Chapter 1

Maintenance

Customer Maintenance

2/OEM

Use this procedure to create and maintain a customer database which accurately reflects the customer's organisation. This makes sure that invoices, statements, and acknowledgements, as well as the goods, are sent to the correct address. Equally, you must make sure that the correct analysis codes are applied to sales and orders, so you can perform accurate analysis.

You must therefore identify:

- Where to send statements and invoices.
- From where you receive the payments.
- The delivery points.
- Trading terms and analysis codes.

In a simple organisation, these can all be the same.

For each customer, you can enter in Sales Order Processing the following addresses:

- A single statement address.
- Any number of delivery addresses.
- Any number of invoice addresses.

The account code which uniquely identifies a customer is eight characters long with a suffix of three characters. Statement and invoice accounts always have a suffix of 000. You cannot have both a statement and an invoice account.

Statement address: This is held in the Accounts Receivable Customer Master File and identified by the customer account code and a system-generated three digit sequence number of 000.

Delivery address: You set up each delivery address as another record in the Customer File. Identify each delivery address by the statement address customer account code and a delivery sequence number other than 000.

Invoice address: If this is *not* the statement address or delivery point, identify it by a unique customer account code, which is different to the statement customer number, and a delivery sequence number of 000.

Customer Sales Information

Sales Order Processing has a profile on each customer delivery point as well as the address details and the other data needed by Accounts Receivable. This customer sales information defaults through to each customer order, and includes the stockroom that usually supplies the customer, normal price list, normal discount list, normal allocation priority and so on.

The profile also holds customer data used by Sales Analysis.

Customer Maintenance Selection Screen

To display this screen, select Customers (Maintenance).

Use this screen to select the customer you want to maintain.

```

Fields:

Customer

Enter a customer.

Sequence No.

If required, enter a delivery sequence number.

Detail Required

Enter one of the following to specify what you want to maintain:

1 - Invoice address. To maintain the invoice address. You do not need to enter a sequence number.

2 - Delivery address. To maintain the delivery address. You must enter a sequence number.

3 - Sales details. To maintain the sales details. You must enter a sequence number.

5 - Trade details. To maintain the World Trade customer details, if you are using World Trade. You must enter a sequence number.

Complete the necessary fields, then press **Enter** to display the next screen. The screen displayed depends upon what detail you require.

Invoice Name And Address Maintenance Screen

To display this screen, on the Customer Maintenance Selection Screen, enter the customer. Then enter 1 in the detail required field and press **Enter**.

Tip: You only need to define an invoice address if it is neither the statement nor the delivery address. The customer code must be different to the statement code.

Use this screen to enter and maintain the details for the invoice address.

MA a 08/014					

Fields:

Name

Enter the customer invoice name, using up to 35 characters.

Address 1 - 5

Enter up to five lines of invoice address.

Post Code

Enter the post code, using up to five characters for each half.

Contact

Enter the customer contact, using up to 35 characters.

Phone No

Enter the customer telephone number using up to 20 characters.

Fax No

Enter the customer fax number using up to 20 characters.

Currency Customer Flag

Enter one of the following:

0 - If you only allow the Accounts Receivable base currency for this customer.

1 - If this customer is a multi currency customer.

Currency Code

If you process the account in a currency other than your base currency, enter the currency associated with the customer. This defaults to the base currency.

Language Code

Enter the language to use for all descriptions and text printed on documents. This language must have been defined to the Module Manager.

Group 1-4

Enter up to 4 analysis codes. They must be defined to parameter type CGP1

Remarks

Enter any remarks, using up to 50 characters.

Ar Salesman

Accounts Receivable salesman. Enter the salesman, this must be defined to the General Ledger.

Ar Region

Accounts Receivable region. Enter the region, this must be defined to the General Ledger.

Invoice Consolidation

This defaults from the Company Profile. Enter one of the following:

0 - DN. To consolidate invoices by despatch note.

1 - D. To consolidate invoices daily.

2 - W. To consolidate invoices weekly.

3 - M. To consolidate invoices monthly.

4 - D/O. To consolidate invoices daily to order reference.

5 - W/O. To consolidate invoices weekly to order reference.

6 - M/O. To consolidate invoices monthly to order reference.

Note: Invoices for any delivery points for this address are consolidated together

Press **Enter**. If you are using World Trade the Customer Trade Details Window displays, otherwise the Customer Maintenance Selection Screen is redisplayed.

Currency Customer Flag

Enter one of the following:

- 0 - If you only allow the Accounts Receivable base currency for this customer.
- 1 - If this customer is a multi-currency customer.

Currency Code

To process the account in a currency other than your base currency, enter the customer's currency. This field defaults to the base currency.

Language Code

Enter the language to use for all descriptions and text printed on documents. This is also the default code for Order Overrides and Despatch Details windows.

VAT Code

Enter the VAT code if it is different from the set-up in Accounts Receivable. The default value for orders is taken from the delivery address.

VAT Calc Basis

Enter one of the following:

- 1 - If the Customer is exempt from VAT - the VAT code should have a rate value of 0.
- 2 - To use the VAT code assigned to the Customer Account.
- 3 - To use the VAT code assigned to the Items.

St Addr

Statement address. Enter the address to which you send the statement. This defaults to the statement address customer number.

In Addr

Invoice address. Enter the invoice address, if you do not send the invoice to this delivery address.

Tip: You do not need to complete the remaining fields for delivery only addresses.

Functions:

F10

Additional Details. Use this function to display the additional field, Extra Rate VAT. Enter 1 if you do charge extra using the defined VAT codes.

Press **Enter** to save the changes. The Customer Maintenance Selection Screen is redisplayed.

Note: If you change any search entry fields, a screen automatically displays so you can maintain the information used to create the search criteria for this customer.

Customer Sales Information Screen

To display this screen, on the Customer Maintenance Selection Screen, enter the customer and sequence number. Then enter 3 in the detail required field and press **Enter**.

Note: The Customer Sales Information screen is displayed automatically when you set up new delivery address details.

Use this screen to maintain the customer data used to control the processing of sales orders, and for Sales Analysis.

Fields:

Stockroom

Enter the depot which usually supplies this customer.

Price List Code

Enter the price list which normally applies to this customer.

Note: This is not applicable if you use Advanced Pricing.

Discount List Code

Enter the discount list which normally applies to this customer.

Note: This is not applicable if you use Advanced Pricing.

Cash Discount Code

Enter the cash discount, defined as a percentage or value, to apply to orders for this customer. This must be defined on the descriptions file against major type CDSC.

Note: All the following fields default from the company profile.

Allocation Priority

Enter the usual priority of orders; this is used for the batch allocation of stock to orders.

Currency Rate Code

Enter the default rate used to convert prime currency orders into base currency. This field only displays for a multi-currency company with the Currency Customer flag set to 1.

Back Orders

Enter one of the following:

0 - No. If the customer does not accept back orders.

1 - Yes. If the customer does accept back orders, for example, if there is a stock shortage.

Part Delivery

Enter one of the following:

0 - No. If the customer does not accept part orders.

1 - Yes. If the customer does accept part orders, for example, if there is a stock shortage.

Note: This refers to part delivery of a line not a whole order.

Manual Pick List

Enter one of the following:

0 - No. Not to produce a manual pick list.

1 - Yes. To produce the order allocations and their associated stockroom before producing the picking notes. This list is a manual picking list which you can use to adjust despatch quantities before sending the orders out.

Carriage Charged

Enter one of the following:

0 - No. If you do not charge this customer for carriage.

1- Yes. If you do charge this customer for carriage.

Small Order Charge

Enter one of the following:

0 - No. If you do not charge this customer for orders under a specified value.

1- Yes. If you do charge this customer for orders under a specified value.

Acknowledgement

Enter one of the following:

0 - No. If you do not want to print an acknowledgement for each order.

1- Yes. If you do want to print an acknowledgement for each order from this customer.

Order Reference

Enter one of the following:

0 - No. If you do not need a reference for each order.

1- Yes. If you do need a reference for each order from this customer.

C Of C To Be Used

This is used for Advanced Order Entry. Enter one of the following:

0 - No. If you do not want to produce a Certificate of Conformance.

1 - Yes. If you do need to use the Certificate of Conformance features. A Certificate of Conformance requires that an item has certain characteristics which meet defined values.

Print Config. Options

This only displays if Configurator is installed and active. Enter one of the following:

0 - No. To only print parent items.

1 - Yes. To print both parent and component items on the external text.

Note: Only Sales Analysis uses the following fields.

Division

Enter the customer division. This is defined on the descriptions file against major type DN.

Sub-Division

Enter the customer sub-division. This is defined on the descriptions file against major type SV.

Region

Enter the sales region. This is defined on the descriptions file against major type SN.

State

Enter the customer state. This is defined on the descriptions file against major type ST.

Territory

Enter the customer territory. This is defined on the descriptions file against major type TR.

Salesman

Enter the salesman. This is defined on the descriptions file against major type TN.

Customer Class

Enter the customer class. This is defined on the descriptions file against major type CCCC.

Corporation

If the customer is part of a larger organisation, enter the corporation.

Special Customer

Enter one of the following:

- 0 - No. If this customer is not one of your special customers.
- 1 - Yes. If this customer is a special customer, by your own definition.

Default Price List

Enter one of the following:

- 0 - No. Not to use the default price list if the item is not on the customer's price list.
- 1 - Yes. To use the default price list if an item is not on the customer's price list.

Print Discounts

This is only applicable if you are using Advanced Pricing.

Enter one of the following:

Blank - To print the gross price and display the discount specified on the company profile.

- 1 - To only print the nett price on the invoice.
- 2 - To print the gross price and total value of all line discounts on the invoice.
- 3 - To print the gross price and total item discount on the invoice.
- 5 - To print the gross price and details of all discounts on the invoice.
- 6 - To print the gross price minus any non-presentable discounts and total of line discounts on the invoice.
- 7 - To print the gross price minus any non-presentable discounts and total value of all item presentable discounts on the invoice.
- 8 - To print the gross price minus any non-presentable discounts and all presentable discounts on the invoice.

Invoice Consolidation

Enter one of the following:

- 0 - DN. To consolidate invoices by despatch note.
- 1 - D. To consolidate invoices daily.
- 2 - W. To consolidate invoices weekly.
- 3 - M. To consolidate invoices monthly.
- 4 - D/O. To consolidate invoices daily to order reference.
- 5 - W/O. To consolidate invoices weekly to order reference.

6 - M/O. To consolidate invoices monthly to order reference.

Service Branch

This field only displays if you use Service Management. Enter the Service Branch for this customer, see the Service Management Product Information for further details.

Functions:

F10

Additional Details. Use this function to enter additional details for the customer using the Customer Maintenance Additional Details Window.

F16

Default Pricing Type. This is only available with Advanced Pricing. Use this function to maintain the default pricing types, using the Pricing Type Restrictions Window. If you enter types here, it restricts pricing to only prices from these types.

F19

Pricing Groups. This is only available with Advanced Pricing. Use this function to maintain the pricing groups, using the Customer Pricing Groups Window. You can attach customers in a particular customer group to a specific pricing type.

F21

Text Entry. Use this function to enter text in a specified language. This text can be displayed or printed on external documentation, such as despatch notes, or not printed anywhere, according to the usage code selected.

Note: You do not need to select language codes to print text in the native language.

Press **Enter** to save the entered information. The Customer Maintenance Selection Screen is redisplayed.

Customer Maintenance Additional Details Window (F10)

To display this screen, select **F10=Additional Details** on the Customer Sales Information Screen.

Use this screen to enter document processing, despatch parameters and sales details.

Fields:

Document Processing

Priced Despatch Notes

Enter one of the following:

- 0 - No. To not print prices on despatch notes.
- 1 - Yes. To print prices on despatch notes.

Type Of Despatch Note

Enter one of the following:

- 1 - To generate a separate despatch note and invoice.
- 2 - To generate a combined document for the despatch note and invoice.

Generate Invoice Number At Picking

Enter one of the following:

- 0 - No. Not to generate the invoice number when you produce the pick list.
- 1 - Yes. To generate the invoice number when you produce the pick list.

Despatch Information

Despatch Method

Enter the default despatch method. This must be defined on the Inventory descriptions file, against major type MODE.

Transport Method

Enter the default transport method. This must be defined on the Inventory descriptions file, against major type TMTH.

Terms Of Delivery

Enter the default terms of delivery. This must be defined on the Inventory descriptions file, against major type TDEL.

Note: If World Trade is live, this field defaults to the value held on the Customer Maintenance Trade Details Screen.

Carrier

Enter the default carrier. This is checked as follows:

1. If Advanced Shipping is live, and the processing company is active with Sales Order Processing, the carrier defaults to that defined via Shipping Customer Defaults.
2. If a new code is entered, it is validated against the Shipping Names And Address file (Shipping Customer Defaults Maintenance).
3. If Transport Planning is live, and the processing company is active within Sales Order Processing, the carrier defaults to the carrier defined to the Transport Planning Delivery Profile.
4. If a new code is entered, it is validated against the Transport Planning Carrier file.

Tip: A Sales Order Processing company is defined to a Transport Planning company via an SOP company/stockroom combination.

5. If neither Advanced Shipping nor Transport Planning are live, then the default is blank. The carrier must be defined on the Inventory descriptions file, against major type CARR.

Sales Details

Agent

Enter the default agent. This must be defined on the Inventory descriptions file, against major type AN.

Sub Agent

Enter the default sub-agent. This must be defined on the Inventory descriptions file, against major type AN.

Select **F8=Update** to save any changes and return to the Customer Sales Information Screen.

Pricing Type Restrictions Selection Window (F16)

Note: This is only applicable if you are using Advanced Pricing.

To display this window, select **F16=Default Pricing Types** on the Customer Sales Information Screen.

Use this window to select the pricing type for the restrictions.

Price/Discount Profiles Maintenance

4/OEM

Tip: The Price/Discount Profiles are not used if you use Advanced Pricing.

Note: Discount or Price List Profiles must exist before you can set up customer additional details.

Pricing Structure

You can set up and maintain any number of price lists. You can specify a default price list for each company. The customer sales information for each delivery point holds:

- The price list normally used for the customer delivery point; this price list must be in the customer's trading currency.
- A flag to show whether the default price list is available for this delivery point.

When you enter an order for this delivery point, the order header screen shows the normal price list set up in the additional details. Each order line picks up the price list specified on the order header. You can change both of these price lists.

Price list possibilities include:

- Every order line priced from the normal delivery point price list.
- Every order line priced from the same price list, but not the normal delivery point list.
- Different order lines priced from different price lists.

You can override the price for a particular line with a fixed price, however this means the order is suspended.

If you cannot price a line from the designated price list then either the order is suspended or, if you are using the default price list, this is used to instead.

Discounting Structure

You can set up and maintain any number of discount lists. The additional details for each delivery point optionally has the discount list normally used for the customer delivery point

This discount list must be in the customer's trading currency. When you enter an order for this delivery point, the order header screen shows the normal discount list set up in the additional details. Each order line picks up the discount list code specified on the order header. You can change both of these lists.

Discount list possibilities are:

- Every order line discounted from the normal delivery point discount list.
- Every order line discounted from the same price list, but not the normal delivery point one.
- Different order lines discounted from different discount lists.

For a particular line, you can override the discount list with a fixed discount.

Price And Discount Profiles

To set up a price list or discount list, you need to:

1. Set up the list profile.
2. Maintain the list.

The profile contains the user who has authority to maintain the list.

Free Of Charge Orders And Order Lines

If you have whole orders or order lines which are free of charge you must set up a price list profile for a price list called FOC.

Price/Discount Profiles Maintenance

To display this screen, select Price/Discount Profiles (Maintenance). Enter a list code and Price Type, (1 for discount, 2 for price) then press **Enter**.

Use this screen to create or maintain price and discount profiles.

Note: If you want to transfer authority to a different user, the user with the authority must make the change.

Text.....			
Default list..	0 (1=Yes,0=No)		
F3=Exit F4=Prompt F12=Previous			
08-17	SR	MW	KS IM II KENB20A PET166S2

Fields:

Authority

Enter the user who has the authority for this discount or price list.

Currency

Enter the currency in which to express the list values.

Note: Currency details only display if the Multi-Currency Flag on the Accounts Receivable company profile is set to 1-Yes.

Text

Enter up to 30 characters of text

Default List

Enter one of the following:

0 - No. If this list is not the default price list for this company.

1 - Yes. If this is the default price list for this company.

Note: this field only displays when you maintain price lists, that is you entered 2 (price list) in the Type field.

Tip: You can only specify one price list per company as a default list.

Press **Enter** to save any changes. Then select **F3=Exit** to return to the menu.

Price List Maintenance

5/OEM

Use this option to enter the details for the price list profiles.

These details include the effective date and the items included on the price list.

Note: Before you can maintain a price list, you must set up the price list profile.

Price Lists Maintenance Selection Screen

To display this screen, select Price Lists
(Maintenance).

Use this screen to select the price list, effectivity date and item for which you want to maintain price details. You can only maintain a price list if you are its current owner, as defined by the user authority on the price profile.

You can also enter details to create a new price list.

Enter the number by which the order line quantity should be divided before being priced.

To save the changes, press **Enter**, then select **F3=Exit** to return to the menu.

Discount List Maintenance

1... 6/OEM **2...**

You can apply discounts, with up to nine breaks, to:

- Lines (discount 1).
- Whole order (discount 2).

You can base discount 1 on line value or quantity, and express it either as a value, or as a percentage. You can set up this discount for individual items, or for groups of items in discount groups.

Discount 2 is based on whole order value, and is expressed as a percentage.

When applying discounts, Sales Order Processing follows this procedure for each order line:

- It checks if the item has an individual item discount. If it finds one, it is applied.
- If the item does not have an individual discount set up, it checks if the item belongs to a discount group. If it does the group discount is applied.
- If neither of the above produces a discount, the default discount list ALL is used.

When each line has been checked for a discount, Sales Order Processing checks to see whether the whole order should receive a discount.

Discount List Maintenance Selection Screen

To display this screen, select Discount Lists (Maintenance).

Use this screen to select the discount list you want to maintain. Each list can contain item discounts, item group discounts and whole order discounts. However, you must individually define the discounts, that is you cannot define group discounts and order discounts on the same screen.

Note: Only the current owner can maintain a discount list. The owner is defined by the authority on the discount profile.

		15.00	30.00000
		999999999999.99	40.00000
F3=Exit F11=Delete F12=Previous			

Fields:

UOM Code

Enter the units used for the quantity limits. If you leave this blank, the unit of measure in the order is used.

UOM Factor

If the UOM is different from the units of measure in the order, enter the factor used to convert the ordered UOM to the discount UOM.

Note: The UOM code and UOM factor fields do not display for the whole order discount.

Percent/Value

Enter one of the following:

- 1 - Prct. If the discount is a percentage of the line value.
- 2 - Value. If the discount is an amount or value.

Based On

Enter one of the following:

- 1 - Qty. If the discount is based on order line quantity.
- 2 - Value. If the discount is based on order line value.

Note: The whole order discounts are always percentages and based upon order values.

Currency Code

Enter the currency to use on this list.

Note: The qualifying limits and rates define a scale of discounts. The types of entry required are governed by the Based On and Percent/Value flags.

Qualifying Limit

Enter up to 9 quantity or value limits. The maximum qualifying limit is 99999999999999.99.

Rates %

For each qualifying limit except the first, enter either the discount percentage or actual discount value.

Note: For any whole order the discount is based on order value and the discount is a percentage of the whole order value.

Press **Enter** to save any information.

Create New Price List

7/OEM

Use this option to create a new list price by basing it on an existing price.

To help you update an existing price list, with a complete review of the prices, you can specify that the prices are adjusted by a defined percentage. Enter a positive number to increase and a negative number to decrease.

You can also generate a new price list either as a direct copy or as a defined function of the original.

Create A New Price List Screen 1

To display this screen, select Create New Price List.

Use this screen to enter the information for a new price list or to maintain an existing price list.

OE155	Z1 - UK Demonstration Company	USER GBJBAMSA	27/05/98 12:17:23
Create New Price List			
Price list details:			
New list.....	_____	Old list.....?..	_____
Effectivity date.....	_____	Effectivity date.....	_____
New authority.....	_____		
Factor (%).....	_____		
Number of decimals.....	5		
Update prices.....	1 (0=No,1=Yes)		
Multi-currency details:			
Currency.....?	_____		
Currency rate Code.....	_____		
Currency rate.....	.00000 ('1'=Multiply,'2'=Divide)		
F3=Exit F4=Prompt F19=Currency			

Fields:

New List

To create a new list, enter a new name.

To update an existing list, enter the list name.

Effectivity Date

Enter the date from which the prices are effective.

New Authority

Enter the person who is to have authority for the list. If you are updating an existing list, the system assumes the authority for the list is the same as before.

Old List

Enter the price list to update or use as a base for a new one.

Effectivity Date

Enter the effectivity date of the Old list.

Tip: If you want the latest version of the Based-on price list, and want the new price list to be effective from today, enter *yesterday's* date in the first Effectivity Date field, and *today's* date in the second Effectivity Date field.

Factor (%)

Enter the percentage by which the prices on the old list are to change.

For a decrease, enter - after the percentage.

Number Of Decimals

Enter how many decimal places should appear in the new prices.

For example: If the current price is 27.37 and the factor 8%. The system calculates the price as 29.55960. If you set this field to 1 the price is 29.6. If you set the field to 2, the price is 29.56.

Update Prices

Enter one of the following:

0 - No. To produce a report to show the effect this price update would have, but not actually update the prices.

1 - Yes. To update the prices on the list.

Currency

Enter the currency for the new price list.

Note: you must enter either a currency rate or a current rate code.

Currency Rate Code

Enter the currency rate code used to define the exchange rates.

Currency Rate

Enter the currency rate to use when converting old prices to the new prices.

Enter one of the following in the untitled field:

1 - Multiply. To multiply the transaction value by the currency rate.

2 - Divide. To divide the transaction value by the currency rate.

Functions:

F19

Currency. Use this to override currency details for transactions where currencies are not linked to the EURO. See Override Conversion Parameters Window (F19) in Transactional Order Entry for more information.

Press **Enter**. This displays a warning message if you are updating an existing list, press **Reset** to clear. Then press **Enter** a second time to display the Create A New Price List Screen 2.

Create A New Price List Screen 2

To display this screen, press **Enter** twice on the Create a New Price List Screen 1.

Use this screen to select specific attributes for the new price list. You may select a range of items by item code, or by item attribute.
