Chapter 1

Maintenance

Maintenance Data

Much of the data used by requisitioning is held in the Drinks Inventory Management, Drinks Purchase Management, Production, or Drinks Distribution Requirements Planning.

The usage of master file data from other applications is as follows:

Data	Sourced From
Item	Drinks Inventory Management
Supplier	Accounts Payable Drinks DRP
Purchase Officer	Drinks Purchase Management Drinks Inventory Management Drinks DRP
Stockroom	Drinks Inventory Management

The definition of user authorisation is the only data maintained within Drinks Requisitioning.

This option can be accessed from the Drinks Requisitioning Maintenance menu.

Authorisation Maintenance

1...
2... **1/DQM**

To maintain details of all users who may create manual requisitions, i.e. 'requisitioners', and their respective 'authorisers'.

These records are used within this application to decide who should authorise a manually entered requisition. This decision is based on the spend limits assigned within this procedure.

Authorisation Maintenance Selection Screen

Select the Authorisation Maintenance option.

This allows you to enter the ID of the requisitioner. It must be a valid User ID on the system.

```
RQ270          HW - Handy Wholesalers Ltd    User GALBRAIJ    29/01/96

```

Fields:

Requisitioner's User ID

Enter a valid User ID, i.e. one defined to a Business Manager, or select one from the prompted list of valid Requisitioners.

Press **Enter** to display the Authorisation Maintenance Details Screen.

Authorisation Maintenance Details Screen

This screen is displayed when a valid User ID has been entered into the Authorisation Maintenance Selection Screen. This screen will be blank if the User ID has not been maintained previously.

This screen enables you to maintain the Department, Spend Limits, and optionally the Authoriser for this Requisitioner.

Fields:

Requisitioner's User Id

The Requisitioner's User ID is displayed from the previous screen.

Name

Enter the name of the person who is to be allowed to enter manual requisitions.

Department

Enter the name or code of the Department in which this person works.

*Note: A new Department may be created, using **F8=Update**, when the first person in the Department is defined to this procedure.*

Telephone

Optionally enter a telephone number or extension for this person.

Spend Limit Per Requisition

Enter the maximum total net value for a single requisition that this person can raise without requiring authorisation (e.g. from his Departmental Manager).

Note: If this control is not required, or the Requisitioner is sufficiently senior within the company, enter this as all nines with this decimal place i.e. 999999999999.99.

Spend Limit Per Month

Enter the maximum total net value of the requisitions which this person can raise per month without requiring authorisation (e.g. from his Departmental Manager).

Note: If this control is not required, or the Requisitioner is sufficiently senior within the company, enter this as all nines with this decimal place i.e. 999999999999.99.

The Calendar month is obtained from the current system date.

Actual Spend

This is the total net value of all manual requisitions raised by this person in the current calendar month. This value is automatically maintained within the application, when the manual requisition is authorised, but may be manually amended here.

Note: Where the Authoriser is not the original Requisitioner, the amount spent is updated for the Authoriser rather than the Requisitioner, as he/she is considered to have actually committed the expenditure.

Authoriser's User ID

Enter the User ID of the person who is responsible for authorising requisitions for this requisitioner. An authoriser is not required where the requisitioner has unlimited spend capability.

Note: This authoriser must have been defined previously as a requisitioner in his/her own right, with at least one spend limit higher than the current requisitioner.

Tip: The authoriser may in turn need to have an authoriser defined on his/her requisitioner record. This may be left blank, if both spend limits are set to all nines, i.e. as far as Requisitioning is concerned this requisitioner is the most senior person within the company. At least one such requisitioner must be defined for the company.

*If you select **F11=Delete**, the following conditions are checked:*

Are there outstanding requisitions which were manually entered by this Requisitioner?

Is this Requisitioner defined as an Authoriser to any other Requisitioner?

If the answer to either of these is 'yes', an appropriate error message is displayed and the

delete request is not performed. Otherwise a confirmation message is displayed before the record is deleted and an audit record written.

On selecting **F8=Update**, the record is updated in the Requisitioning Authorisation File, and record(s) are written to the corresponding Audit File.

Authorisation Maintenance File List

21/DQM

This option submits a batch job which produces the Authorisation Maintenance File List Report.

Authorisation Maintenance File List Report, for each Requisitioner defined using Authorisation Maintenance, lists the following information:

- User ID.
- User Name.
- Contact Telephone.
- The Requisitioner's Spent Limits.
- Actual Spend for the current month.
- The Requisitioner's Authoriser.
