Chapter 2

Inventory Processing

Introducing Inventory Processing

Inventory Processing is also commonly known as stock movement transfer.

The primary functions of Inventory Management are to record stock movements and determine, at any moment, the current stock levels. To achieve this there are a number of different types of stock movements.

While you can record these transactions within Inventory Management, the module forms part of an integrated business system and many transactions are more easily performed by other applications. (For example, Purchase Management handles the receipt of goods, and Sales Order Processing the despatch.) Stock counting and housekeeping are therefore the main movements transacted solely within the Inventory Management application.

When transactions are performed the format of the screen is very similar for all transactions. To simplify the process you enter common data on the first screen. The second screen records the detail of the movement.

Receipts, Issues and Adjustments

The main processes concerned with Inventory can be categorised as either Receipts, Issues or Adjustments of stock.

Record Purchase Order

1/INP

Use this to maintain details of the supply position held in the On Order balance. Once you have recorded a purchase order using this option, you can then receive goods into stock against it using the Purchase Order Receipt option.

Note: If Catchweight is used in this company, the movement cost of Catchweight items is based on the secondary value entered. When a cost is entered, it is in the item's secondary UoM.

Warning: This process is usually carried out from within Purchase Management. The following applies to those companies without Purchase Management.

Record Purchase Order Selection Screen

Select Record Purchase Order.

Use this screen to select the required stockroom code for the purchase order, in addition to specifying the date, references and reason codes.

IN009	Z1 - Demonstration Company	USER SP1	5/09/94 16:57:25
Record Purchase Order			
Stockroom.....?	01		
Ref.no. date & type.?	p-132-0994	5/09/94	IN
Narrative.....?			
Reason code.....?	RO		
F3=Exit F4=Prompt			

Fields:

Stockroom

Enter a stockroom code. The stockroom must exist on the company profile.

Ref.No.

Enter the reference number for the movement using up to 14 alphanumeric characters; this may be linked with the reference type specified.

Date

Enter a date to specify the reference date. This defaults to the current system date, but can be changed. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Type

Enter the reference type using up to three alphanumeric characters. These are defined on the descriptions file against the major type TRAN. See Descriptions.

You can use the reference type as a mnemonic to describe the reference number, for example, you can use REQ to indicate that the reference number is a stores requisition note number.

Narrative

Enter the narrative or description for the movement using up to 20 alphanumeric characters.

Reason Code

Enter a reason code chosen from those defined on the descriptions file against major type MOVR. See Descriptions.

Press **Enter** to display the Record Purchase Order Detail screen.

Record Purchase Order Detail Screen

To display this screen press **Enter** on the Record Purchase Order Selection screen.

Use this screen to record the details of the purchase order.

IN009	Z1 - Demonstration Company	USER SP1	5/09/94 17:01:11

Fields:

Supplier

Define the source of supply using up to 11 alphanumeric characters.

Warning: The supplier details are not confirmed against supplier profiles in Purchase Management.

Item

Enter the item code. The system automatically generates the description.

Movement Qty.

Enter the quantity of the item using up to 11 alphanumeric characters.

Lot

Not required when recording a purchase order

Quantity Units

Select one of the three units given on the item file.

The default is the purchase unit.

Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter the (Secondary Value**

Entry) window is displayed.

The following update is performed for each purchase order recorded:

- Include in on order balance.

Press **Enter** to check the data. Press **Enter** again to carry out the update.

Secondary Value Entry Window

If Catchweight is used in this company then, for items that are Catchweight category 1 or 2, when you press **Enter** the Secondary Value Entry window is displayed.

Note: The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.

Fields:

Item Code

The item code is displayed for your information only and cannot be amended.

Item Issue UoM

The item's issue unit of measure is displayed for your information only.

Nominal Secondary Value

The short description of the item's UoM is displayed in the field's title. The item's nominal secondary value is displayed. You can override this value if required, however if you enter a value that exceeds the configured tolerance, an error message will be displayed.

Secondary Unit Of Measure

You can change the unit of measure for the quantity the item you want to move. To do this, prompt the field to display the Units Of Measure window listing the available configured units of measure.

Press **Enter** to carry out the movement.

Purchase Order Receipt

2/INP

To receive stock supplied as a result of a purchase order generated outside the Purchase Management application.

Warning: This process is usually carried out from within Purchase Management. The following applies to those companies without Purchase Management.

Record Purchase Receipt Selection Screen

Select Purchase Order Receipt.

Use this screen to select the required stockroom code for the transaction in addition to specifying the date, references and reason codes.

Movement Reason...?.. _____			
F3=Exit F4=Prompt F12=Previous F17=Lot			

Fields:

Supplier

Define the source of supply using up to 11 alphanumeric characters.

Warning: The supplier details are not confirmed against supplier profiles in Purchase Management.

Item

Enter the item code. The description is automatically generated.

Movement Qty.

Enter the quantity of the item using up to 11 alphanumeric characters.

Lot

Enter a lot number for the item you wish to receive, using up to 15 alphanumeric characters.

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. The unit of measure defaults to that defined as the purchase unit for this item/stockroom, but can be changed.

Press **Enter**, to check the details for each item and to prompt for the next item number.

*Note: You cannot receive more than is on order. If the message: **You cannot make a receipt for more than has been ordered** is displayed, return to Record Purchase Order and enter a new order before attempting to receive stock.*

*Note: If you receive a negative stock quantity the system will display a warning. You can continue with the transaction only if Negative Stock is allowed for this stockroom. This is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, select **F8=Continue** to override the warning message.*

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

This transaction processes the following updates:

- Add to physical stock.
- Subtract from on-order.
- Recalculate available.
- Recalculate costs (average, latest, and the creation of a FIFO record, depending on costing method).
- Update date of last receipt.

As costs are recalculated, if you use any form of actual costing you need to enter a cost. If the item is lot controlled and a lot of the stated number does not exist, the system creates a new one.

Press **Enter** to process the receipt and return to the Record Purchase Receipt Selection screen.

Miscellaneous Receipt

3/INP

Use this option to record the receipt of goods not covered by other options or applications.

Note: If Catchweight is used in this company, the movement cost of Catchweight items is based on the secondary value entered. When a cost is entered, it is in the item's secondary UoM.

Enter the narrative or description for the movement using up to 20 alphanumeric characters.

Reason Code

Enter a reason code chosen from those defined on the descriptions file against major type MOVR. See Descriptions.

Tip: All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

Press **Enter** to accept the entered details and display the Record Miscellaneous Receipt Detail screen.

Record Miscellaneous Receipt Detail Screen

To display this screen press **Enter** on the Record Miscellaneous Receipt Selection screen.

Use this screen to enter individual stock movements.

IN009	Z1 - Demonstration Company	USER SP1	5/09/94 17:03:04
Record Miscellaneous Receipt			
Stockroom.....?	01	Central Stockroom	
Received from.....			
Item.....?	5013	Muesli Bar Honey High Fibre 50g	
Movement qty.....	2.000		
Lot.....?	B009

Cost/unit.....	23.75000	Stock.... PL	Pallets Of
	FIFO Costing	Purchase.. CA	Cases of
		Issue.... BX	Boxes of
Ref.no,date & type?..		5/09/94	
Narrative.....			
Movement Reason...?			
F3=Exit F4=Prompt F12=Previous F17=Lot			

Fields:

Stockroom

Enter the stockroom using up to two alphanumeric characters. The stockroom must exist on the company profile.

Received From

Optional, free format field, enter up to 10 alphanumeric characters.

Item

Enter the item using up to 15 alphanumeric characters. You must define the item on the items file and link them to the stockroom through Inventory Maintenance.

Movement Quantity

Enter the quantity you want to receive using up to 11 characters, three decimal places.

Lot Number

Enter a lot number for the item, using up to 15 alphanumeric characters.

Or: Enter a new lot number for this receipt; prompting on the Lot field for this item displays the new lot number with no stock present on the physical or available balances.

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. The unit of measure defaults to that defined as the purchase unit for this item/stockroom, but can be changed.

Note: This is not the field for the receipt of quantity!

Cost/Unit

Enter the cost/unit using up to 15 numeric characters, five decimal places.

If the movement is a goods receipt transaction and latest, average or FIFO costing is in use, the system used this method of costing to value the movement. Otherwise the system values the movement according to the costing method defined for the item/stockroom.

Note: Cost/unit is not used for issues.

*Note: If you leave the cost per unit blank the highlighted message **Zero unit cost has been entered** appears at the base of the screen. You can amend the cost at this stage in the procedure.*

Note: With Standard Costing and no batch/lot/serial control, the only essential information is Item and Movement Qty.

Press **Enter**, to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. You can still amend the screen details at this stage.

If you specify a lot number that does not yet exist, the system displays the Lot Reference Maintenance screen.

*Tip: The detail screen will redisplay until you do not need to make any more changes, in which case press **Enter** to process the movement and prompt for the next item number.*

When you have entered the entire batch of movements and processed the last movement, select **F12=Previous** to return to the previous screen.

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

This transaction processes the following updates:

- Add to physical stock.
- Recalculate available stock.
- Recalculate costs (average, latest, and the creation of a FIFO record, depending on costing method).
- Update date of last receipt.

As costs are recalculated, you should enter a cost if you use any form of actual costing. If the item is lot controlled and a lot of the stated number does not exist, the system creates a new one.

Press **Enter** again to carry out the update.

Customer Order Issue

11/INP

Use this option to issue stock to a customer order if you are not linked to the Sales Order Processing application.

Warning: This process is usually carried out from within Sales Order Processing. The following applies to companies without Sales Order Processing.

Note: You can only issue previously allocated stock. You can do this through the Adjust Allocated Stock option from the Inventory Processing screen. It has no link with allocating stock to a customer order in the Sales Order Processing application.

Record Customer Order Issue Selection Screen

Select Customer Order Issue.

Use this screen to select the required stockroom code for the customer order issue in addition to specifying the date, references and reason codes.

Fields:

Stockroom

Enter the stockroom using up to two alphanumeric characters. This defaults to the stockroom code you specified on the selection screen, but can be changed here.

Customer

Enter the customer, using up to 11 alphanumeric characters.

Note: This is not checked against customer profiles in Sales Order Processing.

Note: From this screen the Ref. No., Type and Reason code fields are mandatory.

Item

Enter the item using up to 15 alphanumeric characters. You must define the item on the items file and link them to the stockroom through Inventory Maintenance.

Movement Quantity

Enter the quantity you want to issue using up to 11 characters, three decimal places.

Lot Number

Enter a lot number for the item, using up to 15 alphanumeric characters.

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. The unit of measure defaults to that defined as the purchase unit for this item/stockroom, but can be changed.

Cost/Unit

Cost/unit is not used for issues.

Note: With Standard Costing and no batch/lot/serial control, the only essential information is Item and Movement Qty.

Press **Enter**, to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. You can still change the screen at this point.

If the system displays the error message Cannot Issue More Than Has Been Allocated at the base of the screen, with a negative number next to the message Allocated Stock, and you want to continue with an issue, take the following course of action:

- 1 - Exit the Customer Order Issue screen and take the Adjust Allocated Stock option.
- 2 - Enter a number of items equal to or greater than the negative allocated stock figure displayed at the same time as the error message.
- 3 - Retake the Customer Order Issue option and continue as before.

If the system displays the error message Standard unit cost has not been defined in stockroom at the base of the screen, and you want to continue with an issue take the following course of action:

- 1 - Exit the customer order issue screen.
- 2 - Take the Stockroom Details option.
- 3 - Enter a standard cost for the item in the issuing stockroom.
- 4 - Return to the Customer Order Issue option and continue as before.

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

This transaction processes the following updates:

- The movement quantity is subtracted from the physical stock and allocated stock for the item/stockroom.
- Available stock for the item/stockroom is calculated
- Usage figures for the item/stockroom are updated.
- The last issue date for the item/stockroom is updated.

Press **Enter** twice to carry out the update.

Miscellaneous Issue (Physical)

12/INP

You can enter details of an issue for which no prior allocation has taken place. This procedure differs from Miscellaneous Issue (Available) in that the updates associated with this transaction type are fixed so that stock levels can become negative.

If you want to issue more stock than the physical stock level, the system warns you, but allows you to do it. For example, you may want to despatch an incoming delivery straight to your customer, effectively bypassing goods receipt, picking, confirmation and despatching processes, and complete the paperwork later.

Warning: Use this option carefully, to avoid getting into a mess with the stock levels.

Record Miscellaneous Issue (Physical) Selection Screen

Select Miscellaneous Issue (Physical).

Use this screen to select the required stockroom code for the transaction in addition to specifying the date, references and reason codes.

Cost/Unit

Enter the cost/unit using up to 15 numeric characters, five decimal places.

If the movement is a goods receipt transaction and latest, average or FIFO costing is in use, this method of costing is used to value the movement. Otherwise the movement is valued according to the costing method defined for the item/stockroom.

Note: Cost/unit is not used for issues.

Note: With Standard Costing and no batch/lot/serial control, the only essential information is Item and Movement Qty.

Press **Enter**, to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom, is highlighted in reverse image as the default units. You can still change the screen at this point.

*Note: If you receive a negative stock quantity a warning message is displayed. You can continue with the transaction only if Negative Stock is allowed for this stockroom. This is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, select **F8=Continue** to override the warning message.*

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

Note: For non-Catchweight items, if zero is entered, an error message is displayed. However, for Catchweight items, a zero primary value and a positive or negative secondary value can be entered and processed properly.

This transaction processes the following updates:

- Adjust physical stock.
- Recalculate available stock and frozen stock.

When the system adjusts the physical stock balance it updates the available or frozen stock balances, as appropriate, by the same amount.

You can use this procedure to adjust lots, if the item is lot, batch or serial controlled.

When you have detailed your required stock adjustments press **Enter**. Press **Enter** again to

carry out the update.

Allocated Stock Adjustments

32/INP

Use this option to adjust the balance between the allocated and available stock levels, without changing the physical stock level.

Warning: It is extremely important to be aware of the implications of using this option where Sales Order Processing is in use.

Record Allocated Adjustment Selection Screen

Select Allocated.

Use this screen to select the required stockroom code for the transaction in addition to specifying the date, references and reason codes.

Fields:

Stockroom

Enter a stockroom code. The stockroom must exist on the company profile.

Ref.No.

Enter the reference number of the movement using up to 14 alphanumeric characters; this may be linked with the reference type specified.

Date

Enter a date to specify the reference date. This defaults to the current system date, but can be changed. The reference date is cross referenced with the table of period and week end dates, to decide the week and period numbers for ageing the stock movement and history records.

Type

Enter the reference type using up to three alphanumeric characters. These are defined on the descriptions file against the major type TRAN. See Descriptions.

You can use the reference type as a mnemonic to describe the reference number, for example, you can use REQ to indicate that the reference number is a stores requisition note number.

Narrative

Enter the narrative or description for the movement using up to 20 alphanumeric characters.

Reason Code

Enter a reason code chosen from those defined on the descriptions file against major type MOVR. See Descriptions.

Tip: All the above information is written to the movement history and is available for display and reporting, to aid recognition and analysis.

To display the Record Allocated Adjustment Details screen press **Enter**.

Fields:

Stockroom

Enter the stockroom using up to two alphanumeric characters. This defaults to the stockroom code you specified on the selection screen, but can be changed here.

Customer

Enter the customer, using up to 11 alphanumeric characters.

Item

Enter the item using up to 15 alphanumeric characters. You must define the item on the items file and link them to the stockroom through Inventory Maintenance.

Movement Quantity

Enter the quantity you want to adjust using up to 11 characters, three decimal places.

Lot Number

Enter a lot number for the item, using up to 15 alphanumeric characters.

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. The unit of measure defaults to that defined as the purchase unit for this item/stockroom, but can be changed.

Cost/Unit

Enter the cost/unit using up to 15 numeric characters, five decimal places.

If the movement is a goods receipt transaction and latest, average or FIFO costing is in use, this method of costing is used to value the movement. Otherwise the movement is valued according to the costing method defined for the item/stockroom.

Note: Cost/unit is not used for issues.

Note: With Standard Costing and no batch/lot/serial control, the only essential information is Item and Movement Qty.

Press **Enter** to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom is highlighted in reverse image as the default units. You can still change the screen at this point.

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

This transaction processes the following updates:

- Adjust allocated stock.
- Recalculate available stock.

If the item is frozen or there is insufficient available stock for allocation, the application displays the message: You are trying to allocate more stock than you have. You should process a receipt before continuing with the stock allocation.

If the item is lot controlled, you can display the physical and available stock balances by prompting on the lot field. You can then continue the allocation against a lot that has sufficient available stock.

Press **Enter** to carry out the update.

Frozen Stock Adjustments

33/INP

Use this option to alter the balance between the frozen and available stock levels, without changing the physical stock level.

You can enter details of stock that cannot be allocated or issued. You can use this facility as a Quality Assurance freeze or to reserve a lot for a particular customer. You would normally use the facility to adjust frozen stock if you do not have the extended lot, batch or serial details, active as specified on the company profile.

If you choose to inactivate extended lot details, then the system does not record availability dates or times when you receive a lot into the Inventory application. This means that stock monitor does not consider the status of the item. Each individual item can have its status of frozen or available modified, irrespective of the status of other items in the lot. (See Lot, Grade and Potency for further explanation of the implications of this function.)

Tip: Available Stock = Physical - Frozen - Allocated.

Note: Any stock that has not been allocated must be either physical or frozen.

This procedure does operate at item level; however, if you select to enable extended lot details, every lot has header details that include a stock status that applies to the whole lot.

The following example indicates how the stock status monitor interacts with this adjust frozen stock function and lot controlled items:

If you attempt to adjust the frozen status of three items out of a lot of seven, without changing the stock status of the lot, the stock status monitor automatically makes an equal and opposite adjustment to the frozen stock balance which negates the adjustment you made previously.

If you attempt to freeze three items out of a lot of seven and change the stock status to a code indicating frozen stock, the stock status monitor automatically makes an adjustment to freeze the rest of the lot.

Tip: Use the Lot Transformation option to change the status of part of a lot, for example to take account of the deterioration in the quality of some items.

Enter the stockroom using up to two alphanumeric characters. This defaults to the stockroom code you specified on the selection screen, but can be changed here.

Note: From this screen the Ref. No., Type and Reason code fields are mandatory.

Item

Enter the item using up to 15 alphanumeric characters. You must define the item on the items file and link them to the stockroom through Inventory Maintenance.

Movement Quantity

Enter the quantity you want to adjust using up to 11 characters, three decimal places.

Lot Number

Enter a lot number for the item, using up to 15 alphanumeric characters.

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. The unit of measure defaults to that defined as the purchase unit for this item/stockroom, but can be changed.

Cost/Unit

Enter the cost/unit using up to 15 numeric characters, five decimal places.

If the movement is a goods receipt transaction and latest, average or FIFO costing is in use, this method of costing is used to value the movement. Otherwise the movement is valued according to the costing method defined for the item/stockroom.

Note: Cost/unit is not used for issues.

Note: With Standard Costing and no batch/lot/serial control, the only essential information is Item and Movement Qty.

Press **Enter**, to display the three units of measure for the item. The first unit of measure, equal to the issue units of the item at this particular stockroom, is highlighted as the default units. You can still change the screen at this point.

*Note: If you receive a negative stock quantity a warning message is displayed. You can continue with the transaction only if Negative Stock is allowed for this stockroom. This is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, select **F8=Continue** to override the warning message.*

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

Note: For non-Catchweight items, if zero is entered, an error message is displayed. However, for Catchweight items, a zero primary value and a positive or negative secondary value can be entered and processed properly.

This transaction processes the following updates:

- Adjust frozen stock.
- Recalculate available stock.

Press **Enter** twice to carry out the update.

Miscellaneous Issues

Issuing both available or frozen stock requires greater control on stock levels. In both cases you are not able to issue more than the actual quantity of frozen or available stock held in the stockroom. If you attempt to process an issue that contravenes this, the system displays a warning message and prevents you from confirming your intent to issue.

Miscellaneous Issue (Available)

13/INP

You can enter details of an issue for which no prior allocation has taken place. You can amend the updates associated with this transaction type in the Inventory Processing Profile, to reflect the updates you require when available stock is issued.

Note: If you want to issue more stock than the physical stock level, the system warns you, and prevents you from doing it.

The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

This transaction processes the following updates:

- Subtract from physical.
- Recalculate available.
- Include in usage.
- Update date last issued.

Frozen stock includes:

- Items that have been frozen using the adjust frozen stock option.
- Items where the stock status has been set to unavailable status.
- Items that have not yet reached the first available date, as indicated on the lot header, and do not have the stock status code set to a released status.

Note: If stock that has not yet reached the first available date and has a blank stock status code is included in the available stock, check that the stock monitor is running in the subsystem INBACK3.

If the system displays a warning that there is insufficient frozen stock in the stockroom for the transfer to take place but you want to continue with the transaction, take the following course of action:

- Adjust the frozen stock using the Record Frozen Adjustment option.
- Return to this option and continue as before.

Select **F8=Update** to carry out the update.

Record Transfer Out

41/INP

When a transfer takes place between two stockrooms there is often not only a physical change in location, but also a change in responsibility. Inventory Management has two movements to record these actions, one to transfer goods out of a stockroom and the second to transfer goods into a different stockroom. There are four options that relate to transferring items between stockrooms:

- Record Transfer Out and Confirm Shipment Receipt are used together to perform the two halves of a stock transfer.
- Single Step Transfer where you can transfer available stock between two stockrooms, immediately. There is no change to the in transit stock balance.
- Single Step Transfer (Frozen) where you can transfer frozen stock between two stockrooms immediately, in a single operation.

Note: A transfer can only take place if the item is already defined at the stockroom using the Stockroom Details option.

Insufficient Frozen Or Physical Stock

If the system displays a message indicating that there is insufficient frozen or physical stock in the stockroom for the desired transfer to take place, and you wish to continue with the transaction, take the following course of action:

- Exit the transfer option. You can take the Item/Stockroom option to view each stock balance for the item/stockroom combination.
- Then take the appropriate stock adjustment option, physical, available or frozen, to increase that stock balance.
- Return to the Stock Transfer option and continue as before.
- If the item is lot controlled Inventory Management automatically creates a lot with the same lot header details as the lot in the from stockroom. Until stock is transferred into this lot, both the physical and available balances are set to zero.

Costing The Transfer

The way that the transaction is costed depends on which costing method is specified on the item file. One of the following will apply:

- Average costing - The movement is valued at the average cost of the From stockroom, causing a recalculation of average cost at the To stockroom.
- Standard Costing - The movement out is valued at standard cost of the From stockroom. The movement in is valued at standard cost of the To stockroom. Any difference is written to the Inventory movement file as an A type, that is value only adjustment.
- FIFO - The movement out is valued at FIFO cost. The movement in creates a new FIFO record for the same value.

Record Transfer Out Selection Screen

Select Record Transfer Out.

Use this screen to select the stockrooms for the stock transfer, along with the date, references and reason codes.

Fields:

The following fields are for information only.

From Stockroom

The name of the transferring stockroom for the item.

To Stockroom

The name of the receiving stockroom for the item.

Generated Reference

A unique code number automatically generated by the system to identify this transfer.

The following fields require entries:

Sel

Select. Enter 1 against a line to amend it and press **Enter**. The details then display at the base of the screen for modification.

Item

Enter the item using up to 15 alphanumeric characters. You must define the item to the items file and link it to the stockroom through Inventory Maintenance. You can amend the item number displayed in this field.

Movement Qty

Enter the quantity you want to transfer, using up to 11 characters, three decimal places.

*Note: If you transfer a quantity that results in a negative stock balance a warning message is displayed. You can continue with the transaction only if Negative Stock is allowed for the stockroom. This is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, select **F8=Continue** to override the warning message.*

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. Only those units defined for the item are allowed. The unit of measure defaults to that defined as the issue unit for this item/stockroom, you can change it here.

Narrative

Enter the item's text description.

Ref.No. Date & Type

Enter the reference number, reference date and reference type.

Lot

Enter the lot for a lot, serial or batch controlled item, using up to 15 alphanumeric characters.

Cost/Unit

Enter the cost/unit for this movement using up to 15 numeric characters, five decimal places.

Reason Code

Enter the reason code for this movement.

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

The updates associated with this transaction type are as follows:

- Subtract from physical stock (From stockroom).
- Recalculate available stock (From stockroom).
- Add to in transit stock (To stockroom).
- Usage is updated at the From stockroom.
- Date of issue is updated at the From stockroom.

Functions:

F18

Despatch details. Use this function to record additional despatch information associated with the movement of goods.

Warning: Centralised Document Processing must be active to use F18=Despatch Details.

Once all the details for this issue are correct, press **Enter**. Press **Enter** again to transfer the movement details to the middle of the screen. Select **F8=Update** to carry out the update.

Record Transfer Out Despatch Details Window (F18)

To display this window select **F18=Despatch Details** on Record Transfer Out Detail screen.

Use this window to detail the document processing you require for the transfer out transaction.

Fields:

Document Processing

Online Print Of Despatch Notes

Enter one of the following:

- 0 - Print as part of a batch.
- 1 - Print immediately.

Priced Despatch Note

Enter one of the following:

- 0 - Do not show prices on despatch notes.
- 1 - Show prices on despatch notes.

Despatch Note Language

Indicate the language of the text printed on the despatch note.

The system checks the chosen code against those defined in Application Manager.

Despatch Information

Despatch Method

Indicate the default despatch method. You must define the method on the Inventory descriptions file, against major type MODE.

Transport Method

Indicate the default transport method. You must define the code on the Inventory descriptions file, against major type TMTH.

Reason For Despatch

Defaults to Blank. Any entry made is checked against the Inventory descriptions file, against major type MOVR.

Terms Of Delivery

Indicate the default terms of delivery. You must define the code on the Inventory descriptions file, against major type TDEL.

Note: If World Trade is live, this field defaults to the value held on the (Sales Order Processing) Customer Maintenance - Trade Details screen

Carrier

Indicate the default carrier. The confirmation of this field is dependent on interfaced applications. The system performs the following checks in the order specified.

Note: If Advanced Shipping is live, and the processing company is active with Sales Order Processing, the carrier defaults to that defined by Shipping Customer Defaults.

Note: If you enter a new code, it is checked against the Shipping names and Address file (Shipping Customer Defaults Maintenance).

Note: If Transport Planning is live, and the processing company is active within Sales Order Processing, the carrier defaults to the carrier defined to the Transport Planning Delivery Profile.

Note: If you enter a new code, it is checked against the Transport Planning Carrier file.

Note: You define a Sales Order Processing company to a Transport Planning company via an SOP company/stockroom combination.

Note: If neither Advanced Shipping nor Transport Planning are live, then the default is blank. Any entry made must be defined on the Inventory descriptions file, against major type CARR.

Shipping Marks

Free format field for shipping marks.

Number Of Packs

Enter a packaging code along with a quantity and unit of measure. The confirmation is dependent on interfaced applications. Otherwise, codes are checked against the Inventory descriptions file, against major type TPPK.

Note: If Advanced Shipping is live, the code entered is validated against the Pack Types file.

Weight

Enter a UoM code along with a weight.

Any UoM code entered is checked against the Inventory descriptions file, against major type UoM

Volume

Enter a UoM code along with a volume, these are checked against the Inventory descriptions file, within major type UoM.

Select **F8=Update** to update details.

Confirm Shipment Receipt

42/INP 7/DRP 12/WTB

Use this option to confirm the receipt of shipment. This maintains the In Transit balances and updates the stock and costs at the receiving stockroom. It is at this point of internal receipt that the acquisition movement is written.

Confirm Shipment Receipt Selection Screen

Select Confirm Shipment Receipt.

Use this screen to confirm the receipt at a stockroom of stock in transit from another stockroom within the company. Inventory updates the records for the receiving Stockroom. If this Stockroom is defined to the Warehousing application, use this option to enter details to include the items in the put-away processing of Warehousing.

F3=Exit F4=Prompt			
7-33 █ MW KS CL █ DM II EDN4000 KB PET178S1			

Fields:

From Stockroom

Enter the transferring stockroom code for the item.

To Stockroom

Enter the receiving stockroom code for the item.

Distribution Order Number

Enter the distribution order number to transfer items between stockrooms in different locations.

Consignment Number

Enter an Advanced Shipping consignment number to display all the orders associated with this consignment.

Warning: You cannot enter an Advanced Shipping consignment number and a distribution order number.

Note: If you enter a specific order or consignment number, then you do not need the

From and To stockroom codes.

*Note: **DRP Only**. If no items are found in the Distributions Requirements Planning In transit file for the specified selection criteria, then an error message is displayed.*

Press **Enter** to display the Confirm Shipment Receipt Details screen.

Confirm Shipments Receipt Detail Screen

To display this screen press **Enter** on the Confirm Shipment Receipt Selection screen.

Use this screen to select the items within the received shipment from the displayed list of items in transit. The items are added to this in transit list when a Distribution Order is confirmed as despatched from a stockroom in Sales Order Processing or Warehousing Confirmation of Despatch.

F3=Exit F4=Prompt F5=Refresh F8=Update F12=Previous							
00-57 SF MW KS IM II EDN400A PET165S2							

Fields:

From Stockroom

Displays the stockroom code and description entered on previous screen or the despatching stockroom if you enter a distribution order number.

To Stockroom

Stockroom code and description entered on previous screen, or the receiving stockroom if you enter a distribution order number.

Order

Displays a specific order when you select one.

Select All Lines To Update

Enter one of the following:

- 0 - Update only the lines selected with 1 when the job is submitted.
- 1 - Update all the lines.

Sel

Select. Enter one of the following:

- 1 - To select a line to be received or to amend receipt details.

2 - To maintain lot header details if the item is lot, batch or serial controlled. See Maintain Lot Header in the Inventory Management Product Information for more details.

(If Warehousing is in Use.) Enter **1** against received lines and select **F13**, to display the Warehousing Details screen. Enter the pack and expiry date details.

Date

The date of despatch from the From stockroom.

Lot Number

Note: The lot number displays under the date field.

Enter a lot, batch or serial number for the item if it is lot, batch or serial number controlled. Defaults to the lot, batch or serial as despatched.

Order

The distribution order number.

Line

Distribution order line number.

Item

The item code for the item in transit.

SR

The receiving stockroom for the item. This must be defined to the item in Inventory Management. The receiving stockroom defaults to the To stockroom for the displayed distribution order but you can override this with any valid stockroom for the item.

Quantity/UoM

Specify the actual quantity received and unit of measure. This must not exceed the quantity despatched.

Note: If the received quantity entered is less than the quantity despatched, then the received quantity is booked in to stock but the balances remain in transit. The assumption is that the remainder of the item is confirmed, via this screen, once it is received.

Sec Value/Secondary UoM

The secondary value and UoM items can be explained as follows:

- Blank - There is no secondary value for the order line.
- Secondary Value and Secondary UoM display without underscore - the secondary value of the order line is displayed for your information only.

- Secondary Value and Secondary UoM display underscored - the value of the unit of measure was calculated for Catchweight types 1 or 2 and may be amended as required.

Note: You must confirm receipt of the entire quantity despatched before it is removed from the in transit list. You can do this across more than one shipment receipt.

If there are any discrepancies, you must process an Inventory Stock adjustment, (with an appropriate reason code) after you have fully received the quantity at the receiving stockroom.

Warehousing Interface

Warning: *For items controlled within a stockroom defined to Warehousing, you must enter the appropriate details.*

The physical and available stocks are updated by the receiving quantity, and the in transit quantity down-dated accordingly. This is done by the batch job. Batch and FIFO cost records are maintained where appropriate.

These receipts are also updated in the stock history and movement files as Transfer In quantities. These should tie up with the corresponding Transfer Out details added at confirmation of despatch of the distribution order at the centre.

Amend details by overtyping the lines, and select **F8=Update**. This submits the batch program to update selected lines. It also displays Warehousing details if applicable. A Shipments Received Report is output as part of the batch job to provide printed proof of shipments receipts.

Confirm Shipments Receipt Items In Transit Screen

To display this screen press **Enter** on the Confirm Shipment Receipt Selection screen.

Use this screen to select the items within the received shipment from the list of items in transit displayed. The items are added to this in transit list when a distribution order is confirmed as despatched from a stockroom in Sales Order Processing or Warehousing.

The whole of the quantity despatched must be confirmed as received before it is removed from the in transit list. You can do this across more than one shipment receipt.

							Bottom
1=Select order line for receipt 2=Maintain lot header details							
F3=Exit F4=Prompt F5=Refresh F8=Update F12=Previous							

Fields:

Select All Lines To Update

Enter one of the following:

0 - To not update all lines.

1 - To select all lines to update.

Sel

Select. Enter one of the following:

1 - To select a line to be received or to amend receipt details.

2 - To maintain lot header details if the item is lot, batch or serial controlled.

Sr

The receiving stockroom for the item. The receiving stockroom defaults to the To stockroom as entered on the distribution order, but can be overridden with any valid stockroom for the item.

Quantity

Specifies the actual quantity received. This must not exceed the quantity despatched. If the received quantity entered is less than the quantity despatched, then the received quantity will be booked in to stock but the balances will remain in transit. The assumption is that the remainder of the item will be confirmed, via this screen, once it is received.

If there are any discrepancies, these must be handled by an inventory stock adjustment (with an appropriate reason code) after the quantity has been fully received here.

Lot Number

If the item is lot, batch or serially controlled, then a lot, batch or serial number is required. Defaults to the lot, batch or serial as despatched.

Amend details by overtyping the lines, and select **F8=Update**. This submits the batch program to update selected lines. It also displays Warehousing details if applicable. A Shipments Received Report is output as part of the batch job to provide printed proof of shipments receipts.

Stock Transfers

You can record the transfer of stock from one stockroom to another as a single process. Use this option to transfer between stockrooms held within the same physical location. For example, between Goods Inwards and an actual Stockroom.

Single Step Transfer

43/INP

Use this option to record a simultaneous transfer out of one stockroom and receipt into another. The updates that happen following this transaction depend on the Inventory Processing Profile.

Record Stock Transfer Selection Screen

Select Single Step Transfer

Use this screen to select the stockrooms for the stock transfer, along with the date, references and reason codes.

Fields:

The following fields are for information only.

From Stockroom

The name of the transferring stockroom for the item.

To Stockroom

The name of the receiving stockroom for the item.

The following fields require entries:

Sel

Select. To amend a line already displayed in the top part of the screen, select it with 1 and press **Enter**. The details then display at the base of the screen for modification.

Item

Enter the item using up to 15 alphanumeric characters. You must define the item to the items file and link it to the stockroom through Inventory Maintenance. You can amend the item number displayed in this field.

Movement Qty

Enter the quantity you want to transfer, using up to 11 characters, three decimal places.

Quantity Units

Enter the unit of measure code as defined on the descriptions file against major type UNIT. This defines the unit of measure in which the movement quantity is expressed. Only those units defined for the item are allowed. Unless it is changed, this unit of measure defaults to that defined as the issue unit for this item/stockroom.

Narrative

Optionally override the existing narrative.

Ref.No. Date & Type

Optionally override the existing values. If you have activated Document Processing, the reference is automatically generated.

Lot

Enter the lot for a lot, serial or batch controlled item, using up to 15 alphanumeric characters.

Cost/Unit

Enter the cost/unit for this movement using up to 15 numeric characters, five decimal places.

Reason Code

Enter the reason code for this movement.

*Note: If Catchweight is used in this company, for items that are Catchweight category 1 or 2, when you first press **Enter** the (Secondary Value Entry) window is displayed. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus Details, for example Kilos Details.*

*Note: If you transfer a quantity that results in a negative stock balance a warning message is displayed. You can continue with the transaction only if Negative Stock is allowed for the stockroom. This is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, select **F8=Continue** to override the warning message.*

This transaction processes the following updates:

- Subtract from physical balance (From stockroom).
- Recalculate available stock (From and To stockrooms).
- Add to physical balance (To stockroom).
- Usage and date of issue are updated at the From stockroom.

See Transfer Out for an explanation of the costing methods for transfers.

- Updates date of receipt (To stockroom).
- Updates item costs (To stockroom).

Once all the details for this issue are correct, press **Enter**. Press **Enter** again to transfer the

movement details to the middle of the screen.
Select **F8=Update** to carry out the update.

Single Step Transfer (Frozen)

51/INP

Use this option to transfer already frozen stock from one stockroom to another, preserving the Frozen status.

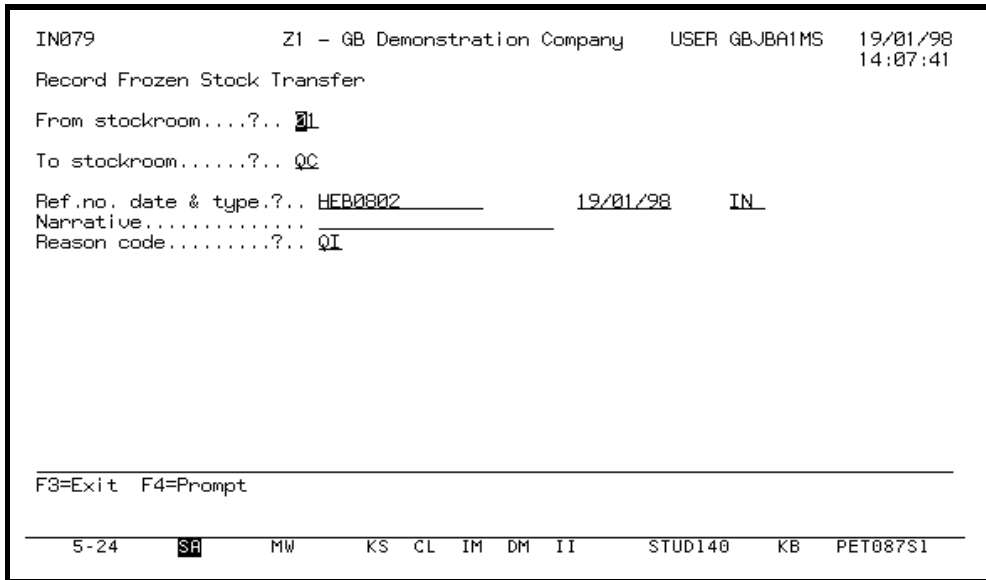

You cannot choose to transfer a greater quantity than the actual amount of frozen stock held in the From stockroom.

Record Frozen Stock Transfer Selection Screen

 Select Single Step Transfer (Frozen).

Use this screen to select the stockrooms for the stock transfer, along with the date, references and reason codes.
