Chapter 9

Product Activity Information

Drinks Sales Order Processing Product Activity Information

Product Activity data provides information to a supplier about their customers' sales activity and inventory status. The data can be used in a variety of ways, for example to replenish customer stocks, or generate rebates or commission payments. This information is provided to you via EDI, and you have the ability to maintain, and subsequently archive, the data received.

The data is received into the EDI files, validated and stored in Product Activity Files in Drinks Sales Order Processing. An audit report is produced which optionally will report all data received, or only exceptions (i.e. validation errors). The following data is validated:

- Company.
- Reporting Customer.
- Item code, or inner or outer bar code or State Reference.
- Units.
- Activity Code.
- Duplicate data.
- Pack units.

Each receipt of data is given a unique Product Activity Number.

The information supplied may be, for example:

- Details from a wholesaler of sales made to it's customers.
- Details of stock balances at a customer.
- Details of stock balances at the end of a period.

The type and use of the information is agreed between the two parties to, for example:

- Provide additional rebates or commission on sales made.
- Use stock balances to determine replenishment requirements.

Drinks Sales Order Processing receives the data, validates it, and populates the database, it does not process the information, other than to archive old data.

Product Activity Maintenance

1/DOI

The data on the Product Activity files in Drinks Sales Order Processing can be received via EDI, or created manually, and can be amended and viewed. Data for amendment can be selected by Product Activity, Customer Transaction Type or data range.

Product Activity Maintenance Selection Screen

Select the Maintenance option.

Fields

Customer Number

Enter a valid customer number. This is the customer who is supplying the information.

Transaction Type

This identifies the type of information being transmitted. This is validated against Description file type PATT.

Start / End Date

Enter a suitable date range.

OR

Activity Number

Enter an activity number.

State References

Enter one of the following:

1 - For new information entered, state references can be used and will be converted to item codes.

0 - State references not allowed, only valid item codes can be entered.

Functions

F10

Add. Add a new record manually.

Key in customer details and press **Enter** to continue, or press **F10=Add** to add a new record manually.

Product Activity Information Maintenance Header Screen

This screen is displayed when you have selected a valid record, or pressed **F10=Add** on the Product Activity Information Selection Screen.

Fields:

Activity Number

This is assigned by the system and is a unique code.

Customer Number

Enter a valid customer number for new records. This is the source who has supplied the information. The **F4=Prompt** is available. If the customer has been entered on the selection screen, this is displayed in this field.

Transaction Type

This identifies the type of information being transmitted. This is validated against Description code PATT. The **F4=Prompt** is available.

Start / End Date

Enter a suitable date range.

Identifier Code

This identifies the type of source of information, e.g. buying location (i.e. customer), reporting location (wholesaler), etc. This is validated against Description code PAIC. The **F4=Prompt** is available.

Reason

This is a text memo field, but must be entered on a manual change.

Press **Enter** to view the Product Activity
Information Detail Screen.

Product Activity Information Maintenance Detail Screen

This screen is displayed when the **Enter** key has been pressed on the Product Activity Information Header Screen.
