Chapter 4

Reports

Configurator Reports

All of the standard sales and production reports and documents are available for configured items. In addition, reports are available within Configurator, with selection criteria, for the following:

- Configurator rules
- Configurator messages
- Items by search family characteristic.

The Supply / Demand Exception option is included from Advanced Order Entry.

Each report prints according to the following:

Frequency

As required.

Stationery

Standard listing paper.

Print Positions

132.

New Page

Overflow.

Sales Documentation

Instead of the components within a configured item being 'invisible', you can choose to have such components detailed on acknowledgements, pick and despatch notes, and on invoices.

The component selected, its description and required quantity are documented.

Configurator Rules

Select the Configurator Rules option. You can select a specific rule or a rule category.

You use this option to print Configurator rule details for a specific rule, all rules, or all rules in a particular rule category.

Header, test, action and rule message details are displayed on the report.

Fields:

Rule Number

Optionally enter a rule code for which to print Configurator rule details.

Category

Optionally enter a rule category. Configurator rule details are printed for all rules defined to the category.

Leave both selection fields blank to print all Configurator rules.

Configurator Messages

Select Configurator Messages. You can select either a specific message or a message category.

You use this option to print Configurator message details for a specific message, all messages, or all messages in a particular message category.

The text of each message is printed on the report.

Fields:

Message Number

Optionally enter a message code for which to print Configurator message details.

Message Category

Optionally enter a message category. Configurator message details will be printed for all messages defined to the category.

Leave both selection fields blank to print all Configurator messages.

Item by Characteristic

Select the Item by Characteristic option to display the Search Family Selection Screen. Complete this screen and press **Enter**, a list of characteristics within the search family is displayed.

You use this option to print characteristic details for items in a specified search family. The report lists items defined to the selected search family group, with their individual characteristics displayed according to those selected for inclusion.

Since all characteristics and values are displayed you can print exactly the details you want. However, if you want to print all details for your selected search family, you can go through the selection windows selecting F15 each time.

Fields:

Select

Enter 1 to select up to 10 characteristics to appear on the Item by Characteristic report.

Functions:

F15

Select all characteristics.

Select the required characteristics and then press **Enter** to display individual value selection windows in turn for each selected characteristic.

Select the required characteristic values and then press **Enter** to display the next value selection window. When you have selected values for each required characteristic, the initial screen is redisplayed, so you can submit the report for batch processing.

Supply / Demand Exceptions

You use this option to produce a report of any discrepancies between supply and demand details - for example, where a production order is amended so that the quantity no longer matches the sales order. See Advanced Order Entry product information for more details.
