Glossary

Glossary

Allocated Stock

The quantity of an item which has been allocated or reserved for a sales, distribution or production order. It is held as a **balance** at **item/stockroom** level.

Allocate Lots

You can specify the lots/batches from which stock is allocated to an order.

Alternative Item

An **item** that can be offered as an alternative to another in a sales situation.

Available Stock

The quantity of an **item** which is available for issue and has no allocation or reservation made for it. It is held as a **balance** at **item/stockroom** level.

Back Order

The quantity of an item required for sales orders which are due or overdue for delivery and for which there is no stock. It is held as a **balance** at **item/stockroom** level. Also it is applied to orders which are due or overdue for delivery and for which there is no stock.

Back to Back Order

Purchase order raised to meet the requirements of a sales order.

Batch Allocation

A batch job which considers **orders** which are for delivery and matches them against the **available stock**. Where there is a match the stock is allocated to the order so that picking and despatch may take place.

Batch Control

This is a level of stock control at a more detailed level than **item/stockroom**. See also **lot control**.

Batch/Lot/Serial Traceability

Where stock recording is specified at **batch**, **lot** or **serial** level, this refers to the ability to trace the movement of stock, including sales to customers, at this detailed level.

Business Process

This relates to System 21 Constructor for System 21 Enterprise Work Management. A business process is at the top level of the business function. Within a Business Process it is possible to have Elemental Activities, Assembled Activities and other Business Processes. Business Processes can be nested to several levels.

However, there are restrictions on the way in which you construct Business Processes depending on whether you use Constructor as a design tool for enterprise modelling or a configuration tool for Work Management.

If the Business Process is to be uploaded to Work Management these rules apply:

- Assembled activities cannot be present
- Nesting can only be to one level down
- At the top level, a nested Business Process be linked to an end node.
- A User selected path cannot link into a parallel path

There may be other restrictions in place, but the validation will highlight these.

Cash Discount Code

Code which determines the settlement terms assigned to the customer.

Certificate Of Conformance

When goods are received, attributes of particular lots may be entered according to a pre-defined Certificate Of Conformance (quality assurance certificate). Lots of the item may then be selected according to their conformance to particular attributes.

Charges

Charges to be made on an invoice for which no corresponding stock movement will occur. They may be added at any time from order entry to confirmation of despatch. Three extra charges may be made on an invoice.

Configure to Order

This is an order where stock is allocated by generating a production order for the configuration of items. Production and Configurator must be attached for this to be available.

Credit Control

Advanced Order Entry monitors the value of the customer's order commitment against the credit limit assigned to the customer. Orders will automatically suspend when the credit limit is exceeded.

Customer Code

The customer code is used to identify the data held for the customer. Multiple sets of data can be held to reflect complex customer organisations. This includes statement, invoice and delivery information.

Depot

A stockroom which has been defined to the Sales Order Processing application. This allows the stockroom to process sales orders.

Descriptions File

This is a file set up within Inventory Management and is also maintained from Sales Order Processing. It defines a number of parameters, codes and their descriptions.

Direct Delivery Order

A purchase order delivered direct to the customer to satisfy a sales order.

Discount List

A list that enables discounts to be given as a percentage or value and with quantity breaks based on quantity or value. The discounts may also apply to an **item**, a discount group or an order. Discount lists are maintained in order entry processing. Customers are assigned a default discount list.

Expected (Stock)

The quantity of an **item** which is expected will be available, assuming both sales and supply orders are processed to schedule. This is usually expressed as a quantity for an **item/stockroom**.

Frozen Stock

The quantity of an item which has been removed from 'available to issue'. It is held as a **balance** quantity at **item/stockroom** level.

Gross Margin

The difference between the cost of the **item** and the net sales price. This is expressed as a percentage of either the cost or the sales price.

IN Currency

A European currency that is linked to the EURO currency with a fixed exchange rate.

Item

The single term used to describe an element of stock identified by a unique item code.

Kit

A group of **items** which can be sold as a set. It is maintained in Inventory Management as a single level list. A kit may also be assembled on-line in Advanced Order Entry.

Lead Time

The standard amount of time, in weeks, from a decision to order an **item** for a **stockroom**, to the item being received in the stockroom.

Lot Control

This is a level of stock control at a more detailed level than **item/stockroom**. 'Lot' is used as a generic term for lot, batch or serial control.

Manual Allocation

The explicit allocation or de-allocation of stock at a **stockroom** to a nominated **order** or order line.

Make to Order

This is an order where stock is allocated by generating a production order for the items. Production and Configurator must be attached for this to be an option.

Normal Order

This is an order where order lines are allocated directly from stock.

Order Number

The sales order number assigned to the customer's **order** by the system.

On Order

The quantity of an item for which outstanding purchase, distribution, or production orders exist. It is held as a **balance** quantity at **item/stockroom** level.

Physical Stock

The total quantity of an item in a **stockroom**. It is held as a **balance** quantity at **item/stockroom** level.

Picking Note

A document on which is listed all the **items** for an **order** which have been allocated for despatch. Used as authority to pick and despatch items for an order.

Price List

A list of prices to be charged for **items**. A price list may be in any currency set up for Accounts Receivable. Customers are assigned a default price list. Price lists are maintained in Sales Order Processing.

Priority Code

Code which determines the priority used for an order in any back order allocation.

Purchase to Order

This is an order where stock is allocated by generating purchase orders.

Purchase Order Requisition

Request for a purchase order to be raised to satisfy a sales order.

Quotation

An unconfirmed **order** which allows an **order** to be priced without allocating stock.

Quotation Life

Used to calculate the quotation expiry date after which a quotation may not be converted to an order.

Replenishment Order

Purchase order used to replenish stock.

Reserve Against Purchase Orders

Allocate stock from expected rather than available stock.

Stockroom

An area, physical or logical at which stock is to be recorded and counted. It may also be authorised as a **depot** within Sales Order Processing

Suspended Orders

Orders are suspended automatically for credit and pricing exceptions conditions. Suspended orders are not presented for allocation.

Time Fence

A period of time, in days which when added to the current date gives a date in the future. This future date can be used as the limit for allowing **stock allocation** and printing acknowledgements.

Unit of Measure

The unit in which an **item** is expressed for the purpose of buying, selling, stocking or valuing.

Warehouse

A warehouse is a **stockroom** which has been set up in Inventory Management and authorised for location recording in Warehousing. It may also be authorised as a **depot**.

Work Management

This is the short name for System 21 Enterprise Work Management.

This is the term that describes JBA's implementation of activity task automation and control. The Work Management Engine is central to this processing and it is server-based.

System 21 Constructor is the design/configuration tool for Work Management. You upload Business Processes from Constructor in order to enable them for Work Management.

System 21 Explorer is the interface which Work Management uses to initiate its enabled activities.
