Glossary

Glossary

Agent Contact

The person with whom the transport is booked.

Area

A geographical division of Drinks Transport Planning responsibilities. These normally have very definite boundaries, e.g. motorways, rivers, mountains, county/state lines and are normally determined by the carrier.

Area Minimum

The lowest charge, made by the carrier, for delivering any load, or part load, into this area.

Assembled Order

An order that has been confirmed as picked and 'despatched' in Drinks Sales Order Processing or Drinks Warehousing.

Authorise Payment

A carrier invoice is matched to the relevant load, with the payment details being transferred to Accounts Payable.

Automatic Rating

The rating of loads, by the application, based on their corresponding rate codes.

Bill of Lading (BoL)

A formal document, containing full particulars of goods shipped or for shipment, which forms a contract with the carrier.

Bill Format

A system code which defines the layout of the BoL details.

Bill Required

Defines whether or not a BoL is to be printed.

Capacity

The maximum amount a particular vehicle type can contain, in terms of the load gross weight and/or volume.

Capacity Type

The unit in which capacity is measured, i.e. gross weight, volume or a total number of containers.

Carrier

An organisation 'employed' to transport goods. This may be an internal fleet or an external haulier or parcel carrier.

Carrier Rates

A set of charges levied for the transportation of goods. Each set is identified by a rate code, which is assigned to a load for automatic rating purposes and is effectively a contract with the carrier.

Carrier Type

A user-defined classification of carriers. For Example, may be used to determine whether it is an internal company fleet or an external organisation.

Charge Structure

A table of charges which may be used as part of the definition of a carrier rate. It represents a sliding scale of rates based on gross weight, volume or number of containers.

Commodity Code

A standard code representing the type of product being transported.

Completed Load

A load 'awaiting drop to history' i.e. requiring no further action other than to archive.

Confirm Delivery Time

An indication that this customer operates a booking in system for transport and that confirmation of a suitable delivery time must be gained.

Consignee

The person, agent or carrier to whom the goods to be transported are handed over to.

Container

An object used for holding goods during transportation, e.g. carton, box, pallet, barrel, drum, or bottle.

Conversion Factor

A fixed value normally used to convert weight, or volume, between imperial & metric units when rating or printing a load.

Crew

Identifies a second driver or driver's mate.

Cyclic Route

A route where the destination is the same as the origin.

Default Centre

The transport centre for which the planner has primary responsibility. He/she is automatically assigned into this transport centre.

Delivery Profile

A delivery address, defined with additional parameters used as defaults for planning deliveries to this customer.

Destination

The predetermined end of a route, which is defined to the application as a node. For cyclic routes, the destination is the same as the origin.

Driver

The person who is assigned to drive the vehicle containing the load, following the instructions provided on the load sheet or bill of lading.

Driver Manifest

See load sheet.

Drop

A stop point on the route where part of the load is to be delivered. A sequence number is normally employed in defining drop points, to ensure the driver visits them in a cost effective manner. A drop is uniquely identified by a combination of this sequence number and a customer delivery point (defined by the customer number and a three character delivery sequence) i.e. there may be multiple customer delivery points associated with each drop.

Drop Charge

A carrier charge rate per drop.

Drop Charge (Minimum)

The least amount a carrier will charge for all drops on a load.

Drop Charge (Maximum)

The most a carrier will charge for all drops on a load.

Exclusive Load

A load containing only orders for one particular customer delivery point.

Free Drops

The number of drops for which the drop charge is *not* applied. 'First drop free' is often used to mean that one drop is free of charge.

Goods Value

The total sales value of the goods contained on the load, held for insurance purposes.

Gross Weight

Total weight of goods when stored in their containers.

Journey

The actual delivery of an individual load on its associated route.

Load

A group of drops to be made on an assigned route, by a nominated carrier, on a particular date.

Load Charge (Minimum)

The minimum amount a carrier will charge for transporting an individual load.

Load Grand Total

The sum of total charges plus drop charges plus penalties plus surcharges for an individual load.

Load Sheet

A document used for marshalling and loading despatches onto the vehicle. Often used, particularly for internal fleets, as a driver manifest which provides a working document to take on the journey.

Manual Payment

A payment to be made to a carrier having matched his invoice to a load but not posted to Accounts Payable. This is used where the carrier has already been paid manually via AP without matching to a load (in exceptional circumstances).

Manual Rating

The rating of loads, by the user, based on rates entered specifically for each load. Normally applied where a carrier is infrequently used.

Manual Requirement

Sales orders to be planned for delivery which the system knows nothing about, typically where the order is being delivered on behalf of another company.

Net Weight

Gross weight less tare weight, i.e. actual weight of goods.

Node

A geographical location where one or more routes start or end. Normally a depot or warehouse used by the carrier, and often a transport centre in its own right from where onward transport is planned.

Order

This may represent a customer order, distribution order (for depot replenishment) or a despatch note. It is assigned to a drop when added to a load.

Origin

The predetermined start of a route, which is defined to the application as a node, and is normally where a transport centre is situated. For cyclic routes, the origin is the same as the destination.

Outstanding Load

A load not yet completed, i.e. still awaiting further action within the system.

Outstanding Order / Outstanding Requirement

An order not yet added to a load.

P & L Override

A specific General Ledger profit and loss account to which the transport costs of the load are to be posted.

Payables Account

The account to which details of carrier invoices, and their subsequent payments, are posted.

Payment

The amount to be paid to the carrier for transportation of goods, after first matching the carriers invoice to the relevant load and posting to Accounts Payable.

Payment Method

How the carrier is to be paid, e.g. prepaid, cash on delivery paid by the customer.

Penalty

An additional charge applied when the gross weight of the load is less than the carriers specified minimum weight.

May also be applied for volume or number of containers, rather than weight.

Pending

The status of a load whilst it is still available for the addition of orders, i.e. not yet released.

Planner

A person who has responsibility for planning transport.

Planner Time Fence

The number of calendar days ahead that a planner is normally planning transport.

Zero represents today, 1 tomorrow and so on.

Radial Routes

Routes sharing a common origin each with a different destination.

Rate

A price per unit to be charged by the carrier for transporting goods. Based on a contract or agreement with the carrier.

Rate Code

See carrier rates.

Rating

Calculation of the expected carrier charge for a load, based on the rating method & rate code assigned to it.

Rating Method

A system code representing how the carrier rates are used to calculate the charges for a load (in automatic rating).

Ready for Loading

See assembled order.

Released Load

A load which is available for shipment, with the next process being the printing of transport documentation.

Route

A regular journey travelled from the transport centre. Represented by a code which is associated with delivery profiles and assigned to loads.

Seal Number

Used where security tags are physically attached to the load, with each one identified by a reference number and/or colour.

Ship Date

Despatch date for the load from the origin.

Ship Time

Despatch time for the load from the origin.

Skeleton Load

A standard load which is used regularly as the basis of a new load, by copying across the defaults and instructions added to it.

Stop

Alternative term for a drop, often used in the US and Canada.

Surcharge

Unforeseen increases to carrier rates, e.g. increases in fuel, vehicle insurance, expressed as an additional value or a percentage increase applied to total charge.

Tare Weight

The weight of the wrapping or container in which the goods are transported.

Time Slot

A range of times when the customer accepts deliveries. Normally used only for customers with restrictions.

Total Charge

The charge calculated for a load, based on multiplying the rate by the gross weight (or volume or number of containers).

Transshipment

The transfer of goods, via a load, from one stockroom to another within the company.

Transport Centre

A stockroom / warehouse / depot / distribution centre from where goods are physically transported. (This may be a group of stockrooms).

Vehicle

A registration number or unique code identifying the vehicle carrying the load.

Vehicle Type

Represents a class of vehicle in terms of its key attributes, e.g. size, dimensions, loading method.

Volume

The cubage occupied by the goods when packed in their respective containers.

Waybill (see also Bill of Lading)

An alternative term for bill of lading often used in the US & Canada.
