Chapter 1

Data Take-On

Entry Of Details

This section of the Product Information highlights the method by which the initial item / location stock details are entered for a warehouse.

You can use this procedure to implement warehouse control for any stockroom that you have previously set up using Drinks Inventory Management.

Each item which is managed by Drinks Warehousing requires an item / warehouse profile in order to define its rules and characteristics.

A series of routines enable you to capture the initial stock count so that the data can be entered, reconciled and adjusted before being accepted. This is best performed whilst there are no Drinks Inventory transactions being carried out.

Details need to be entered to reflect the type of items being counted. The item, lot, rotation date, pack and quantity details are all required. The entry of counts is by locations or item, the use of the two routines will allow for fine adjustment of the count.

Reconciliation provides a report showing count discrepancy with the Drinks Inventory balance, (when Drinks Inventory Management is already active). Other data mis-matches are also identified. The reconciliation report should be run without update until the count entered has been checked and verified as correct. When the update is requested, the final report is produced and appropriate adjustment made to the Drinks Inventory balances.

*Note: The Warehouse must remain inactive until this exercise has been completed. Deactivate the warehouse using **F14**, the activate/deactivate toggle key, from the warehouse profile maintenance option.*

This is the method by which the initial item/location stock details are entered.

After the data take-on has been reconciled and the warehouse updated then the Data Take-on Completion option must be taken. This will accurately set the location content and fullness details used for put-away and commit processing, the routine concludes by activating the Warehouse.

Implementing Warehousing for Bonded Stockrooms

If you want to implement warehouse control for a stockroom that is already Bond controlled, you do not need to carry out any additional steps. Once the Bonded Stockroom has been defined as a Bonded Warehouse, any item receipts will invoke the Warehousing screens as well as the Bond receipt screens to capture Bond information. Issues from a Bonded Warehouse will calculate any duty payable.

If a stockroom is already warehouse controlled you must not use the Bond application to define this stockroom as Bonded.

To define a warehouse as a Bonded stockroom:

1. Issue all stock from the warehouse.

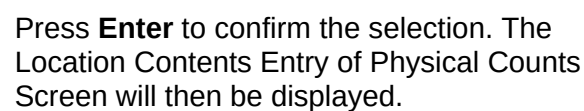

2. Use the Bond module to define the stockroom as a Bonded stockroom.
3. Re-receive the stock into the warehouse. The stock receipt will then capture the Bond details for the stock.

Location Contents

1/DWD

This procedure enables the initial item details to be recorded by location. The procedure is not available when the Warehouse is 'active'.

Location Contents Entry of Physical Counts Screen

This screen is displayed when you enter a valid location into the Location Contents Selection Screen and enables the entry of physical counts of items at the location.

The selected location is identified. Details should be entered for each item at the location.

WH190	Z1 - Demonstration Company		User SP1	01/09/94
	Central Warehouse			12:00:00
Data Take-on - Location Contents				
Location.....	AC1	Area..	MS	Main Store
Type.....	RA	Standard	Racking	
Line	Item	Lot	Rotation	Pack Label Quantity
0001	5006		0/00/00	PAL 16.000
Line	Item(?)	Lot(?)	Rotation	Pack(?) Label Quantity
_____	_____	_____	0/00/00	_____
F3=Exit F4=Prompt F5=Refresh F8=Update F12=Previous				

Fields:

Item

Enter the item code that has been counted. A prompt is available. The item must have an item/warehouse profile.

Lot

Enter the appropriate lot number if the item is lot, batch or serial controlled.

Rotation Date

Enter the appropriate date if the item is rotation date controlled.

Pack

How the item is packed. A prompt is available.

Label

Enter the label number if the item is to be stored by unique label number.

Quantity

Enter the quantity in the location in Inventory stockroom issue units.

For example, for kegs of Beer, the quantity entered is litres not kegs, or cases of Wine, the quantity is bottles not cases. Quantities are not dual unit format because the warehouse may be used for Production Modules which require decimal quantities.

Add Items to the display by filling in the above details and pressing **Enter**.

*Note: Changes will only be written to the database when **F8-Update** is pressed.*

Note: Amendment of an item already added requires the entry of the line number corresponding to the entry on the display.

When you have finished making entries, press **F8-Update** to write all changes to the database.

Note: If the warehouse is bonded, then the bond rotations must be entered. See the relevant Bond Product Information.

Item Details

2/DWD

This procedure allows you to enter item / location details when you are first setting up the warehouse on the system.

Item Details Selection Screen

Select the Item Details option.

This screen enables the selection of the item / lot for which details are to be recorded.

WH191	Z1 - Demonstration Company	User SP1	01/09/94
	Central Warehouse		12:00:00
Data Take-on - Item Details			
Item.....?	5006		
Lot.....?			
F3=Exit F4=Prompt			

Fields:

Item

The item code for which details are to be recorded. A prompt is available.

Lot

If the item is lot, batch or serial controlled, then the appropriate lot number must be entered.

A prompt is available on existing lots for this item and the quantity currently located in this lot. If a new lot number is entered you will be required to maintain the lot header details before proceeding.

Press **Enter** to confirm the selection and display the Item Details Entry Screen .

Item Details Entry Screen

This screen is displayed when you have entered valid item and lot codes into the Item Details Selection Screen and enables the entry of the location / item characteristics and counted quantities.

The selected item / lot is identified. Enter details for each occurrence of the item.

		Central Warehouse			12:00:00
Data Take-on - Item Details					
Item..... 5006		Total Quantity.			
Lot.....		Entered.....			
Line	Rotation	Pack	Label	Location	Quantity
0001	0/00/00	PAL		AB3	16.000
0002	0/00/00	PAL		BA2	12.000
0003	0/00/00	BOX		AC1	6.000
Line	Rotation	Pack(?)	Label	Location(?)	Quantity
_____	<u>0/00/00</u>	_____	_____	_____	_____
F3=Exit F4=Prompt F5=Refresh F8=Update F12=Previous					

Fields:

Rotation Date

If the item is rotation date controlled, enter the appropriate rotation date.

Pack

This is a code which describes how the item is packed.

Label

Enter the label number if the item is to be stored by unique label number.

Quantity

Enter the quantity in Drinks Inventory stockroom issue units.

For example, for kegs of Beer, the quantity entered is litres not kegs, or cases of Wine, the quantity is bottles not cases. Quantities are not dual unit format because the warehouse may be used for Production Modules which require decimal quantities.

Add Item/Location details to the display by filling in the above details and pressing **Enter**.

*Note: Changes will only be written to the database when **F8=Update** is pressed.*

When you have made all the entries, press
F8=Update to write the changes to the database.

Note: Amendment of item/location details already added requires the entry of the line number corresponding to the entry on the display.

Note: If the warehouse is bonded, then the bond rotations must be entered. See the relevant Bond Product Information.

Data Take-on Reconciliation Without Update

1... **2...** 11/DWD

This option is used to provide a comparison of the book-stock figure at location, lot and item / stockroom levels with counted details.

The reconciliation is based on the comparison of entered quantities and the current physical stock quantities.

Data Take-on Report Details Screen

Select the Data Take-on Reconciliation Without Update option.

WH990	Z1 - Demonstration Company Central Warehouse	User SP1	01/09/94 12:00:00
Data Take-on - Reconciliation Report			
Report content..... <u>1</u>		1=Detail 2=Summary	
Items to be included on report..... <u>2</u>		0=None 1=Discrepancies only 2=All	
Range of items:			
From...?..		_____	
To...?..		_____	
F3=Exit F4=Prompt			

Fields:

Report Content

1 - Detail. The detailed report provides the summary information (outlined below) as well as details of item quantities, rotation dates and pack types by location.

2 - Summary. The summary report provides the following information:

Total quantity - the recorded quantity of the item in Drinks Inventory Management.

Entered quantity - the quantity entered during this data take-on session.

Variance - the difference between the recorded quantity and the counted quantity entered for the item.

Items to be included on Report

0 - No items.

1 - Discrepancies only.

2 - All items.

Range of Items

Enter the range of items to be included in the reconciliation. Leave blank for all items.

The item codes entered in both the 'to' and 'from' fields must have been defined to Drinks Warehousing. If an item code is entered in the 'from' field and the 'to' field is left blank, then only this item will feature in the report.

Press **Enter** to confirm the selection and submit a batch job to produce the report.

Troubleshooting:

The following messages may be printed on the report for the reasons described below.

***** Variance error has occurred *****

A discrepancy exists for the item between the counted stock and the stock recorded in Drinks Inventory Management for the stockroom.

***** No Summary Data take-on records exists *****

No data take-on values have been entered for the item, but a quantity of stock is recorded in Drinks Inventory Management. When final reconciliation takes place, Drinks Inventory Management stock levels are adjusted to reflect the stock counted, hence the warning is given to prevent stock levels of zero being entered for items unintentionally.

***** No Item/warehouse profile record exists *****

The item has been defined to Drinks Inventory Management but does not have an equivalent item / warehouse profile, and thus cannot be processed within Drinks Warehousing. Item/warehouse profiles are defined using the option 'Item/warehouse profile'.

Data Take-on Reconciliation With Update

12/DWD

This option is used to provide a comparison of the book stock figure at location, lot and item/stockroom levels with counted details.

The reconciliation is based on the comparison of entered quantities and the current physical stock quantities. If update is requested then the entered counts will be used to set the initial stock position for items at the specified locations, to ensure that the sum of the item at each location in the warehouse equals the item/stockroom balance an appropriate stock adjustment will be performed.

Once completion has been requested, those items in the selected range cannot be further amended using data take-on.

Data Take-on Report Details Screen

Select the Data Take-on Reconciliation With Update option.

This screen allows the details of the reconciliation report to be defined and also to indicate whether the data take on is complete.

WH990	Z1 - Demonstration Company	User SP1	01/09/94
	Central Warehouse		12:00:00
Data Take-on - Reconciliation Report			
Report content..... 1		1=Detail	
		2=Summary	
Items to be included on report..... 2		0=None	
		1=Discrepancies only	
		2=All	
Complete ?..... 1		0=No	
		1=Yes	
Range of items:			
From?... _____			
To...?.. _____			
F3=Exit F4=Prompt			

Fields:

Report Content

1 - Detail. The detailed report provides the summary information (outlined below) as well as details of item quantities, rotation dates and pack types by location.

2 - Summary. The summary report provides the following information:

Total quantity - the recorded quantity of the item in Drinks Inventory Management.

Entered quantity - the quantity entered during this data take-on session.

Variance - the difference between the recorded quantity and the counted quantity entered for the item.

Items to be included on Report

0 - no items.

1 - discrepancies only.

2 - all items.

Complete

0 - No. Do not complete the data take-on. This will allow for further amendments to the stock count data.

1 - Yes. The data take-on will be marked as complete for the items selected. No further amendments are possible to the selected items using the data take-on functions until the option 'Data take-on completion' has been run. Even though the items are marked as completed 'Data take-on completion' (see next section) must still be run in order to update the stock levels in both Inventory Management and Drinks Warehousing.

Range

Enter the range of items to be included in the reconciliation. Leave both fields blank in order to include all items. The item codes entered must be defined to the Warehouse, i.e. they must have an item/warehouse profile, which can be defined using the 'Item/warehouse profile' option.

Press **Enter** to confirm the selection and submit a batch job to produce the report and perform the appropriate updates.

Data Take-on Completion

21/DWD

This option sets the space available and current usage characteristics for each location, clears the data take-on files and activates the warehouse. The users default/current warehouse is assumed.

This procedure is submitted without any confirmation required.
