Chapter 5

Inventory Lot/Grade/Potency

Lot/Grade/Potency Introduction

You can use Batch or Lot control for items that need further detailed identification of the stock, for example, drugs, wallpaper, wool, date controlled items. It is the same *item*, but quantities of the item can be manufactured at different times, or be of varying colour/shade or need greater traceability through the supply chain.

Serial control is much more specific. This is where each individual item carries an unique number, for example, a PC, television, tank.

You indicate on the Item Master file if the item is to be batch, lot or serial controlled. However, the first stage is to indicate on the company profile if Extended Lot details are required.

Are Extended Lot Details Required?

If the answer is *NO* - extended lot details are not required, the system functions as follows:

1. On receipt of items, the entry of a lot number (only) will be mandatory.
2. Stock balances will be held at lot number level.
3. Issues will demand the entry of a valid lot number.
4. All Inventory enquiries will include lot number information.

If the answer *YES* - that extended lot details *are* required, the system supplies support for the Production application but also provides extra controls:

- Stock status.
- Dates.
- Shelf life.
- Potency.
- Grade.
- Lot traceability.

Lot Movements

You can trace the location of a lot over time and locations. Lots can be traced back to Production - both component and parent items - and to Sales Order Processing and Purchase Management order enquiries. A single lot may be located in a number of stockrooms, where all parts of it retain the same lot header details. However, you can transform a lot and amend the lot details for each part.

Enquiry facilities are available on all these aspects of lot control.

Note: you can hold a single lot of an item in more than one stockroom.

Stock Status

This is one of the functions that controls the availability of stock. It covers the requirement to classify stock as being unavailable for processing, for example, allocating, picking and despatch. It may be quarantine stock, stock that requires inspection or QA, stock for internal sales or for key customers.

A blank status - dates will control availability.

A stock status - this code will determine availability.

Using a stock status code with a 1 in the seventh digit of the Limit field of a description code against STKS in the Descriptions file, will ensure that all receipts of that item will be automatically frozen.

The stock status applies to a complete lot regardless of how many stockrooms it is in. If stock is made unavailable, it is frozen in all stockrooms and vice versa. A default stock status may be entered on the Item Master. Changes to the stock status are written to an audit file.

Shelf Life, Grade and Potency

All lots have four dates associated with them, used by Production and Sales Order Processing, Order Entry to control release and allocation of stock.

A shelf life is maintained for all lot controlled items and, in conjunction with the production or receiving dates, the stock status monitor can calculate the availability of the lot. A status flag, also on the lot header, provides extra function for lot control and may be used to override the availability dates for the whole lot.

The grade and potency level of the lot may be maintained and made mandatory for certain items. Lot potency is used in the Production process to enable the processing of actual potent units of a product where the strength of an active ingredient is important, rather than physical units.

Dates

Maintenance will be required of shelf life units (for example, days), and possibly numbers for shelf life and customer shelf life.

Release lead time units and numbers may be maintained, if an inspection or QA period is required.

Production date = Current date (if finished goods received from Production or Purchasing).

Expiry date = Production date + Shelf life.

First available date = Production date + Release lead time.

Last available date = Expiry date - Customer shelf life.

An Inventory Stock Status Monitor constantly reviews all controlled items and automatically freezes/unfreezes stock according to stock status codes or availability dates.

WH - Warehousing. The commit routine will ignore stock beyond last available date.

AOE - Advanced Order Entry. Allocation against batches will give a warning message if stock is beyond Last Available date or Expiry date.

OE/WH - Sales Order Processing/Warehousing. Warnings are given at confirm pick/despatch if beyond dates.

Grade

For products that have a wide range of quality specifications and require multiple grades, for example, eggs.

Allocation and issues may be controlled - with specific grades only being issued to production, received into stock or issued to customers.

Where there may be a requirement to downgrade or upgrade stock.

Potency

Again, you may need to hold potency details at lot level. In addition, you may need to be able to update lot potency - if mixtures or blending of potency occur.

Lot Traceability

To provide full forward/backward traceability for all lots.

Forward = Customer Orders, Production Orders, Transfer Orders.

Backward = Purchase Orders, Production Orders, Transfer Orders.

Lot Header Maintenance

1/INL

You can record basic information about a product lot irrespective of where the lot is held within the Inventory Management application.

You normally enter the information when you receive a batch, lot or serial controlled item into the Inventory Management application by any route (Inventory Receipts, Purchase Management Receipts, Production Finished Goods Receipts, and so on). However it is possible to maintain the lot header directly.

Lot Header Maintenance Selection Screen

Select Lot Header.

Fields:

Item Number

Select an item number to amend; or enter a unique number to create a lot reference.

Lot Reference

Enter a lot reference.

Note: You must enter the item number to prompt on associated lot reference numbers.

Press **Enter** to display the Lot Header Maintenance Detail screen.

Lot Header Maintenance Details Screen

To display this screen select an item and lot number on the Lot Header Maintenance Selection screen and press **Enter**.

Use this screen to maintain the header details for the requested lot. The lot header details will be valid for all items included in the lot regardless to the physical location of parts of that lot.

To modify the details for a subset of the lot, see Lot Transformation.

Note: The visibility and maintenance of some of these fields is controlled by external flags or applications. (This is particularly relevant if Production is installed).

The lot header information will be held in the system until the lot number itself is purged using the Delete FIFO/Lot Utility.

The upper part of the screen identifies the item and lot number for which maintenance has been requested. The lower part lists the lot header details specifically required for this item.

Inventory displays any current data for the lot.

10-27	SA	MM	KS	IM	II KENB20A PET166S2

Fields:

Production Date

This is the date on which the lot is manufactured or received. The field will default to be the current date but may be any previous date. If not entered it can be calculated back from the expiry date using the shelf life of the item.

If you receive the lot in Purchase Management or Production then you must enter either a production data or expiry date. If you receive the lot in Inventory the fields are not mandatory.

This only applies if the item lot is being received for the first time. Once the lot exists both the production and expiry dates are not maintainable.

Warning: The production, expiry and first and last available times are displayed if the Display Lot Time field on the Lot Header Parameters screen, in Item Maintenance is set to 1.

Production Time

This cannot be changed once the lot has been created and is for memo purposes only.

Expiry Date

This is the date on which the shelf life of the item expires.

If not entered, it is calculated by adding the shelf life to the production date. If you receive the lot in Purchase Management or Production then you must enter either a production or expiry date. If you receive via Inventory the fields are not mandatory.

Once the lot exists, the production and expiry dates are not maintainable. Enter a date not less than today's date. If entered the production date can be calculated by subtracting the shelf life from the expiry date.

Expiry Time

The time at which the shelf life of the item expires.

First Available Date

Enter a date which must be greater than or equal to the production date.

All lots with the first available date greater than the current date will normally be automatically frozen. If you do not enter a date it will be generated by adding the release time into the production date.

First Available Time

Enter a time, this time is for memo purposes only. If the production date is equal to the first available date then the first available time must be equal to or greater than the production time.

Last Available Date

Enter a date which must be greater than the first available date but less than or equal to the expiry date.

All lots with a last available date less than the current date will normally (if there is no stock status) be frozen automatically. If you do not enter a date will be generated.

Last Available Time

Enter a time. If expiry date is equal to the last available date then last available time must be less than or equal to expiry time.

Status Code

Select a stock status code from those defined on the description file against major type STKS.

The stock status code is used as an override to the availability dates to determine if a lot quantity is to be available or classed as frozen stock.

If you leave the stock status blank, the availability dates will be used to move stock in and out of the frozen stock.

You divide stock statuses into available or not available using the 7 digit limit field held against the stock status descriptions codes on the descriptions file. If the seventh digit is set to 1 the stock status indicates that the lot will be made unavailable. If set to any other value the lot will be made available.

Reason Code

Enter a reason code from those defined on the descriptions file against major type SSRC.

Enter the code if the stock status code is changed or is blank initially to indicate why the status of the lot was changed.

Potency

This is the potency of the whole lot irrespective of which stockroom the lot is located in.

Note: This field is only displayed if the Potency Required flag on the Lot Header Parameters Maintenance screen is set to 1.

Note: Potency is a percentage that is, the potency you specify here is the number of parts of active ingredient per hundred parts.

Grade

Enter a grade code from those defined on the descriptions file against the major type GRAD. This is the grade of the whole lot irrespective of which stockroom the lot is located in.

Note: This field is only displayed if the Grade Required flag on the Lot Header Parameters Maintenance screen is set to 1.

C-Of-C Reference

Enter a Certificate of Conformance reference, associated with a C-of-C defined in Advanced Order Entry, to be assigned to this lot. You enter the values for this C-of-C when you first receive the lot into Inventory.

Note: If you are using Advanced Order Entry then the system displays a Certificates of Conformance field on the Lot Header Maintenance screen if you have specified a Certificate of Conformance for this item on the second Item Maintenance screen. (See Advanced Order Entry for an explanation of Certificates of Conformance).

Suppliers Lot Reference

Enter up to 36 alphanumeric characters to specify the lot reference allocated by the supplier.

Function:

F13

Grades. To display lot grade history.

F14

Status. To display the Stock Status History Enquiry for an existing lot.

F15

Potency. To display lot potency history.

F16

Adjust Active Ingredient. To display the Adjust Active Ingredient screen.

F17

Certificate of Conformance. To display certificate of conformance details.

F21

Text Entry. This displays the Maintain Text window where you enter or select a Usage Code and a Language Code for multi-lingual text entry. When you press **Enter**, the Item Text window is displayed. This is where you can enter text in the selected language to be displayed or printed on external documentation, for example, despatch notes, according to the usage code selected.

Tip: You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language by entering a different language code when **F16=Additional Overrides** function key is available.

Note: Language codes do not need to be selected in order to print text in the native language.

Press **Enter** or select a function key.

Adjust Active Ingredient Screen (F16)

To display this screen select **F16=Adjust Active Ingredient** on the Lot Header Maintenance Details screen.

Use this screen to modify the potency level for a lot of the selected item. This change applies to the whole lot irrespective of its location.

The item number, item description and lot number of the selected lot are displayed at the top of the screen.

01-02 SF MW KS IM II KENB20A PET166S2			

Fields:

Potency

The current potency of the lot.

Quantity

The current quantity of items in the lot defined in the issue unit.

Total Potent Units

Quantity x Current Potency % = Total Potent Units.

New Potency

Specify the new potency using up to nine characters, five decimal places. Negative values are not allowed.

Note: Potency is a percentage, that is, the potency you specify here is the number of parts of active ingredient per hundred parts.

Reason Code

Enter a two alphanumeric character reason code from those defined in the descriptions file against the major type PRSC.

*Note: When you press **Enter**, the application will calculate and display the following information*

New Potent Units

This is the total potent units in the lot using the new potency level in the Quantity x Potency % calculation.

Potency Change

The difference between the original total potent units and the new potent units. This field can be positive or negative.

Select **F8=Update** to update the lot header details and potency history file.

Certificates Of Conformance Window (F17)

To display this screen enter a new Certificate of Conformance and select **F17=Cert of Conformance** on the Lot Header Maintenance Details screen.

Use this window to complete the Certificate of Conformance criteria before the lot is received into Inventory.

See the Advanced Order Entry application for details on creating Certificates of Conformance.

Stock Status Recalculation

1... 11/INL 2...

This procedure processes all lots currently with physical stock. It uses the current date and the first and last available dates of each lot to determine if the lot quantity should be available or frozen. This process only selects lots with the stock status equal to blank that is, no Product override is present. A change in stock status will apply to the whole lot across all stockrooms.

This process affects two stock balance values: available and frozen. The actual quantity of the lot does not change and the equation will not be affected by this procedure: $\text{Physical} = \text{Available} + \text{Allocated} + \text{Frozen}$. The procedure reviews dates and stock status if the stock monitor is not running. (See Background Processing.)

Select Stock Status Recalculation.

Lot Transformation

12/INL

This procedure allows you to enter the details of lots to be split or transformed. The status of each original lot remains constant while the target lot header details can be maintained.

For catchweight items, you can also transfer the secondary values. There are three different processes:

- When the entire balance is transformed and the entire secondary is also assigned to the new lot, batch or serial number, so it does not need to be entered.
- For partial transformations of catchweight type 1 and 2 items, the actual secondary value must be captured.
- For catchweight type 3 items and items with a secondary unit of measure, the nominal secondary value is always calculated for partial and full transformations.

Record Lot Transformation Selection Screen

Select Lot Transformation.

Use this screen to select and enter a stockroom, date, references and reason codes for transforming lots.

Fields:

Sel

Select. Enter one of the following:

- 1 - Amend, details will return to the entry fields at the base of the screen. Modify any details and press **Enter** to accept the changes.
- 3 - Display lot header details, the display the lot header details of the lot named in the from/to lot column.

Movement Qty

Specify the quantity to be subtracted from the first lot and transferred to the second lot using up to eleven characters, three decimals.

From Lot

Enter the originating lot using up to fifteen alphanumeric characters. This lot must exist in the above stockroom.

To Lot

Enter the lot to receive the transferred items using up to fifteen alphanumeric characters. This can be an existing lot or a new lot. In the case of an existing lot, the

items will be added to the total physical stock for that lot and the frozen or available balance as appropriate.

Press **Enter** to display the current or default lot header details for the To Lot, these can be amended. The values entered here are valid for the whole lot, even if parts of the lot are located in different stockrooms.

The lot header details must be complete for the transformation to proceed.

The application will redisplay the details screen, with the line just entered moving to the top part of this screen. The quantity units and cost per unit will default from the From lot. To toggle between the from lot and the to lot select **F13=From/To Lot Details**.

The reference data will default from the previous screen but can be amended if required.

*Note: If catchweight is used in this company, for items which are catchweight category 1 or 2, when you first press **Enter** the Secondary Value Entry window is displayed.*

Functions:

F8

Update. To update the lot details.

F13

From/To Lot Details. To toggle between the two lots.

Press **Enter** twice to carry out the update.

Grade History Enquiry

22/INL

Select Grade History.

Enter the item code and lot number and press
Enter.

Use this screen to view the grade history of the lot, in date order. To modify the grade associated with this lot, select the Grade Maintenance option.

F3=Exit F12=Previous F13=Lot header F14=Lot trace			

Fields:

User

Displays the username of the person who last updated the lot grade.

Functions:

F13

Lot Header. To display the Lot header details.

F14

Lot Trace. To view the Lot trace enquiry.

Select **F3=Exit** to exit the enquiry.

Stock Status Enquiry

23/INL

Use this enquiry to view the status of all lots associated with a particular item or stockroom. It is possible to select frozen or available lots, or all lots with a specific stock status code.

Stock Status Enquiry Screen

Select Stock Status.

Use this screen to select all lots associated with an item, stockroom or subset of items.

IN244	Z1 - Demonstration Company	USER SP1	26/08/94 11:01:55
Stock Status Enquiry			
Date..... <u>26/08/94</u>			
Enter any one of the following mandatory fields:			
Available.....	—	(Blank or 1)	
Frozen.....	—	(Blank or 1)	
All.....	<u>1</u>	(Blank or 1)	
Stock status.....?	—		
The following are optional:			
Item.....?	<u>5013</u>		
Lot.....	_____		
OR			
Stockroom.....?	—		
Item FROM.....?	_____		
Item TO.....?	_____		
F3=Exit F4=Prompt			

Fields:

Date

The date defaults to today's date.

Note: You have to select one of the following four fields:

Available

Enter 1 to view stock balances and current stock status of only available stock, otherwise leave this field blank.

Frozen

Enter 1 to view stock balances and current stock status of only frozen stock, otherwise leave this field blank.

All

Enter 1 to view stock balances and current stock status of all lot controlled stock, otherwise leave this field blank.

Stock Status

Enter a stock status code using up to two alphanumeric characters, from those defined on the descriptions file against the major type STKS, to view stock balances for stock that has the particular stock status code specified.

You may then select some of these additional fields in order to restrict the scope of the enquiry.

Item

Enter a lot controlled item reference number to restrict the enquiry to this item only.

Lot

Enter a lot number, associated with the specified item. The lot field cannot be entered independently of the item field. An entry in this field will restrict the enquiry to that lot only.

Alternatively some of the following optional fields may be entered:

Stockroom

Enter the stockroom you wish to restrict the enquiry to using a two alphanumeric character code. If left blank all stockrooms will be included in the enquiry.

To further restrict the breadth of the enquiry you may select a range of items:

Item From

Enter an item using up to fifteen alphanumeric characters. This will be the item from which items will be selected. If no Item To field is specified, then the application will select all lot controlled items ordered alphanumerically after this item.

Item To

Enter an item using up to fifteen alphanumeric characters. This will specify the last lot controlled item in the range.

If a stockroom is entered and a range of items specified the enquiry will be restricted to those items within the range, in the stockroom. If the stockroom is left blank then all stockrooms will be checked for items within the range.

Press **Enter** to display the Stock Status Enquiry
Available And Frozen Lots screen.

Stock Status Enquiry Available And Frozen Lots Screen

To display this screen select your enquiry criteria on the Stock Status Enquiry screen and press **Enter**.

Use this screen to view the available and frozen stock balances and stock status codes for all lots located that fulfil the selections made on the previous screen.

Fields:

Sel

Select. Enter one of the following:

- 1 - To view the lot header details.
- 2 - To perform a lot trace.
- 3 - To display any allocations made against the selected lot. This option is only available if Advanced Order Entry is installed. Frozen Lots with existing allocations are marked with an * for lot header, to view the lot header details.

Note: The lot quantity will display in reverse image if its status is not derived from the availability date range for the lot. This can occur when the stock status is manually adjusted.

Stock Status History Enquiry

24/INL

Select Stock Status History.

To display this screen enter the item and lot number on the Stock Status History Enquiry Selection screen and press **Enter**.

The item reference number, item description and lot number specified on the previous screen are displayed at the top of this screen. Upon entering the stock status enquiry, only summary information will be displayed. This includes

- Stock status and description.
- Stockroom where the lot is located.
- Stock balances that are affected by changes in the stock status.
- Available stock, frozen stock and the net change in the two balances.

05-23	SP	MW	KS IM II KENB20A PET166S2

Fields:

Item

Enter the item whose lot you wish to trace using up to 15 alphanumeric characters.

Lot

Enter the lot number for the item using up to 15 alphanumeric characters.

Stockroom

Enter the stockroom required using up to two alphanumeric. The item/stockroom relationship should have been defined as per the Application Reference Data Stockroom details.

Date Range

Enter a range of dates in order to restrict the breadth of the display of movements.

If entered, the From date must be less than the To date. If left blank, the To entry will default to the From date. If no date range is entered, all movements will be displayed regardless of date.

Movement Type

Enter a single alphanumeric character code from those defined on the descriptions file against the major type MVTP.

Press **Enter** to display the Lot Trace Enquiry Details screen.

Lot Trace Enquiry Details Screen

-  To display this screen, select an item, lot and Movement combination on the Lot Trace Enquiry Selection screen and press **Enter**.
-  Alternatively: Enter 3 in the 1 field on the sixth Item/Stockroom Enquiry screen.

Use this screen to view the receipts and issues of the selected item and lot combination.

10-2 SA MW KS CL IM DM II MARVIN KB PET087S1							

Fields:

Item/Lot

This field displays the names and descriptions of the item and lot, and is displayed for your information only.

Sel

Select. Enter one of the following:

- 1 - To display the Inventory Movements - Summary. For more information see Inventory Movements - Summary screen.
- 2 - To display the Order Enquiry screen. For more information see Order Enquiries.
- 3 - To display the Forward/Backward lot trace.

Date

For each lot, this field displays the date of the receipt or issue for your information only.

Type

Denotes the type of transactions carried out for this item.

Order/Reference and Sub-Reference

Denotes any reference recorded for these transactions.

Note: The reference can be up to 33 characters for works order-less production transactions (codes M, N and W). In this case the reference is made up as follows:

I = Item reference of up to 15 characters

R = Route code of 1 character (with a space either side)

F = Work-in-Progress Lot Number of up to 15 characters

Customer/Supplier

Identifies the customer or supplier associated with the transaction. This information is taken from the Sales Order for a customer, and the Purchase Order for a supplier.

Quantity

The amount of items associated with this lot/transaction, displayed in the primary unit of measure.

If catchweight is used for this company, the amount of items can be displayed in either the primary unit of measure by selecting **F9=Quantity**, or the secondary unit of measure by selecting **F9=(Short Description)**.

Functions:

F9

Quantity/(Short Description). This is a toggle field which is only displayed when catchweight is used for this company.

When **F9=Quantity** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in the Quantity fields in the primary unit of measure.

When **F9=(Short Description)** is displayed at the bottom of the screen, where (Short Description) is the 9 character description of the secondary unit of measure, you can select **F9** to display the quantity of the item in the (Short Description) fields in the secondary unit of measure.

F13

Lot Header Details. To toggle between lot details.

F15

Potency History. To view potency history.

Select an item with either a 1, 2 or 3 to enquire on further details for your chosen item and press **Enter**.

Forward/Backward Trace Window (Option 3)

To display this window, select an item on the Lot Trace Enquiry Details screen with 3 and press **Enter**.

Use this window to display production orders and receipts for your chosen item. Use **F13=Issues** or **F13=Receipts** to toggle between both depending on which details are being displayed at the time. Use the Backwards trace to display component issues associated with a works order receipt, and the Forwards trace to display finished goods receipts associated with a works order issue.

05-26      SF      MW      KS      IM      II KENB20A PET166S2
  
```

Fields:

Date

The date defaults to today's date.

Available

Enter 1 to print stock balances and current stock status of only available stock, otherwise leave this field blank.

Frozen

Enter 1 to print stock balances and current stock status of only frozen stock, otherwise leave this field blank.

All

Enter 1 to print stock balances and current stock status of all lot controlled stock, otherwise leave this field blank.

Stock Status

Enter a two alphanumeric character code from those defined on the descriptions file against the major type STKS if you wish to print stock balances for stock that has the particular stock status code specified.

You may then select some of these additional fields in order to restrict the scope of the report.

Item

Enter a lot controlled item reference number to restrict the report to this item only.

Lot

Enter a lot number, associated with the item specified above. The lot field cannot be entered independently of the item field. An entry in this field will restrict the enquiry to that lot only.

Alternatively some of the following optional fields may be entered.

Stockroom

Enter the stockroom you wish to restrict the report to using up to two alphanumeric characters. If left blank all stockrooms will be included in the report.

To further restrict the scope of the report you may select a range of items.

Item From

Enter an item using up to fifteen alphanumeric characters. This will be the item from which items will be selected. If no Item To field is specified, then the application will select all lot controlled items ordered alphanumerically after this item.

Item To

Enter an item using up to fifteen alphanumeric characters to specify the last lot controlled item in the range.

If a stockroom is entered and a range of items specified the report will be restricted to those items within the range, in the stockroom. If the stockroom is left blank then all stockrooms will be checked for items within the range.

Select **F8=Submit** to submit the report to print.
