## Chapter 6

### Utilities

# Drinks Purchase Management Utilities

Drinks Purchase Management provides a number of utilities for database reorganisation and verification. The Utilities options are not required for the normal day to day operations of the module.

The utilities provide the following facilities:

- Company profile maintenance.
- The copying of company data.
- The purging and reorganisation of the database.
- Item search rebuilding.
- Supplier price update.

This section of the Product Information deals with the utility routines.

*Note: Maintain Company Profiles is dealt with in the Maintenance Section of this Product Information.*

# Copy Company

## 2/DPU

This option enables a new company to be created quickly and easily by copying details from an existing company. 'From' and 'To' companies are specified. Both companies must exist in the Drinks Inventory Management module.

There is also the option to copy all of the existing parameter types and parameter details from one company to another (existing) company.

## Copy Company Selection

Select the Copy Company option.

| To Company                             | __                                      |             |                      |
| Miscellaneous codes only? 1=Yes,0=No 0 |                                         |             |                      |
|                                        |                                         |             |                      |
| F3=Exit    F4=Prompt                   |                                         |             |                      |

### Fields:

#### From / To Company

Enter the code of the company you want to copy and the code and the company name that you want to create.

*Note: The 'From' company must be a valid company, and the new company cannot be an existing one, within Drinks Purchase Management.*

#### Sundry Codes Only?

Enter one of the following:

- 1 - If you only want only the parameters to be copied to the new company.
- 0 - If all details are to be copied, i.e. the company profile and parameters.

Press **Enter** to create the new company.

# Cancelled Order Purge

## 3/DPU

In the normal day to day running of the Drinks Purchase Management module, orders will be cancelled for a variety of reasons - however, the cancellation of an order does not remove it from the system. This option exists to enable cancelled orders to be purged for a particular company.

## Cancelled Order Purge Selection Screen

Select the Cancelled Order Purge option.

```
PM005          Purge Cancelled Orders Utility      User GBJBALM1      4/09/95
                                                    15:18:58

Company Code  __  Enter required company code

Order Number  _____

Enter order number to be purged, or leave blank to purge all
cancelled orders for requested company

F3=Exit

05-22  SP  MK  KS  IM  II  KENB20A  PED171S1
```

### Fields:

#### Company Code

Enter the company code of the company for which you wish to remove cancelled orders. The company must be valid and exist in Drinks Purchase Management.

#### Order Number

You have the option of deleting all of the cancelled orders for a particular company or just a single order, by entering the order number.

When deleting a single order, the module will check that the order exists and is cancelled. If the order number is left blank, then all cancelled orders will be purged for the company specified.

Press **Enter** to submit the utility for batch processing.

# Order Clearance

## **1...** **2...** 4/DPU

This option initiates the purging of historical data from the Drinks Purchase Management database. It enables completed orders to be cleared from the database, keeping files to a manageable size. A specified number of transactions can be retained for each item supplier profile.

'Completed' means fully received and fully invoiced.

## Order Clearance Selection Screen

Select the Order Clearance - Select Parameters option.

```
PM400                                User GBJBALM1    4/09/95
                                     15:19:42

Order Clearance - Select Parameters

Any records matched before the entered date will be eligible for deletion.

A specified number of transactions will be retained on file for each
item/supplier if an entry is made to the 'retain' field.

Enter Company Code:      _____
Enter Invoice Matched Date: _____
Enter number of transactions
to be retained per item/supplier: _____

F3=Exit

10-36    SF    MK    KS    IM    II    KENB20A    PED171S1
```

### Fields:

#### Enter Company Code

Enter the company code of the company for which you wish orders cleared. The company must exist in Drinks Purchase Management.

#### Enter Invoice Matched Date

Enter the invoice matched date. Orders finally matched with an invoice (and therefore completed) up to this date will be eligible for clearance by this option.

*Note: No orders completed after the cut-off date will be deleted.*

#### Enter Number of Transactions to be Retained per Item / Supplier

You may wish to enter the number of transactions to be retained per item supplier. If this is left blank, then the option will delete all orders completed up to the given cut-off date. If a number is entered here, then that number of transactions will be retained as a maximum for each item supplier.

You may wish to retain some transactions to provide historical data for the Drinks Purchase Management report options.

Press **Enter** to submit the routine for batch processing.

## Reconciliation Reports

### **1...** **2...** 5/DPU

This option provides an exception report for item supplier profiles and purchase order details.

## Reconciliation Reports Selection Screen

Select the Reconciliation Reports option.

```
PM154          Purchase Management Utilities Menu      User GBJBALM1      4/09/95
                                                    15:20:44

Reconciliation Reports for company  DK

  1. Item/Supplier Profile validation
  3. Orders File validation

Enter Option _

F3=Exit
18-18  SF  MK  KS  IM  II  KENB20A  PED171S1
```

### Fields:

#### Enter Option

Enter one of these options:

1 - For an item supplier validation. This option will produce an exception report on the following conditions:

- No records for a company.
- No suppliers.
- Suppliers not active.
- Zero prices.

3 - For an order file validation. This option will produce an exception report on the following conditions:

- No supplier found.
- Supplier not active.
- No purchase officer.
- No order header.

Press **Enter** to submit the routine for batch processing.

## Create Item Search Index

**1...**  
**2...**

### 6/DPU

This option rebuilds the item search index from the Drinks Inventory Item Master description.

There are two circumstances where this facility is useful:

- Where Drinks Inventory Management is installed prior to Drinks Purchase Management. In such a situation the Drinks Purchase Management index would not have been maintained on an item-by-item basis. This option will bring the index up-to-date with the latest Item Master data.
- Where Drinks Inventory items have been converted from another module using specially written computer programs, this facility may be used to build the index for converted items.

## Item Search Index Detail Screen

Select the Create Item Search Index option.

A screen is displayed stating that a batch job will be submitted.

Press **F8=Submit** to send the report to print, or  
**F3=Exit/F12=Previous** to cancel.

# Supplier Price Update

## **1...** **2...** 7/DPU

This option will increase all price structures for a selected supplier with a percentage increase.

## Supplier Price Update Selection Screen 1

Select the Supplier Price Update option.

```
PM830          QA Drinks Company for V3 - STUDB30A USER GBJBALM1    4/09/95
                                           15:21:52

**Fields:**

**% Increase**

Enter the percentage increase to adjust all price structures for the selected supplier.

 Press **F8=Update** to send the request to be processed.

## Install Purchasing / AFI Link

### 8/DPU

When you install Drinks Purchase Management and the AFI module, it is necessary to run this option on a one off basis, to copy the Purchasing Data Dictionary and various other control files into the AFI module.

AFI is then aware that Drinks Purchase Management exists as an module.

AFI is required to enable the derivation of Extended General Ledger codes associated with Goods and Price Variance accounts.

The rule number to be used for the derivation is defined in the Parameter Limit against the description code 'EGLR', minor code:

- 01 - AFI rule for extended GL. This is used in purchase order entry to build the extended codes for each order link.
- 02 - AFI rule for price variance extended GL. This is used in Invoice matching to build the extended code for price variants.

Select the Install Purchasing / AFI Link option.

*Note: AFI is not used for any actual postings to the GL.*

To enable this retrieval of External GL codes, two dummy posting rules must be established in AFI:

- AFI rule for Goods Extended GL
- AFI rule for Price Variance Extended GL

To enable Drinks Purchase Management to identify these two specific rules, the rule numbers must be set up on the Drinks Inventory Management Descriptions file in two specific entries.
