Chapter 2

Processing

Advanced Order Entry Processing Functions

Advanced Order Entry is designed to produce quotations and orders with the minimum number of entries. To do this, data held permanently on file is used wherever possible. The default data is set up before you start to use the order entry facility.

Order Entry

1/AOP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

All that needs to be entered when processing an order or a quotation is the item code and quantity of each item. Pricing and discounting are performed automatically. Stock is allocated from the default stockroom if available. External order text is added. If a quotation, the default customer is used and a quotation type allocated.

When an order line is entered stock is allocated automatically from the specified stockroom according to specific rules. Stock which has been allocated from a stockroom may be allocated against specific lots.

Previously allocated stock may be deallocated. Stock may be force allocated, ignoring the rules set for automatic allocations.

Kits

Orders for kits not already set up in Inventory Management may be set up during order entry.

Note: An item record must exist for the parent, and for each of the components.

The order line number of the parent item may not be changed for the component item after the order has been updated. If change is required, the component line must be cancelled and re-entered specifying the changed order line number for the parent item.

On-line kits are processed in the same way as kits set up in Inventory Management i.e. only the components are physically picked and the price is taken from the parent item.

The allocation of components depends on the setting made in the Advanced Order Entry Options window on the Company Profile Maintenance screen. There are two possible ways of allocating components.

0 Components are allocated whether or not the whole kit can be allocated.

1 Components are not allocated until the whole kit can be allocated.

Note: The quantities entered for individual components are per one of the parent item (i.e. the required number of the component to make one of the parent).

All kits may be manipulated in this way through Advanced Order Entry.

Quotations

The Quotation Print and Quotation Reprint activities are compatible with Work Management and can be run as part of a Business Process in

System 21 Constructor and System 21 Explorer.

Any order can be taken as a quotation by simply keying in a valid quotation type code.

The codes can be set up in the descriptions file so that they will automatically calculate an expiry date for you. In addition, the code can be set up with a special flag so that the system will actually attempt to allocate the stock even for a quotation.

Alternatively, AOE can be set up to be in 'quotation mode'. The order entry screen will include a defaulted quotation type code and calculate an expiry date, if so defined.

If a quotation is not wanted, the user would simply blank out the quotation type code.

The facility to continuously be in quotation mode is 'turned on' also in the descriptions file.

All quotations can be very quickly turned into live orders.

In some instances, the quotation may be for a prospective customer i.e. someone not defined on your customer file. AOE can then make use of a default customer to raise the quotation. If the quotation is accepted, the company must then be set up on the customer file and the quotation is changed to the correct account code.

The default customer is nominated on the Sales Order Processing company profile.

To change to a valid customer take **F15=Customer** and key in the Customer [account code and delivery sequence number] for a valid account, and blank out both the Invoice name And address and Delivery name And address. At the same time blank out the quotation type code and expiry date. Press Enter.

If the quotation had already been for an existing customer, the quotation code and date could have been blanked out from **F14=Header**.

Advanced Order Entry Header Screen

Select the Order Entry option.

This screen enables you to:

- Select a customer
- Enter an order line
- Override order defaults

Tip: It is not necessary to enter any data in this screen as all order processing can be done from the Sales Order Line Details screen.

Beneath these sales order defaults, the screen displays details of the last order you processed since logging on this session. Therefore, each time you log on there will be no information to display until sales orders have been processed. The sales order information shown includes:

- Sales Order number
- Customer number and name
- Customer order reference
- Order date

```

Fields:

Select Customer

Customer Search

This field is untitled on screen. If the customer search is to be used, enter the search type code in the first one-character field. You can enter:

- 1 - Customer select
- 2 - Customer name
- 3 - Customer search word 1
- 4 - Customer search word 2

The default search type is specified on the Sales Order Processing Company Profile Maintenance Screen 2, Advanced Order Entry Parameters screen.

Tip: Customer search words 1 and 2 are defined in Sales Order Processing, Company Profile, Alpha Search screen. To tell which search words have been defined, enter a 1 in this Select field, then enter a ? in the Customer field, and then press **Enter**. Fields 2 and 3 on the resultant screen will show customer search words 1 and 2. If you press **Enter** on this screen, a list of all customers will be displayed.

Customer

If a customer code is not entered the default customer number, as defined in Sales Order Processing Company Profile Maintenance Screen 2, Order Entry Parameters Screen is used. A customer search facility is provided.

Enter the account code and the address code of the customer to whom the goods are to be sent. The code is in two parts and both must be entered.

Note: For a firm order it is quicker to select a customer in this screen; however, by leaving the customer number blank, it is possible to provide rapid responses to customer enquiries.

Tip: When carrying out an enquiry or quotation, you can leave the customer number blank. The default customer number set up on the company profile will then be used to process the enquiry/quotation. This 'dummy' customer can then be amended later if the quotation is converted to an order.

Customer Order Ref.

Enter the customer order reference. This is mandatory or optional depending on the setting of the Order Reference flag on the Sales Order Processing, Customer Maintenance, Sales Details screen which can be set to 0 (optional) or 1 (mandatory). You cannot enter a reference number which has already been used for the customer. Order amendments and enquiries can be accessed by customer order reference.

Select Item

The enquiry/quotation line enables rapid responses to customer enquiries and the generation of quotations.

Item Search

This field is untitled on screen, but displays the default item search type defined in Inventory Management Company Profile Maintenance, Extended Options (F10) screen. If item search is to be used, enter the search type.

- 1 Item reference
- 2 Item description
- 3 Purchase description
- 4 Alternative reference
- 5 Search family
- 9 Base item

Tip: Use search code 1 followed by the item code to bypass the search.

Tip: The Item, Quantity and UOM fields may be optionally used to enter the first line of the order.

Item

Enter the item on which enquiries are being made or an order being placed. If the code is not known, then partial code (or search characters) can be entered and Item Search is invoked automatically.

Quantity

Enter the quantity required for delivery.

UOM

Enter the unit of measure if it is different from the issue unit. The unit of measure entered must be one of the purchase, stocking, or issue of measure defined in item maintenance in Inventory Management.

Default Data

Note: The Stockroom, Price list and Discount list are displayed for the default customer. However, if Advanced Pricing is in use, then the Price List and Discount List fields will not be displayed.

Much of this data is taken from the sales details defined on the selected customer record in Sales Order Processing, Customer Maintenance option. If a customer has not been selected, then the default customer record is used.

Order Date

The current date is displayed and may be overwritten. Enter the customer order date.

Due Date

The current date is displayed and may be overwritten. Enter the date on which the order is due for delivery.

Stockroom

The stockroom specified on the selected customer sales details record is displayed and may be overwritten. Enter the stockroom from which stock is to be allocated to the order.

Note: If centralised document processing is required, this stockroom must be assigned a stockroom site.

Price List

The price list specified on the selected customer sales details record is displayed and may be overwritten. Enter the price list to be used for the order. This must be in the currency of the order.

Note: Not displayed if Advanced Pricing in use

Discount List

The discount list specified on the selected customer sales details record is displayed and may be overwritten. Enter the discount list to be used for the order. This must be in the currency of the order.

Note: Not displayed if Advanced Pricing in use.

Quotations

The final two fields on this screen relate to quotations.

Quotation Type

The default quotation type is displayed but may be overridden. Blank out the quotation type to convert a quotation to an order.

Note: Orders may not be converted to quotations.

Valid quotation types are set up in the Inventory Management descriptions file, under major type QTNO. The default quotation type is also set up in the descriptions file, under major type DFLT, description code QTNO.

Expires

This field displays the expiry date associated with the quotation type specified. This may be overwritten but can not be prior to the current date. To convert a quotation to an order blank out the expiry date as well as the quotation type.

The expiry date uses the number of days specified in the parameter limit field for the quotation type (see Quotation Type). The value displayed in this field is the number of days added on to today's date.

Press **Enter**. The Sales Order Line Details screen is displayed.

Functions:

F13

Amend order

Advanced Order Entry Line Details Screen

This is the main order entry screen. All processes associated with order entry can be accessed from this screen using action codes or function keys. Order lines are entered at the bottom of the screen.

The order quantity is highlighted if stock has not been allocated.

Action codes are available which enable you amend order lines and perform enquiries related to them. Move the cursor to the select field of the required order line and enter an action code.

Function keys are available to carry out enquiries, prompt on fields, enter order text, maintain order header and complete the order.

A message will be displayed at the top of the screen if any item in the order is not on the price list used by the order, or if a fixed price has not been entered on the order lines overrides screen. That item will have 00.00 displayed as the price on the order line. The message can be maintained in the Inventory Management descriptions file, under major type SUSP, description code NP.

A similar message will be displayed if an item has a negative price. this description is maintained under major type SUSP, description code NV.

The margin percentage will be highlighted on any order line where the margin is greater than the upper margin tolerance.

Fields:

Line Details (Display Only)

Line

Order line number.

Item

Item code and description.

Str

Stockroom.

Due Date

Order line due date.

Quantity

Order quantity.

UOM

Unit of measure. This is the issue unit of measure, unless otherwise specified.

Price

Line price.

Value

Line value, including discount, expressed in the currency of the order.

Margin%

Margin percentage. This is expressed as a percentage of cost or sales depending on the setting of the Margin Calculation flag on the Sales Order Processing company profile, Advanced Order Entry Parameters screen.

Txt

An asterisk (*) indicates that text has been entered against the line.

Input Fields**Item Search**

This field is untitled on screen, but displays the default item search type defined in Inventory Management Company Profile Maintenance, Extended Options (F10) screen. If item search is to be used, enter the search type.

- 1 Item reference
- 2 Item description
- 3 Purchase description
- 4 Alternative reference
- 5 Search family
- 9 Base item.

If you do not need to use the search, and want to key an item code in straight away you must ensure that the search type is set to 1.

Item

Key in the item code.

If kits have been predefined, enter the parent item code and quantity, and the system will pull in all related sub-assemblies (components) which can be deleted, amended etc..

Qty

Key in the order line quantity.

UOM

Leave blank if you want the standard issue unit. Either the purchase or stock unit can be used instead

Override

This is used to carry out line overrides such as changing the default price or discount list, using a fixed price, different date or building kit/component relationships etc.

Select

This field is untitled on screen but enables you to perform actions on individual order lines by entering the relevant option number against the required line :

- 1 - to amend a line. This opens the Line Overrides window.
- 2 - to source the item from a different stockroom, or supply a substitute item.
- 3 - to allocate batches. (Lines must already have been allocated)
- 4 - to delete a line.
- 5 - to reserve stock against purchase orders.
- 6 - to access availability details.
- 7 - to enter text.
- 9 - to force allocate a line. This will cause the available stock to go negative if insufficient stock is available to meet the demand.
- 10 - to deallocate the line.
- 11 - to select the pricing detail enquiry. (Advanced Pricing only)

Pressing **Enter** will process the line, including an attempt to allocate stock provided that the line due date is within the stockroom's allocation time fence. The order line is displayed further up the screen. Further lines can be entered in the same way.

Functions:

F3

Cancel an order

F9

Advanced Pricing only. This will re-price the whole order, including adding whole order discounts. If lines are then added when **F13=Trailer** is taken, the whole order discounts calculated here will be superseded by those applicable at the end of the order

Fields:

Search Type

This field enables you to select the item data to search on.

1 Item reference. The item reference search displays all the items, in item number sequence, beginning with the search criteria entered. The search criteria can either be a complete item code or the beginning characters of an item code.

2 Inventory description. If the inventory description search facility is used, a selection is made based on the inventory search words which currently exists for the item. These are generated in Item Maintenance (Inventory Management), based on the first 20 words from the item description and the first three lines of the external text for the item.

3 Purchasing description. If the purchase description search facility is used, a selection is made based on the purchasing item text and the item description.

4 Alternative reference. The alternative reference search displays all items which have an external reference (i.e. a customer or supplier reference) beginning with the search characters entered.

5 Search characteristics. The characteristics search displays all the items with the associated search codes. A range selection on a "from" and "to" basis is available.

9 Base item. Production and Configurator must be implemented. The base item search displays all configured items for the base item entered.

? The ? prompt facility displays a more detailed selection of each option.

Search Criteria

For search types 1-4, enter the search type and up to 20 search words or initial characters of search words. An item will be selected on all the entered words unless search type 1 is used in which case only one word should be entered.

All items which meet the search criteria are displayed in a subsequent screen.

Order Line Item Master Scan Window 2 (Selected Items)

This window displays the results of the item search and enables you to select items and quantities to appear on the order.

Fields:

Quotation Type

The default quotation type is displayed but may be overridden. Blank out the quotation type to convert a quotation to an order. Quotation types are set up in the Inventory Management descriptions file, under Major type 'QTNO'.

Note: Orders may not be converted to quotations.

Quotation Expires

The default quotation expiry date is displayed but may be overridden. It may not be prior to the current date. To convert a quotation to an order blank out the expiry date also.

This field will be blank if a quotation type has not been specified.

Stockroom

This is the normal stockroom from which deliveries are made to the selected address or the one keyed in on the initial order entry screens. If a change is required enter the required stockroom code. Stockroom code search is available.

Priority

The priority to be used when allocating against order lines is displayed. The system will consider the priority first and then the delivery date. Any number between 00 and 99 can be used. Two specific priority numbers are;

'99' Force allocation (batch allocation)

'00' Manual allocation

Price Type

(Advanced Pricing only) This is a price type which can be used to override the order. A prompt of valid price types is available Price type 2.

The currency of the price type must be the same as the currency of the order.

Discount Types

(Advanced Pricing only) It is possible to enter up to 4 optional discount types. Any types entered must be valid discount types Price type 1

The currency of the price type must be the same as the currency of the order.

Discount Percentages

(Advanced Pricing only) Up to 4 discount percentages may be entered. A discount percentage cannot be entered if a discount type is input.

Discount Presentation

(Advanced Pricing only) A presentation must be entered for any percentage that has been input.

0 Nett Discount

1 Gross Discount

Price List Code

The price list used for the order is displayed. Enter the new price list if a change is required. It must be in the currency of the order. Price list code search is available. Price lists are set up in Sales Order Processing, Price Lists Maintenance.

Discount List

The discount list used is displayed. Enter the new discount list if change is required. It must be in the same currency of the order. Discount list code search is available. Discount lists are set up in Sales Order Processing, Discount Lists Maintenance.

Priced At

Orders may be priced at the price effective at the time of order or despatch. The method used is displayed (1 Order, 2 Despatch). Enter the new method if change is required.

Cash Disc. Code

The cash settlement terms are displayed.

Currency Code

The currency in which the order will take place, is defaulted from the customer's delivery address in Accounts Receivable.

This is only shown for a multi-currency customer and may be overridden.

Currency Rate Code

This will default to the currency rate code from the customer sales details in Sales Order Processing Customer Maintenance, but may be overridden. The currency rate code holds the exchange rate of the currency code and is set up in General Ledger maintenance. This is only shown for a multi-currency customer.

Currency Rate

The currency exchange rate associated with the currency rate code to be used for the conversion, from the base currency of the company.

If 1 is specified, the currency rate will be used to multiply the transaction value to get the base value.

If 2 is specified, the currency rate will be used to divide the transaction to get the base value.

Note: If a fixed currency rate is to be used, the currency rate code should be blanked out and a fixed currency rate should be entered in the currency rate field.

Fields:

Payment Terms

There are 4 parts to this field but not all of them are necessarily used at once. The first part of the code can be any of the following:

D Number of days from invoice date

M Net monthly account

P Periodic range

T Extended payment terms

The second part of the code identifies the range if a Periodic range has been selected. The third part of the code is used to specify either the payment date for monthly (M) or periodic (P) selections, or the number of days to add to the invoice date for a daily (D) selection.

The fourth part is only used if Extended payment terms (T) is selected. It uses a settlement code that is defined by Cash Management which defines a payment pattern.

Examples:

1. D 030 will give a payment date of 30 days after the invoice date.
2. M 210 will give a payment date as the 10th of the second month after the month the invoice was sent.
3. P 2019 206 will give all the invoices dated between the 20th of the next month and the 19th of the month after, a payment date of the 6th of the first month after the invoice is sent.
- P 1110 105 will give all the invoices dated between the 11th of this month and the 10th of the month after, a payment date of the 5th of the first month following the month after.
4. T XXX where XXX would be a code identifying a payment pattern as defined in Cash Management.

Payment Method

The method of payment is a code as defined in the Cash Management application.

Examples:

'CHQ', 'STD'.

Tip: Cash discount codes and staged discount codes are mutually exclusive.

Cash Discount Code

A discount code is used to identify the type of discount and a single cash discount percentage. These are defined in the description file, major type CDSC and a prompt is available.

Staged Discount Code

Multiple cash settlement discount percentages, allowing tiers of discount according to how soon the payment is received, can be defined. These codes are predefined within Cash Management and a prompt is available.

Bank Details

A default bank account is displayed for the delivery point statement account, or the consolidated statement account if the statement account is hierarchical. The line shows bank sort code, account number, user reference and account type code.

Functions:

F13

Bank details override

Order Header Payment Overrides Customer Bank Scan Window (F13)

This window is opened when **F13=Bank Details Override** is actioned on the Payments Override window.

This window displays any existing bank details, and enables new bank accounts to be entered or an existing, alternative bank account to be selected.

If no details exist, then an error message will be displayed, but **F10=Add** may still be used to add details.

Fields:

These fields are displayed for British banks

Bank Sort Code

Bank branch sort code.

Account Number

Customer's bank account number.

Account Name

Customer's account code.

Bank Name

Name of bank.

Address

Address of bank.

User Reference

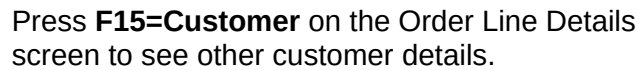

Free format user reference.

Type Of Account

This field is only used for National Westminster banks.

First Direct Debit

This enables extra validation for direct debit accounts.

- Customer (if order is a quotation)
- Customer order ref
- Customer order date
- Delivery date
- Invoice name And address
- Delivery name And address

Fields:

The customer code can be changed provided that the order is still a quotation. It cannot be changed once the quotation has been converted to an order by removing the quotation code.

A search on customer details can be carried out using these fields.

The customer order reference may be amended. A reference which has been used previously for the customer cannot be used again.

Customer Order Date

The customer order date can be amended. The default is the current date.

Delivery Date

The delivery date can be amended. The default is the current date.

Quotation Type

The default quotation type code is set up on the Inventory management descriptions file against the major type 'DFLT', description code 'QNT0' but may be overwritten. To convert a quotation to an order, blank out the quotation type and the expires date.

Expires

The quotation life is held on the descriptions file against Major Type 'DFLT', description code, 'QTNO'. This is added to the current date and displayed as the quotation expiry date. The expiry date may be amended but may not be earlier than the current date.

To convert a quotation to an order, blank out the expiry date as well as the quotation type.

Invoice Name And Address

The customer invoice name and address are displayed and may be amended.

Delivery Name And Address

The customer delivery name and addresses are displayed and may be amended.

Note: The Customer can only be changed if a quotation, rather than an order is being processed.

Make any amendments required and press **Enter** to return to the Order Line Details screen.

Functions:

F21

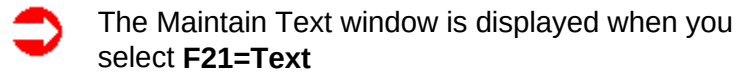

Text Entry. This displays the Maintain Text window where you enter or select a Usage Code and a Language Code for multi-lingual text entry. When you press **Enter**, the Item Text window is displayed. This is where you can enter text in the selected language to be displayed or printed on external documentation, for example despatch notes, according to the usage code selected.

Tip: You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language by entering a different language code when F16=Additional Overrides function key is available.

Note: Language codes do not need to be selected in order to print text in the native language.

P Transport Planner

Q Quality Control

S Sales Office Memo

T Technical

Some standard text usage codes are supplied with the Inventory application. Other usage codes may be defined in Inventory Descriptions Maintenance under major type USGC.

Note: To enter text in multiple languages enter a valid Language Code, in addition to the Usage Code, to display the Item Text window.

Language Code

Enter or select a valid language code, in addition to the Usage Code, if you want to enter multi-lingual text. The Item Text entry window is displayed where you can enter text in the language specified. This field is optional and may be left blank if you do not use multi-lingual text entry.

Tip: You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language by entering a different language code when F16=Additional Overrides function key is available.

Note: Language codes do not need to be selected in order to print text in the native language.

F13=Select existing text

This lists all currently defined Usage/Language code combinations for the entered text type/text reference. You can select the combination you want to use for entering multi-lingual text. Order Line Details Customer Account Summary Window (F16)

Press **F16=Acct Enquiry** on the Order Line Details screen to enable an account enquiry.

Order Line Details Overrides Screen (Option 1)

Entering 1 against an order line on the Order Line Details screen opens the Order Line Overrides screen.

This screen allows you to override the selected order line. Three open windows are displayed:

Last Five Orders

This displays the date, quantity and unit price of the last five orders for this item.

Price Structure

This displays the item's discount unit price and related values for the discount price list specified for the order/order line.

Order Line Overrides

This screen enables you to:

- Change price list
- Override automatic pricing
- Change discount list
- Override automatic discounting
- Override order line due date
- Change the order method.
- Specify direct delivery
- Request quality assurance (Certificate of Conformance)
- Amend the order quantity
- Amend the unit of measure
- Specify the line as a kit component.

Note: When a configured item is entered on the order line entry screen, the order line override window is automatically displayed. This can only happen if Production and Configurator are attached.

The order line number and item code are displayed at the top of the screen.

06-61 SF MW KS IM II KENB20A PET166S2		

Fields:

Line Number

References the selected order line number.

Item

Displays the item on the order line.

Price Type

(Advanced Pricing only) This is an optional line override, if entered it supersedes the price that would apply if standard Advanced Pricing logic is used. If entered it must exist and must be a price function of 2 (price). It must be the same currency as the order.

Price List

If a different price list is to be used for the order line enter the new price list code. It must be in the same currency as the order. Price lists are maintained in Sales Order Processing maintenance.

Fixed Price

(Advanced Pricing only) A manual price may be ordered. If a fixed price is entered, it is not be possible to enter a price type.

Per

(Advanced Pricing only) This works in conjunction with the fixed price. i.e.

Fixed price 100, Per 2.

If a Qty of 1 is ordered, value 50.

If Per is not entered the fixed price is assumed to be the line price.

Disc List

If a different discount list is to be used for the order line enter the new discount list code. It must be in the same currency as the order.

Discounts

(Advanced Pricing only) An extra discount window is shown if 1 (yes) is entered.

1 Yes

0 No

Fixed Discount

If a fixed discount percentage is required, enter it here. Leave blank to use the discount list code.

Due Date

The order due date is displayed. Enter the order line due date if this is different. It may not be earlier than the current date.

Enter Text

If you wish to maintain the order line text which appears on external documents enter 1. The external order line text screen is displayed.

Configurator

If Configurator is attached and the line is for a configured item, this flag controls entry to the options allowing operation and component selection for the configured line.

1 - to configure the line.

0 - not to configure.

The flag is set to 1 on line entry for configured items, as these items must be configured. On line amendment, the flag is defaulted to 0, so you can choose whether or not to reconfigure the line.

Order Method

The default ordering method for the item is displayed. On line entry it may be overridden to another ordering method, unless it is a configured line when the ordering method is fixed. Several ordering methods may be used for the same line by overriding this flag on order line amendment.

If **F4=Prompt** is used, the resultant window displays **F15=Extend**, which displays limit, rate and VAT details as held on the descriptions file for each method.

Valid Order Methods:

0 - Sell from stock (i.e. allocate normally)

1 - Make to order. If make to order is chosen, a production order is automatically generated. The order lines are entered on the normal Advanced Order Entry line entry screen.

2 - Purchase to order. This is also known as a Back to Back purchase order.

3 - Direct delivery purchase to order. A supply order may be set up for delivery direct to the customer. Purchase requisitions should be released in Requisitioning and purchase orders printed off in Purchase Management.

When the goods are received by the customer, take the goods receiving option in Purchase Management to indicate that the goods have been received.

4 - Reserve against existing supply orders

5 - Configure to order (for configured items only). To enter a configured order line, enter the code of the configured item together with the required order quantity. Configured items are included in the standard inventory item prompt. Alternatively, a base item may be entered and the required item selected from a list of configured items related to the base item.

In the resultant window that is displayed, you can specify customer details in order to narrow the choice of configured items to just those configured for that particular customer. Customer details may be blanked out to show all items configured from the base item.

Press **Enter** to display the Configured Item Selection Window, where you can select a configured item from a list of alternatives configured from the base item for the specified customer.

When a finished goods receipt is made in production, the stock is automatically allocated. Then the stock must be picked and despatched, and the order invoiced in Sales Order Processing.

Make to order, configure to order and reservations against production orders are only allowed if Production and Configurator are attached for the company.

Methods

Codes are displayed representing the ordering method or methods used so far for this order line. The codes indicate the following methods:

WO Production order - for make to order or configured lines, and for order methods 1 and 5.

RS Reserved against a production or purchase order (order method 4).

BB Back-to-back purchase order (order method 2).

DD Back-to-back purchase order with direct delivery (order method 3).

Certificate

Enter 1 if you require a Certificate of Conformance for the order line.

Quantity

Enter the quantity ordered for delivery on the nominated delivery date. You will not be allowed to leave this screen unless an order quantity is entered.

UOM

Enter the unit of measure of the order line. This need only be entered if it is different from the issue unit.

The unit of measure must be one of the purchase, stock, or issue units of measure set up in item maintenance in Inventory Management.

Allocated

The number of units of the item allocated to the order is displayed, along with the unit of measure.

Reserved

The number of units of the item reserved for the order is displayed, along with the unit of measure.

Outstanding

The number of units of the item that are yet to be allocated to the order is displayed, along with the unit of measure.

Parent Line

If the item is a kit component, enter the order line number of the parent item. This may not be changed after the order line has been entered. Kitting is not allowed for configured items.

Functions:**F16**

Additional Overrides

Order Line Overrides Additional Details Window (F16)

Press **F16=Additional Overrides** on the Order Line Overrides screen to open the Additional Details window.

This window enables you to enter salesman and/or agents who may be associated with the order. Salesman, and/or agents may also be entitled to commission which must be entered separately via the Sales Order Processing, Commission Maintenance routine.

Fields:

Discount Type

Up to 4 discount types may optionally be input. Any types entered must be valid price types with pricing function 1 (discounts). It is possible to prompt on valid discount types.

Discount %

Up to 4 discount percentages may be entered. A discount cannot be entered if discount types have already been entered.

Presentation

A discount presentation must be entered for any discount % input.

0 Nett Discount

1 Gross Discount.

Discount Value

A fixed discount value can be entered. If entered the previous discount values cannot be made.

Per

Discount value per. This works as the per field on fixed prices.

Order Line Overrides Create Back to Back Requisitions (Order Method 2)

Note: This window will not be displayed if Advanced Pricing is in use.

This window is opened if the Ordering Method field, on the Line Overrides screen is set to 2 (purchase order).

This routine, in the event of a stock-out situation and in the absence of a purchase order against which to reserve, can create a requirement for a purchase order to satisfy a customer's needs. This requirement will appear immediately as a requisition which can then go through a process of approval and be turned into a purchase order.

The window displays the item, stockroom and quantity. Some or all of the data will default in, if:

- A default supplier is entered in the Item/Stockroom details
- An Item/Supplier profile exists in Purchase Management

Fields:

Supplier

The default supplier is displayed, but can be over-typed.

Due Date

The order line due date is displayed. Over-type if the purchase order due date is different.

Price

If an Item/Supplier profile already exists for this combination ,of item/supplier the supplier's default price is displayed.

Key in a price, or over-type the displayed price if necessary.

Currency

This Is The Default Currency.

Discount %

If an item/supplier profile already exists for this combination of item/supplier the supplier's default discount is displayed. Key in a discount, or over-type the displayed discount if necessary.

Purchasing Off

Key in the code of the purchase officer responsible for the requisition.

Press **Enter** to update, and to return to the Order Line Details screen.

Note: Purchase requisitions should be released in Requisitioning and purchase orders printed off in Purchase Management. When the goods are received into stock, the goods are automatically allocated. The stock then needs to be picked, despatched and invoiced in Sales Order Processing.

Functions:

F13

Invokes the Purchase Management, Where Bought enquiry

Order Line Details Sourcing Screen (Option 2)

Entering 2 against an order line on the Order Line Details screen displays the Sourcing screen.

This screen enables you to:

- Source the product from another stockroom
- Supply an alternative item

The screen also gives access to some of the procedures and enquiries available when entering an order line in the normal way.

The screen displays a table showing the available stock, the stock on order, and the stock in transit for the item and any alternative items.

The details for the current order line stockroom are displayed on the first line. Following this the unit price and the stock available, on order, and in transit for each stockroom in which the item is held are shown. Beneath this alternative products are shown with stockroom, price and stock available, on order, and in transit.

You may delete or amend the order quantity at the designated stockroom and enter order quantities against any of the alternative stockrooms/items. Press **Enter** to generate an order line for each order quantity entered.

The following details are displayed for each stockroom;

- Quantity available and unit of measure
- Price per unit and unit of measure
- Quantity on order and unit of measure
- Quantity in transit and unit of measure

07-03		SA	MW	KS	IM	II	KENB20A PET166S2

Fields:

Select

Options are available which give access to enquiries and operations you may need to perform.

- 1 - to view a stock availability enquiry.
- 2 - to allocate against batches.
- 3 - to reserve stock against purchase order(s).

Quantity

Enter the quantity of the item to be supplied. Any previous allocations for this order line will be displayed in the first stockroom and can be amended.

The quantities entered do not need to match the original quantity entered for the line. It can be increased or decreased.

If you allocate stock from another stockroom or another item, a new order line will be created.

UOM

Enter the unit of measure in which the item is to be supplied. This need only be entered if it is different from the issue unit of measure. The unit of measure must be one of the purchase, stock, or issue units of measure set up in item maintenance in Inventory Management.

Order Line Details Allocate Stock against Lots Window (Option 3)

Entering 3 against an order line on the Order Line Details screen opens this window.

Tip: Automatic and manual allocation against lots is determined by the setting of various control parameters on the Inventory Management, Company Profile, Stockroom Details Extended Options screen. This screen is specific to Advanced Order Entry functionality.

- If automatic allocation is in use the system will allocate to the lowest lot reference which has stock available. If allocating all the available stock to the first lot does not satisfy the order line, it will carry on allocating to the next lot reference, and so on. This is done when the picking note is produced in the Sales Order Processing application.
- For manual allocation to a lot, which might be done to obtain a lot which has a C of C which most closely satisfies the customer requirement, key a 3 against the order line for which you want to allocate a lot; the stock must already have been allocated from the stockroom.

This screen enables you to:

- Allocate stock against lots
- Deallocate stock against lots
- Perform allocation enquiries
- Perform Certificate of Conformance reference enquiries.
- Display lot header details.

Note: Stock must already have been allocated from a stockroom against the order line before it can be allocated against lots.

PI Purchase orders in Inspection

PO Purchase order

SO Sales order

SQ Sales order quotes

SS Suspended order

Due Date

Order line due date

Customer/Supplier

Customer or supplier number and description.

Qty O/S

For a sales order this figure shows the number of units yet to be allocated. For a supply order it represents the number of units available for allocation i.e. the number of units that do not have reservations against them.

Rsvd?

Outstanding reserved. Quantity outstanding from supply orders will be displayed only if reservations have been made against it.

A star will be displayed on any line that has reservations against a supply order. If you place a 1 on this line, you will see the reservations enquiry window giving details of these reservations.

Available

The two numbers are associated with each item and are running totals.

The first number which represents actual stock availability, takes the current available stock minus the sales order quantity of the line.

Current available stock

is the stockroom available stock minus sales order quantities from previous lines

Expected

This is the figure 'Qty O/S' if it is a sales order line.

The second number which represents expected stock availability, takes the current available stock plus outstanding supply order quantities.

Outstanding supply order quantity is the figure 'Qty O/S' if it is a supply order line. It represents currently unallocated and unreserved units from the supply order.

Select

This field is untitled on screen.

Enter 1 to make an enquiry into reservations for any order line against purchase orders.

Functions:

Advanced Order Entry Trailer Screen (F13)

When all the lines have been entered pressing **F13=Trailer** displays the Order Trailer screen.

Values are shown in the currency of the order and in the base currency. The screen enables you to:

- Override customer order reference
- Override customer order date
- Suspend the order
- Enter up to three sundry charges, applying a VAT code and rate to them.

Note: Orders with quotation codes are held on file but no further processing takes place.

For prime currency orders, all values are shown in both the prime currency and Accounts Receivable base currency.

Fields:

Customer Order Ref

The customer order reference entered in the customer details screen is displayed. If a change is required enter the new customer order reference.

Customer Order Date

The customer order date is displayed. If a change is required, enter the new date.

Suspend

To suspend the order enter a two figure suspend code. The code must be a valid code on the descriptions file. Search is available. The system may automatically suspend an order. If so, the code and description will be displayed.

Quotation Type

If this is a quotation these values will be displayed, taken from the first screen.

Quotation Enquiry

If this is a quotation these values will be displayed, taken from the first screen.

Total Cost

This field displays the cost value of the order.

Margin

The margin of the order is expressed as a percentage of costs or sales value depending on the setting made on the Sales Order Processing company profile.

Total Goods

The net value of the sale is displayed.

Base Amount

This column show values in the base currency of the company for the adjacent fields.

Charge Code

If a sundry charge is to be added enter the appropriate charge code. The charge code must be a valid code set up on the descriptions file against Major Type 'SUNC', in Inventory Management. Search is available. The standard value of the charge and normal VAT rate are also held on file and will be retrieved unless an amount or amounts are manually entered.

VAT only charges may be processed to support the delivery of samples or gifts. VAT is still applicable even though there is no associated goods value.

In this case, VAT should be entered against a user-defined charge code specifically set up in the Inventory Management descriptions file for this purpose. Only VAT values will be posted to Accounts Receivable.

Charge Amount

Enter the sundry charge amount. Leave this blank to use the amount set up against the charge code on the descriptions file.

VAT Code

Enter the VAT code for the additional charge. It is only necessary to enter this code if the normal code is to be changed.

VAT Rate

This is the VAT rate associated with the adjacent VAT code.

Total Charge

The goods value of the order plus sundry charges.

Total VAT

The total VAT charges associated with this order.

Order Total

The invoice amount of the order, i.e. total goods, plus total charges plus total VAT, less any discounts.

Note: If an early settlement discount is appropriate then an appropriate message will be displayed on the screen.

Finish the order by pressing **F13=End Order**; the Order Entry *open order* screen is displayed: Summary of the order just entered is displayed. Another order can be entered, or the last option returned with **F3=Exit**.

Functions:

F13

End order entry

F21=Text Entry

This displays the Maintain Text window where you enter or select a Usage Code and a Language Code for multi-lingual text entry. When you press **Enter**, the Item Text window is displayed. This is where you can enter text in the selected language to be displayed or printed on external documentation, for example despatch notes, according to the usage code selected.

You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language by entering a different language code when F16=Additional Overrides function key is available.

Note: Language codes do not need to be selected in order to print text in the native language.

Order Amendment

2/AOP

Select the Order Amend option.

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Note: When Advanced Order Entry is in use all order amendment must be actioned through Advanced Order Entry, Order Amend, regardless of how the order was entered.

The amendment routine provides the same facilities found within Order Entry. For more information on specific screens, see Order Entry.

Authority for users to amend/release suspended orders can be restricted. This authority restriction is set up via the General Ledger Utilities options, and is defined on a company, application and user level to selected suspension Reason Codes. If used, a user will only be authorised to release orders that are suspended with a code they are authorised to. If Authority Restriction is not used, each user will be authorised to release all types of suspended order.
