Chapter 1

Maintenance

Drinks Purchase Management Maintenance

This section of the product information is for use during the set-up of the system, and covers the configuration of Drinks Purchase Management and Master File maintenance procedures.

Most of the options appear on the maintenance menu.

Maintain Company Profiles

1/DPU

In common with other Drinks modules, a company profile must be set up and maintained for each company that you wish to use in Drinks Purchase Management. This profile controls the working environment by specifying such things as:

- The defaults for data entry used throughout Drinks Purchase Management.
- Details of the other modules attached to Drinks Purchase Management.
- The numbering systems to be used for documentation.
- The company code of the General Ledger company with which this Drinks Purchase Management company is associated.
- Details used by the Drinks Requisitioning system, if this is being used.

Note: See also the Inventory Company Profile, described in the Drinks Inventory Management Product Information, which defines a number of control parameters important to Purchase Management.

Warning: Take extreme care when amending existing profiles due to the effect that the amendment may have on data already in the module.

Maintain Company Profiles Selection Screen

Select the Maintain Company Profiles option.

The screen lists the Drinks Purchase Management companies to which you are authorised. You choose the company whose profile you want to maintain.

```

Fields:

Name

Enter a suitable name for this company. If a name has been set up previously it will appear here, otherwise enter a suitable name.

Address Lines / Telephone / Fax Number

Type in the address and telephone / fax numbers which are to be printed when orders are produced.

Address Defaults

Supplier Sales Office Address Sequence Number

For each supplier there may be several addresses set up, each identified by a sequence number. Type in the sequence number which will most often be used.

Receiving Address Supplier

Receiving addresses are held in this module as dummy suppliers. Enter a dummy supplier account code to be used to hold the receiving address.

Receiving Address Default Sequence Number

Each receiving address will have it's own sequence number. Enter the sequence number which will most often be used.

Note: This default is overridden in Order Entry by any receiving addresses established against the Stockroom.

Purchasing Defaults

Delivery Instructions-Item Prefix

Prefix used by the system to store access Delivery Instructions. Enter any non blank free text e.g. DELINS.

Booking In Point

Goods received in Purchase Management can be brought in to any one of three locations. The location chosen may be changed for individual receipts when they are entered. Enter the most commonly used.

- 1 - Goods inwards.
- 2 - Inspection.
- 3 - Stores.

Note: This default may be overridden at Stockroom level if established in the Stockroom defaults maintenance.

Output Queues

Enter the printer output queue required for Reports, Orders, GRN's / Labels and Reject Notes. Queues entered here will override any set up in Module Manager User Profiles.

Note: For P.O. print you can select the Depart Queue or the User Queue.

For more information about Output Queues and Libraries see the Machine Manager section of the System Manager information.

Hold

Enter how the output on the Output Queue is released.

- 0 - released automatically.
- 1 - held until you release it.

Library

Enter the library in which the output queue resides.

Press **Enter** to display the Maintain Company Profile System Tailoring Screen.

Maintain Company Profile System Tailoring Screen

This screen is displayed when you have pressed **Enter** on the Maintain Company Profile Details Screen.

It allows you to specify which other modules are attached to the Purchase Management system and to control the way in which Purchase Management works for this company.

Fields:

Which Purchase Ledger Is To Be Used?

- 1 - if the Purchase Ledger is to be used.
- 2 - if the Purchase Ledger is not to be used.

Do You Wish To Access The Purchase Ledger Log?

- 1 - if purchase receipts are to be matched against invoices in the Purchase Ledger log.
- 0 - if purchase receipts are not to be matched against invoices in the Purchase Ledger log.

Which Requisitioning System Is To Be Used?

- 1 - if the Drinks Requisitioning system is to be used.
- 2 - if the Drinks Requisitioning system is not to be used.

Which Scheduling System Is To Be Used?

This field is for future enhancement - type in a '2'.

Which Inventory System Is To Be Used?

1 - The Drinks Inventory system is to be used.

Goods Received Notes To Print?

1 - to enable GRN's to be printed.

0 - to inhibit this print.

Note: This may be overridden by Stockroom defaults.

Goods Received Labels To Print?

1 - to enable the automatic printing of labels at receipt time.

0 - to inhibit printing of labels.

Invoice Match Inhibit If Goods Not In Stores Location?

1 - to inhibit the matching of receipts with invoices while goods are in goods inward or inspection.

0 - to allow matching when goods are in these locations.

Update Current Price At Order Entry?

The current prices of all items purchased from each supplier are kept on an item/supplier profile. If you require that this profile should be available for update at order entry time:

1 - Yes.

0 - No'.

Update Current Price At Invoice Match?

1 - if you require that the item supplier profile should be available for update at invoice matching time.

0 - if you do not require that the item supplier profile should be available for update at invoice matching time.

Blank Supplier After Order Entry?

1 - to see blank supplier code and address details between orders.

0 - to retain the supplier details entered on the previous order.

Print Invoice Matching Detail?

1 - if you require invoice matching details to be printed automatically when the invoices are matched.

0 - if you do not require an automatic print out. In this case it can be done manually via Accounts Payable.

Item Receipts - Number Of Days

Enter the number of days early that a delivery of ordered goods will be accepted.

General Ledger Company Code.

Enter the General Ledger company code to which this Purchase Management company is to be linked.

If the General Ledger company is entered, it must be a valid General Ledger company. Purchase Management uses the default base currency code of this company and will determine whether it is multi-currency.

The Accounts Payable company used by this Purchase Management company is determined by the selection of this General Ledger company code. A Purchase Management company will use any Accounts Payable company which interfaces to the General Ledger company specified here.

Press **Enter** to see the Maintain Company Profile
Numbering Systems Screen.

Maintain Company Profile Numbering Systems Screen

This screen is displayed after you have pressed **Enter** on the Maintain Company Profile System Tailoring Screen.

It is used to determine the numbering systems to be used on Purchase Management documents.

PM003	Purchasing Company Profile	User GALBRAIJ	16/08/95
			13:06:58

Fields:

Order Numbering:

Automatic Order Numbering?

This is a mandatory field.

Note: A system generated order number may be overridden during order entry.

1 - to generate order numbers automatically.

0 - To enter unique order number manually.

Start Number

Enter the first order number to be used.

Ending

Enter the last permissible order number.

Last Order Number Used.

The last order number generated.

Order Number Prefix

A single character used to prefix the order number should be entered here if automatic order number is specified. This can be useful in a multi-company environment, so that orders for different companies can be easily distinguished, or to distinguish sales from purchase orders.

Goods Received Note Numbering:

Automatic Goods Received Note Numbering?

- 1 - if you require the system to generate GRN numbers automatically.
- 0 - if you wish to enter your own unique GRN numbers at receipt entry time.

Start Number

The first GRN number to be used.

Ending

The last permissible GRN number.

Last GRN Number Used

The last GRN number generated.

Note: This may be overridden by separate ranges for each Stockroom, if established in the Stockroom defaults maintenance.

Debit Note Numbering:

Debit Notes To Print?

- 1 - to allow the system to produce debit notes for the return of goods.
- 0 - to inhibit this facility.

Start Number

The first Debit Note number to be used.

Ending

The last permissible Debit Note number.

Last Debit Note Number Used

The last Debit Note number generated.

Currency Defaults:

Which Conversion Rate Code Defaults Are Used For Orders / Receipts / Invoices

Type in the rate code (set up in the General Ledger) to be used for the conversion from prime currency to base currency on orders and receipts.

Press **Enter**, to see the Maintain Company Profile Ranges Screen.

Maintain Company Profile Ranges Screen

This screen is displayed when you have pressed **Enter** on the Maintain Company Profile Numbering System Screen.

It is used to determine the range of values available for use as purchase officer codes.

PM003	Purchasing Company Profile	User GALBRAIJ	16/08/95 13:18:13

08-52	82	HW	KS IM II KENB20A PET087S2

Fields:

Requisitions System Options

Order Class For Sourced Requisitions

This is the order class to be used for requisitions created from MPS, MRP, DRP, Drinks Inventory Management or Back to Back processing. Enter '1', '3' or '4' for stocked or non stocked orders where tracking by item code is required.

Release Flag Value On Creation Of Requisition

This can be any alphanumeric character. Each requisition is given a release flag which is used to group requisitions for reporting / creating purchase orders.

New Order Flag Default Value

0 - When converting requisitions to purchase orders they will be added to existing purchase orders where supplier, despatch address, currency, order class, and stockroom match.

1 - A purchase order is created for each requisition.

New Order Created On Change Of Purchase Officer

0 - Multiple requisitions for the same supplier are combined into a single purchase order, for all purchase officers.

1 - Requisitions are combined onto a single purchase order only if the purchase officer is the same.

Requisition Numbering

Start Number

Enter the first requisition number to be used.

Ending Number

Enter the last requisition number to be used.

Last Number Used

The last Requisition number generated.

Authorisation Required For Modified Sourced Requisitions

0 - Authorisation is not required.

1 - Authorisation is required if requisitions are generated by other modules, but manually modified.

Press **F8=Update** to save the changes the company profile.

Inventory Descriptions

The following data must be set up in order for Drinks Purchase Management to run:

- Drinks Inventory Management - Maintenance Menu - Descriptions Option:
 - Major Type - 'USER'
 - Minor Code - User ID
 - Description - Free Text (e.g. the User's name)
 - Parameter Limit - Numeric Purchasing Officer.

Parameters and Sundry Codes Maintenance

1... **2...** 1/DPM

Parameters and Sundry Codes are used to describe and validate the various codes used within Drinks Purchase Management.

They are designed so that, as far as possible, they are set up and defined by you, the user.

They comprise of a parameter type (table header), and parameter details (table entries).

An audit report is automatically generated when any parameters are updated. It details the 'before' and 'after' images of the parameters.

A number of other codes are set up in Drinks Inventory Management, by selecting the Descriptions option.

Parameter and Sundry Codes Maintenance Selection Screen

Select the Parameters and Sundry Codes option.

The Selection Screen is displayed which enables you to select the parameter type (table header), or parameter detail (table detail), to be maintained. A list of valid parameter types and their descriptions are displayed for the company.

PM008	HW - Handy Wholesalers Ltd	User PGMR1	13/12/96 9:11:16
Parameter File Maintenance			
Parameter Type...		___ Enter PTDS to define new type	
Parameter I.D.....		___	
Type	Description		
ORDC	Order class		
STYP	Schedule type		
XDEF	Definitions		
F3=Exit			
06-36	82	MW	KS IM II KENB20A PET007S2

Fields:

Parameter Type

You can enter PDTS to maintain a parameter type, or create a new one. In this case you then enter a Parameter Type (e.g. UOMC) in the Parameter ID field.

To maintain an existing Parameter Type such as UOMC. You must then enter an existing Parameter ID (such as EA) in the Parameter ID field.

Parameter ID

Enter the parameter type to be added or maintained if 'PTDS' was entered above, or a parameter code to be added or maintained for the parameter type above.

1. The 'standard' parameter types in this module are:

- 'GUMC' - Group Unit of Measure Code. (See note 1, Notes on Parameters later in this section.)
- 'ORDC' - Order Classifications. (See note 2, Notes on Parameters later in this section.)
- 'SCRC' - Scrap Reason code description. (See note 3, Notes on Parameters later in this section.)

- 'STYP' - Schedule Order Type. (See note 4, Notes on Parameters later in this section.)
- 'UOMC' - Unit of Measure Code. (See note 1, Notes on Parameters later in this section.)
- 'WHSE' - Stockrooms (Requisitions)
- 'XDEF' - User-defined field description. (See note 5, Notes on Parameters later in this section.)

At least one value should be defined for each.

Notes on these particular types can be found later in this section.

2. For example, the following entry:

- Parameter Type - 'PTDS'
- Parameter ID - 'SCRC' displays the Parameter Type screen for scrap reason codes

Entry of:

- Parameter Type - 'SCRC'
- Parameter ID - '01' displays the Parameter Detail screen for Scrap code 01

Press **Enter** to display the Parameter and Sundry Codes Maintenance Parameter Type Screen.

Parameter and Sundry Codes Maintenance Parameter Type Screen

This screen is displayed when you have pressed **Enter** on the Parameter and Sundry Codes Maintenance Selection Screen.

It enables you to add or update parameter types. If amending a parameter type AMENDMENT is displayed at the top right hand of the screen. If adding a new parameter type, INSERTION is displayed.

PM008	HW - Handy Wholesalers Ltd	User GALBRAIJ	16/08/95 14:21:02
Parameter File Maintenance			
Parm Type	PTDS		
Parm I.D	SCRC	INSERTION	
Description Size (Maximum)....:	█		
I.D. Size....:	█	& Format....:	█ (C=Character,N=Numeric)

Value required....: █ 1=Yes/Blank=No			
F3=Exit		F12=Previous	
09-36	HW	KS	IM II KENB20A PED171S1

Fields:

Parm Type

Always 'PTDS' (from previous screen).

Parm ID

Parameter Type (from previous screen).

The following details must be entered:

Description Size

Enter the maximum number of characters allowed for the description of this parameter type. The maximum allowed is 30 characters.

ID Size

Enter the number of characters allowed for the parameter identifier for this parameter type, e.g. 'ORDC' is '1', 'SCRC' is '2'. The maximum ID size for any parameter is 4 characters.

Format

Identify the format as follows:

C - if the identifier for this parameter type is alphanumeric.

N - if only numerics are allowed for this parameter ID.

Description

A description for the parameter type. This cannot be left blank. It appears on the list of types on the initial selection screen.

Value Required

1 - if the parameter has an associated value to be maintained

0 - the parameter does not have a value to be maintained..

Press **Enter** to display the Parameter and Sundry Codes Maintenance Parameter Details Screen. If you press **F3=Exit** - a Parameter File Maintenance Report is automatically produced, giving the before and after images for all parameter types that have been maintained.

This field is displayed only if you are entering or maintaining codes for which a value is required. Enter the value or rate for the parameter.

UOM Group Code

Used to associate units of measure with a group code for conversion purposes. Refer to note 1 below.

Press **F3=Exit** - a Parameter File Maintenance Report is automatically produced, giving the before and after images for all parameters maintained whilst in this option.

Notes on Parameters:

Note 1

The Unit of Measure Code, UOMC, is a special parameter type, which works in a slightly different way to the other parameter types. The parameter details for this type are the various units of measure required for purchasing and receiving of non-stock items.

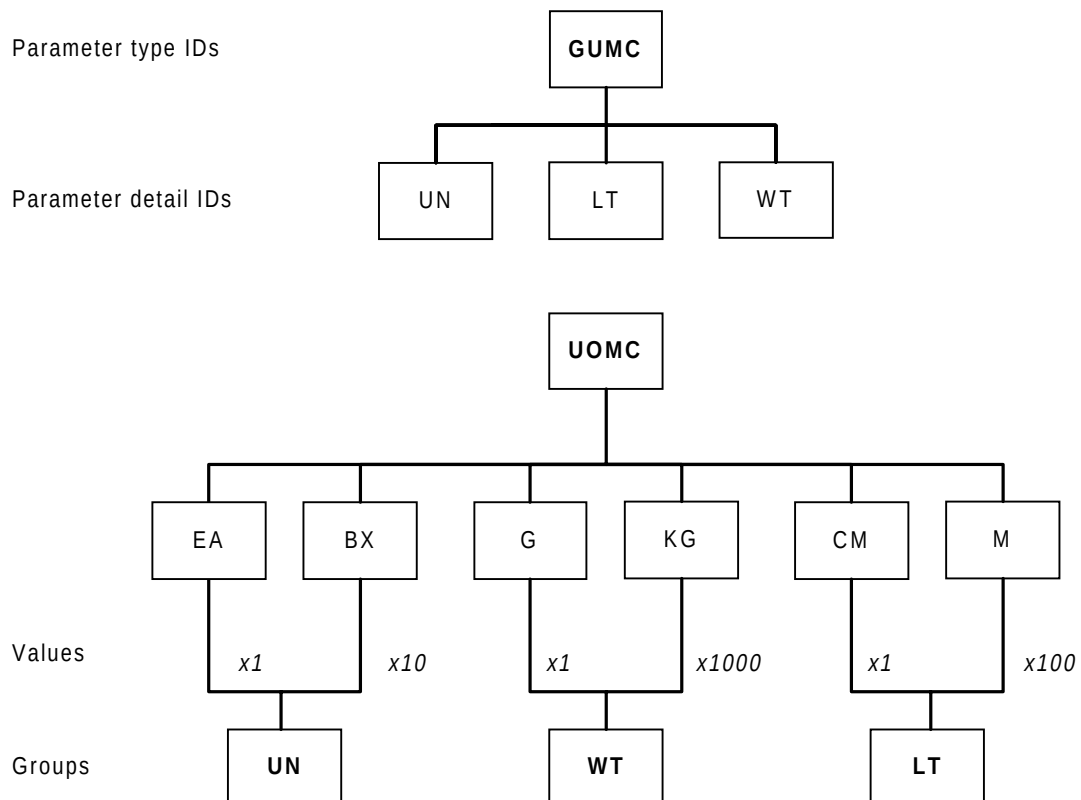

Purchasing units for stock items are set up in Drinks Inventory Management (along with stocking and selling units). It is not necessary for the units of measure set up in Drinks Purchase Management to match these, but it can make it easier for users if the same codes are used throughout.

Each parameter detail within the parameter type UOMC must be associated with a parameter detail from the parameter type Group Unit of Measure Code, GUMC. The group unit of measure code allows us to convert between one unit of measure and another and also to separate from each other units which are not comparable.

To set up units of measure, the following process is required:

- Set up the parameter type GUMC in the usual way.
- Add parameter details within type GUMC, one for each group of units required: e.g., unit, volume, etc.
- Set up the parameter type UOMC, remembering to select 'value required' with a 1.
- Add the required parameter details within the parameter type UOMC, entering the correct group and conversion rate for each one. These should be the actual units for printing on orders etc. e.g. bottles or litres.

Example:

Note 2

Order classification defines the type of items ordered on a purchase order. It is specified at Order Header level. Order classes are:

- 1, 4 Stock orders.
- 2 Production Orders (Cannot be entered manually - would have to be generated from an external source or interface).
- 3 DRP Orders
- 5, 7, 8 Non stock orders.
- 6 Service orders.

Note 3

Scrap Reason Codes define a reason for returning goods to a supplier, or scrapping goods against an order.

Note 4

Schedule Types define a purchase order as being scheduled, i.e. the goods ordered on a single order line are to be delivered in more than one drop, on more than one date, according to the schedule defined on the orders. You must set up 'B' for a blanket order and 'S' for a scheduled order.

Note 5

The description that you set up for parameter type XDEF, parameter ID IPRI will appear on the order header entry/amendment details to control the printing of the Purchase Order. It should be set up as 'Print Priority'.

Purchasing Officer Names Maintenance

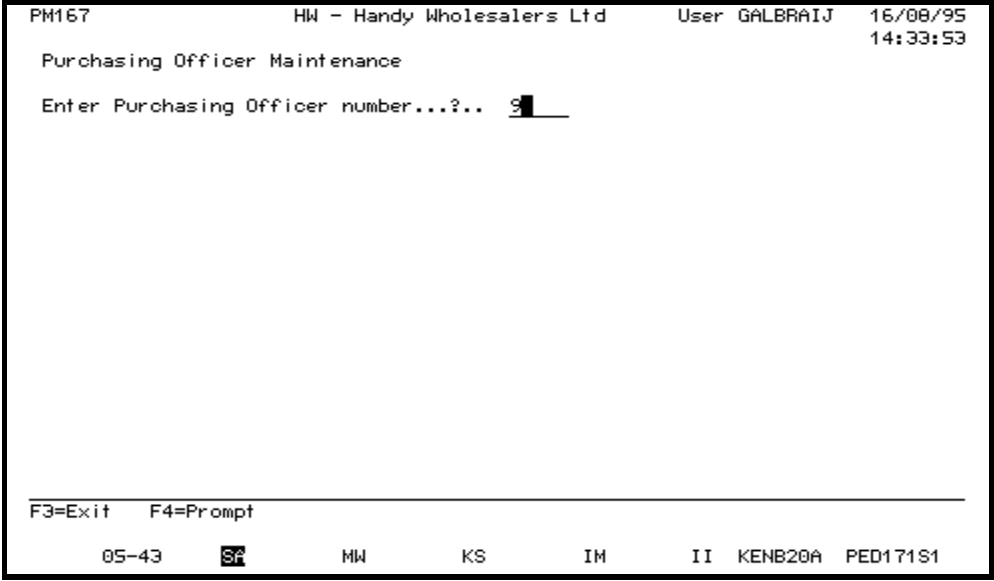

3/DPM

This option allows you to maintain the codes and names for purchasing officers, planners and authorisers in the company.

Purchasing Officer Names Maintenance Selection Screen

 Select the Purchase Office Names option.

This screen allows you to select the purchasing officer number to be maintained, or add a new purchasing officer.

```

Enter the name (up to 25 alphanumeric characters) of the purchasing officer. This field cannot be left blank.

Extension Number

Optionally enter the telephone extension number for the purchasing officer.

Press **Enter** to write the details to the Purchasing Office file, the system will return you to the Purchasing Officer Names Maintenance Selection Screen. Press **F3=Exit**.

Item Supplier Profiles Maintenance

1...
2...

4/DPM

The Item Supplier Profile is used by the Drinks Purchase Management module to provide supply details of an item from a specific supplier. The following details of the stock items purchased from each supplier are kept:

- Total quantity of all orders that have been placed with this supplier for this item.
- Total quantity received against these orders.
- Most recent price and discount, or price structures based on quantity bought.
- Lead time.
- Supplier's item reference.
- Various memo fields relating to ordering rules.
- Landed cost details.

The Item / Supplier Profile can be updated in three ways:

- Directly by the user, from the maintenance option.
- At order entry, when a new price is entered.
- At invoice match, when there is a new price on the invoice.

If no item supplier profile exists when the item is bought, the module will create one in order entry or invoice matching using the price input for that order. (No price structures or landed cost details will be created, these will have to be added manually.)

Note: If the Drinks Requisitioning module is in use, then a valid item supplier profile must exist for each item selected for re-order, the supplier being the default supplier as defined in Drinks Inventory Management Stockroom Details Maintenance.

Item Supplier Profile Maintenance Selection Screen

Select the Item Supplier Profiles option.

This screen is used to select the item supplier combination to be maintained.

14-17	SE	MW	KS IM II KENB20A PET087S2

Fields:

Item

The item code from the previous screen.

Supplier

The supplier code from the previous screen, together with the supplier's name and address.

The details outlined below are displayed if the item/supplier combination is found, and the literal 'AMENDMENT' is displayed. If the item supplier combination is not found these fields are blank and the literal 'INSERTION' is displayed.

Current Price

Enter the current price of the item from this supplier. This is the price per unit for the purchase unit of measurement displayed. Alternatively you can use **F13=Price Structures** to set up a price structure for this item.

UOM

The purchase unit of measure defined for the item.

Last Price Change

The date that the current price was last amended, in either order entry, invoice matching, or via this screen.

Discount

Enter the standard discount for this item from this supplier. This discount provides the default for the first line discount on purchase orders.

Lead Time

Enter the lead time, in days, for delivery of the item from this supplier. This lead time is used in calculations of supplier performance.

Supplier Item

Enter the supplier's item code or reference for the item.

Currency Code

This field will default to the supplier's default currency, if applicable, but can be changed (first time only).

This field will be protected with a flashing asterisk if there is a current price structure in existence.

Receipts To Date

Total quantity of this item received from this supplier, in purchase units. This is only displayed for amendments.

Orders To Date

Total quantity of this item ordered from this supplier, in purchase units. This is only displayed for amendments.

% Basis

This and the three fields listed below may be entered for memo purposes only.

- Minimum
- Maximum
- Multiples

'Multiples' must be entered if 'Maximum' is required.

Functions:

F13

Price structures. Price structure maintenance.

F14

Landed costs. Landed cost maintenance.

F21

Text. Display text screen for Item Supplier.

Select the appropriate function key to continue.

Item Supplier Profile Maintenance Price Structures Effectivity Dates Window (F13) or (F10)

If no price structures have been set up for this item supplier information when you press **F13=Price Structures** from the Item Supplier Profile Maintenance Details Screen, or if a new price structure is selected from the Item Supplier Profile Maintenance Price Structures Screen by pressing **F10=Add New Structure**, effectivity dates are requested using the Enter Effectivity Dates Window.

F13=Next Structure F14=Next Item F15=Change Effectivity Dates			
21-24 MW KS IM II KENB20A PED171S1			

Fields:

Item

The item code and description from the previous screen.

Supplier

The supplier code and name and address from the previous screen.

Effective From

The date from which this price structure is effective.

Effective To

The date to which this price structure is effective.

*Note: The literal '**EXPIRED**' is shown for an expired price structure, '**CURRENT**' is shown for an active price structure and '**PENDING**' is shown for a price structure which will become active in the future.*

Ref.

If amending a price structure, the reference number displayed against each line may be entered to display the line to be amended.

When entering a new price structure your system automatically allocates the reference number. Enter the details in the Quantity and Price fields, and press Enter. The new structure will be displayed, with a reference number against it. This field is protected once a line has been selected for amendment.

Quantity

This field specifies the quantity break. The price associated with this quantity will be selected, if the order quantity falls on or below this quantity, and above any previously entered quantity.

Note: Quantities entered must be in ascending order and the last quantity in any structure must be set to '99999999.999'.

Price

This field specifies the price associated with the quantity. It must be in descending sequence, unless the quantity is equal to all '9's'. In this case the price can equal the preceding price. On update of a current structure the first price for the structure will be updated on the item supplier details screen.

Note: When amending a current price structure line, both quantity and price details may be changed. The changed quantity and price must fall between the previous and subsequent quantity and price values.

Functions:**F10**

Add New Structure. Add new price structure for this Item Supplier. Effectivity dates that do not overlap with those of any existing price structure must be entered before continuing.

12-06 **SF** HW KS IM II KENB20A PED171S1

Fields:

Item

The item code and description from the previous screen.

Supplier

The supplier code and name from the previous screen.

UOM

The purchase unit of measure and description from the previous screen.

Currency

The currency code assigned to the item supplier profile from the previous screen.

Cost Code

Enter a valid landed cost code or use the landed cost code prompt to select a valid code. These are set up in the Landed Cost Codes option.

Landed Cost

Type in a percentage or value to be used in the cost calculation. Appendix A contains a more detailed explanation of landed costs.

Percent/Value Indicator

This indicator is read from the Landed Cost file, but may be overridden.

1 - The landed cost is a percentage added to the item cost.

0 - The landed cost is a value added to the item cost.

Compound Indicator

Percentages/values can be compounded. For percentage costs, this will indicate (when other % cost elements are used) whether to compound or accumulate them when applying to the price:

1 - to compound the percentages.

0 - to accumulate the percentages.

For value costs, this indicates whether the value cost is to be accumulated with the price before or after applying the percentages.

1 - to apply before.

0 - to apply after.

Price Dependent

Price dependent means that the accumulated costs will be calculated and added to the price which gives a value on which the non-price dependent values may be accumulated and calculated:

1 - to specify price dependent.

0 - to specify non-price dependent.

Up to 10 landed cost codes may be entered against an item supplier profile.

Press **F8=Update** to update the Item Supplier
Profile Maintenance Landed Costs Screen.

Item Supplier Profile Maintenance Text Screen

To maintain text information for the selected item supplier combination, select **F21=Item/Supplier Text** from the Item Supplier Profile Maintenance Detail Screen.

This text is used for memo purposes only. You can enter up to 99 lines of text for this Item / Supplier combination.

Delivery Instructions Maintenance

5/DPM

This procedure maintains a set of delivery instructions for the company.

These instructions are assigned to an order in Order Entry and Order Amendment, and appear on purchase order prints.

Delivery instructions are set up on the Item Specification file using an item created from the 12 character prefix (identified on the Company Profile), and a three character suffix entered through this maintenance option.

The entry of an existing code permits maintenance and deletion of data. The entry of a new code permits the addition of new Delivery Instructions.

Delivery Instructions Maintenance Selection Screen

 Select the Delivery Instructions option.

This screen is used to select the code for the set of delivery instructions to be maintained.

User Authority Values Maintenance

1... 9/DPM **2...**

This procedure is used to maintain user-specific authorisation values. These are used in Goods Receiving and Invoice Matching, to check that the user has sufficient authority to confirm a difference in value (under or over), from the original order. If either the absolute value or percentage of order line value are exceeded, then the user is prevented from confirming the acceptance.

Over Receipts

When a user tries to accept an over receipt the system calculates its value and compares it with the user's authority value. It also calculates the value of the over receipt as a percentage of the original value of the order line and compares this with the user's authority percentage. If either of the calculated values is higher than the user's authorities, the over receipt cannot be completed.

Examples: 100 items are ordered at £1 each but 105 are delivered the system calculates $5 \times £1 = £5$ and $£5 / £100 = 5\%$ and then compares these with the user's authority values.

Considered Complete

When receipts are being entered against an order the user may wish to log an order as complete, even when the goods received are less than those on the original order. When a user tries to do this the system calculates the value by which the receipt is below the original order line value and compares this with the user's authority value.

It also calculates the value of this under-receipt as a percentage of the original value of the order line and compares this with the user's authority percentage. If either of the calculated values is higher than the user's authorities, the order cannot be considered complete.

Examples: 100 items are ordered at £1 each but only 95 are delivered the system calculates $5 \times £1 = £5$ and $£5 / £100 = 5\%$ and then compares these with the user's authority values.

Invoice Matching Authority Value

At invoice match the value on the invoice is often found to be different to that on the original order. When a user tries to amend a value the system calculates the difference between the invoice and the order value and compares this with the user's authority value.

It also calculates the difference as a percentage of the original value of the order line and compares this with the user's authority percentage. If either of the calculated values is higher than the user's authorities, the invoice match cannot be completed.

This option also involves the selection of a default stockroom for the user.

User Authority Values Maintenance Selection Screen

Select the User Authority Values option.

This enables you to select the user profile to be maintained. This user profile must have been previously defined to Module Manager.

```

User Authority Value And Percentage Maintenance
Enter User Profile: _____ & Press ENTER to continue.

F3=Exit
05-23  84  MW  KS  IM  II  KENB20A  PET007S2
```

Fields:

User Profile

The user ID of the user profile you want to maintain.

Press **Enter** to display the User Authority Values Maintenance Details Screen.

User Authority Values Maintenance Details Screen

This screen is displayed when you have entered a valid user profile into the User Authority Values Maintenance Selection Screen.

It allows you to update the value and / or the percentage of order line value which the user can confirm as an acceptable difference (in Goods Receiving and Invoice Matching). You also define the default stockroom for this user profile.

Tip: If authority values are found for the selected user profile, then these are displayed.

```
PM012                HW - Handy Wholesalers Ltd        User GALBRAIJ    16/08/95
                                                           16:20:44
User Authority Value And Percentage Maintenance

ADDITION

Enter authority parameters and default stockroom for User Profile GALBRAIJ

    Authority Value ..... 5000
    Percentage ..... 10 %
    Default Stockroom ...?.. 01 *****

    Press Enter to Update File:

F3=Exit  F4=Prompt

05-42  SF  MW  KS  IM  II  KENB20A  PED171S1
```

Fields:

Authority Value

The maximum difference in value that the user can accept.

Percentage

The maximum percentage difference of a line value that the user can accept as a difference.

Either authority value or percentage, or both, may be entered. Both entries cannot be left blank.

Default Stockroom

The normal stockroom at which this user will record purchasing receipts, transfers and adjustments.

Press **Enter** to validate the entries you have made. On completion of validation, the details from the screen are written to the Authorities file.

The Selection Screen is then displayed.

Landed Cost Codes Maintenance

1... **2...** 10/DPM

This option enables you to maintain landed cost code details. These are used in item/supplier maintenance, order line entry/amend and Drinks Inventory Management item/stockroom maintenance.

Landed costs are purchasing costs increased over and above the direct purchase price of goods or services. Each cost code set up within this option represents a particular category of landed cost, for instance transportation costs, insurance or excise duty.

Landed Cost Codes Maintenance Selection Screen

Select the Landed Cost Codes option.

```
PM090      HW - Handy Wholesalers Ltd      User PGMR1      13/12/96
                                           9:45:42

Landed Cost Code Maintenance

F3=Exit   F4=Prompt

05-42      SF      MW      KS      IM      II      KENB20A      PET007S2
```

Fields:

Landed Cost Code

Enter the Landed Cost Code you want to maintain.

Press **Enter** to display the Landed Cost Codes Maintenance Details Screen.

Landed Cost Codes Maintenance Details Screen

After entering a valid Landed Cost Code into the Landed Cost Codes Maintenance Selection Screen, the Landed Cost Codes Maintenance Details Screen is displayed.

This option enables you to maintain the landed cost code details for the selected landed cost code.

Note: Any existing details for the landed cost code are displayed on this screen.

Price Dependency (1/0)....	0		
F3=Exit F11=Delete F12=Previous (To Select)			
08-42	SE	MW	KS IM II KENB20A PED171S1

Fields:

Description

Enter a meaningful description of up to 30 characters. You cannot leave this field blank.

Percent/Value

Specify either percentage or value. Percentage will relate to the supplier's price on the item supplier profile, purchase order lines or GRNs. Values will always be absolute and will refer to the purchasing unit of measure.

1 - Denotes a percentage of the item cost will apply.

0 - Denotes a cost value per unit of measure for the order line will apply.

Compound Indicator

Percentages/values can be compounded. For percentage costs, this will indicate (when other % cost elements are used) whether to compound or accumulate them when applying to the price.

1 - To compound the percentages.

0 - To accumulate the percentages.

For value costs, this indicates whether the value cost is to be accumulated with the price before or after applying the percentages.

1 - To apply before.

0 - To apply after.

Price Dependency

Price dependent means that the accumulated costs will be calculated and added to the price which gives a value on which the non-price dependent values may be accumulated and calculated.

1 - To specify price dependent

0 - To specify non-price dependent.

Note: See Appendix A for an example of the module of landed costs.

Press **Enter** to save.

Authorisation Maintenance

11/DPM

This is used to maintain details of the users who may create or maintain purchase orders, and to define their respective authority limits on order creation. These details are used by the module to determine who should authorise a purchase order. This is based on the limits entered here.

The same limits are used to control authorisations in both Drinks Requisitioning and in Drinks Purchasing; altering the limit in one module alters the limit in the other.

Authorisation Maintenance Selection Screen

Select the Authorisation Maintenance option.

This allows you to enter the User ID of the user whose authorisation levels you wish to maintain.

Note: It must be a valid User ID set up under Inventory Management Descriptions Maintenance - major type 'USER'.

```
PM036          HW - Handy Wholesalers Ltd      User PGMR1      13/12/96

06-38    [icon] MW      KS      IM      II KENB20A PET087S2
```

Fields:

Requisitioner's User Id

Enter a valid User ID (one defined to Business Manager), or select an existing ID from the prompted list.

Press **Enter** to display the Authorisation Maintenance Details Screen.

Authorisation Maintenance Details Screen

 After entering a valid Requisitioner's User ID into the Authorisation Maintenance Selection Screen the Details Screen is displayed.

This enables the maintenance of the Department, Spend Limits and, optionally, the Authoriser for this user.

 *Note: The Requisitioner User ID is displayed from the previous screen.*

Telephone 2509

Spend Limits

-Per Requisition 999999999999.99

-Per Month 999999999999.99 Actual Spend. 999999999999.99

Authorisers User ID..?.. _____

F3=Exit F4=Prompt F5=Refresh F8=Update F11=Delete F12=Previous

08-32  MW KS IM II KENB20A PED171S1

Fields:

Name

Enter the name of the user.

Department

Enter the name of the Department for which this user works. Alternatively, select one from the prompted list. A New Department may be created, using **F8=Update**, when the first person in the Department is defined.

Telephone

Enter the telephone number or extension number for the user.

Spend Limits

Per Requisition

Enter the maximum total net value for a single purchase order that this user can enter without requiring authorisation (e.g. from the Department Manager).

 *Note: If this control is not required, or if this user is sufficiently senior, enter this as all nines (999999999999.99)*

Per Month.

Enter the maximum total net value of the purchase orders that this user can create per calendar month without requiring authorisation (e.g. from the Department Manager).

Note: If this control is not required, or if this user is sufficiently senior, enter this as all nines (999999999999.99).

Note: The calendar month is obtained from the current system date.

Actual Spend

This is the total net value of all orders entered by the user in the current calendar month. This value is automatically maintained by the module, but may be amended here.

Note: If an order exceeds the user's spend limit, the value of the order is added to the authoriser's Actual Spend value rather than the users. The authoriser is considered to have committed the expenditure.

Authoriser's User Id

Enter the user ID of the person responsible for authorising the orders for this user. An authoriser is not required for users with an unlimited spend capability.

This authoriser must have been defined previously as a user in their own right, with at least one spend limit higher than the current users.

This may be left blank if both spend limits are set to all nines, i.e. as far as Drinks Purchasing is concerned, this user is the most senior person in the company. At least one such user must be defined for the company.

Functions:

F11

Delete. Delete the user.

On selecting delete, the following conditions are checked.

1. Are there outstanding orders that were entered by this user.
2. Is this user defined as an Authoriser to any other User.

If the answer to either of these is 'yes' an appropriate message is displayed and the delete request is not performed. Otherwise, a confirmation message is displayed before the record is deleted, and an audit record is written.

Press **F8=Update** to save the details. On selecting updates the record is updated to the authorisations file and record(s) are written to the corresponding audit files.

Stockroom Defaults Maintenance

12/DPM

Operational defaults for the processing of purchased goods are specified on the Drinks Purchase Management company profile. Some of these defaults may optionally be overridden for individual stockrooms by setting up stockroom default profiles in this option.

You can set up and maintain the stockroom name, stockroom address, phone/fax numbers, contact name and receiving address. You can also deal with goods received note (GRN) generation, numbering and printing.

Stockroom Defaults Maintenance Selection Screen

Select the Stockroom Defaults option.

```

PM265                HW - Handy Wholesalers Ltd        User PGMR1        13/12/96

```

Fields:

Stockroom Code

The stockroom name as set in Drinks Inventory Management is already entered here, but can be changed.

Address / Post Code / Telephone Number / Fax Number / Contact Name

Type in these details here. The first address field is Mandatory.

Receiving Address Code

The default receiving address code, which is set up in Maintain Company Profiles will be filled in here. It can be overwritten.

Stockrooms can be used in the literal sense, i.e. as a physical location where stock is kept. In this case, the stockroom address would be likely to be the same as the default receiving address.

Stockrooms can also be used conceptually, for example where goods are received at a number of different locations in one region, but you wish to group all of these within one 'stockroom', for analysis and control purposes. In this case you may have a number of different receiving addresses. So, in this field, put in your most common receiving address.

Booking In Point

Enter the location into which receipts are to be booked as a default. When setting the defaults for a stockroom for the first time, the defaults defined in the Maintain Company Profiles option will be in this field. This may be changed for each receipt.

1 - Goods Inwards

2 - Inspection

3 - Stores

Note: The booking in point must be stores for a bonded stockroom.

Note: If you book directly into stores, stock levels in Drinks Inventory Management are automatically updated. If you book into goods inwards or inspection (options 1 or 2), they have to be transferred (in the Transfer Goods Location option), before stock levels are updated.

Company / Stockroom GRN Generation.

1 - Goods received notes are generated at stockroom level.

0 - Goods received notes are generated at a company level.

Automatic Goods Received Note Numbering

1 - For automatic generation of GRN numbers.

0 - To enter your own unique GRN numbers at order entry time.

Start Number

If you are using automatic numbering key in the first permissible GRN number.

End Number

The last permissible GRN number.

Last GRN Number Used

The last GRN number used will be updated by the system, as each receipt is confirmed.

Goods Receipt Note To Print

1 - To enable printing of GRN's.

0 - To inhibit printing of GRN's.

Goods Receipt Labels To Print

1 - To enable the automatic printing of labels at receipt time.

0 - Inhibit automatic printing of labels at receipt time.

GRN/Label Print Queue

Enter the printer output queue required for GRN's / Labels. For information about Queues and Libraries see the Machine Manager section of the System Product Information.

Hold

- 0 - The output queue on the GRN / Label Print Queue is released automatically.
- 1 - The output on the GRN / Label Print Queue is held until you release it.

Library

The library in which the output queue resides.

Tip: A separate range of GRN numbers can be used for each stockroom.

Press **F8=Update** to save the details.

File Lists

File prints of the following types are available from the File Lists section of the Purchase Management Maintenance menu:

- Parameters & Sundry Codes.
- Purchasing Officer Names.
- Receiving Addresses.
- Delivery Instructions.
- User Authority Parameters.

Each of these tasks submits a batch job to the system, as soon as the appropriate option is selected.

These prints comprise a listing of the current records in each file, and are particularly useful during the setting up of the system to check that all the correct entries have been made.

Parameters and Sundry Codes

15/DPM

The report lists all the parameters and miscellaneous codes currently set up. It includes details of the parameter table, i.e. length of code and description, and also lists the individual codes set up in each table.

Select the Parameters and Sundry Codes option.

Press **F8=Submit** to confirm the submission of this report.

Purchasing Officer Names

17/DPM

This option lists names of all purchasing officers set up for this company.

Select the Purchasing Officer Names option.

Take **F8=Submit** to confirm the submission of this report.

Receiving Addresses

18/DPM

This report lists all receiving addresses currently set up in the module for this company.

Select the Receiving Addresses option.

Select **F8=Submit** to confirm the submission of this report.

Delivery Instructions

19/DPM

This report lists all delivery instructions currently set up in the module for this company.

Select the Delivery Instructions option.

Select **F8=Submit** to confirm the submission of the report.

User Authority Values

20/DPM

This report lists all user authority details currently set up in the module for this company.

Select the User Authority Values option.

Select **F8=Submit** to confirm the submission of the report.
