Chapter 2

Processing

Processing Introduction

You can divide the processing of returned goods through Customer Returns into three types of task:

- Creating and amending return notes to specify return requirements.
- Receiving returned goods.
- Creating credit notes to reimburse the customer.

Currency rates are stored on transactions within System 21. With the introduction of the Euro and European Monetary Union (EMU) in 1999, the way in which we process any monetary transaction will change.

There are now three scenarios to determine the currency conversion rate to be used in this case.

- Sundry Invoices and Credits use the customer order date entered on the credit/invoice screen.
- Customer Returns Credit Notes that are not based on an original invoice retrieves the conversion rate which is applicable to the pricing date entered on the screen.
- Customer Returns Credit Notes that are based on an original invoice retrieves the conversion rate applicable to the date on that original document. If the rate was fixed, that is part of the Euro, then it is retrieved and used on the credit note.

Each time the system calculates an invoice line value from the prime currency to the base currency, the value is converted by taking into account these Euro considerations.

Base Invoice Header Values are calculated from the Invoice Header Prime Values by accumulating all the base goods, VAT and charge totals.

If both currencies are defined as an IN Currency, then the Prime Grand Total is converted to the Base Grand Total.

Any discrepancies between this new base value and the sum of the base goods/VAT and charge totals are written to a special Euro Rounding Account via Financials.

Returns Entry

1/CRP

Use this procedure to specify return requirements so that you can produce a return note containing details of goods to be returned by a customer.

You can create two types of return note as follows:

Matched Returns

You can match a return note against an existing sales invoice for the customer. In this case, you can only return those goods on the original invoice and the quantities returned cannot exceed the original invoice line quantities. This method provides a high level of control over the subsequent crediting of returned goods.

Note: You should handle Soft Kits (as created and entered at the Advanced Order Entry system) as matched returns.

Unmatched Returns

You can enter a return note without referring to an original sales invoice. In this case, you can specify any quantity of any valid item for return. This method increases the flexibility of return processing, at the cost of a decrease credit control.

The type of return note processing you choose depends on your business requirements.

You should handle Soft Kits (as created and entered at the Advanced Order Entry system) as matched returns only.

Return Note Entry Header Screen

Select Returns Entry.

Use this screen to assign header-level details in the specification of a return requirement.

Fields:

Return Number

This is the unique reference number for this return note. The system can automatically assign return note number or you can enter one on this screen, depending on the method specified at company level.

Customer

Enter the customer code for the return note being raised. You must define the customer in Accounts Receivable and Sales Order Processing.

Address Code

Specify the customer address code for collection of goods on this return note. The code defaults to that specified at company level you can amend it to any valid delivery address set up for the customer. You can specify a unique override address for this return note using **F14=Collection Address**.

Receiving Address Code

Specify the code for the address to which the goods on this return note are to be returned. This defaults to that specified at company level you can amend it to any valid receiving address set up in Receiving Address maintenance. Alternatively, you can specify a unique override address for this return note by blanking out the displayed code and using **F13=Receiving Address**.

The receiving address will usually correspond to the location of a stockroom or warehouse within the company.

Request Date

Specify the date when the return was requested. This defaults to today's date but it can be changed.

Return Date

Specify the date that the returned goods are expected to be received. This date is used as the default for the expected date on all lines for this return note. The return date must not be before the request date.

Return Reason

Specify the reason code describing the reason the goods on this return note are being returned. Return reason codes are set up on the Inventory Descriptions File under major type code RFCR. The return reason entered here defaults to each return note line.

Ret Officer

Specify the code of the returns officer responsible for the administration of this return.

Stockroom

Specify the Inventory stockroom or warehouse at which the goods on this return note are to be received. You must define all items entered on the return note to this stockroom.

Coll Instr Code

Optionally specify a code to indicate which set of standard collection instructions you want to print on the return note. You can enter unique collection instructions for this return as external header or line text to be printed on the return note.

Original Invoice

Optionally specify an existing sales invoice number for the entered customer on which to base the return of goods. If you enter an original invoice, you can only return those items on the invoice at the quantities stated on the invoice.

If you do not enter an invoice number, you can specify any valid items (for the receiving stockroom) on the return note with no limit to the return quantity.

Customer Reference

Optionally specify the customer's reference related to this return request.

Department

Optionally, use this field to note the departments or sections of the company responsible for different types of customer return. You can note alternative information here if required. The value entered here will default to each return note line.

Job Number

Optionally, use this field to note a unique reference number for any rework required for the goods returned on this return note. You can note alternative information here if required. An enquiry on Return Notes by Job Number is available within the

Customer Returns application. The job number entered here defaults to each return note line.

Functions:

F13

Receiving Address. This function allows entry of a unique receiving address for the return note.

F14

Collection Address. Allows entry of a unique collection address for the return note. This will override the customer's standard address if entered.

Press **Enter**, the addresses and descriptions associated with the codes entered are displayed for confirmation. If changes are required, select **F12=Previous**.

Press **Enter** again to display the Invoice enquiry/selection screen (for invoice based returns) or the Return Note lines screen (for non-invoice based returns).

Return Note Entry Invoice Enquiry/Selection Screen

To display this screen, enter details, including an original invoice number, on the Return Note Header Screen and press **Enter**.

Use this screen to enquire into Invoice details and select invoice lines to appear on the return note.

Note: This screen is displayed if an original Invoice number was entered on the header screen.

1=Select 2=Line Details						
F12=Previous F13=Further detail F15=Continue F21=Header text F22=Select All						

The following information is displayed for the selected invoice:

- Invoice number.
- Pick note number.
- Customer's delivery address.
- Customer's invoice address.
- Price list for invoice.
- Discount list for invoice.
- Original invoice reason code.
- Invoice discount.
- Despatch method of invoiced goods.

The following information is displayed for each invoice line:

- Invoice line number.

- Despatch sequence number.
- Item description.
- Quantity invoiced.
- Unit price.
- Nett line value.
- Date of despatch.

Note: If catchweight is used in this company and the return is based on an original invoice, the invoice's secondary value is displayed on the return's lines.

Catchweight processing is as follows:

- The unit price displayed is calculated as the line value divided by the secondary value, in other words, the invoice's unit price is not used.
- The unit cost is calculated as the line cost divided by the secondary value.
- The price UoM displayed is the item's secondary UoM, in other words, the invoice's price UoM is ignored.

Non-catchweight item processing is as follows:

- The unit price displayed is calculated as the line value divided by the quantity, in other words, the invoice's unit price is not used.
- The unit cost is calculated as the line cost divided by the quantity.
- The price UoM displayed is the item's stockroom issue UoM, in other words, the invoice's price UoM is ignored.

Fields:

Untitled

Enter one of the following:

1 - To select the invoice line for return. If the returned item is a kit, this selects the parent and displays the component lines. You should select component lines (with a parent line existing) with 2.

2 - To view the details of this invoice line before making a selection. If the item is a Kit you may select individual component lines for the enquiry.

*Note: You may select to return individual lines or select **F22=Select All** to select all lines.*

Functions:

F13

Further Detail. Display further details of the invoice.

F14

Values in base currency. Toggle between base and prime currencies for the displayed values (only if multiple currencies are in use).

F15

Continue. Retrieve the selected Invoice lines to appear on the return note. The return note line entry/amend screen will be displayed.

F21

Text Entry. This displays the Maintain Text window, where you enter or select a usage code and/or a language code. When you press **Enter**, the Item Text entry window is displayed where you can enter text in the specified language to be displayed or printed according to the usage code specified.

F22

Select All. Select all the lines on the invoice to be returned.

Select **F15=Continue** to transfer line details to the return note and continue.

Return Note Entry Line Details (Matched) (Option 1)(F15)

To display this screen, enter 1 to select the line you wish to match and select **F15=Continue** on the Return Note Enter Invoice Enquiry/Selection Screen.

Use this screen to extract return note line details, from an original sales invoice, to be amended and enter or amend return note line text.

The return note reference number and customer name are displayed at the top of the screen.

F4=Prompt F7=Update & next return F8=Update & options F11=Cancel return					
F15=Invoice enquiry					

Fields:

*

Enter one of the following:

1 - Maintain return line details. When the line selected for amendment is a kit, the component parts are automatically updated as appropriate.

3 - Maintain return line text to be printed on the return note.

Lne

Displays the return note line number.

Item

Displays the code of the Item selected from the original invoice.

Quantity

Displays the return note line quantity extracted from the original invoice. This quantity excludes any amount previously returned for the Invoice line. This column also includes the unit of measure for this line.

Exp Date

Displays the date when the goods are expected to be returned from the customer, as entered at header or line level, but can be maintained for individual return lines.

Job Number

Displays the job number for the line. Job number is defaulted from that entered at header level but can be maintained for individual return lines.

Department

Displays the department for the line. Department is defaulted from that entered at header level but can be maintained for individual return lines.

Item Description

Displays the description of the item for the corresponding return note line, immediately below the item code.

Reason

Displays a code indicating the reason this line is to be returned. Reason code is defaulted from that entered at header level but can be maintained for individual return note lines.

Functions:

F7

Update & next return. Complete this return and return to the Return Entry header screen to enter the next return note.

F8

Update & Options. Complete this return and go on to the Return Entry Options screen to specify authorisation, printing and text details.

F15

Invoice Enquiry. Use this option to view invoice lines and to select return lines from them.

Select **F7=Update and Next Return** or **F8=Update and Options** to complete the Return Note.

Return Note Entry Line Details (Unmatched) (Option 1)

To display this screen, enter details on the Returns Note Header Screen and press **Enter** twice.

Use this screen to enter return note line details for a return note not matched to an original sales invoice and enter or amend return note line text.

			J0002	RTNS	1
F4=Prompt F7=Update & next return F8=Update & options F11=Cancel return					

Fields:

*

This is the main selection field on the screen and allows selection of a line for amendment or to enter/amend line level text to print on the return note. Enter one of the following:

1 - Maintain return line details. When the line selected for amendment is a kit, the quantity of the component parts will be automatically updated as appropriate. (See Delete the Kit Window F13.)

3 - Maintain return line text to be printed on the return note.

Lne

Displays the return note line number.

Item

Displays the code of the item to be returned.

Quantity

Displays the quantity of the item to be returned. This is followed by the unit of measure.

Exp Date

Displays the date when the goods are expected to be returned from the customer, as entered at header or line level.

Job Number

Displays the job number for the line. It is defaulted from that entered at header level but can be maintained for individual return lines.

Department

Displays the department for the line. It is defaulted from that entered at header level but can be maintained for individual return lines.

Item Description

Displays the description of the item for the corresponding return note line.

Reason

Displays a code indicating the reason this line is being returned. Reason code defaults from that entered at header level but you can maintain it for individual return note lines.

Note: Enter the following details at the base of the screen to create a return note line:

Item

Enter the code of an Item that is being returned.

Quantity

Enter the quantity of the specified item being returned.

Expected Ret Date

Enter or amend the date when the goods are expected to be returned from the customer. This defaults from the date entered at return note header level. The expected return date must not be before the return request date.

Job Number

Optionally enter or amend notation information for this return line. The suggested use is to assign a unique reference number for any rework required for the goods returned on this return line. You can note alternative information here if required. An enquiry on Return Notes by Job Number is available within the Customer Returns application. The job number defaults to that entered at return note header level.

Department

Optionally enter or amend notation information for this return line. The suggested use is to note the departments or sections of the company responsible for different types of customer return. You can note alternative information here if required. Department defaults to that entered at return note header level.

Reason

Optionally amend the code describing the reason for the return of the goods for this line. Return reason codes are set up on the Inventory Descriptions file under major type code RFCR.

Note: For details of the method of text entry, refer to Text Maintenance at the end of this section.

Note: You may not return more items than were originally invoiced. A record is kept of all returns against an invoice to ensure the original invoice quantity is not exceeded across multiple Return Notes.

Note: If catchweight is used in this company the secondary values are derived as follows:

When the return line is not based on an original invoice, the nominal secondary value is calculated and stored on the return's lines.

When the return line is based on an original invoice and partially returned, the nominal secondary value is calculated as above.

When the return line is based on an original invoice & completely returned, the secondary value on the invoice line is stored on the return line.

Note: For catchweight items, the price UoM displayed is the catchweight item's secondary UoM.

Functions:

F7

Update and Next Return. Complete this return and return to the Return Entry header screen to enter the next return note.

F8

Update and Options. Complete this return and go on to the Return Entry Options screen to specify authorisation, printing and text details.

Select **F7=Update and Next Return** or **F8=Update and Options** to complete the Return Note (see function key usage below).

Return Note Entry Line Amend Screen (Option 1)

To display this screen, enter 1 to select an individual return note line on the Return Note Entry Line Details (Unmatched) (Option 1) Screen and press **Enter**.

Use this screen to amend individual return note line details.

The details displayed at the top of the screen and for each return note line are as for the previous screen. The code of the item selected for amendment is displayed at the base of the screen.

* Lne		Item	Quantity	Exp Date	Job Number	Department

F4=Prompt F12=Reselect Line F13=Cancel Line

Fields:

*

This is the main selection field on the screen and allows selection of a line for amendment or the entry/amendment of line level text to print on the return note. Enter one of the following:

1 - Maintain return line details. When the line selected for amendment is a kit, the quantity of the component parts will be automatically updated as appropriate. Please also see Delete the Kit Window F13.

3 - Maintain return line text to be printed on the return note.

Quantity

Enter or amend the quantity to be returned. If the return is based on an original sales invoice, then the return quantity cannot exceed that of the original invoice line.

Expected Ret Date

Enter or amend the date when the goods are expected to be returned from the customer. The expected return date must not be before the return request date.

Job Number

Optionally enter or amend notation information for this return line.

Department

Optionally enter or amend notation information for this return line.

Reason

Optionally amend the code describing the reason for the return of the goods for this line.

Functions:

F13

Cancel Line. Cancel the return note line currently being maintained.

Press **Enter**, to update the line details and display the Return Note line selection screen.

Line Text To Print On Return Window (Option 3)

To display this window enter 3 against the line you wish to view on the Return Note Entry Line Details (Unmatched) (Option 1) Screen.

Use this window to enter or maintain text for the line you are returning. The system displays any existing text.

Original Invoice

If this return note is based on an original sales invoice to the customer, then the reference number of that Invoice is displayed.

Stockroom

Displays the code and description of the Inventory stockroom to which the goods are to be returned.

Officer

Displays the name of the company employee responsible for the processing and/or authorisation of this return.

Customer

Displays the code of the customer from whom the goods are to be returned.

Address Code

Displays the customer address so you can amend it. This is set up in Accounts Receivable or Sales Order Processing. This is the address from which the collection of returned goods is required, unless you enter a unique collection address for this return note by selecting **F14=Collection Address**.

Note: You can maintain the following details:

Receiving Address

Displays and allows amendment of the address at which goods returned on this return note are to be received. Standard receiving addresses are defined in the Maintain Receiving Addresses option. Alternatively, select **F13=Receiving Address** to enter a unique receiving address for this return.

Coll Instr Code

Displays and allows amendment of any collection instructions which you may wish to appear on the return note. Standard collection instructions are defined in the Maintain Collection Instructions option.

Return Reason

Displays and allows amendment of the code specifying the reason why the goods on this return note are being returned. Return reason codes are set up on the Inventory Descriptions file under major type code RFCR. A new reason code entered here will provide the default reason code for crediting and for any new lines subsequently added to the return note.

Amend Lines

Enter one of the following:

- 1 - Amend return note at line level.
- 0 - Line amendment not required.

Reprint Return Document

Enter one of the following:

- 0 - Do not re-print the return note.
- 1 - Flag the return note to be re-printed during the next batch printing run.
- 2 - Immediately reprint the return note interactively.

Department

Optionally enter or amend notation information for this return. The suggested use is to note the departments or sections of the company responsible for different types of customer return. You can note alternative information here if required.

Cust Ref

Displays and allows amendment of the reference number by which the customer recognises this particular return.

Job Number

Optionally enter or amend notation information for this return. The suggested use is to assign a unique reference number for any rework required for the goods returned on this return

Note: You can enter alternative information here if required. An enquiry on Return Notes by Job Number is available within the Customer Returns application.

Functions:

F13

Receiving Address. To enter or amend a unique receiving address for this return.

F14

Collection Address. To enter or amend a unique collection address for this return.

F21

Internal Text. To enter or amend multi-lingual Return Note header text to be displayed within the Company. Refer to the Text Maintenance section for details.

F22

External Text. To enter or amend header text to print on the return note. Refer to the Text Maintenance section for details.

To amend return note lines, select the amend lines option and press **Enter**.

Return Note Amendment Line Details Screen (Matched) (Option 1)

To display this screen enter 1 to amend a line on the Return Note Amendment Header Screen and press **Enter**.

Use this screen to amend extracted return note line details from an original sales invoice and to enter or amend return note line text. The return note reference number and customer name are displayed at the top of the screen.

Fields:

*

This is the main selection field on the screen and allows selection of a line for amendment or enter/amend line level text to print on the return note. Enter one of the following:

1 - Maintain Return line details. If the returned item is a kit you may only select the parent line for amendment of quantities. Component lines will automatically be updated from any amendment made to parent quantities.

Note: See Delete the Kit Window (F13) for details on how to split kits.

3 - Maintain return line text to be printed on the return note. See Line Text To Print On Return Window

Lne

Displays the return note line number.

Item

Displays the code of the item selected from the original invoice.

Quantity

Displays the return note line quantity extracted from the original invoice. This quantity will exclude any amount previously returned for the invoice line. This also displays the unit of measure in which the line quantity is expressed.

Exp Date

Displays the date when the goods are expected to be returned from the customer, as entered at header or line level.

Job Number

Displays the job number for the line. Job number is defaulted from that entered at header level but can be maintained for individual return lines.

Department

Displays the department for the line. Department is defaulted from that entered at header level but can be maintained for individual return lines.

Item Description

Displays the description of the Item for the corresponding return note line.

Reason

Displays a code indicating the reason this line is to be returned. Reason code is defaulted from that entered at header level but can be maintained for individual return note lines.

Functions:

F15

Invoice Enquiry. To view invoice lines and select return lines from them.

Select **F8=Update** to update the Return Note line details.

Return Note Amendment Line Details Screen (Unmatched) (Option 1)

To display this screen, enter 1 to amend a line on the Return Note Amendment Header Screen and press **Enter**.

Use this screen to enter return note line details for a return note not matched to an original sales invoice and to enter or amend return note line text.

The return note reference number and customer name are displayed at the top of the screen.

Fields:

Select (*)

This is the main selection field on the screen and allows selection of a line for amendment or enter/amend line level text to print on the return note. Enter one of the following:

1 - Maintain Return line details. If the returned item is a kit you may only select the parent line for amendment of quantities. Component lines will automatically be updated from any amendment made to parent quantities.

Note: See Delete the Kit Window (F13) for details on how to split kits.

Note: Soft kits (as created and entered at the Advanced Order Entry system) must be amended at the matched returns option.

3 - Maintain Return line text to be printed on the return note. See Line Text To Print On Return Window.

Line

Displays the return note line number.

Item

Displays the code of the item to be returned.

Quantity

Displays the quantity of the item to be returned. Also displayed is the unit of measure in which the line quantity is expressed.

Exp Date

Displays the date when the goods are expected to be returned from the customer, as entered at header or line level.

Job Number

Displays the job number for the line. Job number is defaulted from that entered at header level but can be maintained for individual return lines.

Department

Displays the department for the line. Department is defaulted from that entered at header level but can be maintained for individual return lines.

Item Description

Displays the description of the item for the corresponding return note line.

Reason

Displays a code indicating the reason this line is to be returned. Reason code is defaulted from that entered at header level but can be maintained for individual return note lines.

Note: Enter the following details at the base of the screen to create a return note line:

Item

Enter the code of an item that is to be returned.

Quantity

Enter the quantity of the specified item to be returned.

Expected Ret Date

Enter or amend the date when the goods are expected to be returned from the customer. This defaults from the date entered at return note header level. The expected return date must not be prior to the return request date.

Job Number

Optionally enter or amend notation information for this return line. The suggested use is to assign a unique reference number for any rework required for the goods returned on this return line. You can note alternative information here if required. An enquiry on Return Notes by Job Number is available within the Customer Returns application. The job number defaults to that entered at return note header level.

Department

Optionally enter or amend notation information for this return line. The suggested use is to note the departments or sections of the company responsible for different types of customer return. You can note alternative information here if required. Department defaults to that entered at return note header level.

Reason

Optionally amend the code describing the reason for the return of the goods for this line. Return reason codes are set up on the Inventory Descriptions file under major type code RFCR.

Select **F8=Update** to update the Return Note line details.

Return Note Amendment Line Amend Screen (Option 1)

To display this screen enter 1 to amend a line on the Return Note Amendment Line Details Screen (Unmatched) (Option 1) Screen.

Use this screen to amend individual return note line details.

The details displayed at the top of the screen and for each return note line are as for the previous screen.

The code of the Item selected for amendment is displayed at the base of the screen.

*

This is the main selection field on the screen and allows selection of a line for amendment or enter/amend line level text to print on the Return Note. Enter one of the following:

1 - Maintain Return line details. If the returned item is a kit you may only select the parent line for amendment of quantities. Component lines will automatically be updated from any amendment made to parent quantities.

Note: Delete the Kit Window (F13) for details on how to split kits.

3 - Maintain Return line text to be printed on the return note. See Line Text To Print On Return Window.

Quantity

Enter or amend the quantity to be returned. If the return is based on an original sales invoice, then the return quantity cannot exceed that of the original invoice line.

Exp Date

Enter or amend the date when the goods are expected to be returned from the customer. This defaults from the date entered at Return Note header level. The expected return date must not be before the return request date.

Job Number

Optionally enter or amend notation information for this return line. The suggested use is to assign a unique reference number for any rework required for the goods returned on this return line. You can note alternative information here if required. An enquiry on Return Notes by Job Number is available within the Customer Returns application. The job number defaults to that entered at return note header level.

Department

Optionally enter or amend notation information for this return line. The suggested use is to note the departments or sections of the company responsible for different types of customer return. You can note alternative information here if required. Department defaults to that entered at Return Note header level.

Reason

Optionally amend the code describing the reason for the return of the goods for this line. Return reason codes are set up on the Inventory Descriptions file under major type code RFCR.

Functions:

F13

Cancel Line. Cancel the return note line currently being maintained.

Press **Enter** to update line details and display the return note line selection screen.

Text Maintenance Screen (Option 3)

-  To display this screen, enter 3 against a return line on the Return Note Amendment Line Details Screen and press **Enter**.

Use this screen to enter or amend up to 99 lines of text.

Returns Authorisation

3/CRP

Use this procedure to authorise those return notes not already authorised in Return Note Entry.

A return note may not have been authorised in the Returns Entry option for one of the following reasons:

- The returns officer for that return had no authority to authorise returns.
- Authorisation was deferred for review at a later stage.

Note: You cannot print a return note nor receive goods until the return note has been authorised.

Return Authorisation Selection Screen

Select Returns Authorisation.

Use this screen to select unauthorised returns for authorisation.

Select the printing option for the return note currently being authorised:

0 - Do not print this return note.

1 - Print this return note during the next batch return note printing run.

2 - Print this return note interactively from this option.

Note: Authorisation of a return note occurs only when you specify a valid print option and press Enter, and the return note printed (if 0 is not specified).

Press **Enter**.

Returns Receiving

4/CRP

Use this procedure to book goods returned on a return note into goods inward, inspection or stores. Only those goods booked into stores update the Inventory company. Note the following:

- Goods booked into goods inward or inspection can be transferred into stores through the Returns Transfer option.
- A return note must be authorised before it can be received.
- A return note awaiting printing must be printed before it can be received.
- Returns cannot be credited until they have been received. The receipt point may be stores, goods inwards or inspection. This value will default to the company profile setting but may be overridden.
- Lot, batch or serial numbers are entered on receipt of lot, batch or serial controlled Items.
- Labels are printed for received goods if this is specified at company level.

Returns Receiving Select Receipt Point Screen

Select Returns Receiving.

Use this screen to specify receipt point and receipt date for goods to be received on a return note.

Returns Receiving			
ENTER:- Receipt Point.. <u>1</u> 1=Goods Inwards,2=Inspection,3=Stores			
Receipt Date... <u>250894</u>			
F3=Exit			

Fields:

Receipt Point

Specify the receipt point for the returned goods. Only those goods booked into Stores will update Inventory. Enter one of the following:

- 1 - Receive the goods at goods inwards.
- 2 - Receive the goods at inspection.
- 3 - Receive directly into stores.

Note: You can only raise credit notes against goods booked into Stores if this requirement has been specified on the Customer Returns company profile for this company.

Note: If catchweight is used in this company and you are receiving a return for catchweight item types or non-catchweight items with a secondary value, Inventory will only be updated with the secondary values if the receipt is booked into the stores location.

Note: For catchweight items, the movement costs are based on the secondary values.

Receipt Date

Enter the date that the goods were received. This defaults to today's date.

Press **Enter** to display the return note selection screen.

Returns Receiving Select Return Note Screen

To display this screen select a receipt point on the Returns Receiving Select Receipt Point Screen and press **Enter**.

Use this screen to select a return note reference number against which receipts are to be made.

Fields:

Untitled

Select. Enter one of the following:

- 1 - To select the return you wish to receive against.
- 2 - To view details of your chosen return.
- 3 - To view any text attributed to your chosen return. See Line Text To Print On Return Window.

Select a return and press **Enter** to display the Returns Receiving Return Note Details Screen.

Returns Receiving Return Note Details Screen

To display this screen select a returns note, on the Returns Receiving Select Return Note Screen and press **Enter**.

OR: Select a returns note on the Outstanding Returns By Item Screen (F13) and press **Enter**.

OR: Select a returns note on the Customer Outstanding Returns Screen (F14) and press **Enter**.

Use this screen to confirm full or partial receipt for line details on the selected return note.

The return note reference number, customer return reference, goods returned note number, receiving stockroom description and customer name are displayed at the top of the screen.

F3=Exit F8=Receive Whole Return F12=Previous F17=Maintain Lot Header			
F21=Return text			

Fields:

*

Select either to receive this return line or to maintain line-level return text:

1 - Enter or amend line text for this return line.

2 - Receive the whole quantity on this return line. If a kit item is selected a window displays the components parts.

4 - To split a kit item it is necessary to firstly delete the parent item. Once the parent is deleted the components are treated as individual stock items.

When you enter 4, a window displays with the warning This option will delete the kit parent line. To continue to split the returned kit select **F11** and you are returned to the previous screen. The component parts can then be received as non-kit items and are assigned lot numbers as appropriate.

Ref

Displays the reference number for this line. This allows the line to be selected for partial receipt by entering the line reference at the bottom of the screen.

Lne

Displays the return note line number.

O/S Qty

Displays the outstanding quantity on this return line (in other words, the quantity still to be received).

Note: If catchweight is used in this company and you are receiving catchweight item types or non-catchweight items with a secondary value, the outstanding secondary value is always recalculated from the outstanding quantity. Be aware that the outstanding secondary value is not the original secondary value less the returned value.

UOM

Displays the unit of measure in which the outstanding quantity for this Item is expressed.

Return Qty

Displays the total quantity on this return note line. Some of this quantity may already have been received.

Item

Displays the code of the item to be received.

Due

Displays the due date for the return (in other words, the expected return date as entered in Return Note Entry or Amend).

Item Description

Displays the description of the Item to be received.

Note: For partial receipt of a return note line, enter the following details at the base of the screen:

Ref

Enter the line reference number if the quantity received is only part of the outstanding quantity. If the full quantity is to be received for this line, enter a 2 against the line instead of selecting by reference number.

Qty

If the selected return line is to be part received, enter the quantity received.

Complete

When receiving less than the total outstanding quantity for a return note line, specify whether or not the line is to be considered as completely received. This is to close the return line if no more goods are expected to be received. Enter one of the following:

0 (or blank) - Line is not complete. More goods are expected.

1 - Line is complete. No more goods are expected and no further receipts will be allowed for this line.

No. Labels

Enter the number of identifying labels that are to be printed for this receipt.

Int. Trace

Optionally enter an internal trace number for this receipt. The internal trace code is used to enter batch, lot or serial details for appropriate Items if only one batch/lot/serial number is required for the receipt. If more than one batch/lot/serial number is required, leave this field blank. The batch/lot/serial entry screen will then automatically display. The code is displayed on enquiries into receipts on return note lines. It is also printed as a reference on the goods returned note (if GRNs are to be printed).

Ext. Trace

Optionally enter an external trace number for this receipt. The external trace code used is for reference purposes only and will be printed as a reference on the goods returned note (if GRNs are to be printed).

*Note: You can register all outstanding goods on the return note as received by selecting **F8=Receive Whole Return**.*

Note: Warehousing – if Warehousing is installed and the receipt is into stores for an active warehouse, then a window will automatically be displayed for entry of a packaging type code (and an expiry date for consumable goods).

Note: If catchweight is used in this company and the items you are receiving are catchweight type 3 or non-catchweight items with a secondary value, the secondary value is calculated for each receipt.

Functions:

F8

Receive Whole Return. To receive the whole order, and automatically return to the Goods Receiving - Select Order screen.

*Note: If catchweight is active, the **F8=Receive Whole Order** function can be used only if all the return lines are for non-catchweight items, or if*

all return lines for catchweight items types 1 or 2 have been fully received. This is because catchweight item types 1 and 2 require a received weight to be entered via the <Secondary Value Entry> window. If the return comprises a mix of catchweight and standard item lines, the catchweight item lines may be received by entering option 2 against each line.

For catchweight item types 3, the calculated nominal weight does not need to be entered as it is the actual weight for the item.

F17

Maintain Lot Header. Define batch details for batch, lot or serial controlled items only. The reference number of the return line must be entered prior to pressing this function key.

F21

Return Text. Enter or amend internal return note header text. Refer to the Text Maintenance section for details.

Press **Enter** to receive the items selected, OR

Select **F8=Receive Whole Return**, to receive the whole return.

Returns Receiving Batch/Lot/Serial Details Screen

This screen is displayed automatically if the received item is lot, batch or serial controlled.

Use this screen to enter specific references for batch, lot and serial controlled Items.

The screen is displayed automatically unless a single reference was entered on the return lines screen in the Internal Trace field. In this case, the application uses the internal trace as the batch, lot or serial number.

The return reference number, customer return reference, item code, item description and quantity received are displayed.

F12=Previous			

Fields:

Maintain Batch

1 - Either maintain an existing line, OR create a new lot/batch/series.

Lot Number

Enter one or more lot, batch or serial codes for the goods received for this return line.

Quantity

Enter the quantity received against each lot or batch. The total of lot or batch quantities must equal the quantity received for the return line.

Note: If extended details for batch, lot or serial controlled Items are specified on the Inventory company profile, then a selection field will display against each batch, lot or serial line so that lot reference details may be maintained.

Note: If Advanced Order Entry is attached and the Item is batch controlled, then a selection field displays against each batch line so that batch details may be maintained and Certificates of Conformance entered.

Note: If catchweight is used in this company and you are receiving catchweight item types 1 or 2 that are batch/lot/serial controlled, enter the lot number you want to receive into and press Enter to display the Secondary Value Entry window. This is where you enter the secondary value you want to receive.

Press **Enter**.

Secondary Value Entry Window

If catchweight is used in this company then, for items which are catchweight category 1 or 2, when you press **Enter** the Secondary Value Entry window is displayed.

Note: The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example, Kilos Details

Fields:

<Item Code>

The item code is displayed for your information only and cannot be amended.

<Item Issue UoM>

The item's issue unit of measure is displayed for your information only.

<Nominal Secondary Value>

The short description of the item's UoM is displayed in the field's title. The item's nominal secondary value is displayed. You can override this value if required, however if you enter a value that exceeds the configured tolerance, an error message will be displayed.

<Secondary Unit Of Measure>

You can change the unit of measure for the quantity of the item to be moved. To do this, prompt the field to display the units of measure window listing the available configured units of measure.

Press **Enter** to validate and update entries made.

Returns Receiving Batch/Lot/Serial Reference Maintenance Screen (F17)

To display this screen, select **F17=Maintain Lot Header** on the Returns Receiving Return Note Details Screen.

Use this screen to set up or maintain the details associated with a lot/batch/serial number. It is used only where extended batch, lot or serial details are applicable.

F12=Previous			

Fields:

Note: Some or all of the following details are displayed/maintained, depending on the definition of the Item in Inventory Management.

Item

The item specified in the order line. This is a display field only.

Lot

The lot sequence to be maintained. This is a display field only.

Production Date

This is the date that the lot is received or manufactured. The field will default to be the current date. If not entered it can be calculated back from the expiry date using the shelf life of the item. If you are entering a date here, enter one that is not later than today's date. This field will only be a display field if you are maintaining an existing lot reference.

Production Time

The time of day the goods were received or manufactured. This field cannot be changed once the lot has been created.

Expiry Date

This is the date that the shelf life of the item expires. If not entered it is calculated by adding the shelf life to the production date. This field will only be a display field if you are maintaining an existing lot reference.

Expiry Time

The time at which the shelf life of the item expires.

First Available Date

This field is always maintainable. If entered it must be later than the production date. All lots with a first available date greater than the current date will be automatically frozen. If not entered it will be generated by adding the release time on to the production date.

Note: Freezing is achieved using stock monitor.

First Available Time

Enter a valid time. If production date is equal to the first available date then first available time must be equal to or later than the production time.

Last Available Date

This field is always maintainable. If entered it must be later than the first available date but less than or equal to the expiry date. All lots with a last available date less than the current date will normally be automatically frozen (unless otherwise indicated in the stock status). If not entered, the date will be generated automatically.

Note: Freezing is achieved using stock monitor.

Last Available Time

Enter a valid time. If the expiry date is equal to the last available date then last available time must be less than or equal to the expiry time.

Stock Status

This is an optional field.

The stock status code is used as an override to determine if a lot is to be available or frozen stock. If the status is changed then a reason code (see below) must be used to indicate the reason for the change.

If stock status is left blank then the availability dates above will be used to move stock in and out of the frozen state.

Reason Code

This must be entered if the stock status is manually changed. This code indicates why the status of the lot was changed.

Potency

Potency is expressed as a number with up to 5 decimal places. It indicates the strength of the active ingredient for the lot. This is the potency of the whole lot, irrespective of which stockroom the lot is located in.

Grade

Enter a grade code chosen from those defined on the Inventory Descriptions file against major type code GRAD. This is the grade of the whole lot irrespective of which stockroom the lot is located.

C Of C Reference

If Advanced Order Entry is attached and the Item is flagged as requiring a certificate of conformance, then you must enter the reference code of the certificate.

Suppliers Lot Reference

Specify the reference code by which the supplier recognises this lot.

Functions:

F13

Grades.

F14

Status.

F15

Potency.

F16

Adjust active ingredient.

F17

Certificate of conformance maintenance.

F21

Text Entry. This displays the Maintain Text window, where you enter or select a usage code and/or a language code. When you press **Enter**, the Item Text entry window is displayed where you can enter text in the specified language to be displayed or printed according to the usage code specified.

For further details on **F13**, **F14**, **F15**, **F16** and **F17** functions see Lot, Grade & Potency in Inventory Management.

Press **Enter**.

Returns Scrap/Adjust

5/CRP

Use this procedure to scrap or reject goods already received on a return note. You can optionally request a print of a rejection note.

Note: Whether or not a credit note is allowed to be raised against scrapped or rejected goods is dependant on the reason code entered against each transaction.

Returns Scrap/Adjust Selection Screen

Select Returns Scrap/Adjust.

Use this screen to select a goods returned number (GRN) to reference the received goods that are to be scrapped or returned to the customer.

Note: The goods returned number is assigned by the system or manually entered in the Returns Receiving option depending on the company profile settings.

CR024	Z1 - Demonstration Company	User SP1	25/08/94 16:42:29
Returns/Scrap/Adjustment Entry			
GRN no. <u>2</u> Date <u>250894</u> Rejection note required <u>1</u> (0=No,1=Yes)			
F3=Exit			

Fields:

GRN No

Enter the goods returned number used to record the receipt of the goods, you want to scrap or return to the customer.

Date

Specify the date on which the goods were scrapped or returned to the customer. This defaults to today's date and cannot be earlier than the return creation date.

Rejection Note Required

Specify whether the details of rejected goods are to be printed on a rejection document. Such a document would typically accompany goods returned to the customer. Enter one of the following:

1 - Print rejection documentation.

0 - Rejection documentation not required.

Press **Enter** to display the details screen.

Returns Scrap/Adjust Details Screen

To display this screen enter a Goods Received Note and elect to create a rejection note on the Returns Scrap/Adjust Selection Screen and press **Enter**.

Use this screen to partially or fully scrap lines on the selected goods returned note or return the lines to the customer with a corresponding reason code assigned.

The selected goods returned number, receipt date, customer account code details, customer name and scrap/adjust date are displayed.

Suncream Factor 4 300m			
Ref 4 Qty 2			
Reason code 01 (?)			
F3=Exit F4=Prompt F12=Previous Screen F21=Text			

Fields:

*

Enter 1 to action the whole line. If only part of the line quantity is to be actioned use the Ref. and Qty fields.

You must enter a reason code. If there are multiple reasons, then each quantity must be actioned in turn with the relevant reason code.

Note: When the line selected is a kit, select the parent line and the component lines will be updated accordingly. Component lines may not be separately scrapped or adjusted.

Ref

The reference number of the line to be scrapped or rejected. Enter this reference number at the bottom of the screen if less than the full line quantity is to be actioned.

Item

Displays the code of the item to be scrapped or rejected.

Return

Displays the return note number against which the goods were received.

Quantity/UOM

Displays the quantity received against this receipt line.

Loc

Displays the location code (receipt point) into which the goods were received, or have been transferred.

Traceability Reference

Displays the lot, batch or serial number if the Item is lot, batch or serial controlled.

Note: You may specify the following details:

Ref

Enter the line reference number if the quantity actioned is only part of the received quantity.

Alternatively, if the whole line quantity is to be actioned, enter 1 against the required line, as explained above.

Qty

For actioning of less than the full line quantity, enter the relevant quantity.

Reason Code

Enter a code representing the reason why the goods were rejected. Reason codes are set up on the Inventory Descriptions file under major type code SCRC.

Note: If 1 is entered in the VAT field against a particular reason code in Descriptions Maintenance then the goods scrapped/rejected against this code cannot be credited. Typically, goods rejected and returned to the customer would not be available for crediting.

*Note: The contents of the VAT field can be displayed by prompting on the reason code field and using **F15=Extend** to extend the display.*

Note: A warning message is displayed if you transfer a quantity out of stores that will result in a negative stock balance. You can proceed with the transaction only if negative stock is allowed for the stockroom, which is set on the stockroom record of the Inventory company profile. If negative stock is allowed, F8 can be selected to override the warning message.

Note: If goods are actioned from the stores location then stock balances are down dated and inventory movement records are written.

Note: If the stores location is warehouse controlled then all transfers out of stores can only

be made using the relevant Warehousing functions.

*Note: If catchweight is used in this company and the items you are adjusting are catchweight types 1 or 2, when you first press **Enter** the Secondary Value Entry window is displayed. This is where you enter the item's secondary value you want to adjust.*

The processing for catchweight is as follows:

- For catchweight type 3 items and non-catchweight items with a secondary value, the secondary value is calculated and displayed for each adjustment.
- Inventory will only be downdated with the relevant secondary value adjustments if the adjustments are made from the stores location.
- Movement costs for catchweight items are based on secondary values.

For partial line adjustments:

- You must enter the actual secondary value for catchweight item types 1 and 2 via the Secondary Value Entry window.
- If your partial adjustment results in a zero quantity balance, the remaining secondary value balance will also be reduced to zero. It is not possible to leave residual secondary balances in receiving locations.
- A partial adjustment cannot result in a negative secondary value balance on a GRN at a location.

For whole line adjustments:

- The actual secondary balance does not need to be entered as the outstanding balance is used instead.

Returns Transfer

6/CRP

Use this procedure to transfer goods from one location (receipt point) to another.

When goods are transferred into or out of stores, stock balances are adjusted and Inventory movement records are written.

Goods are selected for transfer by goods returned note and/or by item.

Note: If the stores location is Warehouse controlled then all transfers out of stores can only be made using the relevant warehousing functions

Note: A warning message is displayed if you transfer a quantity out of stores that will result in a negative stock balance. You can proceed with the transaction only if negative stock is allowed for the stockroom, which is set on the stockroom record of the Inventory company profile. If negative stock is allowed, F8 can be selected to override the warning message.

Returns Transfer Selection Screen

Select Returns Transfer.

Use this screen to select from and to locations (receipt points) for the transfer of returned goods.

CR056	Z1 - Demonstration Company	User SP1	25/08/94 16:43:51
Transfer Goods Location			
	Move from..... 1	1=Goods In	
		2=Inspection	
	to..... 3	3=Stock	
Enter	GRN number..... 2		
and/or	Item.....?..		
	Date..... 250894		
F3=Exit F4=Prompt			

Fields:

Move From

To specify the location from which goods are to be transferred, enter one of the following:

- 1 - Goods inwards.
- 2 - Inspection.
- 3 - Stock.

To

To specify the location to which goods are to be transferred, enter one of the following:

- 1 - Goods inwards.
- 2 - Inspection.
- 3 - Stock.

GRN Number

The selection of goods to be transferred can be made either by goods returned note and/or by item.

Optionally enter a valid GRN (goods returned note) related to the goods that need to be transferred.

Item

Optionally enter an item to be transferred. Goods returned note and/or item may be used to aid selection of the goods required to be transferred. If selection is made by Item only, a list of GRN lines containing the selected Item at the specified Move from location will be displayed.

Note: Where the returns item is a kit, only the parent item may be actioned. Component items which are part of a kit will not be displayed and cannot separately be transferred.

Date

Specify the date of the transfer. This defaults to the current date.

Press **Enter** to display the transfer details screen.

Returns Transfer Details Screen

To display this screen, enter the required details on the Returns Transfer Selection Screen and press **Enter**.

Use this screen to partially or fully transfer received return lines for the GRN and/or item specified on the previous screen.

If a specific goods returned number was entered on the selection screen, then that number, together with the customer code and customer name for the return are displayed at the top of the screen.

If no goods returned number was entered on the selection screen, then the selected item code and description are displayed at the top of the screen.

Ref ____	Quantity _____		
1=Transfer,2=Text			
F3=Exit F8=Transfer all F12=Previous Screen			

Fields:

*

Enter one of the following:

- 1 - Transfer goods to the specified location.
- 2 - Enter text against a line.

Note: For details of the method of text entry, refer to Text Maintenance at the end of this section.

Note: When the returns item is a kit, only the parent item may be actioned. Component items which are part of a kit will not be displayed and cannot separately be transferred.

Ref

Displays the reference number of the line. This reference is entered at the bottom of the screen if the quantity to be transferred is less than the total line quantity.

Item

If lines to transfer were selected by Item, this shows the goods returned numbers for the displayed lines. If lines to transfer were selected by goods returned note, then the Item codes for the displayed lines are shown.

Date

Displays the date on which each line was received.

Quantity

Displays the available quantity for each receipt line.

UOM

Displays the unit of measure in which the line quantity is expressed.

Traceability Ref

Displays the internal reference entered for the receipt line when the goods were returned.

Note: Enter the following details at the base of the screen to perform a partial line transfer:

Ref

Enter the line reference number if the transferred quantity is only part of the line quantity.

Quantity

If part transfer of a line is required, enter the quantity to be transferred for the selected line.

Note: If Warehousing is installed and the transfer is into stores for an active warehouse, then a window is automatically displayed for entry of a packaging type code (and an expiry date for consumable goods).

*Note: If catchweight is used in this company and you are transferring a partial line for catchweight types 1 or 2, when you first press **Enter** the Secondary Value Entry window is displayed where you enter the actual secondary value that you want to transfer.*

The processing for catchweight is as follows:

- Inventory will only be updated with the relevant secondary values if the transfers are made to or from the stores location.
- Movement costs for catchweight items are based on secondary values.
- If you transfer the whole GRN or a whole line, a warning message will be displayed that the previously entered secondary values will be used.

- If your partial transfer results in a zero remaining balance, the total remaining secondary value balance will also be transferred. It is not possible to leave residual secondary balances in receiving locations.

Functions:

F8

Transfer all the displayed lines to the specified goods location.

Press **Enter** to process a selected line, OR

Select **F8=Transfer All** to transfer all the displayed receipt lines for the selected goods returned note or item.

Create Credit Note

1... **7/CRP** **2...**

You use this procedure to create a credit note for goods returned on a return note. The credit note created is identical to a miscellaneous credit raised in Sales Order Processing except that it is related to a specific return note (which in turn may or may not be based on an original sales invoice).

Create Credit Note Selection Screen

Select Create Credit Note.

Use this screen to select a return note on which to base a credit note.

CR031	Z1 - Demonstration Company	User SP1	25/08/94 16:44:45
Credit notes			
Customer.....?	GC01	000	
Customer Return Reference.....			
OR

Select. Enter one of the following:

- 1 - Select a goods returned note for which to create a credit note.
- 2 - Enquire on specific return note details.

Note: Where the returns item is a kit, only the parent item may be actioned. Component items which are part of a kit cannot separately be amended. To split a kit see the section Delete the Kit Window (F13).

Original Invoice

For returns based on an original sales invoice, the reference number of that invoice is displayed.

Customer Reference

Displays the customer's reference code for the corresponding return note number.

Return Number

Displays the return note reference code from which a specific receipt may be selected for crediting.

Date Received

Displays the date on which goods for a particular receipt on the corresponding return note were received.

Note: A return note may have many separate receipts.

GRN Number

Displays the goods returned note reference number assigned to the corresponding return receipt.

*Note: If you select a return note from the list and press **Enter**, the credit note header screen is displayed.*

*Note: If you select a return note for enquiry and press **Enter**, the Return Note by Return Note number enquiry details screen is displayed. This screen is explained within the Enquiries section.*

Press **Enter**.

Create Credit Note Header Screen (Option 1)

To display this screen, enter 1 against a return note on the Create Credit Note Select Returns Note Screen and press **Enter**.

This screen displays the header details of the credit note that is to be created. If the return was based on an original invoice, the details are copied from it and cannot be maintained, only the credit reason can be amended. If the return was not based on an original invoice, the details are sourced from the customer defaults set up in Sales Order Processing and the override of some details is allowed.

Fields:

Customer Delivery

Displays the customer code, address code and customer name for this credit note.

Return Number

Displays the reference number of the return note against which this credit note is being raised.

Original Invoice

Displays, if appropriate, the original sales invoice on which the return was based.

Customer Reference

Displays the customer's reference code for the return note that is to be credited.

Pricing Date

For credits based on an original sales invoice, the invoice date is displayed. For credits not based on an original invoice, this date is specified to enable the correct price list to be accessed when pricing the returned goods for crediting. The default is today's date.

Note: The following details are maintainable if the Return Note being credited was not matched to an original sales invoice, apart from the Cash Discount field.

This is the early settlement discount code of the original sales invoice (for matched returns) or the customer's default settlement discount code (for unmatched returns). This is only displayed as a reminder and does not affect the value credited to the customer. It is not maintainable

Stockroom

Displays the code of the stockroom into which the goods for this return were received.

Price List And Discount List

For credits based on an original sales invoice, the invoice price list is displayed. For credits not based on an original invoice, a price list may be selected to price the returned goods for crediting. This is a mandatory field.

Cash Discount

For credits based on an original sales invoice, the invoice discount list is displayed. For credits not based on an original invoice, a discount list may be selected to price the returned goods for crediting.

Credit Reason

The reason why the credit note is being raised. This defaults to the return reason code specified at header level for this return note. It can be amended to any valid code set up on the Inventory Descriptions file under major type code RFCR. This field can be maintained in both types of return fields.

Refer to the Sales Analysis and Sales Order Processing product information to see the impact on postings to Sales Analysis.

Note: The following currency details are displayed only if the customer to be credited is a currency account. They are maintainable only if the return is not invoice-based. These fields are not shown in the example

Currency/Currency Rate Code/Currency Rate

For credits based on an original sales invoice, the invoice currency is displayed. For credits not based on an original invoice, a currency may be specified. This defaults to the customers default currency.

For credits based on an original sales invoice, the invoice currency rate code is displayed. For credits not based on an original invoice, a currency rate code may be specified. This defaults to the customers default currency rate code.

Currency rate is the factor used to convert currencies from and to the base currency. For credits based on an original sales invoice, the invoice currency rate is displayed. For credits not based on an original invoice, a fixed currency rate may be specified by amending the default rate (which is based on the specified currency rate code).

Currency Operand

Indicates whether the currency rate is multiplied or divided when converting to the base currency.

Functions:

F13

Payment Details. This will only be available if the user is authorised to this function in Application Manager.

F16

Additional Overrides.

F19

Currency. Use this to override currency details for transactions where currencies are not linked to the EURO. See Override Conversion Parameters Window (F19) in Transactional Order Entry for more information.

Press **Enter** to update the screen with the descriptions of the codes, the Credit Note details screen is displayed.

Select **F12** from this screen if re-selection of codes or the amendment of fields is required.

Create Credit Note Payment Overrides Window (F13)

Select **F13** on the Create Credit Note Header Screen to display the Payment Overrides Window.

Note: The payment terms are defined in Accounts Receivable.

Use this window to specify payment overrides for the customer's credit note that is being raised.

Fields:

Payment Terms

There are 4 parts to this field but not all of them are necessarily used at once.

The first part of the code can be any of the following:

- Number of days from invoice date (D)
- Net monthly account (M)
- Periodic range (P)
- Extended payment terms (T)

The second part of the code identifies the range if a periodic range has been selected.

The third part of the code is used to specify the payment date for monthly (M) or periodic (P) selections or the number of days to add to the invoice date for a daily (D) selection.

The fourth part is only used if extended payment terms (T) is selected. It uses a settlement code that is defined by Cash Management which defines a payment pattern, for example, payment by instalment.

Examples:

- D __ 030 will give a payment date of 30 days after the invoice date.
- M __ 210 will give a payment date as the 10th of the second month after the month the invoice was sent.
- P 2019 206 will give all the invoices dated between the 20th of the next month and the 19th of the month after, a payment date of the 6th of the second month after the invoice is sent.
- P 1110 105 will give all the invoices dated between the 11th of this month and the 10th of the month after, a payment date of the 5th of the first month after the invoice is sent.
- T__ __ XXX where XXX would be a code identifying a complex payment pattern, as defined in Cash Management.

Payment Method

The method of payment is a code as defined in the Cash Management application against the customer account.

Example: CHQ,STD.

Cash Discount Code

A discount code is used to identify the type of discount and a single cash discount percentage. These are defined in the description file.

Staged Discount Code

Multiple cash settlement discount percentages, allowing tiers of discount according to how soon the payment is received, can be defined.

Bank Details

This determines the bank account number for this credit note. Bank details can be entered or changed by selecting **F13=Bank Details Override**.

Press **Enter**.

Create Credit Note Bank Details Override Window (F13)

To display this window, select **F13=Bank Details Override** on the Create Credit Note Payment Override Window (F13).

Use this window to specify bank details overrides for the customer's credit note that is being raised.

Fields:

Document Processing:

Invoice Language

Enter a code to represent the language you will use on the invoice.

Customer Attributes:

VAT Calc Basis

This field indicates the customer's VAT status for sales invoicing.

- 1 - VAT exempt
- 2 - Use the VAT code in the following field.
- 3 - Use the VAT code from the inventory item.

Note: If World Trade is live, this flag must be set to 3

VAT Code

Indicates the VAT code applicable. This is a mandatory field if VAT Calc Basis is set to 2 or 3.

Extra Rate VAT

Indicates whether an extra charge will be applicable using the VAT code defined.

VAT Country

Indicates the country code for the country in which this customer is registered for VAT. If this is a delivery address, and the same country applies to the statement address, then there is no need to re-enter the information.

Validation and prompting on this field will depend on which applications are interfaced.

Note: If World Trade is live, then the system will default to the Customer Trading Details setting.

Note: A country code must be entered if a VAT registration number is entered.

Note: If a VAT registration number is blank, a Country code must be entered.

Note: Any code entered must be valid to World Trade.

Note: If World Trade is not live, the country code will be validated against the General Ledger.

VAT Registration

Indicates the customer's VAT registration number in the specified country.

Note: If General Ledger is live, VAT registration will be validated according to a country specific format based on the VAT country code.

Fiscal Code

Indicates the classification code assigned by the government to this customer. This will default to Customer Additional Details.

Sales Details:

Salesman

Indicates the default salesman for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type TN.

Agent

Indicates the default agent for the customer, (Customer Maintenance, Sales Details, Additional Details) any code entered will be validated against the Inventory descriptions file, against major type AN.

Sub Agent

Indicates the default sub agent for the customer, (Customer Maintenance, Sales Details, Additional Details) any code entered will be validated against the Inventory descriptions file, against major type AN.

Region

Indicates the default sales region for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type SN

State

Indicates the default state for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type ST

Territory

Indicates the default territory for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type TR

Select **F8=Update** to update the database and continue.

Create Credit Note Line Details Screen

To display this screen, press **Enter** on the Create Credit Note Header Screen (Option 1).

Use this screen to credit goods received for a return note. The line prices may be amended and credit note line text may be entered.

CR052		NR - Neil Radford and Co. Ltd		User	GBJBA1MS	8/08/96 12:44:15	
Credit Notes

08-02		SF	MW	KS	IM	II	KENB20A PET087S1

Fields:

Select

This field is not named on the screen. Select a return line for the amendment of the price for crediting or for the entry of credit note line text. Enter one of the following:

- 1 - Amend price.
- 2 - View pricing details
- 7 - Enter credit note line text.

Item

Displays the code of the item to be credited.

Quantity

Displays the quantity of the item to be credited.

UOM

Displays the unit of measure in which item quantities are expressed.

Price

The price of the line. This is either invoice or price list based and may be amended if required. If the return note was based on an invoice the price can only be reduced. It cannot be increased above the original invoice price.

UOM/

Displays the unit of measure in which prices are expressed.

Txt

An asterix (*) indicates that credit note text exists for the corresponding line.

Str

Displays the stockroom into which the return was received.

Item Description

This field is not named on the screen, but displays the description of the Item to be credited.

Value

Displays the line value to be credited.

Note: If catchweight is used in this company, the secondary values and UoMs are displayed on the credit note's lines.

Catchweight processing is as follows:

When a credit is not based on an original invoice, the credit is priced and discounted identically to Sundry Credits in catchweight active Order Entry.

When a credit is based on an original invoice:

- A net unit price can be entered against a line. For catchweight items the price UoM is the item's secondary UoM and the line value is the catchweight item's secondary value multiplied by the unit price. For non-catchweight items the price UoM is the item's stockroom issue UoM and the line value is the quantity multiplied by the unit price.
- The line values and discounts are calculated as: original invoice value, multiplied by the available to credit quantity, divided by the original quantity. For catchweight type 1 items, quantity is replaced by secondary value.

Functions:

F13

Proceed to the Credit Note trailer screen to enter charges or refunds.

F15

Allow maintenance of customer details to appear on the credit note.

Select **F13=Trailer** to display the Credit Note trailer screen for the entry and/or the refunding of charges previously made to the customer.

Create Credit Note Price Override (Option 1)

To display this screen, select a return line with a 1 on the Create Credit Note Line Details Screen and press **Enter**.

Use this window to amend the price for the selected credit note line for a credit that is not based on an original invoice.

CR052		NR - Neil Radford and Co. Ltd		User GBJBA1MS	8/08/96 12:44:15

Fields:

Price Type

Enter the price type code.

Fixed Price

Enter the fixed price.

Per

For the number of item issue units.

Note: If catchweight is active in this company when the credit is not based on an original invoice, the credit is priced and discounted identically to sundry credits in catchweight active Order Entry.

If the credit is based on an original invoice:

- The Price Override Window displays: the item reference, the unit price and the price UoM. The override price you enter must not be greater than the unit price for that UoM. The price UoM is the item's secondary UoM for catchweight items, and the issue UoM for non-catchweight items.

- A net unit price can be entered against a line. For catchweight items the price UoM is the item's secondary UoM and the line value is the catchweight item's secondary value multiplied by the unit price. For non-catchweight items the price UoM is the item's stockroom issue UoM and the line value is the quantity multiplied by the unit price.

Select **F8=Update**, to update the details.

Create Credit Note Line Price Overrides (Advanced Pricing) (Option 1)

To display this screen, select a return line with a 1 on the Create Credit Note Line Details Screen and press **Enter**.

The fields previously available for prices are displayed for input. Discount fields are also available. This option is only available if Advanced Pricing is in use.

Fields:

Credit Name And Address

Optionally maintain the customer name and address to appear on this credit note.

Customer Reference

Optionally maintain the customer reference to appear on this credit note. This defaults to the customer reference for the original return note.

Credit Date

Optionally, maintain the date to appear on the credit note. This defaults either to the pricing date or to the current system date.

Note: For the current system date to display, Description TYPE CRV4 should be set up with a description code of 01 and description CR Conditioning.

Note: The following details are displayed and cannot be maintained

Pricing Date

Displays the date used to access price and discount lists in order to price credit notes for returns not based on an original sales invoice.

Press **Enter** to update the details.

Create Credit Note Charges/Refunds (F13)

To display this screen, select **F13=Trailer** on the Create Credit Note Line Details Screen.

This screen completes the credit note by allowing the entry of extra charges. If a negative charge is specified, the value will be added to the amount credited. This is typically used to reimburse the customer for charges on the original sales invoice. If a positive charge is specified, the value will be subtracted from the amount credited. This is typically used to charge the customer for expenses incurred in the retrieval of returned goods.

Total Goods Amount:

Goods Base Amount

Displays the value, in the currency of the credit note and the base currency, of the returned goods to be credited. This total excludes any extra credit note charges.

Note: The following details may be specified:

Charge Code

Specify a code representing the type of charge that is to appear on the credit note. The code entered must have been set up on the Inventory descriptions file with major type code SUNC. Default values and VAT codes may also optionally be entered against the code on the Descriptions file. If so, these values will be retrieved unless overridden for this particular credit note.

Note: VAT charges may be processed to support the delivery of samples or gifts. VAT is still applicable even though there is no associated goods value.

note: in this case vat should be entered against a user definable charge code. only vat values are posted to accounts receivable.

Description

Displays the description of the corresponding charge code as set up on the Inventory descriptions file.

Amount

Specify the value, in the currency of the credit note, of the extra charge to be credited or debited. If a negative value is entered, the value will be added to the total to be credited to the customer. If a positive value is entered, the value will be subtracted from the total to be credited to the customer.

VAT Code

Specify the VAT code applying to the corresponding charge. This may optionally be set up against the charge code on the inventory descriptions file.

VAT Rate

Displays the percentage rate applying to the specified VAT code.

Base Amount

Displays the value, in the base currency, of the corresponding charge.

Note: The following details are maintained by the system as charge details are updated:

Total Charge Amount

Base Amount

Displays the total value to be credited, including VAT and charges, in the base currency.

Functions:

F13

Complete. To complete the credit note and assign a credit note reference number.

F15

Restart. To return to the initial selection screen without creating a credit note.

F22

Text. To enter header text to appear on the credit note. Refer to the Text Maintenance section for details.

Select **F13=Complete** to complete the credit note and assign a credit note reference number. The initial selection screen redisplay shows the credit note reference number together with the customer code and name for the credit note just created.

Text Maintenance

Standard routines exist in customer returns to enter text to be associated with return notes. On a number of the screens we have viewed there is an option to enter text.

The following types of text may be entered:

- Return note header internal text.
- Return note header external text.
- Return note line external text.
- Credit note header external text.
- Credit note line external text.

The appropriate text can be maintained in the following options in Customer Returns:

- Returns Entry.
- Returns Amendment.
- Returns Receiving.
- Returns Transfer.
- Credit Note Creation.

Text may be displayed without maintenance in the following enquiry options:

- Returns by Customer.
- Returns by Item.
- Returns by Return Number.
- Returns by Job Number.
- Returns by Returns Officer.
- Invoice/Credit Note (also in Sales Order Processing).
