Reports

Drinks Purchase Management Reports

The reports in Drinks Purchase Management may be grouped into five categories:

- Orders.
- Adjustments.
- Statistics.
- Accruals.
- File Lists.

All the above are found on the Reports Menu, except for the file lists, which are found on the Maintenance menu.

This section of the Product Information details the options which provide the application's reports.

Order Pre-Print Report

1/DPR

The printing of orders for checking is sometimes referred to as pre-printing and is carried out by running this option. The option produces a copy of the selected order, or all orders in the chosen stockroom that have not yet been printed. The orders are printed in the same format as they will eventually appear, but are printed on standard paper rather than special stationery.

This report may be run at regular intervals in order to allow checking and amendment of released orders before they are finally printed.

Frequency

As required.

Either:

Stockroom

Enter the stockroom required.

Or:

Purchase Order

The purchase order number required.

Press **Enter** to submit the report (after successful validation).

Release / Print Orders Report

2/DPR

The option to print produces a copy of successfully released orders, whether or not they have been pre-printed. Printed orders comprise only those selected in Order Entry for printing.

Once an order has been entered on the system, it is referred to as a confirmed order. However, before receipts can be entered against it, it must be released. The releasing of orders is carried out by running the Release and Print option. This option produces reports of all new orders in the selected Stockroom that are either successfully released or which fail authorisation, whether they have been entered manually or created from purchase requisitions.

Released orders are printed on special purchase order stationery, but otherwise appear the same as other prints.

Note: For Service Orders (order class 6) it is not necessary to release or receive the order, and it is possible to match the invoices to these orders once they have been entered.

This report should be run at regular intervals (probably at least daily) in order to release all orders that have been confirmed since this report was last run.

Frequency

Fields:

Either:

Stockroom

Enter the stockroom required.

Note: Stockrooms can only be selected by Purchasing Officers identified against the stockroom on the Inventory Company Profile.

Or:

Purchase Order

The purchase order number required.

Note: Only orders passing authorisation are printed.

If you select an individual order, and the authorisation fails, an error message is displayed.

Note: If the selected order is flagged as to fax enabled, a fax number selection window is presented.

If you select a stockroom, the submitted job prints a report of orders which failed authorisation and have been passed to the authoriser.

Press **Enter** to submit the report (after successful validation).

Print GRNs

3/DPR

This option prints Goods Receipt Notes for all receipts to a specified stockroom made since this option was last taken.

A screen is displayed asking you to select the stockroom at which goods have been received. (You can prompt for valid stockrooms.)

Note: Your default stockroom is displayed in this field if you have one.

If stockroom is not specified, GRNs are printed for all stockrooms.

Overdue Orders By Supplier Report

7/DPR

This screen allows you to produce a report giving details of overdue orders. For this report you may specify information relating to one supplier, a supplier range, or all suppliers. For these suppliers you may include overdue orders specific to one item, a range of items, or all items. You may also define a range of delivery due dates, which allows you to report on all orders due within a specific time period.

The report gives the following details:

- Supplier code and name.
- Item code and description.
- Order number.
- Line number.
- Blanket sequence.
- Purchase officer.
- Stockroom.
- Outstanding quantity.
- Quantity unit of measure.
- Price.
- Due Date.
- Price unit of measure.
- Currency code.
- Base value.
- Telephone number of supplier.
- Value totals for each item/supplier combination.
- Value totals for each supplier.
- Total value outstanding.

Overdue Orders by Supplier Report Selection Screen

Select the Overdue Orders by Supplier option.

Optionally, you may limit the report to a particular Supplier, Nominal Code, Item Class or Purchase Officer by entering the required value here. The selection should correspond to the report sequence selected previously.

Leave blank for All.

Press **Enter** to submit the report.

Supplier Performance

22/DPR

This report provides statistics relating to the services provided by each supplier. The performance of each supplier is evaluated on the basis of:

- Timeliness - comparing due date with receipt date.
- Quality - using the number of returns made.
- Price - using order and invoice prices.

Each of these factors can be given relative weight depending on its importance to your company. The system then calculates an overall rating for each supplier based on these weightings. The report is intended as an aid in determining supplier efficiency.

Supplier Performance Report Selection Screen

Select the Supplier Performance option.

The report is sequenced by item or supplier, conditioned by range of delivery due dates. Performance can be shown at summary level only (item or supplier) or at detail level (item or supplier).

```

```

Fields:

Sequence By

Enter the sequence:

- 1 - To sequence the report by item.
- 2 - To sequence the report by supplier.

Summary/Detail

Enter the type of report you want:

- 1 - For a summary report.
- 2 - For a detailed report.

Item From/To

Optionally, you may restrict the report to a range of items. Leave blank for all. If 'Item From' is entered and 'Item To' is left blank, a single item is selected. (This applies to each From/To selection.)

Supplier From/To

Optionally, you may restrict the report to a range of suppliers. Leave blank for all.

Due Dates

Enter a range of due dates for the report. The defaults assume all order lines up to the current date.

Weight Factor

Enter a weighting factor to be assigned to each performance attribute which reflects their relative importance. The defaults are '1' for each attribute, but can be overwritten. The higher the value in the field, the higher the relative importance of this factor in calculating supplier performance.

Timeliness

To calculate timeliness, the function first of all calculates the 'Number of days late'. For received items this is calculated as receipt date less due date. For outstanding items this is calculated as tomorrow's date or the maintained expected date (whichever is the later) less the due date.

If the result of either of the above calculations is negative, zero days are assumed.

A ratio is calculated relating 'Number of days late' for each item to 'lead time'. The 'lead time' used here is the number of days from order to due date for the item. These two statistics are expressed as an average for a single unit of the item, across all receipts/orders in the selected range for the level reported.

At supplier level this average is based on value rather than quantity.

Quality

Quality is expressed as a percentage of quantities rejected against quantity received. Rejects are defined as returns or adjustments where a reason code has been specified.

Price

Price performance is expressed as a relationship of quoted order price to invoice price. It is therefore based on invoice matched data only.

It is shown as a total excess charge and as a ratio of excess charge to original order value.

Press **F8=Submit** to submit the report for batch processing.

Accruals (Receipts Not Invoiced)

26/DPR

This report provides an analysis of receipts which have not yet been invoiced.

All receipts are analysed by the System 21 General Ledger Account Code associated with the order line against which the receipt was recorded. For stock orders, this will have been derived from the item master file, as set up in Drinks Inventory Management. For non-stock orders, this code will have been entered in order entry.

Frequency

As required.

Totals

By account code.

By company.

Accruals (Receipts Not Invoiced) Selection Screen

Select the Accruals (Receipts Not Invoiced) option.
