Chapter 1

Advanced Receiving

Receipts Diary

1/AG

The Receipts Diary function allows you to maintain the deliveries for any day. You can create new deliveries, alter existing ones, reschedule delivery times, view and log transit history, receive Advanced Shipping Notes (ASN's) and delete expected deliveries.

Receipts Diary Screen

This screen allows you to specify the date and stockroom that you want to view the outstanding expected deliveries for.

Select Receipts Diary from the menu to display the Receipts Diary screen.

```

AG210          Distribution V3 -> V3 Financials  USER GBJBAPH2  25/10/95
                                           16:15:50

Stockroom.....?..  _  (Blank for All)

F3=Exit  F4=Prompt

07-26  SF  MW  KS  IM  II  KENB20A  PET150S1
  
```

Fields:

Receipt Date

Enter the receipt date. Outstanding expected receipts are displayed up to and including this date. This is defaulted to the current date, but can be changed to any date past or future.

Stockroom

This defaults to blank (all stockrooms), but can be changed to any valid Inventory Management stockroom. When you enter a specific stockroom the details displayed are restricted to the items from that stockroom.

Press **Enter** to display the Expected Deliveries window.

Expected Deliveries Window

This window allows you to select a specific Advanced Shipping Note (ASN) for further processing. It is the main driver for the diary function.

All of the expected ASN's for the receipt date entered on the Receipts Diary screen are listed. The ASN's are created from one of the following three sources:

- The Outstanding Purchase Order lines
- Generated through EDI
- A manual Advanced Shipping Note entry

The list is in date / time order starting with the receipt date. Any records with no time entered against them will appear above records with a time. A line of dashes will be shown between end date requirements.

Press **Enter** on the Receipts Diary screen to display the Expected Deliveries window.

08-11 **SR** MW KS IM II KENB20A PET158S1

Fields:

S

Select. Enter one of the following:

2 - Amend Header. This option displays the Advanced Shipping Note Header Maintenance screen.

4 - Delete. This option displays the Advanced Shipping Note Deletion Confirmation screen.

5 - Display Header. This option displays the Header Detail enquiry screen.

7 - Receive. This option displays the Advanced Receiving screen which allows you to receive ASNs. For more information, refer to the Single Key Receiving section.

Time

The expected delivery time is displayed and can be amended.

Functions:

F10

Add Manual ASN. This displays the ASN Header Maintenance window which allows you to create a new manual ASN.

F14

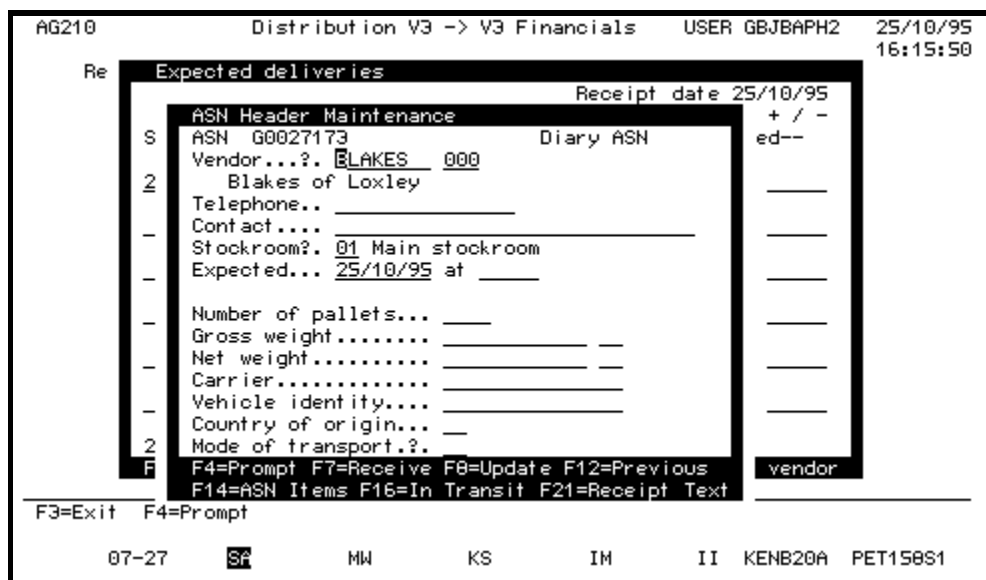

Show Vendor. This is a toggle switch which shows the vendor name for each ASN. Select **F14=Show Vendor** a second time to hide the Vendor Name.

ASN Header Maintenance / Enquiry Window (Option 2 / Option 5 / F10)

This window allows you to enter, amend or view details in the Advanced Shipping Note (ASN) header file.

Each of the fields are displayed from the Advanced Shipping Note file and can be amended except when in enquiry mode.

-  Select option 2 on the Expected Deliveries window to display the ASN Header Maintenance window.
-  Select option 5 on the Expected Deliveries window to display the ASN Header Enquiry window.
-  Select **F10=Add Manual ASN** on the Expected Deliveries window to display the ASN Header Maintenance window.

07-27 SA MW KS IM II KENB20A PET158S1

Fields:

ASN No

The system displays the selected ASN number. When you create a manual ASN the number is defaulted to the next one from the Advanced Receiving company profile.

Vendor

The vendor must exist within the purchase ledger system. The vendor name is displayed below the vendor code.

Telephone

This field is free format. When this field is blank and a vendor code is entered, it defaults to the telephone number from the purchase ledger vendor file.

Contact

This field is free format. When this field is blank and a vendor code is entered, it defaults to the contact name from the purchase ledger vendor file.

Stockroom

The stockroom entered must be a valid stockroom. When you enter the stockroom on the Receipts Diary screen it is displayed here.

Expected

The date and time must be in a valid format. The date will default to the entered receipt date. This field is optional.

Number Of Pallets

Any numeric value may be entered, the default is blank.

Gross Weight

Any numeric value may be entered, the default is blank. The Unit of Measurement (UoM) may also be entered.

Net Weight

Any numeric value may be entered, the default is zero. The UoM may also be entered.

Carrier

Enter the carrier name. This is a free format field which defaults to a blank.

Vehicle Identity

Enter the vehicle identity number. This is a free format field which defaults to a blank.

Country Of Origin

Enter the country of origin code. This is a free format field which defaults to a blank.

Mode Of Transport

Enter the mode of transport which will be used for the delivery.

Note. When this window is in enquiry mode, the fields are for your information only and cannot be amended.

Select **F8=Update** on the ASN Header Maintenance window to display the Expected Deliveries screen.

Functions:

F7

This is the receive key. For more information, see the Receive Expected Delivery screen. **F7** is not available when the window is in enquiry mode.

F14

This displays the Expected Items window which allows you to view, add and amend items against the ASN.

F16

This displays the In Transit window which allows you to view, log and amend the transit history of an ASN.

F21

This displays the Receipt Text window which allows you to enter text on the ASN.

Note. When F14, F16 and F21 are selected when the window is in enquiry mode, the details displayed are for your information only and cannot be amended.

Expected Items Window (F14)

This window displays items which are expected deliveries against an Advanced Shipping Note (ASN).

ASNs received via EDI display these items which have been entered by the vendor. Manual ASNs display all deliveries entered previously, or, when a new ASN is created, show a list of outstanding deliveries built from the purchase order lines file.

New delivery items can be entered by use of the entry line at the bottom of the window. When a new manual ASN is created, the outstanding deliveries from the purchase order receipts file for and before the receipt date for the vendor / stockroom is shown. If no records are selected then records for the next date a delivery is expected, as long as this delivery does not exceed the time fence for allowed receipts, is shown. If no deliveries are expected within the permitted line then no items are displayed.

Entering a new item onto the ASN will write an ASN item detail record, again with no calculation, against the purchase order files. The item is validated to determine whether it is an item within the Inventory system. The stockroom is validated to ensure it is a valid stockroom. The quantity field can be any positive amount.

ASNs generated via EDI and ASNs with manually added items do not display purchase order numbers in this window. ASNs created manually display the purchase order numbers next to the item.

Select **F14=ASN Items** on the ASN Header Maintenance or ASN Header Enquiry window to display the Expected Items window.

08-11 SA MW KS IM II KENB20A PET158S1

Fields:

Quantity

This field allows you to amend item quantities. Reducing the amount to zero deletes the line from the list. Changing the amount won't validate records against the

purchase order files (i.e. an outstanding amount does not have to exist on the purchase order receipts file for the quantity entered).

Press **F8=Update** to redisplay the ASN Header Maintenance window.

Functions

F16

This key toggles between Show Item Description / Hide Item Description.

In Transit History Window (F16)

This window allows you to log and view the history of a delivery. You can record and view what has happened to a delivery, when it happened and its current status. The data displayed on the window is free format text entered against an ASN.

You can add and amend details at any time. The window displays the most recent details at the top.

Select **F16=In Transit** on the ASN Header Maintenance window or the ASN Header Enquiry window to display the In Transit History window.

Text Field

This is a free format field and you can enter up to three lines of text. When this window is displayed from the ASN Header Enquiry window, the details are for your information only and cannot be changed.

Select **F8=Update** to validate the text you have entered and display the ASN Header Maintenance window.

Single Key Receiving

2/AG

This function allows the easy processing of expected deliveries from either Advanced Shipping Notes (ASNs) or from purchase order lines. You can access a particular item or group of items with the minimum of effort, make any adjustments to delivery amounts and receive the items quickly and effectively.

Single Key Receiving Screen

This screen allows you to uniquely identify receipt items and select a specific Advanced Shipping Note (ASN).

Single Key Receiving processing allows you to define the criteria in several ways in order to select the records that are to be displayed on the Expected Deliveries window. For more information, refer to the Advanced Receiving overview.

Select Single Key Receiving from the menu to display the Single Key Receiving screen.

```
AG100          Distribution V3 -> V3 Financials    USER GBJBAPH2    25/10/95
                                                    16:35:12

Fields:

Receipt Point

Enter the Goods Receipt Point for the items that you want to process:

- 1 - Goods Inward
- 2 - Inspection
- 3 - Stores

Any items requiring inspection that are received into stores will cause an exception message to be generated for the Exception Handler to process later. This field is mandatory.

Receipt Date

This is the date the receipt will be stamped with and is defaulted to today's date. It is also the base date for various searches entered below. This field is mandatory.

Stockroom

Enter the stockroom the goods are to be received into. This will restrict the search of expected receipt details to the selected stockroom. The entry must be a valid stockroom defined in Inventory Management. This field is optional.

Vendor

Enter a supplier (vendor) code to restrict the receipt. This must be a valid vendor as defined within the purchase ledger. This field is optional.

ASN Number

Enter the specific ASN to be processed. This field is optional.

P/O Number

Enter a purchase order number to restrict receipt items to be listed. This cannot be entered along with the ASN number and must be a valid Purchase Order within the Purchase Management system. This field is optional.

Item

Select a specific item to be received. This must be a valid item as defined within the Inventory Management. This field is optional.

Press **Enter** to display the Expected Deliveries window.

Expected Deliveries Window

This window allows you to select an ASN from a list which displays ASNs in delivery date and time order. The list is subsetting to match the criteria you entered on the previous screen.

Press **Enter** on the Single Key Receiving screen to display the Expected Deliveries window.

Fields:

Direct Delivery

Enter one of the following:

0 = goods are received into a selected location.

1 = goods are delivered direct.

S

Select. Enter one of the following:

2=Receive Line. Enter option 2 to receive an item. This allows receiving by inclusion only.

3=Hold Line. Enter option 3 to hold an item.

6=Batch Details. This displays the Batch Detail Entry window which displays details from the ASN batch details file.

7=Warehousing. This displays the Warehouse Details window.

8=Line Text. This allows you to enter text against an item.

Delivery Quantity

When the delivery quantity differs from the advised quantity, override the advised quantity with the actual delivery value.

Functions:

F8

Receive Release Lines. This receives all items on the screen with a 2 entered in the select field.

F20

This will load the next ASN from the expected ASN file for the entered selection criteria. When no more ASNs exist an appropriate message is displayed. This facility is not available when the screen is called from Receipts Diary.

Batch Detail Entry Window (Option 6)

This window displays all of the details from the expected ASN batch details file. The total quantity for the batch lines are accumulated and subtracted from the line item delivery quantity, and the 'Unallocated Qty' is displayed at the top of the window.

Note: If the Item is serial controlled then the quantity entered next to the line will default to 1.

Any number of batch lines can be entered, use the arrow keys to scroll down the window to display more entry lines.

Enter option 6 in the S field on the Receive Expected Delivery screen to display the Batch Detail Entry window.

Amend Advice Note Number and GRN Number Window (F8)

This window allows you to amend the advice note number and GRN number against a received delivery.

Select **F8=Receive Released Lines** on the Receive Expected Delivery screen to receive the delivery and display the Amend Advice Note Number and GRN Number Window.

Fields:

Advice Note

This defaults to the ASN number but can be overridden.

GRN No

The system displays this number. It can be overridden if set up to do so in the Purchase Management Company Profile.

Press **F8=Update** to receive the batch.

When **F8=Update** is selected, the system performs the following action for each of the items to be received:

- The delivery quantity is allocated against the earliest outstanding Purchase Order.
- If the purchase order receipt line is fully or particularly satisfied by the delivery then the receipt for all of the delivery quantity is processed.
- If the purchase order receipt line has not enough outstanding to satisfy the delivery then the outstanding quantity will be allocated, the next outstanding

purchase order receipt will be read and the previous logic to satisfy the delivery will be done.

- If a purchase order receipt line allocated against is after the entered receipt date BUT before the latest allowed to be received period (held on the Advanced Receiving company profile) then an early delivery exception will be written, but the receipt will still be allowed.
- If a purchase order receipt line allocated against is after the entered receipt date AND after the latest allowed to be received period then a 'Not allowed to Receive' exception will be written for the still outstanding quantity and the receipt of the outstanding quantity cannot take place. You will be unaware of the exception, but a message will be sent to the user indicated on the company profile, informing them of the exception occurrence.
- If there is still an outstanding quantity and no more valid outstanding purchase order receipt lines, then a 'No purchase order for receipt' exception will be written for the outstanding quantity and a message will be sent to the user indicated on the company profile, informing them of the exception occurrence.
- If the Advanced Receiving company profile indicates that default Landed Costs are taken and there are landed costs then these will be the ones used. If the company profile indicates that default landed costs are not to be taken and landed costs exist on the purchase order receipt lines then a Landed Cost exception should be written and the goods be receipted into Inspection.

Receipt Exception Handling

3/AG

Single Key Receiving creates receipt exceptions which are, for example, variances in quantity from the expected delivery, delivery without a purchase order or late delivery. This function allows you to view the exceptions created.

Receipt Exceptions Selection Screen

This screen lists the exceptions created from Single Key Receiving. The list is in priority sequence, highest first.

Exceptions that require an action are highlighted.

Less important exceptions are displayed to allow you to monitor them. This will highlight any badly performing vendors and allow landed costs to be checked to allow the goods to be received.

Select Receipt Exception Handling from the menu to display the Receipt Exception Selection screen.

Fields:

S

Select. Enter one of the following:

2=Action. This displays the Exceptions For ASN window which allows you to action the selected exception.

5=Display ASN Details. This displays ASN details. For more information, refer to the ASN Header Enquiry screen.

Functions:

F6

This creates an exception report.

Exceptions For ASN Window (Option 2)

This window displays item and delivery details for exceptions against an ASN.

Enter option 2 against an exception on the Receipt Exceptions Selection screen to display the Exceptions For ASN window.

The screenshot shows the 'Receipt Exceptions Selection' screen. At the top, it displays 'AG250', 'Z1 - GB Demonstration Company', 'User GBJBA1MS', and the date/time '28/11/97 10:54:37'. Below this is a list of exceptions with columns for 'Sel', 'ASN Nu', and a description. A pop-up window titled 'Exceptions for ASN... A0000443' is open, showing details for item A000028, including vendor 'FS03 Michel Brunet Chemicals SA', quantity discrepancy, and delivery dates. The bottom of the screen shows function keys: '2=Action', '5=Display ASN Details', 'F3=Exit', and 'F6=Exception Report'.

23-39 SA MW KS CL IM DM II EDN4000 KB PET178S1

Fields:

Item

The system displays the item number and item description.

Vendor

The system displays the vendor name.

Exception Description

This displays the reason for the exception.

Delivery Arrived

Displays the date and time that the goods were received.

Delivery Expected

Displays the date that the goods were expected to arrive.

Quantity Delivered

Displays the amount received.

Quantity Expected

Displays the amount expected.

Press **F8=Accept** to receive an outstanding receipt.

Functions:

F5

This refresh option is only available on high priority messages. It reinstates the values in the quantity fields to the value they stood at when the window was entered into.

F8

This update option is only available for high priority. This will update the purchase order receipt file to mirror changes made within the window. For changes to received lines a new purchase order receipt line will be written for the changed amount, the values of the new record will be the same as the based upon receipt line. For receiving against outstanding lines the purchase order receipts file will show a delivery for the entered amount with the original delivery quantity - entered quantity showing as outstanding.

F17

This indicates that the item is not going to be transferred into stores. A Rejection letter is produced for the goods being returned. The goods aren't taken through the existing returns system as they have never actually been received.

Build Diary Entries

13/AG

This function allows you to generate diary entries for use within the Receipts Diary from outstanding purchase orders. Diary entries allow the easy scheduling of expected deliveries within a stockroom.

Only suppliers that do not have an active EDI Trading Partner Relationship for receiving Advanced Shipping Note (ASN) details need to use this option.

Build Expected Deliveries for Receipt Diary Screen

This screen allows you to specify the date to use to build the diary entries up to.

Select the Build Diary Entries option from the menu to display the Build Expected Deliveries for Receipt Diary screen.

```

AG230          Distribution V3 -> V3 Financials    USER GBJBAPH2    25/10/95
                                                    16:14:33

Build Expected Deliveries for Receipt Diary

Generate Expected Deliveries due on or before..... 25/10/95

Rebuild option..... 1  (0 purge only
                        1 purge and rebuild)

F3=Exit  F8=Submit

06-56      SF      MW      KS      IM      II  KENB20A  PET158S1
  
```

Fields:

Generate Expected Deliveries Due On Or Before

Enter the date you want to build entries up to. The date can be any valid date. The default is the current date. The outstanding purchase orders will be extracted into the Diary for later enquiry and delivery planning.

Rebuild Option

Enter one of the following:

0 - To purge the expected receipt information.

1 - To purge old data and to rebuild the expected receipt details up to the specified date.

Press **F8=Submit** to build the diary. The file used to build these entries is the Purchase Order file.

Every occurrence for an expected delivery for a unique Vendor / Stockroom for each date will generate an entry except where a Vendor already has an entry for that stockroom / date. The ASN number will be generated from the next manual ASN number on the Advanced Receiving company profile.

Exception Report

14/AG

The exception report function generates a list of the exceptions which are to be actioned.

Exception Report Window

This window allows you to submit the exception report to print.

Select the Exception Report option from the menu to display the Exception Report window.

```

Select **F8=Confirm Submit** to submit the report to print.

Receive Advanced Shipment Notes

21/AG

Select Receive Advanced Shipping Notes to display the Receive Advanced Shipping Notes screen.

The purpose of this function is to receive Advanced Shipment Notes sent via EDI into the Advanced Receiving Expected Receipts Diary. A control list is printed which can show details of all Advanced Shipping Note details received or only those in error.

Note: The Advanced Shipping Note details must have already been received into the Application Interface database via the 'Receive Documents' function in EDI/400.

This screen allows you to submit the batch function which adds records to the Expected Receipts Diary for Advanced Shipping Notes received via EDI.

AGI202	Z1 - GB Demonstration Company	User GBJBANB1	4/06/98 12:18:40
Receive advanced shipment note (ASN)			
Control list inclusion..... 1 (1=All schedules, 2=Exceptions only)			
-			
F3=Exit F8=Submit			
MA	b	MW	13/036

Fields:

Control List Inclusion

You can enter the following:

- 1 - All Schedules. Prints details of all Advanced Shipping Notes received.
- 2 - Exceptions Only. Prints only those in error.

Press **F8=Submit** to submit the batch function.

This performs the following functions:

For all Advanced Shipping Note documents received via EDI the details will be copied into the Advanced Receiving Expected Receipts Diary. This function displays,

and allows maintenance of, all receipts expected by receipt date and allows the user to receive whole Advanced Shipping Notes by exception rather than by individual purchase order.

A control list showing error conditions, and optionally all received Advanced Shipping Note documents will be produced.
