Chapter 2

Processing

Sales Order Entry

You can use two different methods of recording sales orders in Sales Order Processing. These are:

- Transcriptional Order Entry - this is for rapid entry using an order pad.
- Conversational Order Entry - this is for a dialogue with the customer to agree how best you can meet their requirements.

For both methods you must enter the customer details, payment details, currency details, assign extra charges (if necessary) and close the order.

You can use Advanced Order Entry with Sales Order Processing. In this case you cannot use Conversational Order Entry, it is replaced by the Advanced Order Entry procedure. Transcriptional Order Entry is available whether or not you use Advanced Order Entry. If you use Advanced Order Entry, then you must make all amendments using the Advanced Order Entry Amendment procedure, regardless of how you created the order. You must disable Advanced Order Entry to use the Sales Order Processing order entry and amendment procedures.

The sales order processing cycle is:

1. Order entry - this is split into header lines and trailer.
2. Allocation of stock.
3. Print order acknowledgements.
4. Print picking/despatch notes.
5. Pick the order items.
6. Confirm despatch.
7. Print the invoices.

To keep user entry down to a minimum, wherever possible defaults from the appropriate customer sales details are displayed.

You can enter up to 999 order lines per order.

Within Sales Order Processing you can enter orders for customers who have exceeded their credit limit. You can also enter unpriced order lines. In both cases the whole order is suspended and you must manually release it.

You can break order entry into the following tasks:

- Identify the customer.
- Determine defaults to condition order processing.
- Enter and maintain order text.
- Details of products and quantities.
- Pricing and discounting the order.
- Defining payment terms.
- Stock allocation.

- Credit checking.
- Entering extra charges and closing orders.

Order Status

The order can have any of the following statuses:

- Outstanding - the order is on the system but stock has not been set aside for shipment.
- Allocated - stock has been reserved (made unavailable for anyone else) for the order.
- On Pick - documentation has been printed (picking or despatch note) and items have been taken out of stockrooms.
- Shipped - items have been confirmed as having left the stockroom or warehouse.

Sales Kitting

You can create single level sales kits using Inventory Management. You can raise sales orders for these kits in Sales Order Processing. Using the following principles:

- **Raising the order.** You raise the order for the kit parent. This produces order lines for both the parent and components. If you use conversational order entry, you can see the component lines. The pricing and discounting is applied to the kit parent. You can raise orders on kit components if you do not require a whole kit.
- **Allocation.** Stock is allocated to the kit components, but sourcing is performed for the kit parent. The component availability is displayed for the chosen stockroom. You can source whole kits from alternative stockrooms. You can also display and use alternative kits for sourcing.
- **Picking.** The picking note lists the kit components.
- **Confirmation of Despatch.** Despatch is confirmed for the kit parent
- **Stock Availability Enquiry.** This is performed on kit components, because stock is allocated to the components.
- **Sales Analysis Update.** What gets updated is determined by what is set up in the items file. You can update the kit parent only, kit components only, both kit parent and components or neither kit parent nor components.

Sales Order Processing And EMU

Currency rates are stored on transactions within System 21. With the introduction of the Euro and European Monetary Union (EMU) in 1999, the way in which we process any monetary transaction will change.

There are now three scenarios to determine the currency conversion rate to be used in this case.

- Sundry Invoices and Credits use the customer order date entered on the credit/invoice screen.

- Customer Returns Credit Notes that are not based on an original invoice retrieves the conversion rate which is applicable to the pricing date entered on the screen.
- Customer Returns Credit Notes that are based on an original invoice retrieves the conversion rate applicable to the date on that original document. If the rate was fixed, that is part of the Euro, then it is retrieved and used on the credit note.

Each time the system calculates an invoice line value from the prime currency to the base currency, the value is converted by taking into account these Euro considerations.

Base Invoice Header Values are calculated from the Invoice Header Prime Values by accumulating all the base goods, VAT and charge totals.

If both currencies are defined as an IN Currency, then the Prime Grand Total is converted to the Base Grand Total.

Any discrepancies between this new base value and the sum of the base goods/VAT and charge totals are written to a special Euro Rounding Account via Financials.

Transcriptional Order Entry

1/OEP

Note: You can use Transcriptional Order Entry in conjunction with Advanced Order Entry.

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Transcriptional Order Entry provides rapid entry of order line details, particularly from documents. You use the standard customer selection and order defaults entry.

The main objective of this method is speed, therefore the sequence you enter the orders in is arbitrary, stock allocation is performed in batch and based upon a priority. To further speed processing, you can perform pricing in a batch run. This parameter is held on the company control record.

Within Transcriptional Order Entry:

- Price and discounting can be interactive or batch.
- Stock allocation is a separate operation.
- There are no enquiries.
- There is no facility to force allocate.

Transcriptional Order Entry Selection Screen

To display this screen, select Order Entry (Transcriptional).

Use this screen to enter the customer, the order dates, and the customer order reference. You must also enter the delivery address for this order. You can search for the customer on any three characteristics determined when Sales Order processing was installed.

Fields:

Customer

Enter the customer and address for this order.

Customer Order Ref

Enter the customer's order reference or purchase order number.

Customer Order Date

Enter the date of the customer's order. This defaults to the current system date.

Delivery Date

Enter the date the customer requires delivery. This cannot be before the current date. This is the default on all order lines.

Press **Enter** to display the Transcriptional Order Entry Header Screen.

Transcriptional Order Entry Header Screen

To display this screen, press **Enter** on the Transcriptional Order Entry Selection Screen.

Use this screen to confirm, or amend, the parameters that control the order processing.

Tip: Several fields are only available if you are using Advanced Pricing.

Tip: The system prompts in the stockroom field. Use Shift and Tab to move the prompt to edit invoice and delivery details.

Fields:

Invoice Name And Address

Enter the name and address of the customer site where you send the invoice.

Delivery Name And Address

Enter the name and address of the customer set to which you send this order.

Stockroom

Enter the stockroom or warehouse from which you deliver to this delivery address.

Note: If you require centralised document processing, you must assign this stockroom a stockroom site.

Priority

Enter the priority to use for the order in any back order batch allocation run:

00 - Manual Allocation.

99 - Force Allocation (Batch Allocation).

Price List Code

Note: This is not used with Advanced Pricing.

Enter the price list for this order. The list must be in the same currency as the account.

Discount List Code

Note: This is not used with Advanced Pricing.

Enter the discount list for this order. This list must be in the same currency as the account.

Priced At

This defaults from the company profile. Enter one of the following:

- 1 - Order. To price the orders during order entry.
- 2 - Despatch. To price the order when you confirm despatch of the goods.

Cash Discount Code

If you are authorised, you can change this value using **F13=Payment Details** or enter a cash discount directly.

Note: The next three fields only displays if the Currency Customer Flag on the Customer Maintenance - Delivery Address screen is set to 1 - Yes.

Currency Code

Enter the currency for this order. This must be the same as the price list currency.

Currency Rate Code

Enter the currency rate code is associated with a currency rate. You set up and maintain these within the General Ledger.

Currency Rate

Enter one of the following:

- 1 - Multiply. To multiply the transaction value by the currency rate to give the base value.
- 2 - Divide. To divide the transaction value by the currency rate to give the base value.

Note: If you use a fixed currency rate, make sure the currency rate code is empty and enter a fixed currency rate in the currency rate field.

Functions:

F13

Payment Details. Use this function to override the payment parameters using the Payment Overrides Window.

F16

Additional Overrides. Use this function to enter additional overrides using the Additional Overrides Window.

F19

Currency. Use this function to override currency details for transactions where currencies are not linked to the EURO.

F21

Text Entry. Use this function to enter text in a specified language. This text can be for internal or external use, according to the usage code selected.

Tip: You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language **using F16=Additional Overrides**.

Function For Advanced Pricing Only:

F14

Price Overrides. Use this function to enter price overrides for Advanced Pricing.

Press **Enter** to display the Transcriptional Order Line Details Screen.

Payment Override Window (F13)

To display this window, select **F13=Payment Overrides** from any Order Header Screen.

You normally define payment terms in Accounts Receivable. They control the due dates and cash discounts that apply to invoices generated from the order. You can only override them using this window if you have the authority to change payment terms.

Note: You must authorise users to this task and the Payment Override sub-task in Application Manager.

Fields:

Payment Terms

There are four parts to this field, but not you do not need to enter all of them.

Enter one of the following in the first section:

D - Number of days from invoice date.

M - Net monthly account.

P - Periodic range.

T - Extended payment terms.

In the second part enter the range, if you selected a Periodic range.

In the third part, enter either the payment date for monthly (M) or periodic (P) selections, or the number of days to add to the invoice date for a daily (D) selection.

Only use the fourth part if you selected Extended payment terms (T). Enter a settlement code defined by Cash Management which defines a payment pattern, for example, payment by instalment.

Examples:

1. D 030 gives a payment date of 30 days after the invoice date.
2. M 210 gives a payment date of the 10th of the second month after the month the invoice was sent.
3. P 2019 206 gives all the invoices dated between the 20th of the next month and the 19th of the month after, a payment date of the 6th of the first month after the invoice is sent.
4. T XXX where XXX is a code identifying a payment pattern defined in Cash Management.

Payment Method

Enter the method of payment as defined in Cash Management. For example: CHQ, STD.

Tip: Cash discount codes and staged discount codes are mutually exclusive.

Cash Discount Code

Enter a discount code to identify the type of discount and a single cash discount percentage. These are defined in the description file, major type CDSC.

Staged Discount Code

Enter a code to define multiple cash settlement discount percentages. This allows tiers of discount according to how soon you receive the payment. These codes are predefined within Cash Management.

Bank Details

Enter the bank details for the delivery point statement account, or the consolidated statement account if the statement account is hierarchical.

Functions:

F13

Bank details override. Use this function to override any existing bank details.

Select **F8=Update** to save any changes and return to the previous screen.

Customer Bank Scan Window (F13)

To display this window select **F13=Bank Details**
Override on the Payment Override window.

Use this window to select the bank account details. If no details exist, then an error message is displayed, but you can still select **F10=Add** to add details.

Fields:

Document Processing

Priced Despatch Notes

Enter one of the following:

- 0 - No. Not to print the prices on despatch notes.
- 1 - Yes. To enter prices on the despatch notes.

Type Of Despatch Note

Enter one of the following:

- 1 - Separate despatch note and invoice. To generate a separate despatch note and invoice separately.
- 2 - Combined document. To generate a combined despatch note and invoice.

Invoice Consolidation

Note: Invoice consolidation is only applicable when you set Type of Despatch Notes to 1 - Separate despatch notes and invoice.

Enter one of the following:

- 0 - DN. To produce an invoice for each despatch note.
- 1 - D. To consolidate invoices daily.

- 2 - W. To consolidate invoices weekly.
- 3 - M. To consolidate invoices monthly.
- 4 - D/O. To consolidate invoices daily to order reference.
- 5 - W/O. To consolidate invoices weekly to order reference.
- 6 - M/O. To consolidate invoices monthly to order reference.

Despatch Note Language

Enter the language to use on the despatch note. This must be defined to Application Manager.

Invoice Language

Enter the language for the invoice. This must be defined to Application Manager.

Despatch Information

Despatch Method

Enter the default despatch method. This must be defined on the descriptions file, against major type MODE.

Transport Method

Enter the default transport method. This must be defined on the descriptions file, against major type TMTH.

Reason For Despatch

Enter the reason for the despatch. This must be defined on the descriptions file, against major type MOVR.

Terms Of Delivery

Enter the default terms of delivery. This must be defined on the descriptions file, against major type TDEL.

Note: If World Trade is live, this field defaults to the value held on the (Sales Order Processing) Customer Maintenance - Trade Details screen.

Carrier

Enter the default carrier. This is checked as follows:

1. If Advanced Shipping is live, and the processing company is active with Sales Order Processing, the carrier defaults to that defined via Shipping Customer Defaults.
2. If a new code is entered, it is validated against the Shipping Names And Address file (Shipping Customer Defaults Maintenance).
3. If Transport Planning is live, and the processing company is active within Sales Order Processing, the carrier defaults to the carrier defined to the Transport Planning Delivery Profile.
4. If a new code is entered, it is validated against the Transport Planning Carrier file.

Tip: A Sales Order Processing company is defined to a Transport Planning company via an

SOP company/stockroom combination.

5. If neither Advanced Shipping nor Transport Planning are live, then the default is blank. The carrier must be defined on the Inventory descriptions file, against major type CARR.

Shipping Marks

Enter the text to use as the shipping marks.

Functions:

F13

Customer Attributes. Use this function to define the customer attribute additional overrides.

Select **F8=Update** to save the changes and return to the previous screen.

Customer Attribute Additional Overrides Window (F13)

To display this window select **F13=Customer Attributes** on the Additional Overrides Window.

Note: Before a user can change these overrides, you must authorise them to this task, and to the Payment Override sub-task using Application Manager.

Use this window to override default customer details.

Fields:

Customer Attributes

Vat Calc Basis

Enter one of the following:

- 1 - If the customer is VAT exempt for sales invoicing.
- 2 - To use the VAT code in the following field.
- 3 - To use the VAT code from the inventory item.

Note: If you are using World Trade, set this flag to 3.

VAT Code

Enter the VAT code for this customer. This is a mandatory field if VAT Calc Basis is set to 2 or 3.

Extra Rate Vat

Enter one of the following:

0 - No. If an extra charge is not applicable using the VAT code defined.

1 - Yes. If an extra charge is applicable using the VAT code defined

VAT Country

Enter the country in which this customer is registered for VAT. If this is a delivery address, and the same country applies to the statement address, you do not need to enter this.

If World Trade is live, it defaults to the Customer Trading Details setting and you must enter a country valid to World Trade.

If World Trade is not live, the country code is checked against the General Ledger.

Vat Registration

Enter the customer's VAT registration number in the specified country.

Fiscal Code

Enter the classification code assigned by the government to this customer. This defaults to Customer Additional Details.

Sales Details

Salesman

Enter the salesman. This must be defined on the descriptions file, against major type TN.

Agent

Enter the agent. This must be defined on the descriptions file, against major type AN.

Sub Agent

Enter the sub agent. This must be defined on the descriptions file, against major type AN.

Region

Enter the sales region. This must be defined on the descriptions file, against major type SN.

State

Enter the state. This must be defined on the descriptions file, against major type ST.

Territory

Enter the territory. This must be defined on the descriptions file, against major type TR.

To save the entered information, select **F8=Update**. The Order Entry Header Screen is redisplayed.

Override Conversion Parameters Window (F19)

To display this window, select **F19=Currency** on any Order Entry Header Screen.

IN currencies are defined within the General Ledger, along with the Euro itself.

*Note: The exchange rate between currencies that are considered to be an IN Currency, that is defined to the Euro, will be fixed and therefore not maintainable. Selecting **F19=Currency** in this instance would display an error message - Both currencies are Euro currencies. Override of rate not permitted.*

F24=More keys			

Fields:

Rate Code

Select a rate code as set up in the Currency Rate Code option within Financials.

Rate

Or. Enter a rate using up to five decimal places.

Multiply or Divide

Enter one of the following:

M - To multiply the values held in the source currency by the exchange rate to achieve the target currency value.

D - To divide the values held in the source currency by the exchange rate to achieve the target currency value.

Source to Euro

This specifies whether to enter a full or partial rate.

For example:

If your base currency is an IN Currency then this is always on so all exchange rates are from or to the Euro.

If the prime currency is an OUT Currency, then the rate will be a partial rate, for example US dollars to EURO.

If your base currency is an OUT Currency, then you can choose to express and hold your rates to the EURO or not. If you do not, then all rates are full rates.

The detail defaults from the Euro Currencies Maintenance option within Financials and decides the Euro calculation.

Press **Enter** to apply the rate and convert the currencies.

Transcriptional Order Line Details Screen

To display this screen, press **Enter** on the Transcriptional Order Entry Header Screen.

Use this screen to enter the item details for this order.

Tip: At minimum, you must enter an item code and quantity.

[illegible]

Fields:

Item

Enter the item, you can search by item name.

Quantity

Enter the order quantity and press **Field Exit**.

Note: You only need to complete the following fields to override defaults for the item.

Note: If you specify a price or discount, you cannot specify a price or discount list.

Warning: If you are using Advanced Pricing, Interactive Pricing: A free of charge price type ZZZ is used. The Unit Price, Discount %, Price and Discount List are not displayed. You can put 2 at the side of the line for order overrides.

Unit Price

Enter the fixed price in the currency of the customer. This overrides all other pricing and is assumed to be a net price.

Disc %

Discount percentage. Enter a discount percentage to fix the line discount.

Prc Lst

Price list. To use a different price list on this line, enter a price list in the currency of the customer. If the item is free of charge, create a FOC price list profile.

Dsc Lst

Discount list. To use a different discount list on this line, enter a discount list in the currency of the customer.

St. R

Stockroom. Enter the depot or warehouse to use for the delivery, if it is different from the stockroom for the order.

Dlvry Date

Delivery Due Date. Enter the required date if it is different from the due date for the order.

Sel

Select. Enter one of the following:

1 - Text. (Interactive pricing.) To enter or maintain text for this order line. (Batch Pricing.) To retrieve text from Inventory to use instead of the standard item description.

2 - Price Overrides. Advanced Pricing only. To override Line prices using the Line Price Override Window.

Note: Page up and down to enter more screens of order lines.

Press **Enter** to process the data and display the Sales Order Line Summary screen. The screen displayed is determined by whether you are pricing in batch or interactively.

Transcriptional Order Line Summary Screen

To display this screen, press Enter on the
Transcriptional Order Line Details Screen.

This screen shows a summary of the order. If you are using interactive pricing and entered a unit price to override the price list value, the charge screen shows the total costs. If you are using batch pricing, only the additional charges and the VAT is calculated.

Fields:

Suspend

If Sales Order Processing has automatically placed the order on hold, the reason for the suspension is displayed.

In batch mode pricing, you can enter a reason to suspend the order.

Charge Code

Enter up to three charge types, if required. Any type must be defined on the descriptions file against Major type SUNC.

You can process VAT only charges for samples or gifts. In this case, enter VAT against a charge code specifically set up for this purpose. Only VAT values are posted to Accounts Receivable.

Amount

Enter the charge for the charge type. This defaults to the value entered in the descriptions file.

Note: The standard charge on the descriptions file is always in base currency, for transaction currency accounts the charge is converted to the order currency.

VAT Code

Enter the VAT code if you want to change the normal code.

Functions:

F15

Restart order entry. Loses all data entered against this order.

Press **Enter** to recalculate the charges total and VAT and add them to the order totals (excluding VAT only). Then confirm the order by pressing **Enter** again. This displays the Transcriptional Order Entry Summary Screen.

Note: EURO VAT is catered for, using VAT details maintained in the General Ledger. You can deduct cash discounts at order time, or payment time, or ignore cash discounts.

Note: If Extra VAT applies, for example, in Spain, it is kept against the VAT Code in the General Ledger.

Transcriptional Order Entry Summary Screen

To display this screen, press **Enter** twice on the Transcriptional Order Entry Summary Screen to accept the order.

This screen shows the summary details of the previously entered order and the number of the order you have just completed.

Tip: You can start processing the next order using the fields at the top of the screen. For more information on these fields, see Transcriptional Order Entry Selection Screen.

Conversational Order Entry

2/OEP

Tip: You cannot use this option if you are using Advanced Order Entry, you must use the Advanced Order Entry Order Entry Routine.

Note: You switch Advanced Order Entry on and off using the SOP In Use flag on the Inventory Management, Company Profile Management Screen.

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Within Conversational Order Entry, COE, you can:

- Search on customers.
- Search on items.
- Do pricing and discounting automatically irrespective of the Company Profile setting. (See also Advanced Pricing.)
- Using Advanced Pricing, you can amend the secondary value UoM.
- Allocate available stock straightaway from the usual depot, warehouse or stockroom, if the delivery date is within the depot time fence.
- Not accept the line if the item is not held in stockroom.
- Force stock allocation regardless of physical position.

From within COE you can enquire on:

- Stock availability in all warehouses and the number of purchase order alternative items.
- Unallocated sales orders and purchase orders.
- Allocated orders requiring the same stock.

Conversational Order Entry helps you meet the customer's requirements by offering alternative items, quoting realistic delivery dates and sourcing from other locations. You use the standard customer selection and order defaults entry.

Stock allocation is performed when you enter an order. This option also performs pricing and credit checking. The order can be suspended for a number of reasons including credit stop, credit limit failure, zero price, and price override.

Conversational Order Entry Selection Screen

To display this screen, select Order Entry (Conversational).

Use this screen to enter the customer, the order dates, and the customer order reference. You must also enter the delivery address for this order. You can search for the customer on any three characteristics determined when Sales Order processing was installed.

```

Fields:

Customer

Enter the customer and address for this order.

Customer Order Ref

Enter the customer's order reference or purchase order number.

Customer Order Date

Enter the date of the customer's order. This defaults to the current system date.

Delivery Date

Enter the date the customer requires delivery. This cannot be before the current date. This is the default on all order lines.

Press **Enter** to display the Conversation Order Entry Header Screen.

Conversational Order Entry Header Screen

To display this screen, press Enter on the Conversational Order Entry Selection Screen.

Use this screen to confirm or amend, the parameters that control the order processing.

Tip: Several fields are only available if you are using Advanced Pricing.

Tip: The system prompt in the stockroom field. Use Shift and Tab to move the prompt to edit invoice and delivery details.

Fields:

Invoice Name And Address

Enter the name and address of the customer site where you send the invoice.

Delivery Name And Address

Enter the name and address of the customer set to which you send this order.

Stockroom

Enter the stockroom or warehouse from which you deliver to this delivery address.

Note: If you require centralised document processing, you must assign this stockroom a stockroom site.

Price List Code

Note: This is not used with Advanced Pricing.

Enter the price list for this order. The list must be in the same currency as the account.

Discount List Code

Note: This is not used with Advanced Pricing.

Enter the discount list for this order. This list must be in the same currency as the account.

Priced At

This defaults from the company profile. Enter one of the following:

- 1 - Order. To price the orders during order entry.
- 2 - Despatch. To price the order when you confirm despatch of the goods.

Cash Discount Code

If you are authorised, you can change this value using **F13=Payment Details** or enter a cash discount directly.

Priority

Enter the priority to use for the order in any back order batch allocation run:

- 00 - Manual Allocation.
- 99 - Force Allocation (Batch Allocation).

Note: The next three fields only displays if the Currency Customer Flag on the Customer Maintenance - Delivery Address screen is set to 1 - Yes.

Currency Code

Enter the currency for this order. This must be the same as the price list currency.

Currency Rate Code

Enter the currency rate code is associated with a currency rate. You set up and maintain these within the General Ledger.

Currency Rate

Enter one of the following:

- 1 - Multiply. To multiply the transaction value by the currency rate to give the base value.
- 2 - Divide. To divide the transaction value by the currency rate to give the base value.

Note: If you use a fixed currency rate, make sure the currency rate code is empty and enter a fixed currency rate in the currency rate field.

Functions:

F13

Payment Details. Use this function to override the payment parameters using the Payment Overrides Window.

F16

Additional Overrides. Use this function to enter additional overrides using the Additional Overrides Window.

F19

Currency. Use this function to override currency details for transactions where currencies are not linked to the EURO.

F21

Text Entry. Use this function to enter text in a specified language. This text can be for internal or external use, according to the usage code selected.

Tip: You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language using **F16=Additional Overrides**.

Function For Advanced Pricing Only:

F14

Price Overrides. Use this function to enter price overrides for Advanced Pricing.

Press **Enter** to display the Conversational Order Line Details Screen.

Conversational Order Line Details Screen

To display this screen, press **Enter** on the Conversational Order Header Details Screen.

Use this screen to enter the details for the order.

Tip: You must enter at least an item and quantity.

19-15 82 MW KS IM II KENB20A PET166S2

Fields:

Untitled

Selection. Enter one of the following:

- 1 - Amend. To change the details of the order line except the stockroom. The selected line displays in the fields at the bottom of the screen.
- 2 - Text. To maintain text for this order line.
- 3 - Price Overrides. For advance pricing only. To enter price overrides to the current line.
- 4 - Delete. To delete the line, press **Enter** to confirm. The status of the line changes to ****DELETED****
- 5 - Source. To source the item from another location, or to supply a substitute item.
- 7 - Availability. To access availability details to estimate when it may be possible to satisfy the customer.
- 8 - Force Allocate. To force allocation on a line even where there is not enough physical stock. This makes the available stock negative, which means that current physical stock cannot meet all of the commitments made to customers, until you receive another supply.

9 - Price Detail. For advanced pricing only. To display a price detail enquiry that shows the price and breakdown of discounts used to calculate the line value.

Item

Enter the item sold. You can search for the item by name.

Qty

Enter the quantity ordered for delivery on the delivery due date. You can use up to three decimal places.

Tip: You only need to complete the other fields if you want to override the default.

Price

Enter a fixed price in the currency of the order. This overrides all other pricing and is assumed to be a net price (must be in the currency of the order).

Note: You can also override prices using option 3.

Note: If catchweight is active, you can enter fixed prices and discounts as a value with an optional unit of measure.

Due Date

Enter the delivery due date, if different from the due date for the order.

Price List

To use a price list just for this line, enter the price list, in the order currency. If no price exists on the price list, the order is suspended with an NP – no price suspense code.

If an item is to free of charge, you must use the FOC price list profile.

Note: If you are using advanced pricing, the free of charge price list is ZZZ not FOC.

Stockroom

Enter the depot used to deliver this order line, if it is different from the order stockroom.

Disc %

Enter the discount, as a percentage, to apply to this line.

Note: For advanced pricing, use the price overrides option (3) or view discounts using the price enquiry option (9).

Disc List

To use a different discount list for this line, enter a discount list in the currency of the order.

Functions:

F13

Trailer. Use this function to confirm the order using the Conversational Order Entry Trailer Screen.

F15

Restart. Use this function to restart the order entry. All entries made to-date are lost.

F21

Item/Quantity Selection. Use this function to search for an item and quantity in the Item field. In the displayed window, enter the required quantities against all the required items. Then select **F8=Update** to create an order line for each item.

Functions For Advanced Pricing Only

F9

Advanced Pricing. Use this function to reprice all order lines including whole order discounts. If you have amended lines, the whole order discount is changed so that the value of the whole order is different and may affect the discount breaks.

*Note: The order is also repriced when you select **F13=Trailer**.*

Order Lines:

To add an order line, press **Enter**. Sales Order Processing then:

- Calculates the line discounts and prices the order.
- Checks for the item at the nominated stockroom and that the stockroom is a depot.
- If the due date within the Allocation Time Fence set for the depot, checks the order quantity is less than or equal to the available stock.
- Checks the credit and price.

The line is added to the order, with any exceptional conditions highlighted. If the quantity is highlighted, allocation has been attempted, but there is insufficient stock at the nominated depot. If a kit component has insufficient stock, the quantity of the parent is also highlighted.

When you have added all the order lines, select **F13=Trailer** to complete the order.

Line Price Overrides Window (Option 3)

Note: This option is only available for Advanced Pricing.

To display this window, select an order line with option 3 - Price Overrides, on the Conversational Order Line Details Screen.

Use this screen to enter price overrides for an order line.

```

15-35  SA  MW  KS  IM  II  EDN400A  PET165S1
  
```

Fields:

Note: You must enter either a price type or a fixed price.

Price Type

Enter a price type to price this line.

Fixed Price

Enter a fixed net price to override the default calculated price for the order line.

Note: If you enter a fixed net price, you cannot enter any discount values, percentages or types.

Per

Enter the factor. The price value is divided by the factor to give the item's unit price.

Note: Enter either a discount type or a percentage but not both.

Discount Type

Enter up to four discount types, these must be price types with a pricing function of 1 - discounts. These override the discounts for the customer or item.

Discount Percentage

Enter up to four fixed discount percentages (for each of the set-up quantity breaks).

Presentation

For each discount percentage, enter one of the following:

- 0 - If the discount is a nett percentage.
- 1 - If the discount is a gross percentage.

Discount Value

Enter a fixed discount value per item issue unit.

Note: If entered, you cannot use the previous discount values.

Per (Discount)

Enter the factor. The discount price value is divided by the factor to give the item's discount unit price.

Select **F8=Update** to validate your entries and save the changes to the order line pricing.

Advanced Pricing with Catchweight

If catchweight is active, you amend the line price and discount details according to the following hierarchy:

	Pricing/ Discount - Primary	Pricing/ Discount - Secondary
Catchweight Type 1 items	-	Yes
Items with a Secondary UoM (Including catchweight types 2 and 3).	Yes	Yes
Items with no Secondary UoM	Yes	-

UoM (Price)

Enter the unit of measure for the fixed price entered for the item.

If you enter a UoM:

- The factor is always calculated for secondary UoMs.
- The factor is calculated for primary UoMs if they are one of the three on the item. (Otherwise you will be prompted to enter a UoM.)

If you do not enter a UoM:

- The factor is set to 0 and the price or discount value applies to the whole line.

Note: If you change the line quantity, the unit price or discount also changes.

Warning: You can price items set up as Catchweight types 2 and 3 by either primary or secondary UoMs. If you use a primary UoM a warning displays. You can cancel the warning and proceed with the order line.

Note: If you enter a primary UoM that is not one of the three UoMs held for the item, a window displays for you to enter the conversion factor. This is used to calculate the primary unit of measure.

UoM (Discount)

Enter the unit of measure for the discount entered for the item.

Note: You can discount all catchweight item types 1, 2 or 3 by a primary unit of measure. You are warned that the secondary UoM pricing was not used.

To save the changes and return to the previous screen, select **F8=Update**.

Order Entry Source Screen (Option 5)

To display this screen, select an order line with option 5, on the Conversational Order Line Details Screen.

This screen displays the item at the requested depot with the available stock and order position. Then there is a list of all the other depots where the item is stocked with the stock and order positions at these alternative depots. Finally, the screen displays a list of the alternative products, their depots and stock positions.

OE100C	Z1 - UK Demonstration Company	USER GBJBALTW	29/05/98
			9:42:54

F3=Exit F12=Previous F15=Restart			

Fields:

Select Quantity

The first line defaults to the original order quantity. You can enter any number of quantities against any depot and any product to source the order from a different depot or item. This generates an order line for each order quantity. If you reduce the original order quantity to zero, it deletes that order line.

Enter the quantities needed against one or more stockrooms, then press **Enter** to save and return to the previous screen.

Stock Availability Enquiry Screen (Option 7)

To display this screen, select an order line with option 7 on the Conversational Order Line Details Screen.

This screen shows a summary of the stock position, including physical and available stock, supply orders and back orders.

The lower part of the screen shows any unallocated sales orders (SO) and outstanding purchase orders (PO) in due date sequence.

Negative figures in the Available stock mean that supply is dependent upon promises for delivery being met, while a negative figure in Expected stock means that there is not sufficient stock to meet this order.

Fields:

Suspend

If Sales Order Processing has automatically placed the order on hold, the reason for the suspension is displayed.

You can enter a reason to suspend the order.

Charge Code

Enter up to three charge types, if required. Any type must be defined on the descriptions file against Major type SUNC.

You can process VAT only charges for samples or gifts. In this case, enter VAT against a charge code specifically set up for this purpose. Only VAT values are posted to Accounts Receivable.

Amount

Enter the charge for the charge type. This defaults to the value entered in the descriptions file.

Note: The standard charge on the descriptions file is always in base currency, for transaction currency accounts the charge is converted to the order currency.

VAT Code

Enter the VAT code if you want to change the normal code.

Functions:

F15

Restart order entry. Use this function to restart entering the order. This loses all data previously entered against this order.

F21

Text Entry. Use this function to enter text for a specified use and language. You specify your customer's default language in Customer Details Maintenance in Sales Order Processing. You can override this default language using

F16=Additional Overrides, when available.

Note: You do not need to select language codes to print text in the native language.

Press **Enter** to recalculate the charges total and VAT and add them to the order totals (excluding VAT only). Select **F13=End Order** to process the order. The Conversational Order Entry Summary Screen is displayed.

Note: EURO VAT is catered for, using VAT details maintained in the General Ledger. You can deduct cash discounts at order time, or payment time, or ignore cash discounts.

Note: If Extra VAT applies, for example, in Spain, it is kept against the VAT Code in the General Ledger.

Conversational Order Entry Summary Screen

To display this screen, select **F13=End Order** on the Conversational Order Entry Trailer Screen.

This screen shows the summary details of the previously entered order and the number of the order you have just completed.

Tip: You can start processing the next order using the fields at the top of the screen. For more information on these fields, see Conversational Order Entry Selection Screen.

```

Transcriptional Order Amend

3/OEP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

You can amend orders using either Conversational Order Amend or Transcriptional Order Amend, regardless of how they were originally entered.

Tip: You cannot use this Transcriptional Order Amend if you are using Advanced Order Entry.

Using this option you can also reprint the order acknowledgements. You cannot delete order lines but you can add new order lines to the order. This option does not automatically adjust the stock allocation.

You use the Order Cancellation option to cancel a whole order or delete individual order lines.

When you access the order, the screen shows whether the order line is on pick or not. You can cancel existing picking or despatch notes using another option to return the status of stock from on-pick to allocated.

If orders are already on pick:

1. If you add new lines or increase the quantities of existing lines, you can either produce another picking note to cover the extra allocation, or you can cancel the present pick note then issue a new note to cover the whole order. You can cancel the existing picking note before or after making the order amendments.
2. If you decrease the quantity of an existing order line, you must cancel the existing picking note first. You then issue a new picking note after making the downward adjustments to the allocation.
3. If you cancel a whole order the allocated and on-pick quantities are automatically reduced to zero - that is, as far as the system is concerned, the picking notes are cancelled.
4. If you cancel a line the allocated and on-pick quantities are automatically reduced to zero. You could amend the existing picking note, although for tidiness it is better to cancel the present picking note and issue another one.

Note: Once you have confirmed an order or order line, you cannot cancel or amend it.

Transcriptional Order Amendment Screen

To display this screen, select Order Amend (Transcriptional).

Tip: You cannot use this function if you are using Advanced Order Entry.

Use this screen to select the order you want to change.

Suspended Orders Release

5/OEP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Either the system or a user can suspend orders with a suspension type defined in the Descriptions File, major type SUSP. The system automatically suspends orders if (description codes in brackets):

- The customer is on credit stop (CS).
- The order would exceed the credit limit (CL).
- The customer is subject to litigation (CT).
- If you entered a fixed price for a line (FP).
- There is no price for a line (NP).
- If this price is a negative value (NV).

Users can suspend orders, for example, if the order is:

- A quotation that later becomes an order.
- A cash with order transaction and the cash received is too little.
- Taken over the telephone and you are waiting for written confirmation.

You must define a two character description code for every suspension reason that you may need.

Note: You can restrict the authority to amend and release suspended orders. You set up this authority in the General Ledger, you define a company, module and user level to selected suspension Reason Codes. If you use this, a user is only authorised to release orders suspended with a code they are authorised to. Otherwise each user can release all types of suspended order.

Suspended Orders Release Screen

To display this screen, select Suspended Order Release.

Use this screen to select the order you want to release.

Order Cancellation

7/0EP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Use this procedure to cancel all or part of an order. You can cancel an order or a line even if you have raised a picking note, unless the picking note is for a depot defined as a warehouse.

Note: If you want to cancel an order with live picking notes, JBA recommend that you retrieve these before cancelling the order. Otherwise they could be used to despatch stock and you only find the error when you request the despatch confirmation.

Order Cancellation Screen

To display this screen, select Order Cancellation.
Then enter the order number and press **Enter**.

Use this screen to either cancel the order or cancel individual order lines. The screen displays the summary order data.

Select **F3=Exit** to leave the screen without cancelling the order.

Manual Allocation By Order

8/OEP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Most allocation is performed interactively when you enter an order or as part of a batch run. The system automatically allocates stock based on delivery date requirements. The stock is allocated to order lines that are not suspended and there is sufficient stock.

However, you sometimes need to explicitly allocate or de-allocate stock to orders. You can either do this to a whole order, to an individual line on an order or to an item. If you allocate at line level, you can define the amount to be actioned. You may need to manually allocate in any of the following circumstances:

- You release a suspended customer order.
- You set the allocation priority of the order to 00 - Manual Allocation. You would use this for export or large orders where normal allocation would cause a disruption in the normal pattern of stock availability.

You can use manual de-allocation to re-assign stock if you find you can make better use of the stock.

You cannot de-allocate stock listed on a picking document. To reassign this stock, complete the despatch procedure with a short or zero despatch. This normally back orders the short shipment and releases the allocated stock.

If you have not confirmed despatch, you can cancel the picking note and de-allocate the stock.

Note: You can only cancel picking notes if the depot is not defined to Warehousing as a warehouse.

Manual Allocation Screen

To display this screen, select Allocation By Order. Enter the order number and press **Enter**.

This screen displays the summary order data. You can then allocate stock for the whole order or by individual line.

Note: You cannot allocate for the whole order if there is insufficient stock, you must process each line separately.

Enter the quantity of stock to allocate or de-allocate.

Functions:

F13

Allocate line. Use this function to allocate the action quantity entered to the displayed order line.

F14

Deallocate line. Use this function to de-allocate the action quantity entered from the displayed order line.

F15

Restart. Use this function to cancel any entries made.

Enter the quantity then select **F13=Allocate** or **F14=De-allocate**. The next order is displayed.

Manual Allocation By Item

9/OEP

Use this option to change the distribution of stock and to examine the sales demand on an item. You can review all outstanding or existing allocated order lines for a specified item and stockroom. You can use this option as an alternative to Manual Allocation By Order Number.

You can select the outstanding orders displayed by From and To Delivery Dates, or display all outstanding orders.

The stockroom must be defined to Inventory and Sales Order Processing. The stockroom item profile must be set up in Inventory for all stocked items.

Order lines are not displayed in the following instances:

- Scheduled orders.
- Orders being used by another user.
- Suspended orders.
- Unpriced orders (you must use batch pricing to price the order).
- The order line is a component of a kit and you are using the standard method of kit component allocation - that is allocation is controlled by the parent. You can control this using the Alternative Kit Allocation parameter within the Inventory Management Company profile.

Note: You can only maintain this parameter if Advanced Order Entry is active.

System Updates

The allocation or deallocation process reflects the changes made in the outstanding and allocated order line quantities. The total figures at the top of the screen also change to reflect the action processed. If an order cannot be met the available stock is allocated and the remainder of the order is placed on back order, if allowed.

Note: For Kit allocation only the complete sets are allocated. For example, for an order of three, two sets are allocated and the remaining set is held as a back order.

Manual Allocation By Item Selection Screen

To display this screen, select Allocation By Item.

Use this screen to select the outstanding orders you want to display.

- 5 - For Advanced Order Entry only. To allocate batches.
- 6 - For Advanced Order Entry only. To deallocate batches.

Action

Enter the quantity to allocate, or deallocate, for the order line.

Tip: To clear all Action quantities and Select codes entered, you can use **F5=Refresh**.

The quantity specified must be less than or equal to the outstanding figure to allocate or less than or equal to the allocated figure to deallocate.

Note: With Advanced Order Entry you can process non-stock items. You manually allocate these items so you can print a picking note. You can also allocate and deallocate batch reservations set up in Advanced Order Entry.

Functions:

F13

Allocate. Use this function to allocate all the items on all the order lines.

F14

Deallocate. Use this function to deallocate all the items on all the order lines.

F16

Stock Availability. Use this function to display the Stock Availability Enquiry for the selected item.

Enter the action quantity, then select the line with the required option, and press **Enter**. The line is updated. Select **F3=Exit** to leave the screen.

Interactive Confirm Despatch

10/OEP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

When you despatch all or part of an order, you must:

- Change the order to reflect the despatch.
- Reduce the stock of the items despatched.
- Create an invoice request.

You can do this either interactively using this option or as a batch job using the Fast Batch (Confirm Despatch) option. If you interactively confirm despatch you can review and amend each despatch before confirmation. If you use the batch job, you enter a list of despatches which you can then review and amend. You only need to enter the lines that need changing.

You can increase the quantity to despatch up to the over confirm tolerance specified for the item and stockroom within Inventory Management.

When you confirm the despatch of a kit, you confirm the parent. The components are displayed but you cannot make any changes.

Within Sales Order Processing, confirming despatch:

- Records part or whole shipments.
- Updates the orders file with the despatch quantity of each order line.
- Generates back orders or cancels the order balance when the despatch quantity is less than the order quantity.
- Produces despatch notes if required. You specify this on the Company Profile.
- Generates invoice details, including an invoice number, which you can print off and post to Accounts Receivable later with Invoices and Credit Notes.

Within Inventory Management, confirming despatch:

- Reduces physical and allocated stock.
- Writes stock movements to the Stock Movement File and Stock History File.
- Reduces lot or batch records.
- Increases the usage of despatched items.
- Calculates the cost to Inventory Management.
- Updates the last issue date.

Confirmation Of Despatch Selection Screen

 To display this screen, select Interactive (Confirm Despatch).

Use this screen to enter the despatch you want to confirm.

OE125	Z1 - Demonstration Company	User SP1	23/09/94 15:03:40
Confirmation of Despatch			
Enter the order number..... 0000095			
and picking note..... 00			
F3=Exit			

Fields:

Enter The Order Number

Enter the order number for which you want to confirm despatch.

And Picking Note

Enter the picking note sequence number. The first despatch note has a picking note sequence of zero.

 Press **Enter** to display the Confirmation Of Despatch Details Screen.

Confirmation Of Despatch Details Screen

To display this screen, enter the order and picking note number then press **Enter** on the Confirmation Of Despatch Selection Screen.

Use this screen to amend, when necessary, the requested despatch quantity to the actual despatch quantity.

The screen displays the customer's name, the order reference, date, and the lines printed on the picking note. The first quantity is the quantity which should be despatched and the second is the actual quantity. This is the quantity used to update stock and produce invoices.

Fields:

Invoice Qty

If the despatched quantity differs from the requested quantity, enter the actual quantity despatched. The actual quantity can be more than the requested quantity, if you have defined an overconfirm tolerance for that Item and Stockroom.

Note: If you enter a despatch quantity that results in a negative stock balance, a warning message is displayed. You only can proceed with the transaction if you allow Negative Stock for the stockroom. You set this for the Stockroom in the Inventory Company Profile.

Enter the unit of measure of the despatch. This defaults to the issue unit of measure.

Sec Val

Note: The secondary value only displays if catchweight is active and you have set up the items as catchweight types 1 or 2.

Enter the secondary value and unit of measure to despatch. This defaults to the nominal secondary value for the quantity picked.

Warning: If you change the quantity but not the secondary value, then the nominal secondary value is recalculated and a warning message displays prompting for the actual value.

The processing is as follows:

Catchweight type 1: Secondary stock is calculated and downdated by the actual secondary value entered. The invoice price is calculated from actual secondary value.

Catchweight type 2: The invoice price is calculated from the quantity despatched and the nominal secondary value despatched updates the invoice line.

Catchweight type 3: The secondary stock and invoice line is updated by calculated secondary value. The price is calculated by the quantity despatched. The cost is calculated by the secondary value.

Non-catchweight items with secondary value: As for type 3 except that the cost is calculated by the quantity.

Cncl

Note: This field only displays if you set Cancel Balance Allowed to 1 on the company profile.

Cancel balance. Enter one of the following:

0 - To keep the balance on file.

1 - To cancel the balance.

If an outstanding balance remains after a despatch for less than the requested quantity, it is deallocated.

Lot

Note: This field only displays for lot controlled items.

If the item is lot, batch or serial controlled, enter specific references for each one despatched.

More

If you need more than one batch or lot or serial number, enter 1 in this field. Press **Enter** to display the Multiple Lot Entry Window.

Functions:

F13

Confirm quantities. Use this function to confirm the quantities allocated.

Press **Enter** to check all quantities, validate Lot numbers and batches. Select **F13=Confirm Quantities** to display the Confirmation Of Despatch Charges Screen.

Select Lot Reference Window

To display this screen, prompt on the Lot field on the Confirmation Of Despatch Details Screen.

Use this screen to select the lot, batch or serial number you want to despatch. The screen shows the available and physical stock in each lot.

- B009	324.000		2.000

1=Select 2=Allocations Position to:
3=C-of-C reference 4=Text
F12=Previous

Fields:

Untitled

Select. Enter one of the following:

- 1 - Select. To select the lot you require.
- 2 - Allocations. Advanced Order Entry only. To display the details of any orders to which this lot is allocated.
- 3 - C-Of-C Reference. Advanced Order Entry only. To display the certificate of conformance details for this lot.
- 4- Text. To maintain or display text for this lot.

Select the Lot required with option 1. The Confirmation Of Despatch Details Screen displays with the selected lot number entered in the Lot field.

Multiple Lot Entry Window

To display this screen, enter 1 in the More field on the Confirmation Of Despatch Details Screen and press **Enter**.

Use this screen to select the lot, batch or serial numbers you want to despatch.

Note: If you are using lower level allocation (Advanced Order Entry must be active), then the pre-allocated lots and quantities are displayed. You cannot remove a pre-allocated lot but you can set the quantity to 0.

F4=Prompt F5=Refresh F8=Update
F12=Previous F24=More keys

F3=Exit F4=Prompt F12=Previous

Fields:

Batch

Enter the lot, batch or serial number to despatch.

Quantity

Enter the quantity to despatch for this lot or batch. The total must equal the quantity to despatch displayed at the top of the screen.

Secondary Value And UoM

Enter the secondary values and units of measure. This must be a valid conversion from the primary UOM and must fit the secondary value type. This defaults to the value shown on the picking note for catchweight types 1 and 2.

Note: If you are using lower level allocation, the secondary value and unit of measure values is by batch, serial or lot.

For catchweight items type 1 and 2, you enter the lot one line at a time, using the window displayed when you press **Enter**.

Note: For more details, see [Conversational Order Entry Secondary Value](#) item.

When the quantities entered match the despatch quantity, press **Enter** to check the details and **F8=Update** to save the entries.

Confirmation Of Despatch Charges Screen

To display this screen, select **F13=Confirm Quantities** on the Confirmation Of Despatch Details Screen.

Use this screen to enter the charges for this despatch. The screen displays the customer's name, the order details and any charges entered on the order. If the despatch is for a multi-currency customer the charges are displayed in transaction and base currency.

F18=Despatch details			
08-51 SF MW KS IM II KENB20A PET166S2			

Fields:

Despatch Date

Enter the date on which the despatch took place. This defaults to the current date.

Despatch Method

Enter the despatch method. This a mandatory field.

Charge Code

Enter a charge code. This must be defined on the descriptions file.

You can process VAT only charges for samples or gifts. You should enter VAT against a charge code specifically set up in the Inventory Management descriptions file. Only VAT values are posted to Accounts Receivable.

Amount

Enter the charge for this despatch. If you do not enter the charge the charge on the descriptions file is used. This is assumed to be in the transaction currency of the account.

Note: The charge is always held on the

descriptions file in the base currency. If the despatch is for an order not in the base currency of Accounts Receivable, it is converted into the transaction currency and displayed in both base and transaction currency.

Vat Code

Enter the tax rate code for the charge. This defaults to the values entered on the descriptions file.

Note: You can delete a charge entered on the order by removing the charge code or changing the values.

Functions:

F13

Confirm despatch. Use this function to confirm the despatch.

F15

Restart. Use this function to restart the confirmation of despatch process.

F18

Despatch Details. Use this function to amend the despatch details using the Despatch Details Window.

Select **F13=Confirm Despatch** to validate the data and perform the following system updates.

System Updates

Note: EURO VAT is catered for using VAT details maintained in the General Ledger. You can deduct cash discount either at order time, or payment time or not at all.

Note: If Extra VAT applies, for example, in Spain, the extra VAT is kept against the VAT Code in the General Ledger.

1. Stock and allocated stock are reduced.
2. The lot or batch records are reduced.
3. The cost of the inventory movement is calculated.
4. Inventory movements are written to the movement history file.
5. The usage for the despatched items is increased.
6. The last issue date for the despatched items is updated.
7. The order is changed to reflect the quantity despatched.
8. An invoice request is generated in the system, and an invoice number allocated.
9. Customer account balance for allocated stock that is not despatched is decreased.

Note: If World Trade is attached the movement is analysed to establish if it is an EC movement or not. If necessary it is included on the Intrastat and ESL reports. For more information refer to the World Trade Product Information.

Warning: There is a large amount of processing and therefore there will be a noticeable delay. Therefore whenever possible use the fast batch method of confirming the despatch.

Confirm Despatch Details Window (F18)

To display this window, select **F18=Despatch Details** on the Confirmation Of Despatch Charges Screen.

Use this screen to change any despatch details. The Sales despatch and miscellaneous invoice is derived from order overrides. You cannot maintain the type of despatch note if you want invoice consolidation. Consignments and internal transfers default from the Customer Sales Details Additional Details Screen.

Fields:

Document Processing

Online Print Of Despatch Notes

Enter one of the following:

0 - No. To print the despatch notes as a batch job.

1 - Yes. To print the despatch notes immediately.

Priced Despatch Note

Enter one of the following:

0 - No. Not to include prices on the despatch notes.

1 - Yes. To include prices on the despatch notes.

Type Of Despatch Note

Enter one of the following:

1 - Separate despatch note and invoice. To generate a separate despatch note and invoice separately.

2 - Combined document. To generate a combined despatch note and invoice.

Despatch Note Language

Enter the language to use on the despatch note. This must be defined to Application Manager.

Despatch Information

Despatch Method

Enter the default despatch method. This must be defined on the descriptions file, against major type MODE.

Transport Method

Enter the default transport method. This must be defined on the descriptions file, against major type TMTH.

Reason For Despatch

Enter the reason for the despatch. This must be defined on the descriptions file, against major type MOVR.

Terms Of Delivery

Enter the default terms of delivery. This must be defined on the descriptions file, against major type TDEL.

Note: If World Trade is live, this field defaults to the value held on the Customer Maintenance Trade Details Screen.

Carrier

Enter the default carrier. This is checked as follows:

1. If Advanced Shipping is live, and the processing company is active with Sales Order Processing, the carrier defaults to that defined via Shipping Customer Defaults.
2. If a new code is entered, it is validated against the Shipping names and Address file (Shipping Customer Defaults Maintenance).
3. If Transport Planning is live, and the processing company is active within Sales Order Processing, the carrier defaults to the carrier defined to the Transport Planning Delivery Profile.
4. If a new code is entered, it is validated against the Transport Planning Carrier file.

Tip: A Sales Order Processing company is defined to a Transport Planning company via an SOP company/stockroom combination.

5. If neither Advanced Shipping nor Transport Planning are live, then the default is blank. The carrier must be defined on the Inventory descriptions file, against major type CARR.

Shipping Marks

Enter the text to use as the shipping marks.

Number Of Packs

Enter the packaging type, the quantity and the unit of measure. If Advanced Shipping is live, the code is validated against the Pack Types file otherwise, it is validated against the Inventory descriptions file, major type TPPK.

Weight

Enter a unit of measure and a weight. The UoM must be defined to the Inventory descriptions file, major type UoM.

Volume

Enter the unit of measure and the volume. The UoM must be defined to the Inventory descriptions file, major type UoM.

Select **F8=Update** to save the changes. The Confirmation Of Despatch Charges Screen is displayed.

Confirmation Of Despatch Completion Screen

To display this screen select **F13=Confirm Despatch** on the Confirmation Of Despatch Charges Screen.

This screen displays the fields on the select screen and the details for the last despatch, including the number of the invoice that will be generated.

Note: If you use centralised delivery documentation, clean despatch notes are not printed.

Note: If the customer is a Module Interface Trading partner, the invoice is processed via AI.

Fast Batch Confirm Despatch

11/OEP

This activity is compatible with Work Management and you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Use this option to minimise the time taken to request confirmation of despatches. This is essentially a batch process where you enter a number of despatches into a batch and then request a separate job to run the update.

You should do the following:

- Check that all items were despatched as requested, that is you do not need to change any quantities.
- Sort into batches where the despatch method and the despatch date are the same.
- Check that you do not need to change the extra charges.
- If you have not set up automatic allocation for the Stockroom, exclude picking lists for Batch, Lot or Serial controlled items. Use the Interactive Confirm Despatch option to identify the Batch, Lot, or Serial numbers and quantities despatched. If you do use automatic allocation, check that the Batch, Lot or Serial numbers were despatched as requested.
- You can process catchweight type 3 and non catchweight items with a secondary unit of measure. For items designated catchweight types 1 and 2 you must confirm despatch (to record the secondary value despatched) using the Interactive Confirm Despatch option.

Confirmation Of Despatch Batch Screen

To display this screen, select Fast Batch (Confirm Despatch).

Use this screen to enter the picking notes and customers for which you want to confirm despatch.

```

Miscellaneous Invoicing

12/OEP, 13/OEP, 14/OEP. 15/OEP

These activities are compatible with Work Management and you can run them as part of a Business Process in System 21 Constructor and System 21 Explorer.

You can raise two different types of miscellaneous invoices or credit notes:

- One for a purely financial (non-stock) transaction
- One for stock update and financial transaction.

There are four different options:

- Credit Notes - use this to make a financial adjustment, for example if you have overcharged a customer.
- Invoices - use this to make a financial adjustment, for example if you undercharged a customer,
- Credit Notes (Stock Update) - use this to make a financial and stock adjustment, for example, if a customer has returned unused goods.
- Invoices (Stock Update) - use this to make a financial and stock adjustment, for example, a customer buying goods at a trade counter.

Note: The screens are similar for each of the four options, so only one option is described in detail.

For each option you can select the customer and enter special addresses with any necessary explanatory text for the document or the document lines.

You can use the customer's standard pricing and discounting or manually enter the price and discount. If you are using Advanced Pricing, however, prices and discounts are calculated according to the pricing rules defined.

Note: You can enter sundry item lines which are catchweight types or have secondary values. These are automatically converted and the line price calculated, if you have Advanced Pricing switched on.

You can reverse an invoice, using the Original Document Reference field. This creates a reverse entry of the original invoice re-priced and valued based upon current pricing information.

Invoicing Selection Screen

To display this screen, select the required Miscellaneous Invoicing option.

Note: The fields displayed are the same for all four options, however the screen title reflects the option selected.

Use this screen to select the customer for whom you want to raise the document.

Fields:

Invoice And Delivery Name And Address

Enter the invoice and delivery name and address for the customer.

Original Doc. Ref.

You can use this document reference fields in two ways:

1. To raise a miscellaneous invoice as a supplement to a normal invoice, enter the number to aid cross-reference.
2. To credit an existing invoice, enter the invoice number. This presents a credit note mirroring the invoice on the subsequent screens for you to amend or accept.

Stockroom

Enter the stockroom used for the delivery.

Tip: This must be defined to a stockroom site if you are using centralised documentation.

Reason Code

Enter the reason for this type of transaction. This must be defined on the Inventory descriptions file against major type RFCR.

Price List Code

Enter the price list to use. This must be in the same currency as the invoice or credit note.

Note: This is not displayed if you are using Advanced Pricing.

Despatch Method

Enter the method of despatch. This must be defined on the Inventory descriptions file, against major type MODE.

Discount List

Enter the discount list to use for the document. This must be in the same currency as the invoice or credit note.

Note: This is not displayed if you are using Advanced Pricing.

Period Number

Enter the account period to post the transaction to. This defaults to the current Sales Order Processing period.

Cash Discount Code

Enter the cash settlement discount to use for the document. To change the settlement terms use **F13=Settlement Override**, if you are authorised to do so.

Note: If you are using World Trade, the following fields are displayed. For more information see the World Trade Product Information.

EC Movement Required

Enter one of the following:

- 0 - If you do not require Intrastat details.
- 1 - If you do require Intrastat details.

Reason For EC Movement

If you do require Intrastat details, enter one of the following:

- 1 - If the goods have been received.
- 2- If the goods have been scrapped.

Note: The following fields only display for multi-currency customers.

Currency

Enter the currency for this document. This defaults to the Accounts Receivable currency.

Currency Rate Code

Enter the currency rate code associated with a currency rate. Set up the codes in the General Ledger.

Currency Rate

Enter the currency exchange rate for the code.

Enter 1 to multiply the transaction value by the currency rate to get the base value.

Enter 2 to divide the transaction value by the currency rate to get the base value.

Note: To use a fixed currency rate, leave the currency rate code blank and enter a fixed currency rate in the currency rate field.

Functions:

F13

Settlement/Payment Overrides. Use this function to amend the payment details using the Payment Override Window.

F14

Price Overrides. Use this function to define price overrides, if you are using Advanced Pricing.

F16

Additional Overrides. Use this function to amend the additional overrides using the Additional Overrides Window.

F19

Currency. Use this function to override currency details for transactions where currencies are not linked to the EURO.

F21

Text. Use this function to enter text for the document, or display previously defined text. You can define the usage and the language of the text.

*Tip: Specify the customer's default language in Customer Details Maintenance. You can override this default using the **F16=Additional Overrides** function, when available.*

Note: You do not need to select language codes to print text in the native language.

Press **Enter** to display the Invoicing Line Details Screen.

Invoicing Line Details Screen

To display this screen, press **Enter** on the Invoicing Customer Defaults Screen.

Use this screen to enter the items for which you want to raise the credit note or invoice.

Tip: For any line there are two mandatory entries; the item number and the quantity, you only complete the other fields to override the defaults.

Fields:

Untitled

Select. Enter one of the following:

- 1 - Lot header. To display the lot header details.
- 2 - Text. To enter multi-lingual text for the document line.
- 3 - Kit Parents. To enter kit parent items.
- 4 - Multiple Lot Entry. To select quantities against multiple lots.
- 5 - Price Overrides. To override the calculated line price. You must be using Advanced Pricing.

Item

Enter the item for this document line.

Quantity

Enter the quantity of the item. If you want to credit a value against a delivery, divide it by the despatch quantity and enter the resulting price in the price override fields as a net price and the despatch quantity in this field.

Note: The secondary value and UoM fields only display if catchweight is active.

Secondary Value

Enter the secondary value as for Confirm Despatch.

UOM

Enter the secondary unit of measure if you are using a secondary value.

Price

Enter the net price in the transaction currency of the order. This includes all discounts except the settlement discount.

Lot

Enter the lot number for lot and serial controlled items, if the credit or invoice includes a stock movement . This lot number must exist on the system for both credits and invoices.

Note: This is not relevant for invoices or credits without stock movements.

Add. Cost

Enter the cost price of non-stocked items, if the item has no cost on the item master file. This is used in Sales Analysis.

Disc %

Note: This is not displayed if you are using Advanced Pricing.

Enter the line discount percentage. This overrides the normal discount rules and you cannot enter a fixed price and a discount list.

P. List

Note: This is not displayed if you are using Advanced Pricing.

Price list. Enter the price list to use for this line. This must be in the same currency as the order.

If no price exists on the price list for the item, a line is generated for zero value. However, when you run the print invoice or credit note procedure, it attempts to re-price the line using the price at despatch routine. If this fails, the document is not printed, Accounts Receivable is not updated, and it is reported on an exception report.

D. List

Note: This is not displayed if you are using Advanced Pricing.

Discount list. Enter the discount list to use for this line. This must be in the same currency as the order.

More VAT

Enter the required VAT code.

Functions:

F15

Restart. Use this function to restart the procedure without saving any changes made so far.

Press **Enter** to save all changes. The Invoicing Summary Screen is displayed.

Invoicing Summary Screen

To display this screen, press **Enter** on the Invoicing Line Details Screen.

Use this screen to review the information entered for the document.

Fields:

Print Invoice Immediately

Note: This field is only displayed if you are not using the Centralised Delivery Documents.

Enter one of the following:

0 - Do not print invoice immediately.

1 - Print invoice immediately. This is for when you need invoices for over the counter sales.

Charge Code

Enter a charge. This must be defined on the descriptions file, under major type SUNC. You also set up a standard value and normal VAT code.

You can process VAT only charges for the delivery of samples or gifts. In this case, you should enter VAT against a code set up specifically for this purpose. Only VAT values are posted to Accounts Receivable.

Amount

Enter the charge. This defaults to the standard charge on the descriptions file.

VAT Code

Enter the VAT code. This defaults to the VAT code entered on the descriptions file.

Functions:

F18

Despatch Details. Use this function to amend the despatch details for this document.

Press **Enter** to accept the document. This performs a credit check, then displays a screen showing the document number, the customer, order reference and the date.

Note: EURO VAT is catered for using VAT details maintained in the General Ledger. You can deduct cash discount at order time, payment time, or never.

Note: If Extra VAT applies, for example, Spain, the extra VAT is kept against the VAT Code in the General Ledger.

Note: If a miscellaneous invoice or credit has no price, pricing is attempted. If this fails, the document is not printed, the ledgers are not updated and an error is written to the Invoices Not Priced report.

Enter Self Billed Invoice

20/OEP

Use this option to manually enter a self billed invoice. You need to manually enter self billed invoices when there is no EDI messaging available or if an EDI message failed.

When EDI messaging is available, record self billed invoices through the Receive Self Billed Invoice option in the EDI Module.

Self billed invoices are for when a customer uses stock from a consignment warehouse and then notifies the supplier of the transaction. The information is recorded in dummy invoice files until you process invoice matching. Once invoice details are matched with stock consumption details an invoice is raised through Sales Order Processing.

Manual Entry Of Self Billed Invoice Selection Screen

 To display this screen, select Enter Self Billed Invoice.

Use this screen to select the customer you want to enter a self billed invoice for.

Fields:

Invoice Name And Address

Enter the name and address where the invoice is sent to.

Delivery Name And Address

Enter the name and address to which you deliver the goods.

Invoice Date

Enter the invoice date. This defaults to the current system date.

Customer Invoice Number

Enter the invoice number assigned by the customer.

Stockroom

Enter the stockroom.

Currency

Enter the currency.

Currency Rate Code

Enter the currency rate code.

Currency Rate

Note: Enter either a currency rate or a currency rate code.

Enter the currency rate in the first section of the field. The currency rate converts old prices to the new prices. In the second section of the field enter one of the following:

- 1 - Multiply. To multiply the transaction value by the currency rate.
- 2 - Divide. To divide the transaction value by the currency rate.

Press **Enter** to display the Self Billed Invoice Entry Screen 1.

Self Billing Invoice Entry Screen 1

To display this screen, press **Enter** on the Manual Entry Of Self Billed Invoice Details Screen.

Use this screen to enter the items included on the invoice.

Enter the date that the goods were received.

Functions:

F15

Detail. Use this function to display either item summary or item details on a second line under the item.

Press **Enter** to display the Self Billed Invoice
Entry Screen 2.

Self Billed Invoice Entry Screen 2

To display this screen, press **Enter** on the Self Billed Invoice Entry Screen 1.

Use this screen to enter the charges for this invoice. This screen also displays a summary of the order details, the calculated total charge, the total VAT, and the calculated invoice total.

Fields:

Charge Code

Enter the charge code.

VAT Code

Enter the VAT code. This must be the same as the VAT code entered on the Self Billed Invoice Entry Screen 1.

Select **F8=Update** to confirm and save the data that you have entered.

Automatic Match

21/OEP

Use this option to process self billed invoice matching. Self billing produces dummy invoice records because you cannot calculate the true cost of the sales as despatch charges are not included.

Invoice matching compares stock shipment details or stock consumption's with invoices lines. Once the invoice matching is complete, the cost of the despatch is copied to the invoice so that the true cost of the sale is on the invoice record. These details are then transferred from the dummy invoice records to sales order processing and you can raise an invoice.

Batch Match For Goods Not Invoiced Screen

To display this screen, select Automatic Match.

Use this screen to define a criteria to process invoice matching.

OE431	Z1 - GB Demonstration Company	User GBJBACHG	21/10/97 13:09:09
Batch Match for Goods not Invoiced

6-20 SA MW KS CL TA DM II EDN400A KB PET178S1			

Fields:

From Date

Enter the date that you want the process to run from.

To Date

Enter the date that you want the process to run to. The default is today's date.

Date to Match

Enter one of the following:

1 - Date Range. To add together invoice lines and shipment or consumption lines within the whole range specified and compare the two resulting figures for a match.

2 - Individual Dates. To match lines from invoice lines and shipment or consumption lines where the dates are the same.

Customer

Enter a customer to only match invoices for a specific customer.

Match Type

Enter one of the following:

- 1 - Consignment Sales Despatches. To match invoices to consignment sales despatches.
- 2 - Consumption of Consignment Stocks. To match invoices to consumption of consignment stocks.
- 3 - Both. To match invoices to consignment sales despatches and consumption of consignment stocks.

Test Run

Enter one of the following:

- 0 - Live Run. To update files and transfer data from the matched lines to the Sales Order Processing invoicing system.
- 1 - Test Run. To generate a report but not perform any file updates.

Select **F8=Submit** to submit the job to batch.

Interactive Manual Match

22/OEP

This function is used as either an automatic matching process in itself or as a manual matching process for lines which failed to match in the batch matching process.

Interactive Match for Goods Not Invoiced Screen

Select Manual Match from the menu to display the Interactive Match for Goods not Invoiced Screen.

```
OE432                Z1 - UK Demonstration Company    User GBJBAMSA    10/07/98
                                                           10:02:38

F3 =Exit  F4 =Prompt

MA  b 12/027
```

Fields:

Customer

Enter a customer code. This field is optional but if no code is entered, the process will take place for all customers. This field is mandatory.

Match Type

Enter one of the following:

1 - Consignment Sales Despatches. Matches invoices to consignment sales despatches.

2 - Consumptions of Consignment Stocks. Matches invoices to consumptions of consignment stocks.

3 - Both. Matches invoices to consignment sales despatches and consumptions of consignment stocks.

This field is mandatory.

Select **Enter** from the Interactive Match for Goods not Invoiced screen to display the Unmatched Invoice Lines / Goods Not Invoiced window.

Unmatched Invoice Lines / Goods Not Invoiced Window

This window provides an interactive method of matching invoice lines to shipment/consumption lines. You can overcome price and quantity discrepancies between the two sets of data by amending the invoice lines to be matched to the consignment/shipment lines. This window is used to handle the exceptions generated and reported on by the batch match process.

Select **Enter** from the Interactive Match for Goods not Invoiced screen to display the Unmatched Invoice Lines / Goods Not Invoiced window.
