Chapter 3

Advanced Pricing

Introduction To Advanced Pricing

Advanced Pricing is an alternative way of handling pricing and discounting, in order entry, amendment, and invoicing. To use Advanced Pricing within a company you must set the Pricing Structure flag on the Company Profile to 1 (advanced). Advanced pricing then replaces the standard routines and can affect the following:

- Order entry.
- Order amendment.
- Sundry invoices and credits.
- Invoices and re-pricing.

With Advanced Pricing you can authorise users, maintain price and discount lists, apply global pricing.

*Note: If you are using catchweight then your pricing structure (set up using **F14** in your company profile) must be set to 1 for Advanced Pricing.*

Use Global Pricing to create one price list from another with optional uplifts. It contains the following procedures:

- Global Pricing Request - This specifies the new and old price lists, the definition of the uplift, and the specification of other parameters. You can review and amend the created work file.
- Global Price Amendment - Use this to review the global uplifts and amend any detail prices which require special attention.
- Global Price Update - This process takes the workfile and creates the new price list.
- Default Price List - Use this to create a default price list.

Advanced Pricing Logic

For each order line price types are retrieved in the following sequence:

Price (Price Type 2)

1. Apply price overrides including any fixed price.
2. Apply defaults for the customer delivery sequence.
3. Apply defaults from the customer 000 delivery account.
4. Read price types lowest sequence first until a valid customer and item combination is retrieved.

Discount (Price Types 1 And 7)

1. Apply discount overrides including any fixed discounts.
2. Apply defaults for the customer delivery sequence.
3. Apply defaults from the customer 000 delivery account.

4. If no details found, retrieve the discounts either:
- By Sequence (Discount application - 1) - Read price types lowest sequence first. Apply all valid customer and item combinations.
 - By Nett/Gross (Discount application - 2) - First read all nett discounts lowest sequence first. Then read all gross discounts lowest sequence first. Apply all valid customer and item combinations.

Price Type Application

Line level - Price and apply line discount type 1 followed by line discount type 7.

Order level - Apply order discount type 1 followed by order discount type 7. After all other discounts, apply whole order discount type.

Pricing Authority

1/OEA

Use this option to maintain user's pricing authorities.

The maintenance of the pricing lists depends on Price Authority. The pricing authority is in the range 1 - 9, with 1 being the lowest, and 9 being the highest. Therefore a user with an authority of 5 can maintain pricing lists, also known as types, with an authority of 5 or less, that is 5, 4, 3, 2 and 1.

Price Authority Maintenance Screen

To display this screen, select Pricing Authority (Maintenance).

Use this screen to maintain a price authority for a user profile. This screen displays a list of the currently defined authorities.

```

Fields:

Select

Enter one of the following:

- 1 - Select. To amend the pricing authority.
- 4 - Delete. To delete the pricing authority.

Position To

Enter a user profile to commence the display from.

Select User Profile

Enter a user profile to amend, or to create a new authority, enter a new user profile.

Functions:

F10

Add. Use this function to add a new pricing authority.

Enter a new user profile and press **Enter**. This displays the Authority Class Window.

Authority Class Window

To display this window, either enter a new user profile, or select a user profile to amend on the Price Authority Maintenance Screen.

Use this screen to enter or amend the details for the pricing authority.

15-24 82 MW KS IM II KENB20A PET178S2			

Fields:

User

Enter the user profile to amend. If you selected the profile on the previous screen, you cannot amend this.

Authority

Enter an authority level, with 1 being the lowest and 9 the highest.

Press **Enter** to validate and save the User Profile.

Pricing Type Profile

2/OEA

Use this option to create Pricing Type Profiles.

Pricing Type Profile specify how the price lists and discount lists for your items and customers will function.

You can set up pricing profiles for many different currencies and functions. You can define these all under one pricing type.

Pricing Type Profile Maintenance Selection Screen

To display this screen, select Pricing Type Profile.

Use this screen to enter the pricing type, currency and function for which you want to define a profile.

The screenshot shows a SAP terminal window with the following content:

```

Fields:

Sequence Number

Enter when this Price Type is searched to see if it applies to a particular order line. System 21 searches from 1 - 999 in sequence, therefore the lower the sequence number the earlier the price type is applied.

Number Of Break Points

Break points are the levels at which prices or discounts start to apply. Enter the number of levels you want the pricing type code to have.

Number Of Values

Discount Lists Only. Enter the number of values discounts, or discount breaks. This is only valid for 0 breakpoints.

Number Of Percentages

Discount Lists Only. Enter the number of percentage discounts. These are displayed in pairs against each value line. This is only valid for 0 breakpoints.

Presentation

Discount Lists Only. Enter one of the following:

0 - If this is a non-presentable discount, that is the discount is not shown on invoice.

1 - If this is a presentable discount, that is the discount is shown on invoice.

Limit Code

Discount Lists Only. Enter one of the following:

1 - To base the discount on the order line value.

2 - To base the discount on the order line quantity.

Rate Code

Discount Lists Only. Enter one of the following:

1 - To define this discount as a percentage.

2 - To define this discount as a value.

Line/Order Level

Discount Lists Only. Enter one of the following:

This defines the discount as being calculated against the line or the order. Order level is available for item groups only.

0 - If this discount is applied at line level.

1 - If this discount is applied at order level.

Authorisation

Enter the minimum user authorisation level required to maintain this pricing type.

Description

Enter the description of the list.

Next Near Breakpoint

Enter the next level at which prices or discounts start to apply.

Retrospective Target

Retrospective Discount Lists (Type 6) Only. Specify the target that the Retrospective Discount Scheme must achieve in order to qualify for the retrospective discount. This target can be either a quantity or a value according to the selection made in the Limit Code field.

Applied At

In each of the following fields, enter the way the profile is applied. This is at different levels for different profile types. For example, you cannot apply a whole order discount profile to a particular item level.

Customer Level

Enter one of the following:

0 - All. To apply the profile to all customers.

2 - Customer. To apply the profile to a specific customer.

3 - Customer Group. To apply the profile to a group of customers. This is defined on the descriptions file, major type CUSG.

Item Level

Enter one of the following:

- 0 - All. To apply the profile to all items.
- 1 - Item. To apply the profile to a specific item.
- 2 - Item Group. To apply the profile to a group of items. This is defined on the descriptions file, major type ITMG.

Note: If you set the Customer Level to 0 you cannot set the Item Level to 0.

Application Level

Enter one of the following:

- 1 - Gross. To apply the profile against Gross Unit price. (Discount percentage off the original price).
- 2 - Nett. To apply the profile against the Nett Unit price. (Discount percentage off the last discounted price).

Press **Enter** to save the information and return to the menu.

Restrictions File Update Window

This window displays automatically if you make changes to the sequence number or add a price type for all customers, and have set the Restrictions Generation Flag on the Company Profile.

Note: Updating is specific to the relevant price type, currency and price.

Use this window to specify how you update the prices using the defined profile.

Pricing Type

3/OEA

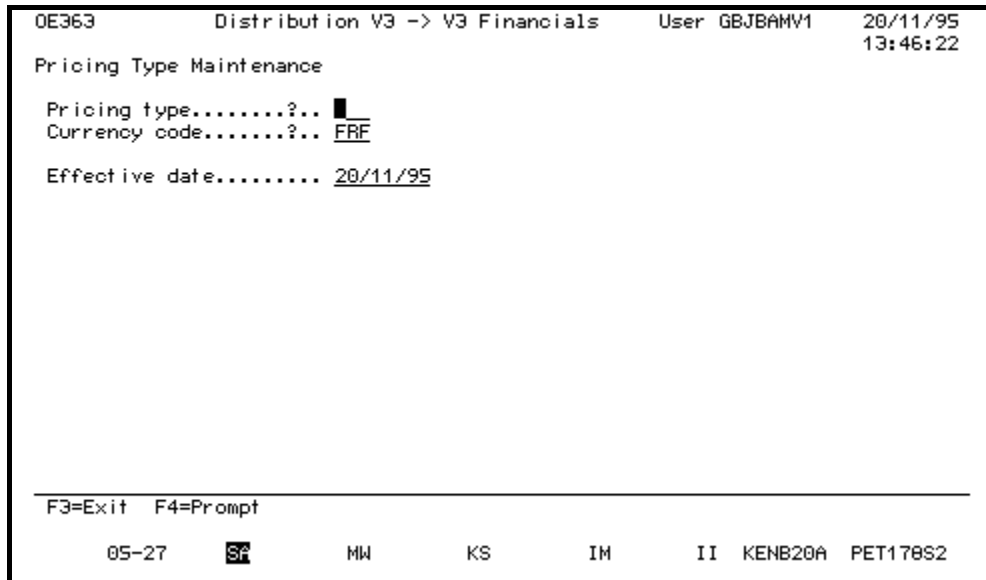

Use this option to maintain the Pricing Type Details.

The pricing type details are in effect the Advanced Pricing equivalents of price lists, discount lists, and so on. They replace the list you maintain in standard Sales Order Processing.

Pricing Type Maintenance Screen

 To display this screen, select Pricing Type (Maintenance).

Use this screen to select the pricing type you want to maintain.

Fields:

Pricing Type

Enter the pricing type for the price or discount list.

Currency Code

Enter the currency for this list.

Effective Date

Enter the date at which these details become effective (defaults to current date).

Note: You can enter more than one price or discount for an item, for example. The effective date is the date on which the price or discount starts to apply.

Enter the selection details and press **Enter** to display the Pricing Type Maintenance Details Screen.

Pricing Type Maintenance Details Screen

To display this screen, enter the selection details and press **Enter** on the Pricing Type Maintenance Screen.

Use this screen to select the pricing line you want to amend.

This screen displays the information defined on the price type profile. The exact information displayed depends upon the selected price type. For each level applicable, the price list shows that a price exists for a given period of time.

Fields:

Presentation

Enter one of the following:

0 - To display the nett price.

1 - To display the gross price.

Start Date

Enter the date from which the amended pricing details apply.

End Date

Enter the date from which the details cease to apply. Enter zero for no end date.

UoM Code

Enter the unit of measure for the prices and discounts. If you change the UoM you are prompted for the conversion factor.

UoM Factor

Enter the conversion factor to apply to the price, discount and quantity ordered to convert to the Item Issue Unit Of Measure.

Example: UoM Code oz with UoM Factor 1.

For a catchweight company. You must enter the UoM for item level price types. If possible, the UoM factor is calculated from this. You will not be prompted for a UoM Factor even if it cannot be calculated. Catchweight items are calculated by the known factor. For catchweight type 1 items the price UoM must be a secondary UoM.

For non catchweight company. If the item uses a secondary UoM you can change the conversion factor.

Note: For item group and all item price types there is no difference between a catchweight and a non-catchweight company

Price

Note: You can price or discount any item with a secondary UoM by that UoM.

Enter the price required.

Limit Code

Enter one of the following:

- 1 - Value. To base the discount on value.
- 2 - Quantity. To base the discount on quantity.

Rate Code

Enter one of the following:

- 1 - Percentage. To base the discount on percentage.
- 2 - Value. To base the discount on value.

Line/Order Level

Enter one of the following:

- 0 - Line. To calculate the discount for the line.
- 1 - Order. To calculate the discount for the order.

Order level is for item groups only. The qualifying value/Qty is for all items within the specified item group for the order.

Next Near Breakpoint where

Enter the next level at which prices or discounts start to apply.

Select **F8=Update** to save the changes. The Restrictions File Update Window displays if you set the Restrictions Generation Flag on the Company Profile.

Pricing Type Maintenance Quantity Breaks Screen (Option 2)

To display this screen, select a pricing line with option 2 on the Pricing Type Maintenance Screen.

Use this screen to enter the quantity, value and percentages for the discount breaks.

Note: The exact fields displayed depend upon the definition of the pricing profile.

Global Pricing Amendment

12/OEA

Use this option to amend a global uplift, defined using the Global Pricing Request Option.

Amend Pricing Workfile Screen

To display this screen, select Global Pricing Amendment.

Use this screen to select a global uplift which is taking place so you can create a price type.

```

Global Pricing Updates

13/OEA

Use this option to select a price type to immediately run the global update defined using the Global Pricing Request option.

Note: You must process all the special amendments using the Global Pricing Amendment option before selecting this option.

Update Live File Screen

To display this screen, select the Global Pricing Updates option.

Use this screen to select the update you want to run immediately.

OE369				Distribution V3 -> V3 Financials				USER GBJBAMV1				20/11/95			
												14:34:45			
Update Live File															
1	Old Type	New Type	New Start Date	1	Old Type	New Type	New Start Date

1=Select for Update															
F3=Exit F8=Update															
08-02				S		MW		KS		IM		II KENB20A PET178S2			

Fields:

Select

Enter 1 against a line to select the price type to update.

Select **F8=Update** to submit the update process to a batch job.

Generate Customer Restrictions

14/OEA

This function generates customer price restrictions automatically. You can specify whether or not the restrictions are applied to All Customer price types.

This function is only applicable to companies where the Restrictions Generation flag on the Sales Order Processing, Company Profile, is set to 1 (automatic). If the flag is set to 0 (manual), then an error message is displayed and processing halted.

It processes price types with a pricing function of 1 (discount), 2 (price), 5 (whole order discount) and 7 (special allowance only). This *does not* process type 6 (retrospective discounts).

Generate Customer Restrictions Window

To display this window, select Generate Customer Restrictions.

Fields:

Include/Exclude 'All' Customer Price Types

Enter one of the following:

- 1 - To include all customer price types.
- 2 - To exclude all customer price types.

Select **F8=Confirm Submission** to submit the batch job.

Pricing Type Enquiry

21/OEA

Use this enquiry to view the details of the pricing type. For more information on the information displayed, see the Pricing Type Maintenance Section.

Select Pricing Type (Enquiry).

Pricing Enquiry By Customer/Item

22/OEA

Use this enquiry to display a list of the Price and Discount types for a specified customer and delivery address and Item.

Pricing Enquiry Selection Screen

To display this screen, select Pricing Enquiry By Customer/Item.

Use this screen to select the customer and item for which you want to display the details.

```

Price function..... 1 (1=Discount, 2=Price)

F3=Exit F4=Prompt

05-24   MW KS IM II KENB20A PET178S2
```

Fields:

Customer

Enter a customer and delivery address.

Item Number

Enter an item.

Price Function

Enter one of the following:

1 - Discount. To display the discounts for this customer and item.

2 - Price. To display the price types for this customer and item.

Press **Enter** to display all the valid price or discount types for the selected customer and item combination.

Note: The price shown at the top is the one used by the pricing program.

Tip: If this screen shows nothing, then the pricing program will not price or discount the item. All discounts shown are applied.
