Chapter 2

Processing

Drinks Telesales Processing

Telesales must create a structured supporting environment for the sales operator, providing rapid response times and simple access to data to answer questions as they arise. In order to achieve this performance, it is necessary to anticipate the orders that are taken, and to answer the questions before they are asked. This is done by running the job which prepares the call list in advance. Order history data is extracted, prices and discount lists are identified, average order and recommended stocks are calculated.

When the details of an order are recorded, they are written to a Telesales specific database designed to guarantee the best possible response times from the computer. At the end of the order, the details are automatically transferred to the standard order bank for servicing by standard picking and despatching routines.

All the options described can be accessed from the Order Processing Menu.

Order Taking Outgoing Calls

1/DSP

This task provides all the information and support required by an operator to make their calls.

Within the procedure the following main functions are available:

- Call Selection.
- Establish Contact.
- Enter Order Item Details.
- Add Additional Items and Charges.
- Order Close.

Outgoing Calls Selection Screen

Select the Outgoing Calls option.

The initial screen gives the operator a list of calls to be made. It is possible for calls to be made on a specific day and optionally at a nominated time. To reflect this, the screen is divided into two: the upper half displays the timed calls and the lower the untimed. The screen is supported by a scheduling program which recommends which call should be made next. This is also displayed at the top of the screen under 'Next Call'.

Fields:

Operator Name

When an operator selects the Outgoing Calls option, their User ID is used to select the calls they should make. If they have the right authority, it is possible to display the call list of any other operator. The name displayed is the name of the operator whose call list is being accessed.

Sales Prompt

A sales prompt is displayed at the top of the screen; each time the screen is changed, the next prompt is displayed.

Next Call

The next call that the module has determined should be made. This is re-considered by the module, either every five minutes, when a call is scheduled, or when a change is made to the list of calls to be made.

List of Calls

There are two lists of calls to be made: the timed list at the top and the untimed list at the bottom. An asterisk is displayed against the next call to be taken.

The following information is displayed for the

customer:

Customer

The customer name.

Telephone

Telephone number from the call profile or the customer details.

Status Code

The name of this field is not displayed on the screen, but the following codes are displayed.

Blank - the call is due to be made today.

> - The call is planned in the future.

R - The call has been rescheduled from the original call date or time.

C - The call has been changed from one operator to another.

< - The call time has been passed.

Call Date and Time

The current target call date and time.

Call Sequence

The calls for the selected operator are displayed in two lists: timed calls and untimed calls. The timed calls are sequenced by date and time, the untimed calls by date.

Action Field

Against each call entry is an action field. The following entries are allowed:

1 - Select the call. The system displays the Establish Contact screen with the data from the selected call profile.

2 - Reschedule call. The system checks that the operator has the correct level of authority and then displays the Rescheduled Call Window allowing new times or dates to be entered.

3 - Change Operator. This system checks the operator has the correct level authority and then displays the Change Operator Window allowing the selection of a new operator.

4 - Abort call. The system checks that the operator has the correct level of authority and then displays the Abort Call Window with reason codes. A reason code must be selected for the call to be aborted.

Function**F13**

Sales Prompts.

F19

Select List.

F22

Incoming Call.

Group / Team Working

If a group of operators are required to work as a team, it can be achieved in the following way:

- Each of the operators is set up in their own right.
- Each call group is set up as an operator.
- When a call list is created, the preferred operator is chosen to be one of the call groups.
- When an operator signs on they will have no calls displayed. If they then press **F19=Select List** they can select the call group to which they have been assigned.
- The module also allows more than one operator to be active on a list at one time.
- The target operator, call group and the actual operator (the person who made the call) are recorded by the system.

Select an option or use a function key to perform the desired action.

Outgoing Calls Establish Contact Screen (Option 1)

This screen is displayed when you select a call by entering a '1' next to it on the Outgoing Calls Selection Screen.

Operators need to make the best use of their time, therefore the time taken to get to the right person must be minimised.

Note: This phase of the call is non-productive and must be kept as short as possible.

Fields:

Operator

Code of the operator making the call.

Type of Call

The type of call to be made - one of:

- Telesales
- Planned Delivery
- Telemarketing

Customer

Details of the name and second line of the address are displayed.

Call Date

The target call date.

Call Time

The target call time. If there is no target the literal 'ANY TIME' is displayed.

Date and time are positioned immediately below the actual date and time displayed in the top right of the screen.

Del(ivery) Date

Planned Date for the delivery (if applicable).

Del(ivery) Time

Planned Time for the delivery (if applicable).

Region

Applicable Sales Region for the Customer.

Territory

Applicable Sales Territory responsible for the Customer.

Salesman

Salesman responsible for the Customer.

Division

Applicable Sales Division for the Customer.

Depot

The Delivery Stockroom from which the Customer's orders are usually sourced.

Telephone

The customer's telephone number.

Contact

The name and title of the primary or normal contact.

Text

The most recent additional text for the contact is displayed. This may be added to or amended, using the **F21=Text** key, prior to continuing with the order.

Extension

The extension number.

Buying List

The name of the buying list which was used to form the basis of the preparation.

Call List

This is only applicable to telemarketing calls.

Order Number

The Customer's own order reference - Mandatory if indicated on the Customer Master Sales details.

Booking In Time

Only applicable for customers defined as Booking In. Enter the booking in time, if known, otherwise it will be entered later via the Amend Booking In Details function.

Ref.

Booking in reference (if applicable). If a booking in time is known and entered, enter a customer reference that confirms the agreed time. Otherwise it is left blank, and entered later via the Amend Booking In Details function.

Cust. Collect

1 - Customer to collect the order. Details are not passed to Drinks Transport Planning. The order is picked and assembled by Pick Note in the normal manner.

0 - Normal Order. Delivery is required.

C.W.O.

Cash With Order. Enter one of the following:

0 - Normal Order.

1 - CWO - the order will be suspended ('CW') to await receipt of payment before the order is released and processed in the normal manner.

Week Commencing Order?

Only applicable for customers defined as requiring Booking In:

0 - The delivery date is the best known date of delivery required, which can be amended by the Amend Booking In Details function.

1 - Week Commencing Order - the delivery date is assumed to be a week commencing date, indicating the week in which the order is due. The Booking In Reference and Time cannot be entered at this point, but must be entered once the date and time is agreed, using the Amend Booking In Details function.

Note: Week Commencing Orders are not allocated.

Call Action

2 - Reschedule Call. The module displays the Reschedule Call window allowing new times or dates to be entered.

4 - Abort Call. The module displays the Abort Call window with the reason codes. If a reason is selected, the call is aborted.

Enter - Process the order.

**** Warning ****

A warning message is displayed if the customer has exceeded the credit limit and/or is on credit stop. Order taking can proceed, but the order is suspended by the module.

Functions:**F19**

The Select Contact Window is displayed to aid the operator in asking for other known employees of the customer. If a selection is made the new contact is automatically associated with the taken order.

F21

Enables maintenance of contact text.

F22

If the call to be taken is a telemarketing call, the buying list can be changed. The Select Buying List Window is displayed allowing selection of the chosen list.

Press **Enter** to proceed to the Outgoing Calls
Enter Order Item Details Screen.

The system records the details of the order
taking cycle agreed at this point, e.g. the name
of the actual contact and the actual buying list.

Outgoing Calls Enter Order Item Details Screen

This screen is displayed when you have pressed **Enter** on the Outgoing Calls Establish Contact Screen.

This task goes through an agreed list of items with a customer recording their requirements. There are two different ways of doing this.

- Telesales and Telemarketing - the order quantity is entered.
- Planned Delivery - the customer's current stock level is entered.

The screen can display a range of supporting information.

Fields:

Screen Structure

The screen has four areas which are common to all types of Order Entry. Each of these areas has a specific purpose:

1 - Displays the overall objectives of the order

Type of Order

- Telesales.
- Planned Delivery.
- Telemarketing.

Customer and Contact Details

Details of the name and second line of the address are displayed plus the contact details.

Buying List

The name of the buying list which is assigned to the customer.

Note: Currency code and currency conversion details are also displayed if the customer is a currency customer.

2 - Displays the list of the items to be sold to the Customer

The list of items is displayed from the buying list for this call. A buying list comprises a number of screens, each of which can have between one and twelve lines. The format of this area of the screen is controlled by the Presentation Design option from Company Profile Maintenance.

3 - Quantity Entry Area

There are two columns of data. The first is headed 'P' for promotion. If the item is being promoted an asterisk is output on the line. Positioning the cursor on the line and pressing the **F4=Prompt** key displays the details of the promotion, and provide prompted quantity entry.

The second column is for entry of the following:

- The order quantity (Telesales and Telemarketing).
- Customer's current stock (Planned Delivery).

The heading that appears above the column and the number of decimal places that can be entered are controlled by the Presentation Design option from the Company Profile maintenance screen.

4 - Displays a range of information areas and windows

You can select between the different information areas by pressing the **F13=Actions** function key. This provides you with a list of available information areas on which to base your selection.

The information areas are as follows:

- Pricing details.
- Line values.
- Whole order details.
- Previous order details.
- Customer Promotions.
- Sales Prompts.
- Retrieve Previous Orders.
- Internal order text.
- Special Delivery Instructions.

Functions:

F10

Add item. Any item (that already exists on the Buying List) can be added to an order at any time in the order taking cycle. This can be important for customers

with 'History' buying lists, where there has been no recent history, so the item is not currently displayed. A window is displayed that allows the entry of an item number and quantity. The required stock checking and pricing is performed during the order taking cycle.

F13

Actions. This allows you to select between the different information areas, using selection criteria. The various screens displayed explained below.

F19 and F20

Move the screen to the left and right respectively.

F22

Close Order.

Outgoing Calls Pricing Details Screen (F13)

This screen is displayed when you have entered **F13=Actions** on the Outgoing Calls Enter Order Item Details Screen.

The price and discount information for customer and buying list can be displayed if pricing has been requested either at generation of call lists or interactively (the choice is set on the Company Control record). The price is retrieved from the price list applicable according to the Advance Pricing rules (for further details of Advanced Pricing, please refer to the Drinks Sales Order Processing Product Information). The issue unit of measure for the item is also displayed.

F22=Close Order					F20=Right
10-35	SH	MW	KS	IM	II KENB20A PED170S1

Fields:

Qty

Enter the quantity required of any item listed.

Functions:

F10

Add item. Any item (that already exists on the Buying List) can be added to an order at any time in the order taking cycle. This can be important for customers with 'History' buying lists, where there has been no recent history, so the item is not currently displayed. A window is displayed that allows the entry of an item number and quantity. The required stock checking and pricing is performed during the order taking cycle.

F13

Actions. This allows you to select between the different information areas, using selection criteria.

F19 and F20

Move the screen to the left and right respectively.

F22

Close Order.

Outgoing Calls Maintain Internal Order Text Window (F21)

This is displayed when you press **F21=Text** on the Actions window and enables you to maintain order text which is displayed on enquiries but not printed on external documents.

14-58		MW KS IM II KENB20A PED170S1	

Fields:

Text

Up to 45 characters may be entered on a single line, and up to 99 lines may be used. No validation is otherwise performed. Lines may be left blank between entered lines.

Position To

Must be a line number in the range 01 to 99, inclusively, if entered.

If a valid 'Position To' is entered, the text display begins at this specified line number.

Insert

Must be a number of lines in the range 01 to 99 inclusively if entered.

If 'Insert' is specified, the appropriate number of lines are inserted after the entered line number.

After

Must be a line number in the range 00 to 98, inclusively if entered.

If 'After' is specified, the appropriate number of lines are inserted after the entered line number.

Delete

Must be a number of lines in the range 01 to 99 inclusively if entered.

If 'Delete' is specified, the appropriate number of lines from the entered line number are removed from the display.

From

Must be a line number in the range 01 to 99 inclusively if entered. If 'From' is specified, the appropriate number of lines from the entered line number are removed from the display.

Note: No amendments, insertions and deletions are actually performed in the text file until the update key is used.

Select **F8=Update** - the text entered is updated in the text file for the requisition, and you are returned to the Selection screen.

Outgoing Calls Special Delivery Instructions Window (F13)

There is a split window available from this option - for Fixed and Variable delivery instructions, with the first three lines of Customer External Text displayed. The Fixed message area (one line) is protected for amendment, whilst the Variable message area (two lines) is always available for amendment.

The delivery instructions are copied from the first three lines of customer external text to the order text. If the second two lines are changed then only the order external text is changed.

Outgoing Calls Order Confirmation Screen (F22)

This is the first phase of the order close. It enables non-standard items to be added and sourcing to be performed. This screen displays details of the order lines, highlights stock shortages and provides sourcing facilities. It also allows item additions and the entry of additional charges.

The upper part of the screen confirms the customer and contact details. This is followed by the list of order lines that have been recorded including the buying list description, quantity and line value. If the account is currently over the credit limit this is displayed.

Note: Credit Checking - During Order Entry only, the order's gross value is available, hence it is this gross value that is used to check the customer commitment against his credit limit and possibly suspend the order. When the order bank update is run, and the full pricing and discounting applied, the credit limit check is performed again - potentially taking the order off credit limit suspension.

Stock Checking

Stock checking is performed if the flag on the company control record is set to 'Yes'. The result of the check is indicated by the manner in which the 'Quantity required' is displayed.

Normal intensity - stock is available. (No adverse condition identified.)

Reverse image - there is insufficient stock at the stockroom which supplies the customer.

Reverse image flashing - the item is not stocked at the stockroom which supplies the customer.

Selection

Each line where there is an exception condition can be selected by the entry of a '1' on the line. There are three ways to satisfy a stock exception:

- The same item shipped from a different stockroom.
- A replacement item shipped from normal stockroom.
- A replacement item shipped from a different stockroom.

Function:

F10

Add item. Any item (that already exists on the Buying List) can be added to an order at any time in the order taking cycle. This can be important for customers with 'History' buying lists, where there has been no recent history, so the item is not currently displayed. A window is displayed that allows the entry of an item number and quantity. The required stock checking and pricing is performed during the order taking cycle.

F13

Actions. This allows you to select between the different information areas, using selection criteria. The various screens displayed are explained below.

Display Whole Order Details (F13)

The purpose of this window is to display to the operator the value of the order taken so far.

Display Customer Promotions (F13)

If a promotion has been set up which is not tied to a particular item, but is for a specific customer or range of customers, it can be viewed at any time by selecting this option.

Display Sales Prompts (F13)

Displays a window with a list of the current sales prompts.

Maintain Internal Order Text (F13)

Text may be maintained against the order which is displayed on enquiries and internal reports but not printed on external documentation.

Maintain Special Delivery Instructions (F13)

Text can be maintained for both Fixed and Variable Instructions.

Press **Enter**.

Outgoing Calls - Sourcing Options Window (Option 1)

This window is displayed when you have selected an exception on the Outgoing Calls Order Confirmation Screen.

When a line is selected for sourcing, the sourcing options are displayed. The current stock position of the required item is displayed in all stockrooms. If an alternative has been identified, this is also listed. A sourcing decision can then be made.

20-15 S2 MW KS IM II KENB20A PED170S1

Fields:

Charge Code

This is a charge code which is defined against the major type 'SUNC' on the descriptions file, in Inventory Management. The charge description is retrieved. A prompt is available, if required.

Charge Amount

This may be entered or the standard may be retrieved. The standard will only be retrieved if no entry has been made and the standard is not zero.

VAT Code

If a code has been set as standard for the charge code it is retrieved when the Enter key is pressed or a valid code may be entered. The VAT rate is retrieved.

Press **F8=Update** to save the additional charges you have entered.

Outgoing Call Order Close Screen

Once an order has been sourced and, consequently, accepted, the Close Order screen is displayed.

The sales order number is now shown, enabling entry of the customer's purchase order number and confirmation of the next call.

The upper part of the screen confirms the customer and contact details. This is followed by the sales order number allocated by the module.

11-29	SA	MW	KS IM II KENB20A PED170S1

Fields:

Customer Order Reference

The customer's purchase order number. This is only mandatory if it has been requested on the customer sales information screen in customer maintenance.

Customer Order Date

Defaults to the current date, may be overridden.

Date Delivery Required

Defaults to the current date, may be overridden.

Next Call Date

Default to the next call date calculated from the call profile may be overridden.

(Next Call) Day

Three letter short name for the Next Call Date's Day of the Week.

Next Call Time

The start time of the earliest call window from the call profile, together with the preferred call time, if applicable. May be overridden.

Proforma Invoice

Enter '1' to print a Proforma Invoice.

Suspension Reason Code

If a suspension reason has been generated in the process of taking the order, e.g. credit limit, zero price, it may not be altered. If nothing is generated by the system, the order may be suspended by entering a valid reason code. A prompt is available.

Functions:

F22

Continue. This order is added to the list of orders to be transferred to the Drinks Sales Order Processing order bank.

*Note: On pressing **Enter**, all the data is validated and any error conditions highlighted. Note the only exit from this screen is to accept the order.*

Press **F13=Actions** to call up the window showing which actions are available to you, from the following:

Display Whole Order Details

Display Customer Profiles

Display Sales Prompts

Maintain Internal Order Text

Maintain Special Delivery Instructions

Maintain Additional Charges

See Order Confirmation, for further details of these actions.

The Call List is re-displayed for selection of the next call, if required.

Incoming Calls

1... **2...** 2/DSP

This task enables operators to access the call list by customer and to take the order in the style of Telesales regardless of whether or not it is planned. Access to this procedure can either be directly from the Telesales Order Processing menu or from the Outgoing calls selection screen.

Incoming Calls Customer Selection Screen

Select the Incoming Calls option.

This screen is used to identify the customer's account.

Fields:

Customer Account Code

Enter the customer account number. The **F4=Prompt** is available.

Delivery Address Sequence

Enter the customer delivery address sequence.

Customer Search Argument

Enter the customer search argument and press **F4=Prompt**. Select the customer from the displayed list.

Customer Status

Enter the customer status. This is used in conjunction with the search argument for displaying customers.

Functions:

F22

Exit to outgoing calls selection screen.

Press **Enter**. If the account is for a valid customer any existing call profiles are displayed. A message is displayed if it is invalid.

Incoming Calls Call Selection Screen

This screen is displayed when you press **Enter** on the Incoming Calls Customer Selection Screen.

This displays the summary details for any existing call profiles, indicates if the call is already planned and provides entry into the call profiles and contact maintenance screens. This enables selection of a planned call, a call profile without a planned call, or an incoming call.

The customer code and name and address are displayed for confirmation. This is followed by a list of the summary details from the call profiles. The time and date of the next call is indicated together with the call frequency in weeks. A message is displayed if it has already been planned by the generation of call lists run. If no profiles exist, i.e. this is not a customer which is normally called, a message is displayed.

```

Fields:

Select

1 - Starts the order taking cycle based upon the selected call profile. If the call is planned, the full facilities are available during order taking including order history review and planned delivery support. If the call is not planned, the order can still be recorded, but order history and recalculation of planned delivery values will not be done.

2 - Selects the call profile for maintenance.

Functions:

F10

Add new profiles. This enables call profiles to be created and then used as the basis for the subsequent order.

Press **Enter** to select the order entry procedure, with system defaults for order type and buying list.

Incoming Calls Record Order Details

The recording of an order, using '1' from the Incoming Calls Summary screen, follows the same process as making an outgoing call (please refer to Outgoing Calls.) However, if the call was not already in the call list (i.e. planned) no order history is available during the cycle. After completing an order, the Incoming Calls Call Select screen is re-displayed.

Manage Call Lists Screen

22/DSP

This function is used to review work to be done and to be distributed amongst the available operators.

Manage Call Lists Pause

Select the Manage Call List option.

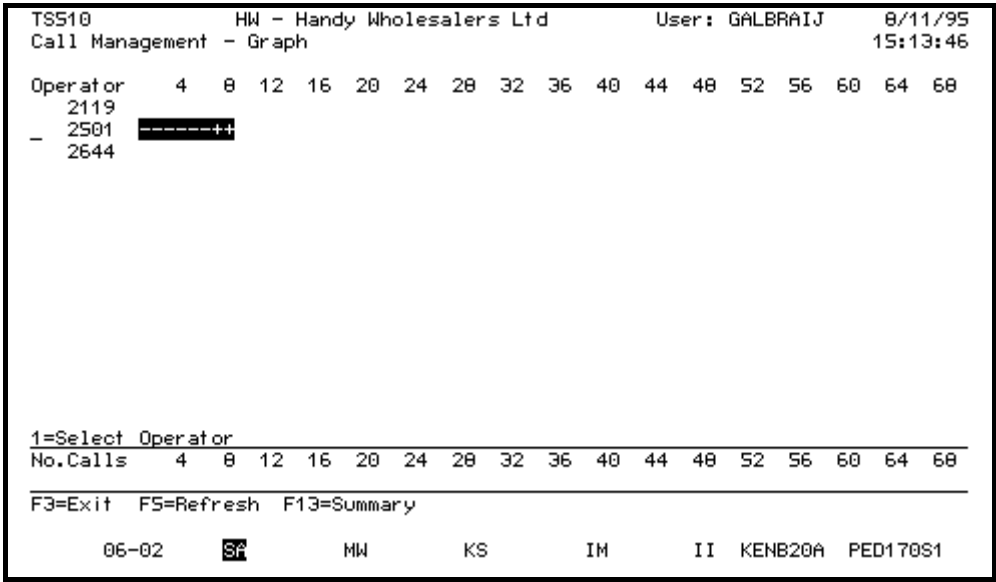

This warns the operator that after the first load of the day of the procedure a re-organise routine is run.

The following message is displayed during the reorganise routine:

'Operator workload being calculated.'

Manage Call Lists Graph Screen

This displays, in diagrammatic form, the work to be done by each operator.
A horizontal bar chart is displayed with the operator's codes on the left of the screen. If there are more than 68 calls to be made the horizontal axis is scaled to the appropriate size.

Fields:

Character Key

Overdue Calls '-'

Today's Calls '#'

Future Calls '+'

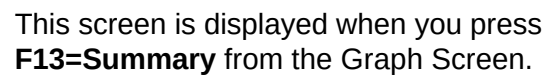

Selection Column

Enter a '1' against an operator's code to select the detailed display of the calls to be made by that operator.

Functions:

F13

Display Call Management Summary Screen.

Manage Call Lists Action Screen (Option 1)

This screen is accessed by entering a '1' against an operator on either the Manage Call Lists Graph Screen or Manage Call Lists Summary Screen.

It displays a list of the calls to be made by an operator to enable re-scheduling and the distribution of work. The list of calls is displayed by time of call in date sequence. Untimed calls are before timed calls.

Generate Call Lists

1...
2...

31/DSP

This task prepares the call list up to the nominated date, and generates all the supporting information.

Although it is intended that this job is run once each working day, it does not *have* to be run every day, or it can be run more than once. The purpose of the job is to prepare work for the Telesales operators, therefore, it may be run whenever it is necessary to perform this task.

Generate Call List Screen

Select the Generate Call Lists option.

The screen contains the data which was used in the previous run of the job together with the standard defaults from the company control record. There are three columns of input data, one for each type of order taking activity: Telesales, Planned Delivery and Telemarketing. By use of the dates and parameters the run can be performed for any combination of order types. Standard defaults are shown on the left where they have been previously defined.

Fields:

Remove Calls Before

The module drops from the call list all calls which have been completed or abandoned. In addition, all calls prior to this date are dropped irrespective of their status (unless the call is currently in progress). The date must be present and valid.

Add Calls To

The module reviews all the call profiles to ensure they have a next call date, if not it calculates one based on the profile. All call profiles with a date equal to or before the entered date are added to the call list. A check is performed to ensure the call is not already present. The date must be present and valid.

Note: Each type of order can have different 'before' and 'to' dates if required.

Pricing Overnight

The normal price list details can be extracted to speed interactive processing. The maximum advantage can be gained by limiting this processing to Telesales

and Planned Delivery, particularly if there is a high probability of the buying list changing for Telemarketing.

Note: This overrides the option established on the Company Profile.

Default Buying List

(Mandatory.) If the buying list is not set up in the call profile, the default buying list is used as a basis for the preparatory work. This default from the company Profile can be changed as required.

Previous Orders (No. of)

As part of the order bank update and the overnight routine, the system examines the immediate orders history and extracts information so that it can be displayed while the order is being taken. The greater the number of orders, the longer it will take to extract the history and build the virtual buying lists. This is particularly true if there are a large number of lines per order, and the preparation is being done for a number of days. To control the amount of processing, the number of orders to be extracted can be set to any number between zero and thirteen.

Orders by Date/Week

Previous orders can be displayed by the date when the order was taken, or summed by week.

- 1 - By date - last *n* orders
- 2 - By week - last *n* weeks' work of orders

Note: Since only Order by History is currently implemented, only option '1' can be used here.

Order Date Format

If the order history is displayed by date, there are three possible formats:

- 1 - dd/mm/yy - e.g. 21/11/95
- 2 - ddmmm yy - e.g. 21Nov 95
- 3 - mmmdd yy - e.g. Nov21 95.

Planned Delivery (Calc. Recommended Stocks)

The system can calculate the recommended stock for a customer using the history data. This option is for planned delivery orders only.

Note: This process can be done whilst normal order taking continues.

Press **Enter** to perform all the validation, and to identify and highlight fields in error.

Press **F8=Submit** to submit the job.
