery date.

Apply Equivalent Cases

This determines that the equivalent case factor will be used to convert the line quantity into equivalent cases before searching for break points. This can also be used for price quantity breaks.

0 - No.

1 - Yes.

This field is only displayed if the Price Function entered on the Pricing Type Profile Maintenance Selection Screen is **1=Discount List** or **6= Retrospective Discount**.

Applied At

This determines the way the discount is applied - by customer, item, pallet or both etc.

Customer Level

2 - Customer.

3 - Customer Group.

0 - All customer.

Item Level

0 - All items.

1 - Item.

2 - Item Group.

3 - Pallet (For discount price type 1 only).

Tip: 3 - Pallet can only be defined for discounts which must also have the following settings:

Limit Code = 2 (quantity)

Rate Code = cannot be 3. If 2 is selected (value) then the value entered is treated as a unit discount per stocking unit ordered.

Note: If the customer level = 0 then Item Level CANNOT be zero. Customer group is descriptions file Major Type CUSG , Item Group is Major Type ITMG. The customers in a customer group are defined using the Customer Group Maintenance Function on the Customer Sales Details.

The items in an item group are defined using the Pricing Groups function in Item Maintenance.

Notes regarding Pallet Discount:

The number of pallets is calculated from the Cases / Pallets table automatically, with no override facility. If there is no entry in the Telesales Cases / Pallets table, the Item Master file is used. If the Item Master Factor is zero and no entry exists in the cases / pallets table for the customer, that Item is excluded from Pallet discounts.

The discount is applied as a normal discount to an order line. It is not applied to Free of Charge lines, nor to order lines which do not make up at least one pallet.

The total used is not stored on the database.

Free of charge, price type ZZZ, order lines are NOT included in the total.

Press **Enter** to save the details.

Pricing Type Detail Maintenance

4/DOA

This enables the maintenance of Pricing Type Details which are the price lists and discount lists.

Pricing Type Detail Maintenance Selection Screen

Select the Pricing Type Detail Maintenance option.

The initial selection screen enables the entry of a Pricing Type Code, a Currency Code and an Effective Date.

0E363	HW - Handy Wholesalers Ltd	User GALBRAIJ	2/08/95 12:50:49
Pricing Type Maintenance			
Pricing type.....?..			
Currency code.....?.. GBP			
Effective date..... 2/08/95			
F3=Exit F4=Prompt			

Fields:

Pricing Type

The Pricing Type code. That is, the code for the individual price / discount type.

Currency Code

The Currency Code for the price / discount profile (set to the Company Profile default).

Effective Date

The date at which these details become effective (defaults to current date). More than one price/discount can be entered for an item, for example. The effective date is the date on which the price/discount starts to apply. The second screen displays all the details that apply on the effective date.

Type in the required code(s) and press **Enter** to display further details.

Pricing Type Maintenance Details Screen

This screen is displayed when the pricing type has been selected on the Pricing Type Screen.

Dependant on how the price type profile was defined, this screen displays the customer groups, item groups, customers and items for which the prices are effective for the pricing type chosen. For each level applicable (e.g. customer group, item), the price list shows that a price exists for a given period of time.

09-63 **S2** MW KS IM II KENB20A PET007S2

Fields:

Customer Group

Displays the customer group assigned when defining pricing details. Codes are held on the Inventory descriptions file, against major type CUSG.

Item

Displays the item group assigned when defining the pricing details. Codes are held on the Inventory descriptions file, against major type ITMG.

Presentation

This determines whether discounts are applied to the Gross line value, or the current discounted line value. The default is 1.

0 - Nett discounts.

1 - Gross discounts.

Start Date

Date from which the details apply.

End Date

Date from which the details cease to apply (zero means there is no end date).

UOM Code

All pricing / documents will be in the unit of measure defined here. The Unit of Measure code from descriptions file major type UNIT.

This field defaults to the stock unit of measure and should not be changed. All quantity based breakpoints are based on the stock unit of measure, and will be divided by the issue to stock conversion factor to price at issue units.

UOM Factor

Not used by Drinks Module, and should be set to 1.

Limit Code

Enter the limit code using one of the following:

- 1 - Discount based on value ordered.
- 2 - Discount based on quantity ordered.

Rate Code

Enter the rate code using one of the following:

- 1 - Percentage Discount.
- 2 - Value Discount.
- 3 - Free Goods. (E.g. 12 bottles for the price of 10).

Note: Free goods may be defined only for discounts which have the following profile settings:

The Price Type Item Level must be 1, i.e. item level.

The Based On must be 2, i.e. quantity.

The number of values and percentages must be zero.

Line / Order Level

Item group discounts, or item group order total (pallet discounts).

- 0 - Line quantity / value or item group pallet total determines the breakpoint.
- 1 - Order total quantity is accumulated for all lines in the group and the total quantity determines the breakpoint.

Next Near Breakpoint

This is the percentage by which the entered order has missed the next breakpoint in the list. The target to achieve the next breakpoint is calculated as:
awarded breakpoint +.01 or

awarded breakpoint quantity +1

the percentage missed by is calculated as

$$\frac{\text{Target - Line Lookup Value}}{\text{Line Lookup Value}} * 100$$

If the percentage missed by is less or equal the next near breakpoint percentage, order entry and amend will issue a warning message, for any discount breakpoint that was nearly reached.

Make any amendments which may be required, and press **Enter**.

For Free Goods: (Route code = 3)

For the details settings, only one breakpoint can be used; if more than one is allowed only the first one is used. When defining the qualifying quantity, and the reward (free goods) the following rules apply:

- Both a qualifying quantity and a reward quantity must be specified.
- The qualifying quantity must be a positive integer quantity, and refers to stocking units (cases).
- The reward quantity must be less than the qualifying quantity, and is expressed in dual unit format.
- The equivalent case factor is not relevant.

Press **F8=Update** to update the file with the new details.

Price Type Maintenance Line Details Screen 1 (Option 2)

Price Element Details Maintenance Screen

This screen is displayed when you press **F8=Update** to update the file, when price element breakdown is in use.

There is a requirement in certain States in the USA to file the details of the elements which make up the total price of a product before the product can be sold in those states. This function allows you to define the breakdown of a price into its constituent elements, and also to use that breakdown for posting to the General Ledger.

Note: This facility is switched on or off on the Company Profile Maintenance Customer Search Control Screen 2.

When you have defined the price breakdown, it is made available to AFI at invoice print time. As each invoice is printed, the invoice line price element breakdown extension file OEPE4 is populated, and is available to AFI.

You can set up quantity breaks and define prices for each quantity, after all the prices have been set up for a specific price type. This screen is presented for each price breakpoint. The top part of the screen allows entry of the Price Breakdown values, and the associated breakpoint, and the price value is shown at the bottom of the screen.

Note: The elements values must add up to the breakpoint price.

Fields:

Value

For each element with a description a value can be entered. Values cannot be entered against blank descriptions.

Change Authorisation No

Each change must have an authorisation entered, which in the US must match the authorisation of the State. There is no validation on this field.

Press **Enter** to save the values to file.

Pricing Type Deletion

5/DOA

This screen enables a Pricing Type and an Effective date to be selected. A batch job will be submitted to delete all prices/discounts which have an end date prior to or equal to the effective date.

Note: The ability to define the price element breakdown is available. See Price Element Details Maintenance Screen in the Pricing Section.

Select the Price Type Deletion option.

OE371	HW - Handy Wholesalers Ltd	User GALBRAIJ	2/08/95 15:02:00
Pricing Type Deletion			
Pricing type.....?.. WPL			
Effective date..... 31/01/94			
F3=Exit F8=Submit job F12=Previous			

Fields:

Pricing Type

The price or discount type code.

Effective Date

The date which will be used to check the end date of the detail line.

Note: Dependant on the price type set-up a second screen may be shown prompting for a range, e.g. a range of Customer types or Item types.

Press **Enter** to complete.

Price List Copy

1... 6/DOA **2...**

This screen is used to set up a new price type from an old one - for a selected customer.

Note: The ability to define the price element breakdown is available. This is only applicable to price lists at customer level, and will copy on a single customer's prices.

See Price Element Details Maintenance Screen in the Pricing Section.

Select the Price List Copy option.

F3=Exit F4=Prompt			

Fields:

New Pricing Type

Enter the new Pricing Type code.

Old Pricing Type

Enter the existing Pricing Type to be copied - it must be set up at the customer level.

Start Date

The start date to be applied to the Price/Discount.

Currency Code

Enter the currency code for the new price list. The F4=Prompt key is available.

End Date

The end date to be applied to the Price/Discount.

Effectivity Date

The effectivity date to be used to search the old pricing type.

Account/Seq. No.

The Account number and Sequence Number for which the new Pricing Type will apply.

Press **Enter** to save the details.

Price Element Description

1... 7/DOA **2...**

This function allows you to define up to 12 elements which make up a price for a specific company. If set up, then whenever a price is defined, the make up of the price must be defined against one of more of these elements. This price breakdown can then be used to analyse invoice values in more detail in the General Ledger.

Price Element Description Maintenance Screen

Select the Price Element Description option.

The system will display a maintenance screen.

Enter the items to report.

Press **Enter** once to validate the screen details, then **Enter** again to submit the report for batch processing.

Global Pricing

Global Pricing enables the creation of one price list from another with optional uplifts. It contains the following procedures.

Global Pricing

1... 20/DOA
2...

This specifies the new and old price lists, the definition of the uplift, and the specification of other parameters. After carrying out this process, a work file is created for review and amendment.

Global Price Amendment

1... 21/DOA
2...

This enables the review of the global uplifts and the amendment of any detail prices which require special attention.

Global Price Update

1... 22/DOA
2...

This process takes the workfile and creates the new price list.

Default Price List

1... 23/DOA
2...

This process enables the creation of a default price list.

Global Pricing Maintenance Definition Screen

Select the Global Pricing option.

The initial screen is displayed to enable the new and old price lists to be entered and the parameters to be defined.

08366	HW - Handy Wholesalers Ltd	User GALEBRAIJ	2/08/95 15:30:43

Global Pricing Maintenance

Price list details:

New pricing type.....	SSP	Old pricing type...?	WPL
Start date.....	010695	Currency Code.....?	GBP
End date.....	310895	Effectivity date.....	

New authority class.... (1=Lowest, 9=Highest)

Factor (%).....	OR	Stockroom.....?	
		Applied margin....	

Update prices..... 0 (0=No, 1=Yes)

Multi-currency details:

Currency.....?	
Currency rate code.....	
Currency rate.....	

F3=Exit F4=Prompt

Fields:

New Pricing Type

A new price list code. This can be the same as the old pricing type.

Start Date

The start date for the new prices

End Date

The end date for the new prices

Old Pricing Type

The old pricing type - must be a valid existing price list

Currency Code

The currency code of the old price list code - must be correct for the old list

Effectivity Date

The date at which the prices should be taken from the old list

New Authority Class

Numeric 1 to 9. The authority class of the new price list - which determines who may update it.

Factor (%)

The uplift: a percentage uplift to apply to the old price.

Or

Stockroom

Enter a stockroom to use for the applied margin.

Applied Margin

A percentage uplift to apply to the standard cost of the item in the stockroom specified. The item or company costing method determines which cost is used.

Update Prices

This field is included for future development.

Multi-Currency Details:

Currency

A valid currency code. This will be the currency of the new prices.

Currency Rate Code

Enter a currency rate code. This will be used to determine the conversion rate between the old price type currency and the currency for the new prices. Price elements are copied and converted.

Currency Rate

Enter a numeric currency rate. To override the rate from the rate cost.

Note: The description of a new price type created by this process will be the same as the old price type you selected.

Note: If using a stockroom to generate prices, only those items on the old price type which are found in the stockroom will have new prices generated. This is in addition to any selection by item attributes ranges.

Press **Enter** to validate the details, then press **Enter** again to continue.

Global Pricing Maintenance Select Range Screen

This screen is displayed when you have pressed **Enter** after completing the parameters on the Global Pricing Maintenance Definition Screen.

This will only be shown if the old price type is applied at a customer level (see Price Type Profile). This screen enables the selection / restriction of the copying price details to certain Customer ranges. This screen enables a Customer range to be entered.

Functions:

F19

Currency Details. Use this function to override currency details for transactions where currencies are not linked to the EURO.

Press **F8=Submit to Batch** to submit the job, and build the new pricing list.

Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency Det** on the Order Entry Header Screen.

IN currencies, that is currencies defined to the Euro, are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between IN Currencies, will be fixed and therefore not maintainable. Selecting **F19=Currency Det**. in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

Note: If only one of the currencies in the transaction is an IN currency, then the exchange rate displayed is the rate between the OUT currency and the Euro, not the full rate between the IN and OUT currencies.

Fields:

Rate Code

Select a rate code as set up in the Currency Rate Code option within Financials.

Rate

Or. Enter a rate using up to 5 decimal places.

Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Press **Enter** to apply the rate and convert the currencies.

Global Price Amendment

21/DOA

Select the Global Price Amendment option.

The initial screen enables selection of a Global uplift which is taking place to create a Price type.

0E368	HW - Handy Wholesalers Ltd	User GALBRAIT	2/08/95
			16:19:37
Amend Pricing Workfile			
1	New Price Type	Old Price Type	
1	SSP	WPL Wholesale Price List	
	GBP	GBP	
F3=Exit			

Fields:

Select

Enter 1 against the required price type. A second screen enables selection of an item's price by typing a 1 against a detail line. This displays the initial (header) price screen for the item. Alternatively, by typing a 2 the header screen is bypassed and the Quantity / Price details only are displayed.

Enter a 4 to delete a price type.

Tip: The processing of the screens is identical to Advanced Pricing Maintenance.

Global Price Update

1...
2...

22/DOA

Select the Global Price Update option.

This option enables the selection of a price type for Global update.

Update Live File							
1	Old Type	New Type	New Start Date	1	Old Type	New Type	New Start Date
1	WPL	SSP	1/11/96				

1=Select for Update
F3=Exit F8=Update

08-02 SF MW KS IM II KENB20A PET087S2

Fields:

Select

Enter a 1 against a line to select the Price type to update.

Note: All the special amendments must be processed as in the previous section before taking this option.

Press **F8=Update** to submit the update process to a batch job.

Default Price List

23/DOA

Select the Default Price List option.

This enables a default price list to be created.

IN096P	HW - Handy Wholesalers Ltd	User GALBRAIJ	2/08/95 16:28:40
Create New Default Price List From Base Price List			
Price list details:			
New Pricing Type. . . . ? SSP			
Start Date. 1/06/95			
End Date. 31/08/95			
Multi-currency details			
Currency code ? GBP			
Currency rate code. . . ? GBP			
Currency rate			
F3=Exit F4=Prompt			

Fields:

New Pricing Type

Enter an existing Pricing type code (which must be defined to be prices at the Item level only).

Start Date

Enter a valid start date.

End Date

Enter an end date after the start date else blank.

Currency Code

Enter a valid code (must already exist for the type price type profile selected).

Currency Rate Code

Enter a valid currency rate code.

Or

Currency Rate

Enter a numeric currency rate.

Note: If there is an existing record for the item and pricing type, with no end date defined

(99/99/99), then the end date on that record is set to the start date for the new price list. The new price list is created for the date range specified.

Note: The price generated is based on the Base List Price on the Item Master File. If the price type is not in Base Currency, it is converted using the exchange rate information entered.

Tip: Use this option to set up and maintain the Wholesale Price Type (defined against inventory description WSPL). This should be an item level only price type.

Note: This does not create the price element breakdown, but the report indicates the elements which need to be maintained using the Price Type Details Maintenance facility.

Press **Enter**. When valid data has been validated, a batch job will be run, creating all the detail prices for the new default list - extracting the Base List Price from the Item Master.
