Chapter 7

Utilities

Drinks Warehousing Utilities

The Drinks Warehousing Utilities option provide access to three separate areas of housekeeping functionality:

- Starting and ending of sub-system jobs.
- Data Deletion.
- Allocation Reconciliation.

The sub-system is used in Drinks Warehousing to run continuous programs that perform certain background tasks, such as monitoring receipts at the warehouse and preparing put-away instructions, or monitoring pick locations to detect when replenishment is required, etc.

Data deletion can be used to recover disk space by removing unwanted or redundant data, such as historical records of warehouse movements.

Allocation Reconciliation runs a report which compares the inventory allocations with the warehouse allocations.

All of these options can be taken from the Drinks Warehousing Utilities menu.

The Drinks Warehousing Sub-system

The sub-system must be active if any of the background processing tasks are required. The sub-system can be started at any time of the day by selecting the 'Start Sub-System' utility option.

The sub-system should only be ended when there are no jobs active within it. To determine if any jobs are still active in the sub-system you can use the command 'WRKSBSJOB DWBACK3'. Active jobs should be ended using the Utilities options provided.

In order to end the sub-system, use the 'End Sub-System' utility option.

Sub-System Jobs

Receipts For Put-Away

1... 11/DWU - START
2...

1... 21/DWU - END
2...

This procedure monitors all receipts at all warehouses and prepares the put-away instructions determining the recommended location. If this process is not used the batch option, The 'Process receipts for put-away' option must be used. The option controls put-away for all locations. This option does not produce put-away labels.

Confirmation Updates

1... 12/DWU - START
2...

1... 22/DWU - END
2...

This procedure processes the updates required for all warehouses as a result of confirmation of put-away, move and pick. These updates can also be performed interactively. The choice for interactive or batch updates is controlled from the warehouse profile.

Replenishment Monitor

1... 13/DWU - START
2...

1... 23/DWU - END
2...

The replenishment monitor produces requests to move stock to appropriate pick locations, for all warehouses, when the physical plus 'planned in' stock falls below the set minimum quantity. Replenishment may be controlled manually.

Serious Error Monitor

1... 14/DWU - START
2...

1... 24/DWU - END
2...

The serious error monitor informs the user, identified in the warehouse profile, that planned instructions were not executed accurately. The monitor, once active, processes errors for all warehouses. This procedure need not be used. Similar information can be found from the Serious Error Enquiry and Serious Error Report.

Confirm Despatch Updates

1... 15/DWU - START
2...

1... 25/DWU - END
2...

This procedure processes the Drinks Inventory Management, Drinks Sales Order Processing and Sales Ledger updates necessary as a result of despatching orders. The warehouse profile determines whether interactive or batch updates are required.

Confirm Material Issue Updates

1... 16/DWU
2...

1... 26/DWU
2...

This procedure processes the Drinks Inventory Management and Production Control & Costing updates necessary as a result of issuing components for orders and schedules. The warehouse profile determines whether interactive or batch updates are required.

Data Deletion - Movement Records

1...
2...

31/DWU

To delete from the database those movement records considered to be no longer required. All records up to and including the entered date are deleted. It is advisable to re-organise the physical file for Warehouse movements.

Warning: This job requires exclusive use of warehousing.

Select the Movement Records Utilities option.

WH550	Z1 - Demonstration Company	User SP1	01/09/94
	Central Warehouse		12:00:00
Delete Movement Records			
Date for deletion of movement records upto..... <u>01/09/94</u>			
F3=Exit F5=Refresh F8=Update			

Fields:

Date

Enter a valid date, only records after this date remain available for enquiry or report. The default date is based on the period end date of the current period minus two months.

Press **F8=Update** to submit the batch job for processing.

Data Deletion Event / Action List Records

32/DWU

This option is used to delete from the database those event and action records associated with put-away, pick and move transactions which have been completed and are dated up to and including the cut-off date. It is advisable to re-organise the physical files for events and action lists.

Warning: This job requires exclusive use of warehousing.

Fields:

Date

Enter a valid date, only records after this date remain available for enquiry and report. The default date is based on the period end date of the current period minus two months.

Press **F8=Update** to submit the batch job for processing.

Data Deletion Location Details With Zero Balance

1... 32/DWU
2...

To delete from the database those location detail records that have no stock balance information. It is advisable to re-organise the location detail physical file.

This procedure is submitted direct from the option.

Warehouse Allocation

1... 41/DWU
2...

This function is used to run a report which compares the Inventory allocations with the Warehouse allocations. There is limited access to this utility.

It is recommended that access should be limited to one or two key users who have responsibility for the total system.

Warning: This job requires exclusive use of warehousing.

Select the Warehouse Allocation option.
