Chapter 5

Three Way Match

Drinks Purchase Management Invoice Matching Functions

The Invoice Matching functions are a quick way of matching invoices to advice note details.

Four options allow you to:

- Set up the tolerance levels allowed for invoice matching
- Match invoices (or credit notes) to advice notes interactively
- Make changes to invoices which have not yet been matched.
- Match invoices and receipts automatically, in batch mode

Use invoice matching when

- Purchase orders have been entered and receipts posted.
- Purchase orders have been entered but some receipts are missing. In this case receipts will be held on an invoice log for automatic matching. By setting up the Accounts Payable (AP) company profile field 'GL Postings for Receipts', unmatched invoices can be posted directly to the ledger.
- The AP company profile field 'Post Unmatched to Ledger' allows an early reclaim of VAT by posting directly to accrual, VAT and creditor General Ledger accounts.

The procedure for using the Invoice Matching options is as follows:

- **Delimiter Maintenance:** Set up values or percentages by which the match is allowed to vary from an exact match and still be accepted (i.e. tolerance levels). Tolerance (or variance) levels may be set up and amended for
 - Individual suppliers
 - Individual purchase orders
 - Individual line numbers
- **Invoice Matching:** Enter an invoice, match with order and receipt lines and post either to the ledger or to the log. Or post unmatched invoices to the unmatched invoice log.
- **Maintain Unmatched Invoices:** This option allows you to access the unmatched invoice log and amend invoice details.

Note: You cannot use this option to make changes to the receipts to which you will match the invoices.

- **Batch Invoice Matching:** To be used once missing receipts have been added. This option automatically accesses the unmatched invoice log to match invoices with receipts. That is, selects items where the advice note number is the same on both the invoice and the receipt.

- Pay invoices: Use the payment processing options to pay matched invoices automatically.

Note: The invoice matching is also known as 'three way match'.

Delimiter Maintenance

4/DKAPI

Use this option to set up tolerance levels for invoice matching. You set up values or percentages by which the match is allowed to vary from an exact match and still be accepted (i.e. tolerance levels). Tolerance levels may be set up and amended for

- Individual suppliers
- Individual purchase orders
- Individual line numbers

If you do not set up tolerances then receipts and invoices must match exactly.

Delimiter Maintenance Selection Screen

 Select the Delimiter Maintenance option.

The Selection Screen is displayed.

PM500	DK - QA Drinks	USER GBJBATMS	16/09/97 15:03:01

6-21	KS CL IM DM II	EDN400A KB	ST0672S1

Fields:

Supplier

To enter tolerance levels for a particular supplier, enter that supplier here.

Purchase Order

To enter tolerance levels for a particular order, enter that order here.

Line Number

To enter tolerance levels for a particular line, enter the line number here.

Leave all fields blank to enter tolerance levels for the current company.

Press **Enter** to display the Invoice Matching Delimiters Detail Screen.

Delimiter Maintenance Invoice Matching Delimiters Detail Screen

This screen is displayed when you have entered details in the Delimiter Maintenance Selection Screen and pressed **Enter**.

This screen enables you to set up tolerance levels. These are values or percentages by which the invoice values can be out and still be accepted.

PM500	DK - QA Drinks	USER GBUJA1MS	16/09/97 15:03:19
Invoice Matching Delimiters			
Supplier..... AAA		Association of Active Architects	
Quantity Variance %...From <u> .00 </u> To <u> .00 </u>			
Price variance %.....From <u> .00 </u> To <u> .00 </u>			
Price Variance Value...From <u> .00000 </u> To <u> .00000 </u>			
Days Past Expected Date..... <u> 0 </u>

F3=Exit F12=Return F8=Update			
10-38	*	KS CL IM DM II	EDN400A KB ST0672S1

Fields:

Quantity Variance %

Enter a range of percentage differences allowed between the invoice quantity and the receipt quantity.

Example: From 20.00- to 20.00 (to allow a variance from -20% to 20%).

Price Variance %

Enter a range of price differences allowed between the invoice price and the purchase order price.

If you enter 'From' a minus value then the invoice price may be less than the receipt price by that value.

Price Variance Value

Enter a range of amounts by which the invoice price and the purchase order price may differ and still be accepted as a match. Use whole numbers only.

Note: In the ranges entered minus values are allowed.

For an invoice to be accepted as matched, the

*variance between the invoice and purchase order
price must be within both the price variance %
and the price value ranges.*

Days Past Expected Date

Enter the number of days you allow after the date the goods should have been received. If that number is exceeded matching will be inhibited.

Days Past Received Date For Invoice

Enter the number of days you allow the invoice date to be past the receipt date. If that number is exceeded then matching will be inhibited.

Leave blank for no further check.

Days Past Invoice Date For Receiver

Enter the number of days you allow the receipt date to be past the invoice date. If that number is exceeded, then matching will be inhibited.

Leave blank for no further check.

Press Enter **F8=Update** to update the details
and return to the Delimiter Maintenance
Selection Screen.

Invoice Matching

1/DKAPI

This option enables you to run an interactive session for matching invoices (or credit notes) to advice notes. Matching facilities are as follows.

- One to one - an individual invoice to one advice note.
- One to many - one invoice may be matched to many advice notes / receipts.
- A running total displays the values selected.
- Quantities and value totals on receipts may be adjusted for matching purposes although original order totals may not be changed. VAT may be dissected to different tax rates.
- Charges may be added to purchase orders. These additional charges may be dissected to different GL accounts.

Invoice Matching Supplier Item Entry Screen

Select the Invoice Matching option.

The screen enables you to enter a batch control value for checking purposes (if your company profile is set up to use batch control).

Control Value . <u>1.00</u>			
F3=Exit			
14-23	KS	CL	IM DM II EDN400A KB ST0672S1

Fields:

Document Type

You may only input one type of transaction per session. Enter one of the transaction types as follows:

IN - Invoices.

CR - Credit notes.

Posting Period

This displays the current Accounts Payable period, but may be changed to a future period if required. The period must exist on the calendar file.

Batch Number

Enter as required.

Control Value

A batch total must be entered, but the value entered here does not restrict the value of documents subsequently entered. At end-of-batch, the value of the documents entered is reconciled. Any discrepancy is highlighted but can be ignored.

Press **Enter** to go to the Invoice Matching

Supplier Selection Screen.

Invoice Matching Supplier Selection Screen

This screen is displayed when you have completed details in the Invoice Matching Supplier Item Entry Screen and pressed **Enter**.

This screen enables you to enter a supplier ID code and maintain the default text for this supplier.

9-14	*	KS CL IM DM II	EDN400A KB ST0672S1

Fields:

Our Ref

Note: This field is only displayed when using the Italian functions.

If a number is displayed it will be an automatically generated invoice number which cannot be changed. This option to auto generate invoice numbers is set up at company profile level.

Otherwise, enter a unique reference for this document. This reference should be recorded on the source document.

Register ?

Note: This field is only displayed when using the Italian functions.

The supplier's default VAT register will display - only if set up for this supplier in General Ledger. This will enable you to produce your VAT reports based on tax area.

Protocol

Note: This field is only displayed when using the Italian functions.

If VAT registers are active (as previous field), the protocol numbers are the sequential numbers of invoices to a particular register.

Press **F20** to display a window of valid protocol gaps and enter '1' beside a number to select it, otherwise type in the appropriate number directly.

Currency

The default is the supplier currency, but it may be changed - press **F17=Override Rate** to overwrite the rate code.

This field is hidden if you are working in single currency.

Period

It defaults to the period entered on the session control screen but may be changed to a later period.

If the accounting date function is active (set up at Country Specific Parameters option 'Accounting Calendar Active?'), then the period will be determined from the document date.

Note: If you are using Italian accounting the tax or registration date will be used.

Doc Date

Enter the date printed on the document (not the date received by your company).

This date is used to calculate the due date for payment.

Gross

The total value of the item (including any VAT or additional costs).

Rate Code

This field defaults to the rate code of the company profile, and is not a maintainable field. To change this code, use the **F17=Override Rate** function.

Tax

Enter the total value of tax.

To dissect the total tax to differing rates of tax, press **F13=Tax dissection**.

If you are using acquisition VAT leave this field set to '0'.

Add Costs

Add the total value of any additional charges on the invoice - such as carriage or insurance.

This total may be dissected, to two or more ledger accounts, by pressing **F10=Add Costs**.

Discount Rate, Code And Value

These fields are completed automatically from the supplier details.

Due Date

Enter the payment due date.

If a date displays, this is calculated from the supplier terms. It may be changed for this transaction if the option to change it is set up on the company profile.

The system may ensure that the due date for payment does not fall on a holiday or weekend day. (Your country specific parameters must be set up to allow this.).

Order Ref

A three way match may be made by matching

- the invoice number (entered at 'Our Ref' above),
- the purchase order number (entered at this field) and
- the advice note number (entered at the next field).

If the invoice to be matched relates to a single purchase order, enter the order number.

Extended Terms

If displayed, will default from the supplier record.

Status

Select the payment status of the invoice:

- 1 - Select. Allow this invoice to be selected when a payment run is made.
- 3 - Hold (from being automatically included in a payment run).
- 9 - Prompt pay. Include in the next payment run irrespective of the payment due date.

VAT Calc

A displayed VAT calculation may default from the Country Specific Parameters. One of the following codes may be displayed or entered:

- 0 - VAT will not be calculated. Goods and VAT are to be entered separately.
- 1 - VAT is calculated and entered based on the value of goods entered.
- 2 - If you wish to enter only the gross value. VAT will be calculated and entered from the gross.

Tax Date

This is the date associated with this item for VAT purposes. If a date is not entered, the document date will be used to establish the VAT period.

Note: if you are using Italian accounting this field will relate to the registration date.

Supp. Ref

Enter the supplier's invoice number. This field is optional, but if entered, it must be a unique invoice reference for the supplier.

Base Value

Note: This field will only display a value if the entry in the Currency field is not the default supplier currency.

Displays the value of the invoice in base value equivalent.

For example, if the default currency is pounds sterling and the invoice is for French Francs, this base value will display the sterling equivalent of the invoice amount.

Ex. Rate

The exchange rate of the default supplier currency to the currency of the invoice.

Supp. VAT

The supplier default VAT code.

Reason Code

This code is not displayed for invoices.

This code is mandatory for credit notes and provides more detailed analysis of the reasons for such postings. The code must already exist.

Convert Point

The field will only display if set up within Country Specific Parameters.

- 1 - The document date is used to perform currency conversion.
- 2 - The tax date is used to perform currency conversion.

Discount

- 1 - Include additional costs in the discount calculation.
- 0 - Additional costs are excluded from the gross discount calculation. Or, there are no additional costs.

Advice

If you wish a match to be made at this screen, enter the advice note number which relates to the purchase order reference entered at the previous field, or

Leave this option blank and when the screen is completed, press **F8=Update** to be prompted to select advice notes to match the purchase order.

Cash VAT

The cash basis code will display from the supplier record.

- 0 - VAT is to be reclaimed based on the invoice date.
- 1 - VAT will be reclaimed, but based on the payment date.

Text

One or more lines of text of invoice / credit note details can be entered. After the first line use the roll keys to enter further lines.

Description

One or more lines of description of the transaction can be entered. After the first line use the roll keys to enter further lines.

Functions:

F8

Accept the header screen details. Update the session with or without a discrepancy. When you press **F8=Update**, matched invoices are posted to the ledger.

If either the 'Order Ref' or 'Advice' fields are left blank the detail screen will display for further matching.

If matching is completed you will be returned to the supplier screen / invoice entry screen.

F10

Add costs. Split the additional costs to different ledger accounts. A dissection screen will display. The total must equal the total additional costs.

F13

Tax dissection. To display the tax dissection screen to split the payable VAT to different tax accounts.

F17

Override rate. You may select a different currency rate, an explicit rate or a base currency value. This option is available if you are using a multi-currency supplier.

F20

Use this option to select gaps in the protocol sequence. This option is available if you have set VAT register to active.

F22

End session. To end the session and display the session completion screen.

Press **F8=Update** to validate the data and post the invoices to the ledger.

Invoice Matching Select VAT Code Window (F13)

This window is displayed when you press
F13=Tax Dissection in the Invoice Matching
Invoice Posting Screen.

The VAT dissection window allows you to dissect the VAT value entered in the 'Tax' field of the Invoice Matching Invoice Posting Screen, to two or more rates of payable tax. The sum of values you enter at this window must equal the tax total entered on the Invoice Matching Invoice Posting Screen. However, the tax total may be at zero value if you selected Acquisition VAT at the supplier screen.

This window will display your current VAT codes.

Item Price / Order Price

Displays the purchase item price and order price - for reference only.

Invoice Qty

Change the quantity from the receipt as required. Any variations from the original must be within the variance tolerance levels set up at the Delimiter Maintenance option.

Line Value

Amend line value within the limits described for 'Invoice Qty' above.

Functions:

F22

When all required invoices are successfully matched use this option to end the session.

When you have selected all advice notes and associated receipts and ensured that the required changes have been made, press

F8=Update to update the changes and perform the match.

If the match cannot be made because the variance is outside of the tolerance limits, then continue to select, change or deselect receipts until any variance is acceptable.

When the match is successful you will be returned to the Invoice Entry screen to enter a new invoice.

Note: Any variances allowed will be added to variance records but the original receipt quantity and value will be change.

Unmatched Invoice Maintenance

2/DKAPI

This option enables you to make changes to invoices which have not yet been matched. You may make changes to additional charges, tax dissections and GL accounts.

You cannot, however, change the original invoice total.

Unmatched Invoice Maintenance Selection Screen

Select the Unmatched Invoice Maintenance option.

The selection screen is displayed.

PM042	Z1 - GB Demonstration Company	USER PRODSUPP	30/07/96 11:42:14
Unmatched Item Maintenance

F3=Exit F4=Prompt			
05-28	SP	MW	KS IM II KENB20A PET16SS2

Fields:

Supplier

Enter the supplier code of the item to be changed.

Log Reference

Enter the invoice reference number from 'Our Ref' field on the invoice header screen.

Press **Enter** to display the order detail lines associated with the invoice, in the Unmatched Invoice Maintenance Detail Screen.

Unmatched Invoice Maintenance Detail Screen

This screen is displayed when you enter a valid supplier item combination in the Unmatched Invoice Maintenance Selection Screen and press **Enter**.

This screen displays invoice line details for you to select for amendment. You may edit additional charges and tax dissections; General Ledger accounts may be changed but the original invoice total must not change.

The amended order line will be used to match the invoice.

Fields:

Sel

1 - Amend the line.

4 - Delete an incorrect line.

Functions:

F10

To add or make changes to additional costs on the order.

F13

To split payable VAT this option will display the tax dissection screen.

Note: This function is not available if you are using the Italian option to post unmatched invoices to the ledger.

Invoice Batch Matching

3/DKAPI

This option automatically matches invoices and receipts. It will only select invoices which you have posted to the unmatched invoice log (or to the ledger) through Invoice Matching.

This batch job looks for the advice note numbers on unmatched invoices to match with the same advice note number on receipts. Any matching invoices and receipts found are then checked further for a match of quantities and values. If the match is within the tolerance limits allowed, the matched items are automatically selected and reported as follows:

- Matches made
- Invoices remaining unmatched
- Details of unmatched invoices and any related receipts found.

Take Invoice Batch Matching option. A message asks you to press **F8=Update** to start the batch matching. When processing is over, a report is produced.
