Chapter 2

Processing

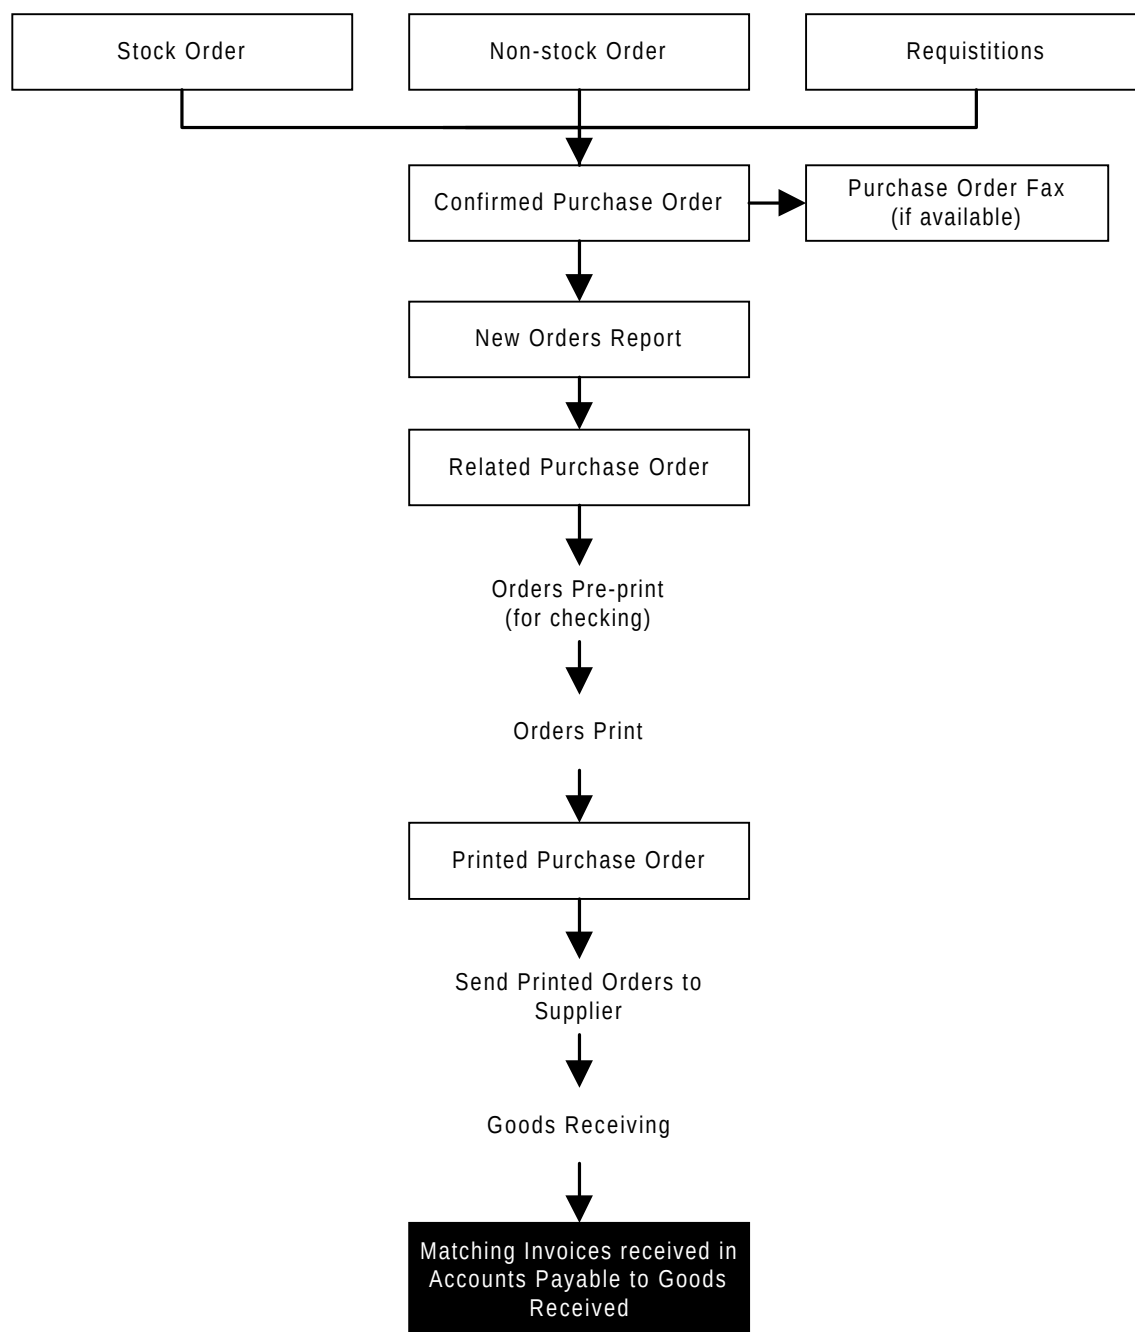

Drinks Purchase Management Processing

The normal day-to-day processing in Drinks Purchase Management can be divided into three types of tasks:

- Creating and amending orders.
- Receiving goods.
- Matching invoices to goods received.

This section covers the procedures which control these processing functions.

The flow chart gives an outline of day to day order processing, and shows the Drinks Purchase Management Reports that are an important part of this process.

Invoice Matching

With the introduction of the Euro and European Monetary Union (EMU) in 1999, the way in which we process any monetary transaction will change.

There are two ways to match an invoice to a purchase order.

- Batch.
- Interactive.

With either method System 21 determines whether the currencies are defined as IN Currencies, that is linked to the Euro, or not.

If either currency is not linked to the Euro, then any discrepancy is written to the Currency Gains/Losses Account held within Financials.

If both currencies are IN currencies:

- If the discrepancy is a positive error, then the amount is written to the Euro Rounding Debit Account.
- If the discrepancy is a negative error, then the amount is written to the Euro Rounding Debit Credit Account.

Order Entry

1/DPP

This procedure enables you to enter details of a purchase order.

Stock and non-stock orders are handled differently within this function. Scheduled and blanket orders are also catered for.

- A stock order is an order that contains stocked items as well as non stocked items or services that require item tracking. The order class is 1 or 4.
- Order class 2 is also a stock order, but is reserved for production replenishment via a user bespoke interface. These cannot be entered manually.
- Order class 3 is reserved for Distribution Requirements Planning stock orders - however, these can also be raised manually.
- A non stock order is one of order class 5,7 or 8, containing non stocked items or services that do not require item tracking.
- A service order, where item tracking is not required, is order class 6. For these orders it is not necessary to release or receive the order and it is possible to match invoices to these orders once they have been entered.
- A scheduled order is one where more than one delivery is expected for the full order line quantity.
- A blanket order is a provisional scheduled order, i.e. one where the required dates and quantities are not considered to be a firm commitment, but provide a guideline for future requirements.

Note: This option also enables the creation of item supplier profiles.

Either of the following may be optionally requested:

- Print the order.
- Process the order.

Order Entry Header Details Screen

Select the Order Entry option.

Note: You will not be able to enter details on this screen unless the Default Purchasing Officer has been set up correctly (in the Descriptions file major type 'USER' and the Purchasing Officer Names).

This screen enables you to assign a supplier, order class (i.e. stocked or non-stocked or service), schedule type, stockroom, and delivery instructions to the order.

Fields:

Order Number

If automatic numbering has been selected in the Company Profile this field displays a system generated number, which can be manually amended if required. The number may optionally include an amendable alpha character prefix. If automatic numbering is disabled enter a unique order number.

Supplier

Enter the supplier code against which you wish to raise the order, or perform the name search to obtain the supplier code. This supplier must exist in Accounts Payable.

Address Code

Enter the address code for this supplier. This must have been set up in Accounts Payable. A code of zeros causes the invoice address to be selected. A default address code is specified at company level.

Receiving Address Code

Enter the code for the address to which goods are to be sent. The default entered on the Company Profile appears here and can be amended if required. This default is overridden on each line if a receiving address code is established on Stockroom Defaults Maintenance. Leave this field blank when using **F13=Receiving Address**, which allows the delivery address to be changed for this order only.

Order Date

This defaults to the current date, but may be changed.

Delivery Date

This is used as the default for the due date on each order line. It must not precede the order date. This field is mandatory.

Order Class

Specifies the type of goods ordered. It must be a valid order class parameter, set up in the Parameters and Sundry Codes option. This field is mandatory.

Order classes 1, 3 and 4 are for stocked items or non-stocked items or services which require tracking via an item code.

Order classes 5, 7 and 8 are for non-stocked items and services which do not require tracking via an item code.

Order class 6 is for services that do not require the receipt of goods.

Note: Stock orders require an Inventory item record to be present for each item ordered.

P. Officer

Enter a valid code for the purchasing officer responsible for this order. This field is mandatory if 'Purchase Officer to be Mandatory' in the Company Profile has been set to Yes.

Schedule Type

The following options are available:

Blank - Leave blank if the order is a 'line' order, i.e. one delivery is expected for the full order line quantity.

If an entry is made, then the code must be valid, and indicates that the order is a type of 'schedule', i.e. multiple deliveries are expected for each line.

Stockroom

Enter the code for the stockroom where the goods from this order are to be received. This field is mandatory if the order is a stock order.

Dly. Ins. Code

Enter the code for the Delivery Instructions you want to be printed on the order.

Order Subtype

Enter an order subtype. This is validated against inventory description 'ORST'. The VAT code against the description is used to determine whether or not the order is an import.

Department

This is an optional 'memo' type field, i.e. any data entered is displayed/printed as and when appropriate.

Shipping Code

This is an optional 'memo' type field, i.e. any data entered is displayed/printed as and when appropriate

Job Number

This is an optional 'memo' type field, i.e. any data entered is displayed/printed as and when appropriate. There is an enquiry facility available to view orders by job number.

Print Priority

Set the print priority as follows:

- 0 - The order, when printed, will be printed on the depot queue.
- 1 - The order will be printed on the users default print queue.
- 2 - The order will be faxed rather than printed.
- 3 - The order will be faxed and printed on the depot queue.
- 4 - The order will be faxed and printed on the user queue.

Disc %1/Disc %2

Optionally enter discounts which apply to the total order. Such details will be printed as part of the header details. These are compound discounts, for example:

If Dics%1 = 10%, Disc%2 - 10%

If the value is 100, then:

100-10% = 90, then 90-10% = 81.

Functions:

F13

Change Delivery Address (for this order only).

F14

Additional Detail.

Once all mandatory entries have been correctly made, press **Enter** to display the details for confirmation.

Press **Enter** again to display the appropriate order details screen (for stocked or non-stocked order depending on the order class selected).

Order Entry Additional Details Screen 1 (F14)

This screen is displayed when you have pressed
F14=Additional Details on the Order Entry
Header Details Screen.

Fields:

Status Code

Enter the current status code for the shipment. This is validated against inventory description 'OSTS'.

Original Requested Ship Date

Enter the date the shipment was originally requested for shipment.

Latest Requested Ship Date

This date is used for invoice pricing.

If the order is 'price at despatch', and this date is entered, then it is used as the date for pricing and discounting purposes. If it is blank then the despatch date is used.

If the order is 'price at order' then the order date is used and this date is agreed.

Terms / Freight Type

Enter the terms / freight code. This is validated against inventory description 'FRTY'.

FOB Code

Enter the Free On Board code. This is validated against inventory description 'FOBC'.

Ship Via Carrier

Enter the carrier code to be used for shipping. If Transport Planning is in use then this is validated against carriers defined in Transport Planning, otherwise it must be a valid supplier.

Invoice Number

Enter the invoice number.

Container Type

Enter the code for the container type used. This is validated against inventory description 'CNTD'.

Vessel Name (Main)

Enter the primary vessel name.

Vessel Type (Feeder)

Enter the vessel type.

Port Of Loading

Enter code for the loading port. This is validated against inventory description 'PORT'.

Port Of Entry

Enter the port of entry code. This is validated against inventory description 'PORT'.

Sailing Date

Enter the scheduled sailing date.

ETA

Enter the estimated time of arrival date.

Function:

F14

Business Entities. Display the Business Entities Screen.

Press **Enter** to validate the entries and display
Order Entry Additional Detail Screen 2.

Order Entry Additional Detail Screen 2

This screen is displayed when you have pressed **Enter** on the Order Entry Additional Detail Screen 1.

18-23	82	MW	KS	IM	II KENB20A PED171S1

Fields:

Order Number

From the Header Screen.

Supplier

The first line of the supplier's name and address from the Accounts Payable Supplier Master file.

Class

The description of the order class from the parameters file.

Currency

The currency of the order.

Note: Currency will only be displayed if the supplier's currency is different to your base currency.

Tip: A list of existing lines on the order is displayed.

Select

This field is untitled on the screen. A selection may be made against any existing line on the order.

- 1 - Amend to amend the line details.
- 2 - Schedule to display the schedule line details screen.
- 3 - Text to display the line text screen.
- 5 - Landed Cost to add additional cost / date line details.

The following details can be entered:

Supplier Item Ref

Optionally enter the supplier's reference for the item. If not entered, this defaults to the supplier item reference held on the item supplier profile (if available).

Item

Enter a valid item or use **F4=Prompt**. This field is mandatory.

Valid item details must exist in Drinks Inventory Management. Stockroom details must be associated with the item unless it is defined as a non-stock item in Inventory.

F21=Review Specification enables you to enter text against the item.

Quantity

The order quantity must be entered. This relates to the units of measure specified by the UOM field.

If left blank, the quantity unit of measure is defaulted to the purchase unit of measure from the item record.

UOM

This is the quantity UOM and must be one of the purchase, stocking or issue units of measure set up in Item Maintenance in Drinks Inventory Management. If left blank, it defaults to the purchase unit of measure from the item record.

Sr

The stockroom at which this line will be received. This defaults to that specified on the order header.

Price

Leave blank to default the price to that specified on the item supplier profile, or any current price structure which exists for the item supplier (only if the order currency is the same as the item supplier currency). If entered, the price is compared to that on the item supplier profile.

If a price exists for this Supplier/Item, you are not able to enter a price - the current price is shown when the line is entered.

Note: If no price exists for this Supplier/Item, you must enter a price and use F22 to create the Price Profile.

UOM

The code for the unit of measure in which the price is expressed. The same rules apply as for the quantity UOM. If left blank, the quantity UOM code is used as a default. If the quantity UOM is blank, the purchase UOM is used.

Full Text

1 - to copy the Drinks Purchase Management text for the item into the order line text.

Blank - the description from the inventory item is copied into the order line text.

VAT Code

This field defaults to the VAT code associated with the item. It is validated against the VAT Codes file on the General Ledger.

Disc%

Optionally, enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

If the first discount is entered, this will be compared to the details held on the item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences described above.

Due Date

This may optionally be entered for non-scheduled orders only. (Scheduled order dates are catered for on a separate screen). If this is not entered, it defaults to the value from the header screen. It represents the date that this order line is due to be delivered.

GL Code

Optional. It will default to the General Ledger account code held on the Inventory item file. This code is used to generate automatic nominal dissections if full invoice matching is used.

Job Number

This field defaults to the values from the header screen and is optional.

Department

This field defaults to the values from the header screen and is optional.

Select an order and press **Enter** or press one of the Function Keys on the screen.

Stock Order Details Troubleshooting

- If no item / supplier record is found, a message is displayed suggesting that a record may be created using **F22**.
- The item supplier profile can be set up with more options in Drinks Purchase Management Item Supplier Profile Maintenance.
- If a message 'no storeroom record' is returned, you can set up these details by taking the Stockroom Details option in Drinks Inventory Management.

Tip: If the order is a type of schedule, the Schedule Line Details screen is displayed after

adding each line for entry of multiple expected deliveries against the line. After entering the schedule details, the module returns to this screen in anticipation of the next line.

Functions:

F7

Update & next order. Update the order and return to the Header screen for the next order (assuming the default completion options).

F8

Update & options. Update the order and display the Completion Options screen for this order.

F10

(Only available for override price). Where there is a price difference, update the price on the item supplier record, only if a current price structure does not exist for the item supplier profile.

F11

Cancel order. Cancel the order and return to the Header screen to re-use this order number.

F21

Review Specification (i.e. text against item).

F22

(Only available where no item supplier profile has been set up). Create a new item/supplier profile record.

Complete the order entry by using the
F7=Update and Next Order or **F8=Update and Options** key.

Order Entry Non-Stock Order Details Screen

This screen enables you to enter purchase order line details for an order comprising non-stocked items and services where item tracking is not required, (as entered for the Order Class on the Order Header).

PM002		NR - Neil Radford and Co. Ltd		User GBJBA1MS		18/06/96

18-02 52 MW KS IM II KENB20A PET179S2							

Fields:

Order Number

From the previous screen.

Supplier

The first line of the supplier's name and address from Accounts Payable.

Class

Description of order class entered on the header screen.

Currency

The currency of the order. Currency will only be displayed if the supplier's currency is different to your base currency.

Tip: A list of existing lines on the order is displayed.

The following details can be entered:

Select

This field is untitled on screen. A selection may be made against any existing line on the order.

1 - Amend to amend the line details.

2 - Schedule to display the schedule line details.

3 - Text to display the line text screen.

5 - Landed Costs to add additional cost / date line details.

Supplier Item Ref

Enter the supplier item reference. An order enquiry is available by supplier item reference. This is a mandatory field for non-stocked lines.

Cost Code

Enter the General Ledger account code which you wish to associate with this order line. An order enquiry is available by this code, and it is also the account to which the goods value is posted in Invoice Matching. This is a mandatory field.

Quantity/UOM

The quantity must be entered together with the appropriate unit of measure codes set up in the parameters file.

Sr

Enter the stockroom that is to receive the order line.

Price/UOM

The price must be entered. Optionally enter the unit of measure to which the price applies. If left blank the quantity unit of measure is used as a default.

VAT Code

The VAT Code must be a valid code on the General Ledger VAT codes file.

Disc%

Optionally enter up to two discounts to be applied to the price for this order line. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

Due Date

May be optionally entered for non-scheduled orders. If this is not entered, it defaults to the value from the previous screen. It represents the date that this order line is due to be delivered. For scheduled orders, the delivery dates are entered on a separate screen.

Job Number

This field defaults to values from the header screen and is optional.

Department

This field defaults to values from the header screen and is optional.

Functions:

F7

Update & next order. Update the order and return to the Header screen for the next order (taking the defaults for the order completion options).

F8

Update & options. Update the order and display the completion options screen for this order.

F11

Cancel order. Cancel this order and return to the Header screen for this order number to be re-used.

Tip: After entering the schedule details, the module returns to this screen in anticipation of the next line.

To complete the entry of the order press the **F7=Update and Next Order** or **F8=Update Option** keys.

Qty

Order line details from the previous screen.

Supplier Item Ref

Order line details from the previous screen.

UOM

Order line details from the previous screen.

Stockroom

Order line details from the previous screen.

Receiving Address Code

Order line details from the previous screen.

Qty Scheduled

A running total of the quantity scheduled.

Ref

You can display line details for amendment at the bottom of the screen by entering the reference number of an existing line and pressing **Enter**.

Request Date

Enter the date that the delivery is required. This field is mandatory.

Quantity

The quantity required for this delivery. Enter '0' to delete a line.

Promise Date

Enter the date delivery is promised by the supplier (if any). If this is not entered, this date defaults to the request date.

Confirm Flag

Enter a user defined code here to describe the status of the line, e.g.:

C - Confirmed

D - Delayed

Q - Queried.

This flag is used as a selection criterion for the Order Confirmation report. You can enter any single character into this field.

Expected Date

Enter the date that the goods are expected realistically to be delivered. If not entered, this defaults to the promise date.

The following fields are available for entry only if a shipping code been entered on the header screen. These are used for memo purposes only.

Ship Date

Enter the date that the goods will be shipped, as promised by the supplier.

Advice Note

Enter the advice note number for the shipment.

Tip: The module checks that the total quantity scheduled does not exceed the outstanding quantity.

Once the scheduled deliveries have been entered, and **F8=Update** is selected, these details are written to the Order Lines file. The previous order line screen is displayed once the update is complete.

Order Entry Line Text (Option 3)

In order to maintain order line text, place a '3' against any order line on the Order Entry Order Details Screen.

This text is created when an order line is added to the order and will be printed on the purchase order. Any text found for this order line is displayed. Up to 99 lines of text, of up to 45 characters each, may be maintained for each order line.

Purchase cost of item.

Total Cost For Line

Purchase cost of item including landed cost.

Derived Landed Cost

Accumulation of landed cost derived values.

Any existing landed costs assigned to the order line are displayed or defaulted from the item supplier profile, or the item stockroom details.

Cost Code

Enter a valid landed cost code or use the landed cost code prompt to select a valid landed cost code.

Landed Cost Value

This is a mandatory field for each entered cost code. Enter a unit cost if it is a value code i.e. the retrieved percentage / value flag is '0', otherwise enter a percentage value.

Tip: See Appendix A for examples of how landed costs are calculated.

Press **Enter** to continue.

Order Entry Completion Options Screen

If **F8=Update & Options** is chosen on the Order Entry Details Screen, this screen is displayed.

This screen enables you to optionally add text to the order, to decide if the order should be printed and / or faxed, and to determine whether further orders are to be entered immediately.

PM000	HW - Handy Wholesalers Ltd	User PGMR1	18/12/96

Do you wish to print the Order ?..... 1 (0=No,1=Yes,2=Immediately,3=Fax)			
Do you wish to use External Supplier Text on this order ?..... 1 (0=No,1=Yes)			
Do you wish to add text for printing on the Order ?..... 0 (0=No,1=Yes)			
Do you wish to add text for display within the Company ?..... 0 (0=No,1=Yes)			
F12=Previous F11=Cancel order			
07-46	SE	MW	KS IM II KENB20A PET087S2

Fields:

Order Number

From the header screen.

Date

The order date from the header screen.

Class

The order class and description from the header screen.

The following details can be entered.

Do You Wish To Enter Further Orders?

- 1 - to return to the header screen after this screen has been processed.
- 0 - to return to the processing menu.

Do You Wish To Print The Order?

Enter one of the following options:

- 0 - No
- 1 - Yes

2 - Immediately

3 - Fax

Note: the combination of Print Order and Print Priority, from the header details, determine when / how the order is to be produced as follows:

<u>Print Order</u>	<u>Print Priority</u>	<u>Action</u>
0	Any	Order not printed or faxed.
1	0	Order printed later on the depot printer.
1	1	Order printed later. If the order is selected individually for printing in the Print / Release program, it is printed on the depot printer.
1	2	Order will be faxed to the default supplier fax number during batch print.
2	0	Order printed immediately on the depot printer.
2	1	Order printed immediate on the users default print queue.
3	2, 3, 4	Order is faxed immediately.

Any other combinations will be invalid.

Immediate printing / faxing is subject to spend limit checks, and only valid orders are printed or faxed.

Do You Wish To Use External Supplier Text On This Order?

1 - to include the text set up for orders to the supplier.

0 - to exclude this text.

Do You Wish To Add Text For Printing On The Order?

1 - to enable text, unique to this order to be added to the standard supplier text, for printing on the order.

0 - to use the standard text set-up for orders to this supplier.

Do You Wish To Add Text For Display Within The Company?

1 - to enable addition of internal text to the order. This is not printed on the order, but is available for enquiry within the company.

0 - to exclude the addition of internal text.

The selections made are used as the defaults for subsequent orders in this session of order entry.

Functions:

F11

Cancel order. Cancel the whole order, ignoring any selected options, and return to the Header screen re-using this order number.

Press **Enter** to process the selected options.

Checking, Releasing & Printing Orders

This section is concerned with producing the hard copy (printed details) of orders which have been placed via Order Entry.

Pre-printing Orders

Before an order is released, it can be printed for checking. The printing of orders for checking is sometimes referred to as pre-printing and is carried out by running the Order Pre-Print option. The option produces a copy of all orders, not yet released and not yet printed. The orders are printed in the same format in which they will eventually appear but are printed on standard paper rather than special stationery.

This report may be run at regular intervals in order to allow checking and amendment of orders before they are released and finally printed.

For more information see the Order Pre-Print section in the Reports section of this Product Information.

Releasing and Printing Orders

Once an order has been entered on the system, it is referred to as a confirmed order. However, before receipts can be entered against it, it must be released. The releasing of orders is carried out by running the Release and Print option. This option produces reports of all new orders in the selected Stockroom that are either successfully released or which fail authorisation, whether they have been entered manually or created from purchase requisitions.

Released orders are printed on special purchase order stationery, but otherwise appear the same as other prints.

Note: For Service Orders (order class 6) it is not necessary to release or receive the order, and it is possible to match the invoices to these orders once they have been entered.

This report should be run at regular intervals (probably at least daily) in order to release all orders that have been confirmed since this report was last run.

For more information see the Release and Print section in the Reports section of this Product Information.

Order Amendment

2/DPP

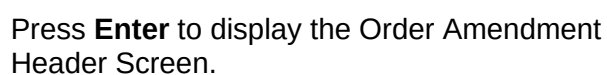

This option enables you to amend existing purchase orders.

Once an order is released, amendments are only allowed to delivery dates, and lines can be cancelled.

All changes are audited and can be printed using the Order Amendment Audit report. The order may also be reprinted.

Note: A purchase order can be amended only by the purchasing officer who raised the order, or a user defined as an 'authoriser'.

Order Amendment Header Screen

This screen is displayed when you have entered a valid purchase order number and enables you to maintain order header details.

An option is available to amend order lines and/or schedule details via subsequent screens.

14-18 SA MW KS CL IM DM II KENB20A KB PET087S1			

Fields:

Order Number

From the previous screen.

Order Date / Stockroom / P.Officer / Supplier

These details default from the order header file and cannot be amended. The order class is displayed next to the order date.

Currency Code

The currency of the order. Currency will only be displayed if the supplier's currency is different to your base currency.

Supplier

Enter a new address code which is valid for the supplier.

Receiving Address

Enter a code for the default address to which the goods are to be sent.

Note: This will not amend any receiving addresses already associated with stockrooms in specific lines.

Delivery Instructn

Enter a code to identify the delivery instructions to be printed on the order.

Supplier Reference

Enter the supplier's order or acknowledgement number for this order.

Order Subtype

Enter the order subtype as follows:

0 - Domestic.

1 - Direct Import.

2 - Import.

These are user controlled and defined in the inventory descriptions file 'ORST'.

Note: The VAT code on the description file indicates whether or not it is an import order and therefore different payment terms may apply.

Amend Lines

1 - to enable amendment of order lines, e.g. quantities and text.

0 - if not required.

Warning: The next five fields are only displayed for entry when the order is not a schedule or blanket order (shown in the top right hand corner of the screen).

Amend Delivery Dates

1 - to enable amendment of promise and expected dates, and confirmation flag values, for individual order lines.

0 - if not required.

Confirm Flag

This is a user determined flag to describe the status of this line of the schedule;

e.g. C - confirmed

D - delayed

Q - queried

This code is a selection criterion on the Order Confirmation report.

Promise Date

Enter a valid date, to apply to all lines on this order. This date represents the date on which the supplier will deliver all items on this order. This field is optional.

Expect Date

Enter a valid date to apply to all lines on this order. This represents the date that is felt to be realistic for delivery of this order.

Ship Date

Enter a valid date to apply to all lines on this order. This is the date that the supplier has reported as being the date of despatch for the whole order.

Re-Print Order

Set the re-print order as follows:

- 0 - No re-print required.
- 1 - Re-print is required.
- 2 - Re-print immediately.
- 3 - Re-print to be faxed.

Print Option

Set the print priority as follows:

- 0 - The order, when printed, will be printed on the depot queue.
- 1 - The order will be printed on the users default print queue.
- 2 - The order will be faxed rather than printed.
- 3 - The order will be faxed and printed on the depot queue.
- 4 - The order will be faxed and printed on the user queue.

Note: the combination of Re-Print Order and Print Priority, from the header details, determine when / how the order is to be produced as follows:

<u>Print Order</u>	<u>Print Priority</u>	<u>Action</u>
0	Any	Order not printed or faxed.
1	0	Order printed later on the depot printer.
1	1	Order printed later. If the order is selected individually for printing in the Print / Release program, it is printed on the users default. If it is printed by selecting a stockroom, it is printed on the depot printer.
1	2	Order will be faxed to the default supplier fax number during batch print.
2	0	Order printed immediately on the depot printer.
2	1	Order printed immediate on the users default print queue.
3	2	Order is faxed immediately.

Any other combinations will be invalid. Order amend is not subject to spend limit checking.

Ship Code

Enter the ship code, for memo purposes only.

Job Number

Enter the ship code, for memo purposes only. It is possible to enquire on orders via their Job Number.

Department

Enter the ship code, for memo purposes only.

Functions:

F13

Receiving Address (for this order only).

F14

Additional Details.

F15

Header Discounts. Update the order header discount percentages for this order.

F21

Internal Text.

F22

External Text.

Press **Enter**. If Amend Lines is set to Yes, then the appropriate Order Line Details screen is displayed, (depending on whether the order is a stocked or non-stocked order). If both are selected, the screens are displayed sequentially.

All other entries are updated immediately, once validation is complete.

Order Amendment Additional Details Screen 1 (F14)

This screen is displayed when you have pressed

Fields:

Status Code

Enter the current status code for the shipment. This is validated against inventory description 'OSTS'.

Original Requested Ship Date

Enter the date the shipment was originally requested for shipment.

Latest Requested Ship Date

This date is used for invoice pricing.

If the order is 'price at despatch', and this date is entered, then it is used as the date for pricing and discounting purposes. If it is blank then the despatch date is used.

If the order is 'price at order' then the order date is used and this date is agreed.

Terms / Freight Type

Enter the terms / freight code. This is validated against inventory description 'FRTY'.

FOB Code

Enter the Free On Board code. This is validated against inventory description 'FOBC'

Ship Via Carrier

Enter the carrier code to be used for shipping. If Transport Planning is in use then this is validated against carriers defined in Transport Planning, otherwise it must be a valid supplier.

Invoice Number

Enter the invoice number.

Container Type

Enter the code for the container type used. This is validated against inventory description 'CNTD'.

Vessel Name (Main)

Enter the primary vessel name.

Vessel Type (Feeder)

Enter the vessel type.

Port Of Loading

Enter code for the loading port. This is validated against inventory description 'PORT'.

Port Of Entry

Enter the port of entry code. This is validated against inventory description 'PORT'.

Sailing Date

Enter the scheduled sailing date.

ETA

Enter the estimated time of arrival date.

Function:

F4=Prompt F8=Update F11=Cancel order F21=Review specification			
08-02	SE	MW	KS IM II KENB20A PET087S2

Fields:

Order Number

From previous screen.

Supplier

The first line of the supplier's name and address from the Accounts Payable Supplier Master file.

Class

The description of the order class from the parameters file.

Currency

The currency of the order.

Note: Currency will only be displayed if the supplier's currency is different to your base currency.

A list of existing lines on the order is displayed.

Select

Select an existing line by entering one of the following:

- 1 - Amend the line details.
- 2 - Display the Schedule screen.
- 3 - Display the line text screen. You can amend or add to the line text to appear on the order.
- 5 - Amend landed cost details

Supplier Item Ref

Defaults to the supplier item reference held on the item supplier profile (if it exists).

Item

Enter a valid item. This field is mandatory.

Valid item details must exist in Drinks Inventory Management. Stockroom details must be associated with the item unless it is defined as a non-stock item in Inventory.

*Note: Use **F21=Review Specification** to enter text against an item.*

*Note: If no Item / Supplier is found i.e. this item has not previously been ordered from this supplier, then a message is displayed suggesting that a record may be created using **F22=Create Item / Supplier** profile. Care must be taken to check the Supplier's Item Reference, Price and Discount are correct before adding this profile.*

Quantity

The order quantity must be entered. This relates to the units of measure specified by the next entry.

UOM

This code must be one of the purchase, stocking or issue units of measure set up in Item Maintenance in Drinks Inventory Management. If left blank, the quantity unit of measure is defaulted to the purchase unit of measure from the item record.

Sr

The stockroom at which this line will be received. This defaults to that specified on the order header.

Price

Defaults to the price specified on the item supplier profile, or any current price structure which exists for the item supplier (only if the order currency is the same as the item supplier currency). If a price exists for this Supplier/Item, you are not able to enter a price - the current price is shown when the line is entered.

*Note: If no price exists for this Supplier/Item, you must enter a price and use **F22=Create Item /***

Supplier to create the Price Profile.

UOM

The Quantity UOM is shown.

Full Text

1 - to copy the Drinks Purchase Management text for the item into the order line text.

Blank - the description from the inventory item is copied into the order line text.

VAT Code

This field defaults to the VAT code associated with the item. It is validated against the VAT Codes file on the General Ledger.

Disc%

Optionally, enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

If the first discount is entered, this will be compared to that held on the item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences described above.

Due Date

This may optionally be entered for non-scheduled orders only. (Scheduled order dates are catered for on a separate screen). If this is not entered, it defaults to the value from the header screen. It represents the date that this order line is due to be delivered.

GL Code

It will default to the General Ledger account code held on the Inventory item file. This code is used to generate automatic nominal dissections if full invoice matching is used. This field is optional.

Job Number

These fields default to values from the header screen and is optional.

Department

These fields default to values from the header screen and is optional.

Note: If the order is a type of schedule then, after adding each line, the Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line. After entering the schedule details, the module returns to this screen.

Tip: If a message 'no storeroom record' is displayed, you can set up these details by taking the Stockroom Details option.

Note that:

- Order quantity cannot be reduced below that already received.

- For back to back purchase orders, the quantity cannot be reduced below the reserved quantity.
- For stock orders the Item code and units of measure cannot be changed.
- An order line can be cancelled by using **F13=Cancel**, once the line has been selected and as long as no receipts have been made against it.
- New order lines can be added.
- The entire order can be cancelled by using **F11=Cancel Order**, as long as no receipts have been made against the order.

Complete the order amendment by using
F8=Update .

Order Amendment Non-Stock Order Details Screen

This screen is displayed for Non-Stock Order Details.

This screen enables you to add or maintain the purchase order line details for an order comprising non-stocked items and services where item tracking is not required, i.e. where the order class is in the range 5-8:

```

Fields:

Supplier Item Ref

Enter the supplier item reference. An order enquiry is available by supplier item reference. This field is mandatory for non-stocked lines.

GL Code

Enter the General Ledger account code which you wish to associate with this order line. An order enquiry is available by this code, and it is also the account to which the goods value is posted in Invoice Matching. This field is mandatory.

Quantity

Enter the quantity.

UOM

Enter the appropriate unit of measure code as set up on the parameters file.

Sr

Enter the code for the stockroom that is to receive the order line. (This defaults to the Stockroom entered in the Order Header Details).

Price

The price must be entered.

UOM

Optionally enter the unit of measure to which the price applies. If left blank the quantity unit of measure is used as a default.

VAT Code

The VAT Code must be a valid code on the General Ledger VAT codes file.

Disc%

Optionally enter up to two discounts to be applied to the price for this order line. This field is optional.

Due Date

The date that this order line is due to be delivered. If not entered, it defaults to the value from the previous screen. This field is optional for non-scheduled orders.

Note: For scheduled orders, the delivery dates are entered on a separate screen.

Job Number

This field is optional and defaults to the value from the header screen.

Department

This field is optional and defaults to the value from the header screen.

Select

- 1 - Amend the line details.
- 2 - Display the schedule line details screen for scheduled or blanket orders.
- 3 - Display the line text screen.
- 5 - Amend landed cost details.

Note: The process is similar to that within the goods receiving function for completing an order short and the same user authority is required.

If the order is a type of schedule then, after adding each line or amending the quantity, the Schedule Line Details screen is displayed for you to enter multiple expected deliveries against the line.

After entering the schedule details, the module returns to this screen in anticipation of the next line.

Complete the order amendment by using **F8=Update**.

Order Amendment Schedule Line Details Screen (Option 2)

If you choose to amend order lines and change the order quantity, and the order is a type of schedule, or if you select '2' from the Order Amendment Schedule Amend Order Lines Screen, the following screen is displayed.

This screen enables you to schedule the order line quantity maintained on the previous screen. The quantity is split into multiple deliveries, each with a required date.

FB=Update completed							
19-16		SA	MW	KS	IM	II	PLYM400A PED171S1

Fields:

Order No

This field defaults to the order header details from the header screen.

Supplier

This field defaults to the order header details from the header screen.

Class

This field defaults to the order header details from the header screen.

Currency

The currency of the order.

Note: Currency will only be displayed if the supplier's currency is different to your base currency.

Line

This field defaults to the order header details from the header screen.

Item Number

This field defaults to the order header details from the header screen.

Qty

This field defaults to the order header details from the header screen.

Supplier Item Ref

This field defaults to the order header details from the header screen.

UOM

This field defaults to the order header details from the header screen.

Stockroom

The stockroom which is to receive the order line.

Receiving Address Code

The code for the address to which the goods are to be sent.

Qty Scheduled

A running total of the quantity scheduled.

Ref

If you wish to amend a schedule, enter the reference number for the schedule line to be amended.

Request Date

Enter the date that the delivery is required. This must be entered.

Quantity

The quantity required for this delivery. Enter '0' to delete a line.

Promise Date

Enter the date delivery is promised by the supplier (if any). If this not entered, this date defaults to the request date.

Confirm Flag

Enter a code here to describe the status of the line, e.g.

C - Confirmed.

D - Delayed.

Q - Queried.

This flag is used as a selection criterion for the Order Confirmation report.

Expected Date

Enter the date that the goods are expected realistically to be delivered. If this is not entered, it defaults to the promise date.

Note: The following fields are available for entry only if a shipping code has been entered on the header screen. These are used for memo

purposes only.

Ship Date

Enter the date that the goods will be shipped, as promised by the supplier.

Advice Note

Enter the advice note number for the shipment.

Tip: The module checks that the total quantity scheduled does not exceed the outstanding quantity.

Once the scheduled deliveries have been entered, and **F8=Update** is selected then these details are written to the transaction file. The previous order line screen is displayed once the update is complete.

Order Amendment Order Line Text Window (Option 3)

This screen is displayed when you enter '3' against a line on the Order Amendment Header Screen.

This is used to maintain order line text, which is created when an order line is added to the order, and will be printed on the purchase order.

Note: This is mandatory for Non-Stock Orders.

```

Fields:

Order Number

The order number from the order header screen.

Supplier

From the order header screen.

Class

The order class.

Line

The order line number.

Item Number

Order line item.

Qty

Order line/schedule line quantity.

UOM

The Unit of Measure for the quantity.

Supplier Item Reference

The supplier item reference for the line.

Stockroom

The Stockroom into which the line will be received.

Item Cost

Purchase cost of item.

Total Cost For Line

Purchase cost of item including landed cost.

Derived Landed Cost

Accumulation of landed cost derived values.

Existing landed costs assigned to the order line are displayed.

Cost Code

Enter a valid landed cost code or use the **F4=Prompt**.

Landed Cost Value

This is a mandatory field. Enter a unit cost if it is a value code i.e. the retrieved percentage / value flag is '0', otherwise enter a percentage value.

Tip: See Appendix A for examples of how landed costs are calculated.

Press **Enter** to continue.

Goods Receiving

3/DPP

This option enables you to record the receipt of goods into various areas. The area of receipt can be specified, i.e.

- 1 - Goods Inwards,
- 2 - Inspection, or
- 3 - Stores.

Drinks Purchase Management expects the input of an order number, an advice note number (the supplier's despatch reference), and a Goods Receipt Note (GRN) number (if the GRN number is not automatically generated). If the order number is not known, then all outstanding orders for a supplier or item may be displayed and the appropriate order selected.

Lot, batch, and serially controlled items are catered for, by the recording of receipts at this level of detail, if required.

The entry of receipts creates the necessary data for invoice matching, and the update of Drinks Inventory Management, including any landed cost calculations.

If a receipt is entered which exceeds, or is less than, the quantity ordered, then the user's authority values are checked before the receipt is accepted.

A report of all receipts may be printed via the 'Receipts and Returns' or 'Daily Receipts and Returns Audit' options.

Back to Back Orders

When receiving back to back orders, reservations against the order will be visible. If the receipt is for more than the total reserved quantity, then the total reserved quantity is allocated, and the remainder booked into stores in the normal manner.

In the case of a direct delivery, over receipt is allowed, but only the Sales Order quantity is invoiced. The remaining quantity is booked into stores in the normal manner. This will require further action depending on the circumstances, e.g.

- Customer accepts over delivery. A sundry invoice needs to be raised (with stock update), to ensure that stock is removed from the stores, and the customer is invoiced for the additional quantity.
- Customer does not accept over delivery. The stock should be returned to the supplier. A supplier return needs to be raised to ensure the stock is removed from the stores, and a credit raised on the supplier.

Note: Direct Delivery Orders can be received into stores only, they cannot be received into Goods Inward or Inspection.

Labels

If required, a specified number of labels may be printed for each order line received. These are output to the printer queue immediately.

Note: Orders cannot be received until they have been released via the New Orders Report (see the section on Checking, Releasing & Printing Orders). For service orders (order class 6), it is not necessary to release or receive the order and it is possible to match invoices to these orders once they have been entered.

Items which have not been ordered cannot be received. It is possible to return chargeable containers, and these can be 'matched' against received associated chargeable containers.

Goods Receiving Select Receipt Point Screen

Select the Goods Receiving option.

This screen enables you to select the receiving point (goods inwards, inspection or stores), date of receipt and stockroom for the goods being received.

```
PM010      QA Drinks Company for V3 - STUDB30A USER GBJBALM1  30/08/95

F3=Exit  F4=Prompt

07-37    SF    MK    KS    IM    II    KENB20A  PED171S1
```

Fields:

Stockroom

Enter the code of the Stockroom into which the goods are being received. The default stockroom is filled in here, if one has been defined for your user ID in the User Authority Parameters option.

If an order has lines which are due for receipt to different Stockrooms, only lines matching this stockroom are presented for receipt.

Receipt Point

Enter the receipt point:

- 1 - For goods inwards.
- 2 - For inspection.
- 3 - For stores.

The receipt point displayed on entry is the stockroom default if one has been set up, otherwise the company default is displayed.

Note: Only stores is allowed for bonded stockrooms.

Receipt Date

Enter the date that goods were received into the above area, if different. Defaults to the current date.

Note: For back to back direct delivery purchase orders the receipt date is used as the despatch / delivery date for the associated sales order.

Once these fields have been entered, or left as default, press **Enter** to display the Goods Receiving Select Order Screen.

Goods Receiving Select Order Screen

This screen is displayed when you have entered a valid receipt point on the Goods Receiving Select Receipt Point Screen.

It enables you to select the purchase order against which receipts are to be made. Outstanding orders by item or supplier may be displayed.

```
PM010          QA Drinks Company for V3 - STUDB30A USER GBJBALM1    30/08/95

04-16    SA      MK      KS      IM      II  KENB20A  PED171S1
```

Fields:

Either

Order Number

Enter the order number against which the receipt was made, if known. Otherwise there are two more methods for identifying and then selecting the required order.

Or

Item

Enter a valid item and use **F13=Order by Item** to display all outstanding orders for this item. An order may be selected from this list.

Or

Supplier

Enter a valid Supplier Code and use **F14=Orders by Supplier** to display all outstanding orders for this supplier. An order may be selected from this list.

Advice Note

Enter the advice note number from the supplier's despatch document. This is a mandatory field.

GRN Number

This field is only displayed for entry if GRN numbers are not automatically generated by the module, as designated on the Company Profile or Stockroom Defaults maintenance. Enter a unique and unallocated GRN Number for this receipt.

GRN Continued

This is displayed for entry to enable subsequent orders to be added to the same GRN.

1 - To enable subsequent orders to be added to the same GRN.

0 - To create a new GRN for this receipt.

Functions:

F13

Orders by item. Display all outstanding orders for the current item.

F14

Orders by supplier. Display all outstanding orders for the current supplier.

Once details have been entered, press **Enter** and the appropriate Goods Receiving Order Details Screen is displayed (depending on whether the order is a type of schedule).

Goods Receiving Non-Scheduled Order Details Screen

This screen is displayed when you have pressed **Enter** after making entries on the Goods Receiving Select Order Screen.

This screen enables you to confirm selected lines on a non-scheduled order as received or partially received. The whole order can be received in one go, provided that the whole of the order is for the selected stockroom.

Order lines can be completed if the received quantity is less, or more, than the order quantity. In these cases, your authority is checked to ensure that you are allowed to process the value of the discrepancy.

Note: The title of this screen can be 'Goods Inwards Receipt', 'Inspection Receipt' or 'Receipt into Stores' depending on the receipt point specified in the first screen of this option.

F21=Order text		
19-08 SF MK KS IM II KENB20A PED171S1		

Fields:

Order Number

From previous screen entries.

Advice Note

From previous screen entries.

Order Class

The code and description of the order class assigned to the order.

GRN No.

This number is either automatically generated or specified in the previous screen, depending on whether automatic GRN generation was selected in the Drinks Purchase Management Company Profile or Stockroom Defaults maintenance.

Stockroom

The code and description of the stockroom into which these goods are to be booked.

For each outstanding order line, the following is displayed:

Lne

Order line number.

O/S Qty

The outstanding quantity, i.e. the quantity not yet received.

UOM

The code describing the issue unit of measure for the item ordered (stock orders), or the order unit of measure (non-stock orders).

Order Qty

The original order quantity for this order line.

Item

The code of the item ordered.

Supplier Item Ref

The supplier's reference for the item ordered.

Tip: Below each line, the date for the order line and the first line of order line text are displayed.

Select

Against each line, you may enter one of the following options:

- 1 - Display Order Line text for this line.
- 2 - Receive the Order Line in full.
- 5 - Receive the order line in full with amendment to Landed Costs.

Alternatively, you may enter details at the base of the screen.

Lne

Enter the line number corresponding to an order line to be partially received, or over-received.

Qty

Enter the receipt quantity.

UOM

If this is a stock order (classes 1-4), the unit of measure will default to the issue unit of measure as set up in Drinks Inventory Management, Item Maintenance.

If this is a non stock item, the unit of measure must be a valid unit of measure set up for the parameter UOMC in the Drinks Purchase Management parameters file.

No. Labels

This is only displayed for entry if the company profile is set up to enable labels to print. If so, enter the number of labels to be printed for this line. It defaults to printing one label if no number is entered. Labels are printed immediately.

Int. Trace

For batch/lot/serial controlled items where the quantity entered relates to a single batch/lot/serial, enter the batch/lot/serial number here. A separate screen is displayed for the entry of numbers if nothing is entered here. This field is optional for non-batch / lot / serial controlled items.

Ext. Trace

It may be used to enter a reference number related to this specific delivery, if required. This field is optional.

Expiry Date

Enter the date on which the 'shelf life' of this consumable item will expire. This field is optional.

Amend Landed Cost

This is an optional field. When receiving lines using the F8 key, or by entering the reference number in the reference field, a '1' here will allow landed cost details to be amended.

Several means of receiving goods are available:

Full Order Receipt

This is when the received quantities agree with the whole order detail. This is achieved using **F8=Update**. If internal or external references, number of labels to print or expiry dates are required, these should be entered at the foot of the screen prior to using **F8=Update**. The values entered will then apply to all lines. If different values are required for each line, then each line must be received individually.

Note: If the order is for more than one stockroom, only the lines for the stockroom currently selected for receipt are updated.

Partial Line Receipt

This is when the full order line quantity is not received in one delivery. This is achieved by entering the reference number for the line at the foot of the screen, together with quantity, and optionally UoM and complete fields. Press **Enter** to accept the partial receipt. However, if an attempt is made to 'close' the order, the module checks the user's authority values prior to accepting.

Note: Actions against each line are effected immediately and the same line cannot be re-selected for action without re-selecting the order and / or GRN.

Warning: If the value of the 'written off' goods in this partial receipt exceeds the user's maximum allowable value, or if the value of the 'written off' goods expressed as a percentage of the total order line value exceeds the users' maximum allowable percentage, a message is displayed at the foot of the screen and the partial line receipt will not be accepted as a complete delivery.

Over Receipt

This is when a quantity greater than that ordered is received. This may be recorded by entering the same details as for a partial receipt - although the Quantity will be greater than that expected. The module makes the same checks for user authority as for the partial line receipt, except that value and percentage will be calculated using the 'excess' quantity received rather than the 'written off' quantity.

Note: Authority to over or under receive is calculated using the User Authority values maintained in Drinks Purchase Management Maintenance.

If receipt into stores (location 3) is specified, the following updates occur:

- Stock balances for 'on-order' are reduced, and 'physical' stock increased.
- Stock movement records are written to audit the receipt.
- Actual costing data is updated (i.e. latest, average and FIFO), including consideration of landed costs.

Note: If you receive goods into Goods Inwards or Inspection, they must be transferred to stores before these updates will occur. Use the Transfer Goods Locations option.

Non-Scheduled Orders' Troubleshooting:

If the item being received is set up as requiring inspection in item maintenance, and is not being received into inspection, then a warning window is displayed. Press **F8=Update** to process the receipt without going through inspection. Press **Enter** if you do not wish to process the receipt.

Functions:

F9

Enter container receipt / return details.

F17

Maintain Batch - if applicable.

Tip: The required number of labels are output immediately to the printer queue. The details printed are as follows:

GRN number.
Date received.
Label number.
Supplier code.
Advice note number.
Supplier name.
Internal trace reference.
Expiry date.
Supplier item reference.
Item number.
Quantity received.
Stockroom.

Goods Receiving Scheduled Order Receipt Details Screen

This screen is displayed when you have pressed **Enter** after making entries on the Goods Receiving Select Order Screen.

This option is used to confirm lines on a scheduled order as received or partially received.

This facility is similar to the one described previously for non-scheduled orders. The differences are highlighted in this section.

The information displayed is as for non-scheduled orders, except:

- 'Schedule Order' is displayed below the stockroom.
- Only deliveries scheduled for delivery within the 'time fence' number of days are displayed and eligible for receipt. This time fence factor is maintained on the Company Profile.

The methods of receipt vary as follows:

- A selected line may not be received in total by entering '2' against it. Instead quantities are received by entering the line number and quantity at the foot of the screen.
- The 'complete line' option is removed as this is not required for a schedule.
- If a quantity is received which is greater than that which is due for a selected scheduled delivery, then the excess is deducted from the next scheduled delivery.

Only on the final receipt is the user's authority checked.

Functions:

F9

Enter container receipts / return details (see the section on Goods Receiving - Container Receipts / Returns later in this chapter).

F17

Maintain the details for a lot - if applicable. If the lot has not yet been specified in the Lot/Trace field, you may prompt for it.

Tip: The required number of labels are output immediately to the printer queue. Details printed are as follows:

GRN number.

Date received.

Label Number.

Supplier.

Advice note number.
Supplier name.
Internal trace reference.
Expiry Date.
Supplier item reference.
Item number.
Quantity received.
Stockroom.

Goods Receiving Order Line Text Window (Option 1)

 This screen is accessed by entering a '1' against the required Order Line.

It enables you to display and optionally maintain order line text at receipt time.

```

Fields:

Supplier

The supplier code and the first line of the name and address from the Order Header.

Order / Line

From the previous screen.

 Existing order line text details, created originally in order entry, are displayed. Up to 99 lines of order line text, each of up to 45 characters.

Position To

Enter line number that display is to start at.

Insert/After

Enter the number of lines to be inserted after the entered line number.

Delete/From

Enter the number of lines to be deleted starting from the entered line number.

 Select **F8=Update** to write the order line text details to the text file.

Goods Receiving Batch / Lot / Serial Details Screen (F17)

This screen is displayed when you take
F17=Maintain Lot Details from the Goods
Receiving Scheduled Order receipt Details
Screen.

It enables you to enter specific references for batch, lot and serially controlled items. It is displayed automatically for any such controlled items, unless an entry was made on the previous screen in the internal reference field. In the latter case, the module uses the internal reference as the batch, lot or serial number.

The order number, advice note, item code and quantity received as on the previous screen are displayed.

-			
F12=Previous			

Fields:

Lot Number

Enter the appropriate number(s) for each batch/lot or serial number.

Quantity

Enter the quantity received against each batch number. The total quantity entered on the screen must equal the quantity received.

Note: Quantity is not entered against serial controlled items as each unit must have a unique reference.

Once the full quantity is entered, the order line and transaction files are updated with the details.

Goods Receiving Internal Order Text Screen

This screen is accessed by taking the **F21=Internal Text** option from the Goods Receiving Details screen.

It enables you to maintain order specific text to be used for internal output only - it does not appear on purchase order prints.

The supplier/order number as on the previous screen, and any existing internal order text, are displayed in a standard Text Entry window.

Up to 99 lines of text, each of up to 45 characters, may be maintained.

Fields:

Position To

Enter the line number at which the display is to start.

Insert / After

Enter the number of lines to be inserted after the entered line number.

Delete / From

Enter the number of lines to be deleted starting from the entered line number.

Select **F8=Update** to write the details to the text file.

Goods Receiving Landed Cost Details Screen (Option 5)

This screen is accessed by putting a '5' (receive / landed costs) against any Order Line or by placing a '1' in the amend landed costs field when receiving or partially receiving.

You may have to deal with other receipt processing screens, such as inspection warnings (if the item is set up in Drinks Inventory Management Maintenance as requiring inspection), or lot/batch/serial details, before coming to this screen.

The Landed Cost Details screen is displayed, as detailed earlier in this section (although the screen title shows amendment as opposed to entry). This screen enables you to maintain landed costs assigned to particular receipt lines.

Note: If multiple Lots are entered on the Lot details screen, each Lot will have its own landed costs assigned.

Goods Receiving Container Receipts / Returns Screen (F9)

This screen is displayed when **F9=Containers** is selected from the Goods Receiving Detail screen, or when either **F3=Exit** or **F8=Update** is selected from the Goods Receiving Detail Screen and an item has been entered for which containers are expected.

It enables you to enter details of the number of containers received and returned against this order. Details of the containers received and returned are displayed in the main body of the screen.

The screen is initially displayed showing monitored containers associated with items being received, but can be modified.

Fields:

Selection

If a line is selected with a '1', those details are copied to the entry section at the base of the screen for amendment. Alternatively, details of any other containers received can be amended or returns entered.

Item

Enter a valid container item number. If an item code is entered that has been defined as a kit list parent item, the kit list component item details will be used in its' place.

Quantity Received

Enter the number of containers received. These must be associated containers and as such are not booked into stock.

Quantity Returned

These must be containers held in the empties stockroom and are booked out of stock. Enter the number of containers returned.

Press **F8=Update** to save the details.

Returns and Adjustments

1... **2...** 4/DPP

This procedure provides a facility to record returns, adjustments, or scrap against a given receipt. You can request a rejection note to be printed including the appropriate text.

- Header - rejection note number, rejection date, supplier name and address, replacement required, date received, GRN number, stockroom, and supplier code.
- Lines - item references, return / scrap quantity and UOM, return / scrap value, original order number and line number, advice note number, lot reference, and rejection note number.
- Totals - rejection note value.

Valid reason codes must be entered for returning, rejecting, or scraping stock.

Returns / Adjustments Selection Screen

This screen is accessed by selecting Returns and Adjustments, and enables the selection of the Goods Receipt Note (GRN) to be processed.

You can determine the specification of:

- Whether replacements are required for the goods, from this supplier.
- Whether or not a rejection note is to be printed, after details have been entered.

F3=Exit F4=Prompt

05-11  SA  MK  KS  IM  II  KENB20A  PED171S1
```

Fields:

GRN Number

Enter the GRN number associated with the receipt against which the return is to be recorded.

Replacement Required

- 1 - To add return quantities to the outstanding balance on the original order.
- 0 - Otherwise.

Date

Enter the date of this return / scrap / adjustment. This field defaults to the current date.

Rejection Note Required

- 1 - To print a document to accompany returned goods to the supplier, after completing the detail screen
- 0 - Rejection note not required.

Stockroom

Enter the code of the stockroom from which the goods are being returned, if required. The field defaults to the stockroom defined as the default for your user ID, if you have one.

Press **Enter** to display the Returns / Adjustments
Details Screen.

Returns / Adjustments Details Screen

This screen is displayed when you have made the relevant entries into the Returns / Adjustments Selection Screen.

It enables you to specify which lines on the GRN are to be processed. For each such line the quantity returned / scrapped is entered, along with a reason code for scrapped items.

```

Fields:

GRN No. / Original Receipt Date / Stockroom / Supplier/ Date / Replacement Required

Displayed from the previous screen / original receipt transaction.

Note: All lines on the GRN are displayed. If an item is held at multiple locations (i.e. goods inward, inspection or stores), then these are displayed on separate lines.

Ref

Computer-generated reference number, for this screen display only.

Supplier Reference

The supplier's item reference.

Item

The item received.

Order No.

The order number received.

Qty / UOM

Quantity received in the item issue unit of measure. (This quantity is reduced as entries are made on this screen.)

Loc

Location:

S - Stores.

I - Inspection.

G - Goods Inwards.

Invoiced Value

Invoiced value, or order value if not yet invoiced.

Select

To return the whole of a line enter a '1' against the line in the list. You must allocate a reason code for the return.

Alternatively, you may return part of a line by entering the following at the base of the screen:

Ref

Enter the reference and number of the line to be amended.

Qty

Enter the quantity returned / scrapped.

UOM

The unit in which the quantity is expressed. This defaults to the displayed unit of measure if it is not entered.

Reason Code

The reason code which you wish to associate with this return. It must be a valid scrap reason code on the parameters file ('SCRC' parameter).

Note: If the location of the item is 'S' (Stores) the stock records are reduced accordingly.

Functions:

F21

Text for rejection notes - only available if the option to print rejection notes was selected on the previous screen.

Press **Enter** to write all updates to the transaction file.

Transfer Goods Location

5/DPP

You can transfer goods from one 'location' to another.

Currently three locations are allowed:

1 - Goods Inwards.

2 - Inspection.

3 - Stores.

Only when goods are received or transferred into stores are Inventory stock details updated.

The method of transfer is flexible in as much as single lines of, or a complete, GRN may be moved. When moving individual lines, the quantity to be moved is also input to allow several movements of one delivery.

A report is generated to give an audit trail of all movements. A goods location transfer report is automatically sent to the printer.

Tip: This facility is not available in a bonded stockroom. Bonded goods must always be held in 'Stores'.

Transfer Goods Selection Screen

This screen is accessed by selecting the Transfer Goods Location option.

It enables you to select the location from which goods are transferred, and the location to which the goods are moved. A GRN number and/or item must be specified.

```

Fields:

Move From

Enter the location from which the goods are to be moved.

- 1 - Goods Inwards.
- 2 - Inspection.
- 3 - Stores.

Move To

Enter the location to which the goods are to be moved, using the same choices as above.

Note: This must be different from the 'Move From' location.

Stockroom

Enter the code of the stockroom from which the goods are being returned, if different. This field defaults to the stockroom defined as the default for your user ID if you have one.

GRN Number

Enter a valid Goods Receipt Note (GRN) number to identify the goods which have to be moved. This field is optional.

Item

Enter a valid item to identify the goods to be moved. This field is optional.

Note: Either a GRN or an Item must be entered.

Date

Enter the date of the transfer. This field defaults to the current date.

Note: If GRN only is entered, then all current receipts which are at the 'from' location and stockroom for this GRN are displayed.

If GRN and Item are entered, only current receipts for this item on this GRN which are at the 'from' location and stockroom are displayed.

If Item only is entered, all current receipts for this item, across all GRNs, at this 'from' location and stockroom are displayed.

Press **Enter** to display the Transfer Goods Details Screen.

Transfer Goods Details By GRN Screen

This screen is displayed if a valid GRN number was entered on the Transfer Goods Selection Screen.

If an item was also selected, then only details for this item will be displayed. Otherwise details for all items within this GRN are displayed.

Tip: The whole GRN can be transferred by using **F8=Update**, or selected lines can be transferred, or partially transferred.

Fields:

From / To / GRN Number

Details from the previous screen are displayed.

Advice Note / Supplier / Supplier Name

Details from goods receiving are displayed.

Stockroom

Stockroom code from previous screen.

The details shown for each receipt line are as follows:

Ref

This system generated reference number (for use on this screen only) may be used to identify a line for partial transfer.

Item Ref

The code (reference) of the item received.

Date

The date of the receipt.

Quantity / UOM

The quantity currently outstanding at this location, in the item issue unit of measure.

Traceability Ref

Internal trace reference, or lot/batch/serial number entered at receipt time.

Expiry Date

The end of the shelf life (automatically sets to the end of the century).

1 - To transfer the full quantity of that line.

2 - To view or maintain text for the original order line, via the standard Order Line Text window.

If a partial Transfer of the order is required, the following data may be entered at the base of the screen:

Ref

Enter the reference number of the line to be part transferred.

Quantity

Enter the quantity to be transferred.

Note: This quantity must be less than the order quantity.

UOM

The unit in which the above quantity is expressed. Where this is left blank, the unit as shown for the line will be assumed.

Note: Any transfers to or from stores result in the appropriate stock updates.

Tip: A Goods Location Transfer Report is sent to the printer automatically. It contains the following details:

Location From/To.

Date of Transfer.

Supplier.

Order/Line Stockroom.

GRN Number.

Item.

Quantity Transferred.

Unit of Measure.

Batch/Lot/Serial Number.

Use **F8=Transfer** to transfer all displayed lines.

Transfer Goods Details by Item

The Item Details screen is displayed if an item code was entered on the previous screen without a specific GRN number.

The fields and options (to Transfer all or part of the Order) are the same as for the Transfer Goods Details By GRN Screen.

Match Invoices To Receipts

6/DPP

Invoice matching allows you to authorise all invoices relating to purchase orders before payment. To use this facility all invoices must be posted to the Accounts Payable Log. After matching, the invoice is posted from the log to the ledger and payment is made

You can match receipts against invoices and returns against credit notes. Multiple receipts can be matched to an individual invoice. Usually the supplier's invoice is used as a guide in the matching procedure. During matching amendments can be made to:

- The order line price - with the option to update the Item / Supplier Profile, if appropriate.
- Order line discount.
- Order and invoice text.

Additional dissections are allowed for changes not on the original order, such as an unexpected packing cost. Unmatched quantities on receipts are kept available for matching against latest invoices. You can prohibit invoice matching for goods not in the Stores location by amending the Company Profile.

Note: Invoice matching writes the appropriate analysis codes and dissections to the logged invoice and so Advanced General Ledger dissections need not be entered when the invoice is first logged.

Dissections

A dissection is a breakdown of an order by values posted to accounts in the General Ledger and is created in the Accounts Payable log. Four dissection types are possible:

Goods dissection

This involves the posting of values of goods to specified goods account(s) in the General Ledger. These accounts are initially taken from the item master file for the product.

VAT dissection

The VAT value is posted to VAT account(s) in the General Ledger. The General Ledger VAT subsystem will assign postings to the correct accounts according to the VAT codes in the General Ledger.

Variance dissection

If you buy a standard costed item at a different cost to the standard cost, a variance occurs which must be accounted for. The value of the variance will be posted to the appropriate account which should be specified for that product in item maintenance in Drinks Inventory Management.

If you change the item cost at invoice matching, a variance also occurs and is dealt with as above.

Difference dissection

When invoice matching, if the goods value differs from the invoice value, this difference must be accounted for by a dissection. The General Ledger account to which this is posted is defined in the differences screen in invoice matching.

The Drinks Purchase Management Company Profile has a flag asking if you wish to 'Print Invoice Matching detail?' If you say yes, the Drinks Invoices Matched Report will print automatically. If you do not choose this option, you may run this report manually from the Accounts Payable Enquiries and Reports menu.

Invoice Match Selection Screen

Select the Invoice Match option.

This screen enables you to select the supplier to be processed, and a specific advice note (if known).

```

Fields:

Supplier / Name / Currency / Advice Note / Order / GRN / Date

Details from the advice note header.

All lines on the advice note, which have not yet been matched, are displayed with the following details:

Item

The code of the received item.

Cost Code

The General Ledger cost code associated with this line. This is the account used for goods dissections generated automatically by this routine.

Loc

The item's current location, i.e.:

S - Stores.

I - Inspection.

G - Goods Inwards.

Supplier Item Ref

The supplier's reference for the item.

Quantity/UOM

The quantity received expressed in the appropriate unit of measure.

Gross Price/UOM

The gross purchase price of the item in the price unit of measure of the order line.

Stockroom

The stockroom into which the order was received.

VAT

The VAT code assigned to the order line.

Disc

The first order line discount.

Special Disc

Up to three special discounts are shown. These are the two discounts entered for the whole order, and the second order line discount.

Value

The total net value of the line. This is obtained by taking the price, applying the discounts, and extending the net price using the quantity. Against each line, you may enter one of the following options:

- 1- Amend the details and then match the line.
- 2 - Match the line with no amendments.
- 3 - Display and/or maintain the standard order line text window.

Press **Enter** to continue.

Invoice Match Details Continuation Screen (Option 1)

This screen is displayed when you select option '1' from the Invoice Match Details Lines Screen.

If a line is selected for amendment, the following details may be overtyped at the foot of the screen:

Quantity.

Gross Price / UoM.

Discount.

Extra Discounts.

Fields:

The item code, supplier item reference and VAT code are displayed for reference only.

*Note: If the price is altered, a message is displayed stating 'Price difference: **F10** to update price & discount or **F20** for special price'. If current price structures exist this message is not displayed and the entered price is accepted.*

The following entry options are available:

- To accept the entered price for this order and update the item supplier profile price to reflect the entered price, press **F10**.
- To accept the entered price for this order only, press **F20**.

- To change the price you entered, press **F20** to accept a special price and then amend the order line by putting a '1' against it.

Note: If you make amendments that change the value of the order, your authorisation level is checked (the authorisation level for your User ID is set up in Drinks Purchase Management Maintenance under the User Authority Parameters).

Note: When matching advice notes, it is not possible to match orders of different currencies.

Invoice Matching Troubleshooting:

- If the changes you have made exceed your authority level, you will receive a message stating 'Excess value on invoice exceeds authority'. In this case you will need to get someone with sufficient authority to carry out the amendments.
- Matching against lines where the goods are not in the stores location may be prohibited with an appropriate error message displayed. This is an option on the Company Profile.
- The item supplier price may be updated automatically if the price is changed by an amended match on this screen. This is an option on the Company Profile.

Functions:

F13

Continue with selection of the required advice notes, or continue to the Invoice Match Completion screen.

Once all lines have been selected for matching, or the **F13** key is pressed when at least one line has been selected, the Invoice Match Completion screen is displayed.

Invoice Match Completion Screen

This screen enables you to confirm as complete the matching, against the current, invoice.

If you have selected all the advice notes that are to be matched, select **F8=Complete Match** to complete matching.

PM031	HW - Handy Wholesalers Ltd	USER GALBRAIJ	24/10/95
Invoice Match			12:06:53
Supplier.. CD01		Advice note..	
Name..... Consolidated Distillers plc			
Matched value..	1016.50

03-63	SP	MW	KS IM II PLYM400A PED171S1

Fields:

Supplier / Name

From the previous screen.

Matched Value

The running total, maintained by the module, of the value of goods from the above supplier selected for matching.

Advice Note

Enter a valid advice note in order to return to the Invoice Match Detail Screen for this advice note, or process a further advice note. Any subsequent matched lines will be added to those already selected.

Currency

The default supplier currency.

Alternatively, leave Advice Note blank and press **Enter** to return to the Unmatched Advice Notes screen to select further advice notes for matching.

Partial match and complete match are processed in a similar fashion in that both functions insist that the whole value of an invoice is accounted for a potential

match, separate dissections are written for the value which remains unmatched, allowing the rest of the invoice to be matched at a later date. Partially and completely matched invoices may be requested separately on the 'Invoices Matched with Purchasing' report in Accounts Payable.

Invoices may still be selected for subsequent matching until the invoice values are transferred to General Ledger from the Accounts Payable log. However, only the value of the invoice not already matched directly with receipts is available for further matching.

Functions:

F7

Partial Match. Select partial matching and display the Invoice/Credit Selection Screen.

F8

Complete Match. Select complete matching and display the Invoice/Credit Selection Screen.

F11

Cancel this Match. Cancel all selected lines and return to the Initial Selection Screen.

Invoice Match Difference Warning Screen

This screen highlights any difference between the goods value of the invoice and the total value matched against the invoice.

If there is no difference, this screen is not displayed. Options are provided to complete, continue, or cancel this match.

The goods value of invoice, invoice number, total matched value and difference are displayed. The module will display the next screen based on the function key selected.

Optionally enter a description for the dissection.

Select **F8=Update**.

A check is made to ensure that the matched value plus the value entered on this screen equals the invoice goods value. If it does not, an error message is displayed and the difference must be resolved.

Once this is reconciled, the update will 'flag' the invoice record on the Accounts Payable log as being either partially or completely matched, depending on your earlier selection. Dissections will also be written to the Accounts Payable log. These will be either generated automatically from the matching with receipts, or dissections entered manually via this screen.

All matched advice note lines are updated accordingly.

See earlier in this Section for more information on dissections.

When you transfer the invoice values from the Accounts Payable log to the General Ledger, the details of all dissections will be displayed. See the Accounts Payable Product Information for more information.

Functions:

F7

No update. No update is performed - all matched details for the current matched advice note(s)/invoice are lost. Return to the initial select screen.

F8

Update. Update the dissections, invoice and advice note records. Return to the initial selection screen.

Invoice Match Stand Alone

To perform invoice matching without reference to the Accounts Payable invoice log.

This is reached by choosing the Invoice Match Stand Alone option.

You may wish to use this option if you do not want the invoice log in Accounts Payable to be checked/updated for the specified invoice or credit note number.

Refer to previous section, 'Match Invoices To Receipts', for further details, as otherwise the two functions are similar.

Note: The 'Difference Warning' and 'Dissections' screens are not displayed as there is no Invoice Log to check against.

The Invoices Matched Audit Report is printed if the Company Profile Flag is set to request it. This flag is set up in the Drinks Purchase Management Utilities, Company Profile option.

Landed Costs

1... **2...** 8/DPP

This option is used to enable the amendment of Landed Costs (variable costs that have occurred over and above the agreed purchase price) that have been assigned to receipt lines. A table of Landed Costs is maintained, where the calculation is as follows:

Landed Costs = Price + Dependent Percentages + Non-Dependent Percentages + Dependent Values + Non-Dependent Values.

Landed Cost Selection Screen

Select the Landed Costs option.

This screen enables the selection of landed costs assigned to receipts.

Landed Costs Maintenance

GRN No..... 500006

Or

Item.....?..

Receipt Date..

F3=Exit F4=Prompt

05-23 SF MK KS IM II KENB20A PED171S1

Fields:

Either:

GRN No.

Enter the GRN number associated with the receipt against which the landed cost details were assigned.

Or:

Item

Enter the required item to maintain landed costs.

Receipt Date

Enter the required receipt date to maintain landed costs.

Once validation is complete, if only one line matches the selection, the Landed Cost Details Screen is displayed. Otherwise, a list of matching lines is presented, from which you may select a line to maintain landed costs.

Landed Cost Details Screen

This screen is displayed when you have made valid entries into the Landed Cost Selection Screen.

This screen allows you to select order lines so that you can maintain landed costs.

At the top of the screen the following information is displayed.

Either:

GRN No.

The Goods Receipt Note number, if it was selected on the previous screen.

Or:

Item

The item, if it was selected on the previous screen.

Receipt Date

The receipt date, if it was selected on the previous screen.

On each line the following details are displayed:

No.

Order number.

Line

Order line number.

Seq

The blanket / sequence number.

Date

The receipt date.

Receipt (Batch/Lot)

The Lot number for this receipt, if applicable.

UOM

The UoM code this cost.

Landed Cost

The default landed cost value. This value can be changed if required. This is the value for the quantity received.

Note: Appendix A shows how landed costs are calculated.

Item

The item code.

Code/Description

The landed cost code and its description.

Press **F8=Update** to save the details.
