Chapter 1

Maintenance

Drinks Telesales Maintenance

Much of the primary data has already been set up as part of the Drinks Sales Order Processing and the Drinks Inventory Management modules. There is, however, additional information which may be entered in order to obtain the maximum benefit from the module. There are a number of common features in the way this data is maintained, these are:

- The standard item and customer search routines are employed.
- The module makes the minimum use of 'codes' and where they are used a prompt is always available to assist in selecting the correct one.
- Selection is normally both from a displayed list or by the entry of a code. Additional text is generally provided.

All options, except the Company Profile Maintenance function, can be selected from the Maintenance menu.

The Company Profile Maintenance function is held in both the Drinks Customer Service and Logistics Main menu, and the Drinks Telesales Utilities menu.

Maintain Company Profile

1... **2...** 1/DSU

As with all the modules, Drinks Telesales can be operated for a number of companies, the characteristics of each being maintained on a control file. Before a company can be set up, the Sales Order Processing and Inventory Management modules must have been installed and configured for the company. The control information can then be maintained.

Company Profile Maintenance Company Selection Screen

Select the Company Profile option.

This screen enables the selection of the company to be maintained. The screen displays a list of all companies currently defined.

TS000 Company Profile Maintenance		USER GALBRAIJ	3/11/95

```

Fields:

Default Telesales Type

The default type of order to be used for call profiles and incoming calls with no call profile. This may be one of three types:

- 1 - Drinks Telesales. Drinks Telesales is a prearranged call to a customer to discuss a predefined list of items and to take an expected order.
- 2 - Planned Delivery. This is a style of Drinks Telesales where the customer gives the current stock level of an item and the module suggests the size of the order necessary to cover the period of time until the next order.
- 3 - Tele-marketing. Telemarketing enables the operator to view the available Buying List and select the most appropriate for discussion with the customer.

Maintain Performance Statistics

The module can record the time taken by every operator to make each phase of the call cycle. This can then be used for performance appraisal or incentive. The module can be flagged not to record this detail.

Message Queue For Break Messages

(Not Used.) Message Queue name.

Library

(Not Used.) Default Library List for the Message Queue.

Standard Working Day

This is an optional field which is intended for use in work planning; numeric with one decimal place in the range of '0.0' to '24.0'. The unit of measure is hours. It should be the most commonly worked number of hours for Drinks Telesales operators. It is used as the default.

Standard Call Duration

(Optional.) Intended for use in work planning; numeric with no decimal places and in the range '0' to '999'. The unit of measure is minutes. It is used as the default for operations.

Standard Rest Period

(Optional.) Intended for use in work planning; numeric with no decimal places and in the range of '0' to '15'. The unit of measure is minutes. It is used as the default for operators.

Default Buying List

If no Buying List is defined on the call profile or on the parameters of generate call lists, this is the Buying List which is used to generate the base order details for incoming calls with no profile.

Number Of Weeks Per Month

In the calculation for planned delivery it is necessary to convert period sales data to week sales data, in the range 3-5. This is the number which is used for the conversion.

Pricing Option

This determines at what level pricing is carried out and can have the following values:

0 - Not at all. No pricing information is available during order entry, nor is the order priced or valued during order entry. The order is priced, with discounts, once the order is complete and the order bank updated.

1 - Overnight. The Buying Lists created and updated during a call list generation (usually overnight) have the current price information attached to them. During order entry, these prices can be viewed, and the order can be priced and valued according to these prices. This is the most efficient way of pricing orders during order entry, but it must be noted that NO discounts are retrieved or applied at this time. When order taking is complete, and the order bank is updated, the order is re-priced and fully discounted according to discounts applicable to the customer and the items purchased.

2 - Interactive. Prices are derived when orders are entered and total values are calculated - however, it does not include any discounts. When the order taking is completed and the order bank updated, the order is re-priced and fully discounted according to discounts applicable to the customer and the items purchased. This will impact performance.

3 - Order Create. This is the same as option '0'.

Note: This pricing option can be overridden by the Pricing Overnight option in Call List Generation.

Stock Checking / Allocation

You can choose to allocate stock interactively, or place Drinks Telesales orders on back order and allocate stock manually in Sales Order Processing.

You can also choose whether or not to perform a stock check interactively from Drinks Telesales. This can only be performed when stock has been allocated.

Select one of the following options:

0 - No stock check. Place stock on back order, if within allocation time fence.

1 - Stock check. Place stock on back order, if within allocation time fence.

2 - Stock check. Allocate stock or place on back order as appropriate.

Note: Allocation is not possible if there is no pricing - therefore, use Stock Checking / Allocation=2 if Pricing Option is set to either 1 or 2.

Functions:

F8

Update Company Profile.

Note: If this option is in reverse image, changes have been made to the original control settings or the control settings may contain errors. It highlights the need to press it in order to process these changes.

F15

Display the Presentation Design Screen.

F16

Display the Next Call Logic Screen.

Press **Enter** to validate the values. The Company Profile Details Continuation Screen is displayed.

Company Profile Details Continuation Screen

This screen is displayed when you have pressed **Enter** on the Company Profile Maintenance Policy Controls Screen.

This is the second screen for specifying the standard policy controls of the company profile.

Note: If you are setting up a new company profile, this screen only displays the default month and day names.

Enter the contact type, text types and description ID's before pressing **F8=Update**.

Warning: Once these controls are entered for the first time, they cannot be changed

Contact Type

Contacts can be maintained for many reasons. This is the code which identifies those to be used by Drinks Telesales.

Note: This field cannot be amended once the company profile has been created.

Text Type

Contracts can be maintained for many reasons. This is the Major Type code on the Drinks Inventory Descriptions File which identifies those to be used by the Drinks Telesales module.

Note: This field cannot be amended once the company profile has been created, and the type

should be 'TTYP' if the supplied sample data is to be used.

Text Sub-Types

The minor codes used by the Drinks Telesales module to classify the text used (for Operators, Contacts, Call Profiles, Delivery Profiles, Buying Lists, and Promotions). Each should be unique, and specified under the Drinks Inventory Management Descriptions File major type for Text Type, above.

Description I.D.'S

The Major Type codes used in the Drinks Inventory Management Descriptions File for allowed Promotion Types and Delivery Routes.

Note: This field cannot be amended once the company profile has been created, and the type should be 'TSPR' and 'TSDR' if the supplied sample data is to be used.

Short Month / Day Names

Three character short names can be set up for Months of the Year and Days of the Week.

Functions:

F8

Update Company Profile.

Note: If this option is in reverse image, changes have been made to the original control settings or the control settings may contain errors. It highlights the need to press it in order to process these changes.

F15

Display the Presentation Design Screen.

F16

Display the Next Call Logic Screen.

Press **F8=Update** to validate any changes and write them back to the file.

Company Profile Maintenance Maintain Order Presentation Design (F15)

This screen is displayed when you press **F15=Presentation Design** on the Company Profile Maintenance Policy Controls or Company Profile Maintenance Continuation Screens.

The format of the Order Line Entry screen can be fine tuned to simplify the operator's task. There are three areas that can be influenced. The format of item number/description, editing of order quantities and the display of previous order history.

TS000 Handy Wholesalers Ltd		User: GALBRAIJ	6/11/95
Order Presentation - Maintain			11:09:52

F5=Refresh F8=Update F12=Previous			
05-34 S4 MW KS IM II KENB20A PED170S1			

Fields:

Item Style Header

The Free Text heading that will appear over the list of items.

Item Pos(ition) From And To

The characters of the item code that is output as standard. The maximum length is 15 characters.

Separator

A character that can be used to print between the item code and item description.

Desc(ription) Position From And To

The characters of the item description that is output as standard. The combined length of the item and description masks cannot exceed 30 characters.

Order Quantity Heading

The heading to appear over the order quantity field (Drinks Telesales / Telemarketing).

Order Quantity Heading

The heading to appear over the customer stock quantity (Planned Delivery).

Order Quantity Format

The number of decimal places allowed on the entry field.

Note: This option is not currently used while quantities are expressed in dual format.

Previous Orders Date Format

If previous orders are displayed by date the format can be either:

1 - dd/mm/yy (e.g. 21/11/95).

2 - ddmmm yy (e.g. 21Nov 95).

3 - mmm ddyy (e.g. Nov 2195).

Note: This default can be overridden when running Generate Call Lists.

Which Q(Uanti)Ty

Order history displayed can either be:

1 - Order Quantity.

or

2 - Delivered Quantity.

No. Of Orders

The number of orders' history to be considered for display when entering orders. If you don't put a value into this field, the system will not show an order screen, or generate an overnight history.

Note: This default can be overridden when running Generate Call Lists.

By Date/Week

The previous orders can be displayed by date or week.

1 - display by date.

or

2 - display by week.

Note: This default can be overridden when running Generate Call Lists. Also note that since only History by Order is currently implemented, only option 1 can be used.

Press **F8=Update** to validate the changes and write them back to the file.

Company Profile Maintenance Maintain Next Call Logic Screen (F16)

This screen is displayed when you press
F16=Next Call Logic on the Company Profile
Maintenance Policy Controls or Company Profile
Maintenance Continuation Screens.

This function controls the sequence in which calls are considered as the next in order of priority. A table is displayed which enables the calls to be categorised in two ways:

- The call should be made today, before today, after today.
- The call should be made at current time, before current time, after current time, at anytime.

The sequence in which the calls should be considered is established by entering a letter from A to L.

TS081		Handy Wholesalers Ltd		User: GALBRAIJ		6/11/95	
						11:24:07	
Maintain Next Call Logic							
Enter below the order in which the call list should be viewed in order to select the next logical call.							
The order is defined by entering 'A' against the 1st view, 'B' against the 2nd view and so on.							
Times	<----->		Dates	----->			
	Past	Today	Future				
Earlier....	<u>F</u>	<u>C</u>	<u>K</u>				
Current....	<u>D</u>	<u>A</u>	<u>I</u>				
Later.....	<u>G</u>	<u>H</u>	<u>L</u>				
Untimed....	<u>E</u>	<u>B</u>	<u>J</u>				
F5=Refresh F8=Update F12=Previous							
13-15		<u>S</u>	MW	KS	IM	II	KENB20A PED170S1

Enter the characters A to L in the required position in the table. Only characters A to L are allowed and all positions in the table must have an entry.

Press **F8=Update** to validate the changes and write them back to the file.

Operator Profiles Maintenance

1... **2...** 1/DSM

Every operator of the Drinks Telesales module requires a profile record. This contains information which is used in the management of the operator's authority and in work planning screens.

Operator Profiles Maintenance Select Profile Screen

Select the Operator Profiles option.

The screen displays a list of current operators and enables selection for maintenance. New operators can be added, or extended text can be maintained for any existing operator.

TS005	HW - Handy Wholesalers Ltd	User: GALBRAIJ	6/11/95
			12:54:11

07-32 SA MW KS IM II KENB20A PED170S1			

Fields:

Operator Name

(Mandatory.) No validation is provided except that it is present. It is 32 characters long.

Operator Extension Number

(Mandatory.) It should be a valid extension number if auto-dialling is required.

Associated User Profile I.D.

(Mandatory.) It must be a valid User ID known to the module, or entered as *GROUP if group call lists are to be used.

Call List Security Class

(Mandatory.) Defaults to the lowest authority level. The authority levels are as follows:

- 0 - The operator may only take the call indicated by the module (from the Next Call Logic Table).
- 1 - The operator may select any call in their call list to be taken next.
- 2 - The operator may change the time and date of any call on their list.
- 3 - The operator may change the time and date and the target operator of any call on any call list.

Hours In Working Day

(Optional.) Intended for use in work planning; numeric with one decimal place in the range '0.0' to '24.0'. The unit of measure is hours. It should be the average number of hours available for this operator to be engaged in Drinks Telesales. If no entry is made the company profile default is used.

Normal Call Duration

(Optional.) Intended for use in work planning; numeric, with no decimal places, in the range 0 to '999'. The unit of measure is minutes. If no entry is made the policy set on the company record is used.

Rest Period Per Hour

(Optional.) The agreed rest time each hour for operators using a work station continuously - used in work planning; numeric, in the range 0 to '15', with no decimal places. The unit of measure is minutes. If no entry is made, the policy set on the company control record is used.

Drinks Telesales Proficient, Planned Delivery Proficient, Tele-marketing Proficient

These three indicators are intended to be used to aid work planning. They have two possible values.

0 - No

1 - Yes

Press **Enter** to perform all validation, highlight error conditions and display error messages.

Alternatively, press **F8=Update** to validate the entries and write them back to the file.

Buying List Maintenance

1... **2/DSM**

You use this procedure to create and maintain Buying Lists.

Buying Lists are lists of items that a customer buys on a regular basis.

You can use these lists to ensure that discussions with the customer are more productive.

Buying List Maintenance List Selection Screen

Select the Buying Lists option.

This screen displays a list of the current Buying Lists. You use this screen to:

- Select existing Buying Lists for maintenance.
- Create new Buying Lists.

You can base a new Buying List on up to five existing Buying Lists. The existing Buying Lists are copied to successive panels of the new Buying List, in the order you enter them on this screen.

TS015		DK - QA Drinks		User: GBJBAIMS		16/02/98

Fields:

(Untitled)

- 1 - Select Buying List. Enter 1 against an existing Buying List to maintain it.
- 2 - Maintain Extended Text. Enter 2 against an existing Buying List to display the Maintain Text Window. You use this window to enter an extended text description for the selected Buying List.

Enter New Or Existing Buying List Code

Enter a new Buying List Code to create a new Buying List.

Enter an existing Buying List Code to maintain an existing Buying List.

A Buying List Code can be up to four alphanumeric characters.

Base On Buying List Codes

Enter up to five existing Buying List Codes to base a new Buying List on. The existing Buying Lists are copied to successive panels of the new Buying List, in the order you enter them.

Enter 1 against an existing Buying List to display its details on the Buying List Maintenance Maintain List Screen.

Enter 2 against an existing Buying List to display the Maintain Text Window.

Enter a Buying List Code in the Enter New Or Existing Buying List Code field and press **Enter** to display the Buying List Maintenance Maintain List Screen.

Buying List Maintenance Maintain List Screen (Option 1)

This screen is displayed when you enter a 1 against a Buying List on the Buying List Maintenance List Selection Screen.

This screen is displayed when you enter a Buying List Code on the Buying List Maintenance List Selection Screen and press **Enter**.

You use this screen to:

- Enter a new list of items to create a new Buying List.
- Maintain the list of items on an existing Buying List.

The Buying List is displayed in a series of panels, each panel containing up to twelve item records. You can use the Page Up and Page Down keys to scroll through the panels or use the Position To Panel field to go to a specific panel.

Each item record consists of the line number, the Item Code as used in Drinks Inventory Management, and the 30-character description which is displayed during order entry.

You can enter a new item record in the fields at the bottom of the screen and position it to any line on the panel. If there is an existing item record on this line, it is moved down a line and the new item record inserted at the specified line. If all lines on the panel contain item records, the last record is forced onto the next panel.

(Untitled)

Enter 1 against the item(s) to be copied.

Press **Enter** to transfer the selected items to the nominated position on the Buying List being maintained.

If there is not sufficient free space on the existing panel, the items will overflow onto the next panel.

Customer Contacts Maintenance

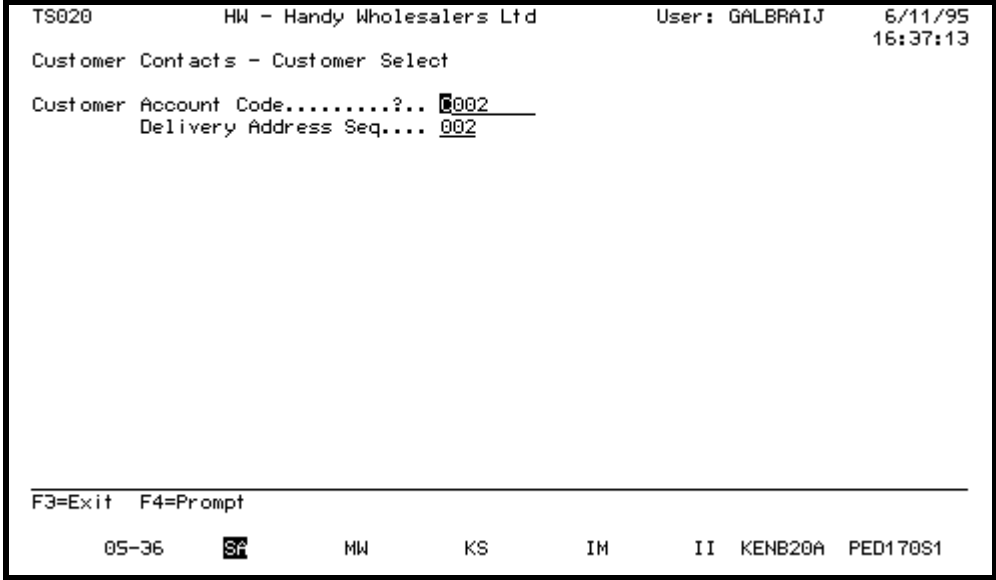

3/DSM

In order to make the telephone call as productive as possible a number of contacts on the customer's site can be named. Additional information can be held to aid the Sales Operator.

Customer Contacts Selection Screen

 Select the Customer Contacts option.

This screen enables the customer/delivery address sequence to be selected.

The screenshot shows a terminal window with the following text:

```
TS020          HW - Handy Wholesalers Ltd          User: GALBRAIJ          6/11/95
                                                    16:37:13

F8=Update to save the changes.

Call Profiles Maintenance

1... 4/DSM **2...**

In its simplest form Drinks Telesales is taking an expected call from a known customer for an agreed list of items. It is the call profile that sets up this pattern. An assumption is made that calls are based upon a weekly pattern. For example, a call should be made every second Wednesday between 9.00 and 9.30.

Call Profiles Maintenance Customer Selection Screen

Select the Call Profiles option.

This screen enables the customer/delivery address sequence to be selected.

Fields:

Account Code & Delivery Address Sequence

The Customer Code and Address Sequence are combined to find details of the required Customer.

Press **Enter** to validate the details, highlight the error conditions and display error messages. If everything is valid, the Call Profiles Maintenance Selection Screen is displayed.

Call Profiles Maintenance Selection Screen

The screen is displayed when you have entered a valid account code into the Call Profiles Maintenance Customer Selection Screen.

It displays the customer name and address for confirmation and a list of the current call profiles. These can be selected for maintenance, extended text can be maintained, or new call profiles can be added.

05-14		S2		MW		KS IM II KENB20A PED170S1	

Fields:

Telephone

Enter the telephone number of the contact person.

Telex

Telex Number (for information only).

Fax

Fax Number (for information only).

Customer Order Type

Enter one of the following:

P - Pallets. There are no quantity restrictions.

C - Cases. The maximum case quantity is 999/11.

Panel Type

Enter one of the following:

H - History. The Buying List for this customer will be restricted to only those items that have a recent Sales History. This shortens the list and speeds call taking up dramatically. The panels are sequenced according to the Price List Sequence Code field on the Item Master file. These sequence codes can be used to place items on screens reflecting product groupings.

F - Full - The full Buying List is used for the Customer, and presented in the sequence built in Buying List maintenance.

Primary Contact

(Optional.) This field is selected from a list displayed when **F15=Select Contact** is pressed.

Operator Code

(Mandatory.) This is the code of the operator who will normally make this call, the module displaying the selected operator's name alongside. A prompt is available for a list of valid operators.

Buying List

The Buying List that will normally be used as the basis for the telephone call. A prompt is available to display valid Buying Lists. If this is left blank, the default from the Company Profile is used.

Drinks Telesales Type

The type of selling call to be made. This will decide the approach to order taking:

- 1 - Drinks Telesales: the order history is displayed on the order line detail screen.
- 2 - Planned Delivery: the average order figure is displayed and order taking expects the entered quantity to be the current stock level.
- 3 - Telemarketing: the customer's current price and discount information is displayed on order taking. Selection of the Buying List is allowed at time of establishing contact.

No. Of Weeks' Cover

This is used to calculate the required order quantity for Planned Deliveries. Using historic data, the system calculates the average week's usage, then multiplies this by the weeks of cover to calculate the required stock level. If this is less than the actual stock, the difference is the recommended order quantity.

Length Of Order History

This dictates the length of order history that is available for display in order entry and calculation of planned delivery quantities.

Call Mask

There are seven fields, one for each day of the week. To make a call on a day enter a 1 on the required day. Up to seven calls can be planned in any week, one for each day. If more than one call per day is required then additional call profiles should be defined.

Call Frequency

The number of weeks between the call mask being repeated.

Note: By use of the Call Mask and Call Frequency, calls can be planned from once a day to once a year.

Note: If different cyclic patterns are used for different item groups, additional call profiles can be set up.

Call Between

There are up to four target time windows that can be set up for the call profile.

If the call is to be made at a specific time only the first of a pair of times need be entered. The first of a pair of times is assumed to be the start time of a call and must be earlier than the second. The 24 hour clock is used (e.g. 10am should be written as '1000'.) Pairs of times may be entered in any sequence but must not overlap. If a call can be made at any time of the day, no times should be entered.

Next Call Date And Next Call Time

May be entered on the maintenance screen, automatically calculated by the next call list generation run or agreed at the end of an order taking cycle.

Functions:

F15

Select a primary contact.

F16

Display Maintain Contacts Screen - to maintain and select the primary contact.

F17

Display Maintain Contacts Screen - to maintain the list for contacts.

F21

Maintain additional text for the selected Call Profile, via the standard text entry window.

Press **Enter** to validate the details, highlight error conditions and display error messages.

*Note: If a field has been changed the **F8=Update** key is highlighted.*

Press **F8=Update** to validate and update the changed fields.

Tip: Occasionally a warning message is displayed, providing you with some information on possible problem areas.

Press **F8=Update** again to confirm these warnings.

Delivery Profiles Maintenance

1... **2...** 5/DSM

In order to gain the co-operation of its customers, a company needs to demonstrate that its level of service improves. The telephone call should link to the next expected delivery in the customer's area. It is possible to create information concerning the customer's preferred delivery requirements.

Delivery Profiles Customer Selection Screen

Select the Delivery Profiles option.

The initial screen enables the customer/delivery sequence to be selected.

Fields:

Account Code And Delivery Address Sequence

These two codes are combined to find details of the required customer.

Press **Enter** to validate, highlight error conditions and display error messages. If all details are valid, the Delivery Profiles Maintain Delivery Profiles Screen is displayed.

Delivery Profiles Maintain Delivery Profiles Screen

This screen displays the current details of the delivery profile you selected on the customer selection screen.

Maintenance of all data fields is allowed. In addition, the screen enables direct maintenance of customer contacts if they have not been set up prior to this screen.

Promotions Maintenance

7/DSM

This procedure enables you to maintain details of current promotions so that they can be displayed at the time of order entry.

There are three distinctly different types of promotion - each of which is maintained through this function:

Promotions

Identify, to the operator, the existence of Customer Promotions, and optionally substitute promotional items that are stocked and priced in the normal manner.

Note: Substitute items may be set up to retain the original's item price.

Freeloaders

Identify, to the operator, the existence of promotions that offer additional 'award' items free of charge, with the ability to include necessary VAT.

Loyalty Schemes

Identify, to the operator, schemes in existence that offer the customer the incentive to collect 'award points'.

All promotions that take effect from this date are displayed.

Date Effective At

All promotions effective at the date are displayed.

Selection Column

Enter against the required promotion:

- 1 - selects the promotion for maintenance.
- 2 - enables extended text to be maintained.

Press **Enter** to validate the details, highlight error conditions and display error messages. If everything is valid the Promotions Maintenance Screen is displayed, for either a Standard Promotion or Freeloader/Loyalty Promotion.

Promotions Maintenance Screen

This screen is displayed when you have made valid entries and pressed Enter on the Promotions Maintenance Selection Screen.

Drinks Telesales does not attempt to support and manage all aspects of promotions. It does, however, provide a way of recording and bringing to the attention of operators, details of current promotions. Promotions can be recorded as covering the following:

A Customer or Group of Customers and/or an Item

If a promotion is for a specific item, a promotion item may be defined. Such an item is substituted for the base item if the promotion is accepted in both Drinks Telesales and Drinks Sales Order Processing Order Entry. The promotion item is automatically included in the generic item family of the base item. Item families are used to define acceptable substitutes for a specific item, for example 2 * 6 packs for 1 * 12 pack, and are used in Sales Analysis and planned deliveries.

There are three main areas in the screen. The first is used to name and classify the promotion, the second is used to define the base and promotion items and the relationship between them, and the third to qualify the customer's related constraints.

Promotion Classification

Promotion No

This is the promotional identifier.

Effective From/To

The start and end date of the promotion - both must be present and valid.

Caption

(Mandatory.) The free text description of the promotion.

Promotion Type

(Optional - for memo purposes only.) Selected from the descriptions file, major type 'TSPR', this can be used to identify various type of promotion. A prompt is available.

Promotion Target

The target increase in activity for the item. If it is present the target order quantity is increased by this percentage for informational purposes.

Note. If you want an extra 10% increase you would enter 110%.

Promotion Item Constraints

Base Item

The item (or Generic Item Family), which is being promoted. If it is present it must be valid. A prompt is available.

Promotion Item

The item that should be delivered in place of the item. If it is present it must be valid. A prompt is available. This item is automatically offered as a substitution to the base item.

Note: You will only get a substitution if both the Base Item and Promotion Item details have been entered here.

Per Factor

The number of promotion items that are sent for one base item. The default is 1.

Promotion Quantity

(Memo field only - NOT used for 'All Customers' constraint checking.) The total quantity of the promotional item available for sale.

Together with item constraints a promotion can be limited to certain customers.

Promotion Customer Constraints

All Customers

1 - if the promotion and the total promotion quantity is available to all customers.

0 - if not available to all customers, but individual customer constraints are being defined with their own promotion quantity limits.

Base Item Pricing

0 - If the promotional item is to be priced in its own right.

1 - If the promotional item is to retain the base item pricing.

Press **F13=Customer Constraints** to allow the definition of customer constraints.

Promotions Maintenance Customer Constraints Screen (F13)

 This screen is displayed when you have pressed **F13=Customer Constraints** on the Promotions Maintenance Screen.

It enables the amendment of constraints, or the addition of new constraints.

F3=Exit F4=Prompt F5=Refresh F8=Update F12=Previous	
F21=Text	
07-24 SF MW KS IM II KENB20A PED170S1	

Fields:

Restriction

(Only for Promotions NOT for 'All Customers'.) There are two possible entries:

0 - There is no quantity limit to this customer or constraint category.

1 - There is a quantity restriction to this customer or constraint category.

Note: This is not available for Freeloader promotions.

Quantity

(Only for Promotions NOT for 'All Customers'.) If the Quantity Restriction (above) is chosen, enter (in stock units) the quantity of the promotional item available to this customer or constraint category.

Note: There is no check that constraint quantity adds up to promotion quantity.

Note: This is not available for Freeloader promotions.

Allocated Orders

(Only for Promotions NOT for 'All Customers'.) This balance is maintained automatically by order entry. When the promotional item is chosen as a substitution, and it falls against this customer or constraint category, this is also

used to check on the consumption of the promotional quantity, item substitution is not performed if the allocated to orders quantity exceeds the restricted quantity.

If 'All Customers' is set to 'Yes', no further constraints are necessary and the 'Allocated to Orders' balance is maintained against an automatically generated constraint 'CATCH ALL'. However since quantity restrictions cannot be set up for 'CATCH ALL' this is effectively a memo field and can be maintained.

If 'All Customers' is set to 'No', at least one constraint must be defined, otherwise the promotion will never be applicable to any customer, and will never be used.

Note: This field is not available for Freeloader promotions.

Customer Account

(Optional.) Enter a Customer Account to limit the promotion to that customer. This delivery sequence may be blank in which case it applies to all delivery addresses for that customer.

Customer Class

(Optional.) Enter a Customer Class to limit the promotion to that customer class.

Price Type

(Optional) Enter a Price Type to limit the promotion to that price type.

Discount Type

(Optional.) Enter a Discount Type to limit the promotion to that discount type.

Note: This field is not available for Freeloader promotions.

Corporation

(Optional.) Enter a corporation code to limit the promotion to that corporation.

Branch

(Optional.) Enter a branch code to limit the promotion to that branch. This field is a memo field only.

Region

(Optional.) Enter a region code to limit the promotion to that region.

State

(Optional.) Enter a state code to limit the promotion to that state.

Territory

(Optional.) Enter a territory code to limit the promotion to that territory.

Division

(Optional.) Enter a division code to limit the promotion to that division.

Sub-Division

(Optional.) Enter a sub-division code to limit the promotion to that sub-division. These constraints are compared with the Sales Order Processing sales details to determine whether or not the promotion is applicable.

Functions:

F13

Add more customer type constraints.

F21

Maintain additional text for the promotion.

Press **F8=Update** to record the details of the specified constraints, then press **F8=Update** again (from the promotions screen) to record the details of the promotion.

If a promotion item has been defined, the item family relations are checked. If no relationship exists, one is created as starting on the start date of the promotion.

Promotions Maintenance Maintain Freeloader / Loyalty Promotion Screen

Freeloader and Loyalty schemes are identified by a single character entry in the Promotion Indicator field. These promotion indicators are defined under the Inventory Descriptions file Major Type 'FRTD', with any single digit Minor Code, and the 'P/V' indicator set to P (for a loyalty scheme) or blank (for a Freeloader).

Note: The promotion indicators A and B are reserved for 'Cash With Order' customers.

The 'Limit' field on the descriptions file entry is set to 1 for each Promotion Indicator where VAT is to be calculated on the nominal value of the 'free' item, according to the Trade Price List.

Promotion Classification

Promotion Indicator

The Freeloader Type indicator. This is validated against the Inventory Description file, major type 'FRTD'.

Effective From/To

The start and end date of the promotion - both must be present and valid.

Caption

(Mandatory.) The free text description of the promotion.

Promotion Type

(Optional - for memo purposes only.) Selected from the descriptions file, this can be used to identify various type of promotion.

Promotion Target

The target increase in activity for the item. If it is present the target order quantity is increased by this percentage for informational purposes.

Budget Centre Account

A General Ledger Account that is passed through to the invoice line details for a Freeloader or Loyalty award item. This can be used in the Advanced Financial Integrator (AFI) to identify Free of Charge sales.

Qualifying Total Equivalent Cases

(Mandatory.) This is the total number of cases that must be ordered to qualify for the Freeloader promotion. Since it is possible to mix different Items with different Case sizes in the list of qualifying items, the term 'equivalent cases' is used and each qualifying item is subsequently described in terms of this 'equivalent case'.

Under Qualifying Total Discount %

(Optional.) If the number of cases ordered does not reach the qualifying total, this discount is applied to each qualifying item that is over the qualifying minimum quantity.

All Customers

Single digit field indicating how the promotion is available

1 - To all customers.

0 - To individual customers only.

Press **F13=Customer Constraints** to maintain Customer Constraints (refer to Promotion Customer Constraints), or press **Enter** to proceed to the Qualifying Items screen.

Promotions Maintenance - Qualifying Items Screen

Once a promotion has been established, a list of existing qualifying items is displayed for maintenance. This screen is displayed when you have made your entries and pressed **Enter** on the Maintain Freeloader / Loyalty Promotion Screen.

Note: If no qualifying items exist, at least one must be created, using the fields at the bottom of the screen.

Fields:

Select

Enter a '4' against a line if you wish to delete the associated qualifying item - you must confirm the request using **F11=Delete**.

Item

The valid item number for an item that, when sold, will qualify for a Freeloader or Loyalty Award if ordering the qualifying quantity or greater.

Min. Quantity

(For Freeloader Promotions only.) The minimum number of cases that should be ordered to be considered in the qualifying total for the promotion, and to qualify for the Under Qualifying Total Discount %.

ECF

(For Freeloader Promotions only.) Equivalent Case Factor for this item, taken from the Item Master File - but can be overridden. One case of this item is equivalent to the number of cases in the qualifying total.

If an Item Master ECF is altered, it is important to remember that it will not automatically be carried through into Drinks Telesales for discount purposes.

Points

(For Loyalty Promotions only.) The number of points that will be awarded (per Issue Unit when the qualifying quantity is ordered.

Press **Enter** to proceed to the Promotions
Maintenance Award Items screen.

Promotions Maintenance Process Freeloader / Loyalty Promotions Window

A customer is entitled to Freeloader / Loyalty Promotions if the 'Promotion Discount Type' on the Customer Sales Details is set to 'FRE' (a Discount Type profile).

When Call List Generation is run, the promotions applicable to each customer are noted on the Buying Lists and, in Drinks Telesales Order Entry, they are displayed in a window as a reminder of the promotions available for consideration.

A promotion can have a number of qualifying items, any or all of which may be ordered to qualify for the promotion, as long as the order quantity for the line is greater than the minimum required for the qualifying item, and the total number of equivalent cases reaches the qualifying total.

Note: Items can qualify for more than one promotion at the same time.

Select **F15** during Order Entry to display the total ordered on each active promotion.

Promotions Maintenance Order Close Screen

When closing an order, the first 15 promotions available to the customer are displayed. You can choose award items from any of these promotions and add them to the order as additional order lines free of charge.

Note: There is no restriction on the number of award items that can be given.

For a Loyalty Promotion, the award item should be a special item on the Item Master file, with an appropriate stock level, each point being one Issue Unit that is invoiced like any other item, and can be analysed in Drinks Sales Analysis to identify points given to a customer.

If a qualifying quantity on a promotion is not reached, any qualifying items over the minimum quantity will attract the Under Qualifying Total Discount %. If an item qualifies under one or more promotions, it can attract more than one discount, all of which are accumulated.

'Award' order lines are allocated, picked, assembled and despatched in the same way as other stocked items - but Free of Charge. The Invoice lines have VAT calculated (if indicated by the setting of the Limit flag on the Promotion Indicator) and are based on the nominal value of the quantity 'despatched', using the price for the item on the Trade Price List. This is the Trade Price List type established on the Customer Sales Details record, or, if this is not established, from the Trade Price List Type established on the Descriptions File Major Type 'WSPL'.

Item Families Maintenance

8/DSM

When an item is promoted this is often done by using promotion packs. As full stock control must be applied, a different item number is normally used for the promotion pack. This, however, can have a distorting effect on sales history. This is particularly significant in Planned Delivery Drinks Telesales; sales analysis data is used in conjunction with certain control parameters to determine the recommended stock levels for the customer. It is, therefore, necessary to link promotional items to their generic or base items so that the total sales of a generic item may be considered together when creating the order history display. This is done by creating item families.

An item family comprises one base item and any number of promotional items.

Item Families Maintenance Base Item Selection Screen

 Select the Item Families option.

The purpose of this screen is to display existing item families, enable selection for maintenance, allow further item families to be set up, and provide selection for extended text to be added.

A list of existing item families is displayed. A selection column is provided.

TS036 HW - Handy Wholesalers Ltd User: GALBRAIJ 8/11/95	
Product Families - Base Item Select 10:28:44	
Base Item	Description
- C101	Chimes Whisky 8x11tr
- D102	Henry's Gin 8x11tr

F3=Exit F4=Prompt F5=Refresh	
20-39 84 MW KS IM II KENB20A PED170S1	

Fields:

Base Item Code

New or existing base item code-the item number of the generic or base item to be added or maintained. The item must be a valid item number.

Selection Column

Enter one of the following:

- 1 - Selects the base item for maintenance.
- 2 - Enables additional text to be maintained.

 Enter the valid item code and press **Enter** to proceed to the Item Families Maintenance Promotion Item Select screen.

Item Families Maintenance Promotion Item Selection Screen

This screen is displayed when you have entered a valid base item code into the Item Families Maintenance Base Item Selection Screen.

This screen displays the existing promotional items for an item family and enables selection for maintenance or for the addition of new promotional items.

The base item for the item family is displayed at the top of the screen. This is followed by a list of the promotion items showing the period of time they should be included in the calculation for planned delivery.

Fields:

Reason Description

(Mandatory.) The text to describe the reason.

Press **Enter** to validate, highlight error conditions and display error messages.

If a change has been made to a field the **F8=Update** key is highlighted.

Press **F8=Update** to validate the entry and write it to the file. The module will return to the Reason Codes Select screen.

Cases/Pallets Conversion Maintenance

21/DSM

This function is used to override the conversion factor set up under Drinks Inventory Management against an Item Master file. By setting a Customer's Order Type as 'P' in Drinks Telesales Call Profile Maintenance, and then setting a correlation between Cases and Pallets using this option, a Customer is able to order goods in Pallet quantities as opposed to Case quantities.

Conversion File Maintenance Screen

Select the Cases / Pallets Conversion option.

This screen is used to create a relationship between Items and Customers, stating the number of cases per pallet for a particular item. This may be the same as, or different from, that set up under Drinks Inventory Management Item Maintenance - but the figure entered here overrides that already set up.

TS005		HW - Handy Wholesalers Ltd		User GALBRAIJ		8/11/95	
						11:12:08	
Case to Pallet Conversion File Maintenance							
Product Code...?.		Cases Per Pallet.....:					
Customer Code...?.							
Sel	Product	Cases Per Pallet	Customer	Code			
-	B101	50	C004	000			
-	B201	64	C003	000			
-	B201	72	C005	000			
F3=Exit F4=Prompt							
05-20		SA	MW	KS	IM	II	KENB20A PED170S1

Fields:

Product Code

(Mandatory.) A valid Item Code (available on the Drinks Inventory Management Item Master file). The **F4=Prompt** is available.

Cases Per Pallet

(Mandatory.) Numeric field denoting the whole number of cases which fit onto a Pallet.

Customer Code

(Mandatory.) A valid Customer Code (available on the Drinks Sales Order Processing Customer Master file).

Select

If you select a product by entering a '1' next to it, and pressing **Enter**, the system will display the details at the top of the screen for amendment.

Type in data for each of the three fields, and press **Enter**.

If valid, the data is transferred to the bottom of the screen.

Repeat the process for any other Item/Customer combinations, or press **F3=Exit** to leave this function.
