Glossary

Glossary

Advanced Receiving Company Profile

This function allows you to maintain the Advanced Receiving Company Profile. This is a window which is called up over the final screen of the Purchase Management company profile management.

Advanced Shipping Note (ASN)

A document prepared by the supplier / vendor detailing what goods are in-transit and expected delivery details.

Batch Control

This is a level of stock control at a more detailed level than **item/stockroom**. The batch of items will have certain characteristics specified for the whole group. See also **lot** control.

Build Expected Receipts

This function allows you to generate diary entries for use within the Receipts Diary function. Dairy entries allow the easy scheduling of expected deliveries within a stockroom.

A file of expected receipts will be built from Advanced Shipping Note (ASN) data received via EDI and from outstanding purchase order lines. This file will be used as the basis for Single Key Receiving and the Receipts Diary.

EDI

Electronic Data Interchange. A method of transmitting business information over a NETWORK, between TRADING PARTNERS who agree to follow approved national or industry standards in translating and exchanging information.

Exception

This is the term given to item deliveries which did not conform to expectations.

Exception Handling

From within Single Key Receiving there are several reasons an event would need to be signalled as an exception. This function allows you to study the exceptions created and where appropriate, take an action.

Expected (Receipt)

These are items which are expected to be delivered into a stockroom.

Item

The single term used to describe an element of stock identified by a unique number.

Item Characteristics

The characteristics or attributes relating to an item (e.g. shape, grade, length, section, finish, etc.)

Landed Costs

The additional cost values to be recorded when receiving certain items. See the Purchase Management Product Guide for full details.

Lot Control

This refers to a level of stock control lower than item/stockroom. May also be known as batch control. The lot of items will have certain characteristics specified for the whole group.

Receipt Point

This is the point into which the item is being delivered: Goods Inward, Inspection, or Stores.

Receipts Diary

This function enables you to control the deliveries for any day. You can create new deliveries, alter existing ones, reschedule delivery times, log transit history, receive Advanced Shipping Notes (ASN's) and even delete expected deliveries from the Diary.

Extra information concerning expected receipts may be provided during the day, such as time of delivery and carrier information. This may be received in various forms other than via Advanced Shipping Notes (ASN's). The receipts diary will

allow you to log receipt information allowing better planning of deliveries. In-transit information can also be logged against an Advanced Shipping Note (ASN) allowing the detailed history of a delivery.

Receive Advanced Shipping Notes through EDI (ASN)

This batch function is available in the EDI Application Interface and loads all EDI received Advanced Shipping Notes (ASN's) into the Expected Receipt Diary.

Single Key Receiving

This function allows the easy processing of expected receipts from either Advanced Shipping Notes (ASN's) or from purchase order lines. You are able to access a particular receipt item or group of items with the minimum of effort, and make any adjustments necessary to delivery amounts and receive the items with a few keystrokes.

The receiving function will provide you with a starting point, for the expected receipts for the current day. Once a receipt is selected, then single key receiving is provided with variances by exception. Batch details and landed costs are appropriately taken care of.

Variances in quantity from the expected will be prioritised, allowing for appropriate action from those in charge of the purchase contracts, such as purchase officers.

Stockroom

A discrete area of a company where stock is recorded and controlled separately from other company stocks.

Time Fence

This is a period of time within which certain actions are allowed to take place.

Trading Partners

A customer or supplier with whom there is an agreement to exchange documents electronically. See Electronic Data Interchange

Transit Code

This is the method by which the item is being delivered into the stockroom.

Unit of Measure

The unit in which a quantity or unit cost is expressed.

Vendor

This is a supplier defined in the Purchase Ledger.
