Glossary

Glossary

Allocated (Stock)

The quantity of an item which has been committed to a customer, distribution or production order. It is held as a balance at item and stockroom level.

Alternative (Item)

An item that can be offered as an alternative to another in a sales situation.

Available (Stock)

The quantity of an item which is available for issue and has no allocation or reservation made for it. It is usually held as a balance at item and stockroom level.

Back Order

The quantity of an item which is required for customer orders which are due or overdue for delivery and for which there is no stock. It is held as a balance at item/stockroom level.

Balance

This either signifies a database record with summary information such as a stockroom balance, or a single calculated quantity field on a record, such as allocated stock or outstanding order balance.

Base Value

The order value according to the Accounts Receivable currency code. The currency code used in the Accounts Receivable has an associated rate which is used to evaluate the order total value.

Batch Allocation

A batch job which considers all orders which are due for delivery and matches them against the available stock. Where there is a match the stock is allocated to the order so that picking and despatch may continue.

Batch Control

This is a level of stock control. A stock balance can be broken down to a lower level, such as batch, against which individual balances can be maintained.

Batch or Lot Traceability

Where stock recording is specified at batch or lot level, this refers to the ability to trace the movement of stock, including sales to customers, at this detailed level.

Business Process

This relates to System 21 Constructor for Work Management. A business process is at the top level of the business function. Within a Business Process it is possible to have Elemental Activities, Assembled Activities and other Business Processes. Business Processes can be nested to several levels.

However, there are restrictions on the way in which you construct Business Processes depending on whether you use Constructor as a design tool for enterprise modelling or a configuration tool for Work Management.

If the Business Process is to be uploaded to Work Management these rules apply:

- Assembled activities cannot be present.
- Nesting can only be to one level down.
- At the top level, a nested Business Process be linked to an end node.
- A User selected path cannot link into a parallel path.

There may be other restrictions in place, but the validation will highlight these.

Cash Discount

The amount of discount given to a customer for paying on time.

Catchweight

For most businesses, an item is bought, stocked, ordered, discounted, picked, priced and sold by the quantity of the item. This is known as the primary unit of measure and is available to all companies. However, some businesses price and sell by another unit of measure, for example, a weight. This is known as the secondary unit of measure. A company which uses catchweight can use both primary and secondary units of measure.

Conversational Order Entry

A method of order entry which is designed to support a conversation with the customer so that stock availability, prices and alternatives may be checked and promises made.

Credit Control

The control of the credit exposure to customers such that the amount owed is added to the stock allocated to the customer and compared with the commercial credit limit held for the customer.

Customer Code

The customer code is used to identify the data held for the customer. Multiple sets of data can be held to reflect complex customer organisations. This includes statement, invoice and delivery information.

D/Dn

Despatch note sequence number is a two digit reference number suffix to order number, when a despatch note is generated.

Depot

A depot is a stockroom which has been set up in Inventory Management and authorised for making despatches for sales orders.

Delivery Address

This is the address where the customer receives their orders.

Descriptions File

This is a file set up within Inventory Management which defines a number of parameters, codes and their descriptions.

Discount List

A list used to apply discounts as a percentage or value and with discount level breaks based on quantity or value. The discounts can also apply to an item, a discount group or an order. You assign customers a default discount list.

EC Movement

If you move the customer goods across borders the order is flagged by the EC Movement field.

Expected (Stock)

The quantity of an item expected to be available, assuming both sales and supply orders mature, for issues on a given date. This is usually expressed as a quantity for an item and stockroom.

Extra Charges

Charges to be made on an invoice for which no corresponding stock movement will occur. They may be added at any time from order entry to confirmation of despatch. Three extra charges may be made on an invoice.

Fast Batch

The name given to the data entry style of confirmation of despatch. Data is entered in a batch and submitted to a batch queue for subsequent processing. This minimises operator screen time.

Frozen (Stock)

The quantity of an item removed from the available to issue for such reasons as quality checks. It is held as a balance quantity at item and stockroom level.

Gross Margin

The difference between the cost of the item and the net sales price. This is often expressed as a percentage of either the cost or the sales price.

Item

The single term used to describe an element of stock identified by a unique product code.

IN Currency

A European currency that is linked to the EURO currency with a fixed exchange rate.

Invoice Address

The address where you send the customer invoice.

Kit

A group of items which you sell as a set. It is maintained in Inventory Management as a single level list.

Lead Time

The standard amount of time, in weeks, from a decision to order an item for a stockroom, to the item being received in the stockroom.

Lot Control

This a level of stock control. A stock balance can be broken down to a lower level, such as lot, against which you can maintain individual balances.

Manual Allocation

The explicit allocation or de-allocation of stock at a depot to a nominated order or order line.

Miscellaneous Invoice or Credit Note

This is a manually raised invoice or credit note which can include inventory movements.

Nett Total

Value of the order including adjustments such as discounts, VAT and charges.

On Order

The quantity of an item for which outstanding purchase, distribution, or works orders exist. It is held as a balance quantity at item and stockroom level.

On-Pick

Quantity of an order that has been identified to a picking note, for a particular item.

Order Number

The sales order number assigned to the customer's order by System 21.

Order Value

The order value displayed in the order currency.

Order

The record of the agreement to supply items to a customer on a date at agreed commercial terms.

Outstanding

The quantity of an item that has not been allocated due to stock exceptions. This can also refer to orders that have not been met.

Payment Terms

The terms are used to evaluate the payment date starting from the date the invoice was sent out.

Payment Methods

This is the method the customer uses to make the payment, for example, cash, cheque.

Physical (Stock)

The total quantity of an item in a stockroom. It is held as a balance quantity at item and stockroom level.

Picking Note

A document on which is listed all the items for an order which have been allocated for despatch. Used as authority to pick and despatch items for an order.

Price List

A list of prices to be charged for items. A price list may be in any currency set up for Accounts Receivable. Customers are assigned a default price list.

Priority

The orders are given a priority number which is used to identify the urgency of allocation. The higher the number the more important the order. These are used in batch allocation.

Proforma

A special invoice sent to a customer as they have paid for the order before despatch.

Staged Discount

The amount of discount given to a customer for paying within a particular duration.

Statement Address

This is the customer's main address and is held in the statement account.

Status

Identifies the status of the order, such as frozen, or complete.

Stockroom

An area, physical or conceptual, where you record and count stock.

Suspended Orders

Orders are suspended automatically for credit and pricing exception conditions. You cannot allocate suspended orders.

Time Fence

A period of time, in days, which when added to the current date gives a date in the future. This future date can be used as the limit for allowing stock allocation and printing acknowledgements.

Transaction or Trans.Type or Type

This identifies whether the document is either an invoice or credit note.

Transcriptional Order Entry

A method of order entry which helps you to quickly enter information, with allocation (and optionally pricing) deferred to later batch processing runs.

Type (Stock Availability Enquiry)

Type of order, such as purchase order, sales order.

Unit of Measure

The unit in which an item is expressed for the purpose of buying, selling, stocking or valuing.

VAT Code

Refers to the VAT rate that should be used to calculate the order's VAT charge.

Warehouse

A warehouse is a stockroom set up in Inventory Management and authorised for location recording in Warehousing. It may also be authorised as a depot.

Work Management

This is the term that describes JBA's implementation of activity task automation and control. The Work Management Engine is central to this processing and it is server-based.

System 21 Constructor is the design and configuration tool for Work Management. You upload Business Processes from Constructor to enable them for Work Management.

System 21 Explorer is the interface which Work Management uses to initiate its enabled activities.
