Chapter 6

Reports

Order Acknowledgements

1/OER

Select Order Acknowledgements.

This activity is compatible with Work Management, you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Note: It is not mandatory to print an Acknowledgement.

Use this option to print or reprint Order Acknowledgements.

OE311	Z1 - Demonstration Company	USER SP1	23/09/94 16:23:30
-------	----------------------------	----------	----------------------

Acknowledgements print/reprint

Order number from..... _____ to _____

Include already printed... 0 (0=No, 1=Yes)

F3=Exit F8=Submit

Fields:

Order Number From/To

Type in the range of order numbers. If you do not enter a range, then all unprinted order acknowledgements, for customers that require them, will be printed.

Include Already Printed

Enter one of the following:

0 - To not reprint order acknowledgements.

1 - To reprint order acknowledgements.

Note: Order acknowledgements will not be printed for completed orders.

F8 to submit the background process.

Picking/Despatch Notes

The Generate Pick Instructions activity is compatible with Work Management you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

The following general sequence of events is followed by the system. For stockrooms:

- The stock is allocated to the order.
- The picking note is requested and printed.

And in addition, for stockrooms defined as warehouses in Warehousing:

- The location of the stock in the warehouse is identified and printed on a picking list.
- The stock is confirmed picked (within the Warehousing module).

Note: If the stockroom is not a warehouse you can set a flag on the sales customer details to requests a manual pick list. This is an additional step in the process that prints all stock allocations for all such customers together. This includes a picking or marshalling phase, where you can adjust the despatch note, using manual allocation prior to printing. You can then request the picking note by order number. Once the order has been despatched the picking note number is used to update the system.

Once stock has been allocated to an order you can request despatch by printing a picking note, or if the stockroom is a warehouse, by transferring the request to the Warehouse module. You only need to print those picking notes which have to be despatched immediately. This is controlled by printing picking notes up to the nominated picking time fence.

Any allocated stock which is outside the time fence, will not normally be included on the picking notes.

If an order is to be satisfied from more than one stockroom then a picking note will be printed for each stockroom. This is to simplify the control of the documents at the depots.

All outstanding allocations inside the time fence, irrespective of the method and the timing of the allocation will be included on a picking note.

Warning: Take care not to run this procedure for the same stockroom and at the same time as the print picking list procedure in the Warehousing module.

You can generate picking notes for:

- A selected depot up to the picking note time fence or lead time.

- A range of orders.
- A single order. (For example to print the despatch note for a customer for whom a manual pick list has been printed prior to the confirmation of despatch.)

You can reprint a picking note. You can only do this before confirmation of despatch. You must exercise care or you could action a double despatch.

Stockroom and lead times are used together to select the picking notes or order number range.

Print Picking Notes

2/OER

Select Picking Notes.

Print and Reprint Pick Notes activities are compatible with Work Management you can run both as part of a Business Process in System 21 Constructor and System 21 Explorer.

Use this screen to select picking notes you want to print. The default picking time fence is retrieved from the descriptions file, major type DNTF, and is displayed in the field lead time. You can use this option to print picking notes for all stockrooms.

OE340P NR - Neil Radford and Co. Ltd USER GBJBA1MS 13/06/96 15:14:50

Request Picking

Stockroom.....?.. ☐ (Blank = Process order number range)

Order to..... (Blank = 9999999, non-blank entry supersedes any entry in stockroom field)

Re-Print Picking Note

Picking note..... /

F3=Exit F4=Prompt

05-20 SF MW KS IM II KENB20A PET166S2

Fields:

Stockroom

Enter a specific stockroom, or leave blank for all stockrooms.

Lead Time

You can overwrite the default for your own picking note time fence. For example, prior to holidays or week ends. This is expressed in days.

Order From

Enter the order number to print a single order. Or enter the first number if you want to print a range of orders.

Note: If you use this as your selection criteria then the picking note time fence is ignored.

Order To

If you want to print a range of orders, enter the highest order number that you want to print.

Picking Note

Enter the picking note you want to reprint.

For Stockrooms:

The system produces picking notes, manual pick lists or both, for allocated orders which satisfy the selection criteria.

For Warehouses:

Requests for despatch are generated in Warehousing.

Note: Each picking or despatch note is identified by the system order number and picking note sequence number. The first picking note sequence number for an order is always 00.

Press **Enter** to validate the selections and submit the job.

Consolidated Invoices

You use a consolidated invoice to bill a customer for more than one despatch. A consolidated invoice details each line of each despatch, and each sundry charge of each despatch. You set the consolidation flag at the customer delivery point and can be over the following intervals:

- A day.
- A week.
- A period.

Consolidated invoices are printed after the end of the selected interval.

That is,

- If you select daily consolidation the first invoice print run of the day will print the consolidated invoices for orders despatched the previous day.
- If you select weekly consolidation the first invoice print run after Inventory Management's Week End Update will print the consolidated invoices for orders despatched the previous week.
- If you select periodic consolidation the first invoice print run after Inventory Management's Month End Update will print the consolidated invoices for orders despatched the previous month.

Note: If you override the normal invoice address on an order, it will not be consolidated.

Note: Sundry Invoices and Credit Notes are not consolidated.

Invoices/Credit Note Print

3/OER

The Invoice Print and Credit Note Print activities are compatible with Work Management you can run both as part of a Business Process in System 21 Constructor and System 21 Explorer.

This option:

- Produces all or selected outstanding invoices, including sundry invoices.
- Produces all or selected outstanding credit notes.
- Optionally posts the documents to Accounts Receivable, and
- Produces a Non-Unique References report - lists any invoices with the same invoice number.
- Extracts invoice details to be passed through AFI into the General Ledger, and
- Produces an Accounts Office Posting List report.
- This program prepares and prints the Invoice and Credit Note documents for all transactions since the previous run.

For orders priced at the time of despatch the invoice is priced using the prices and exchange rate applicable at the date of despatch. If the order is not complete the residual order is revalued using the despatch price

Note: Pricing rules depend on whether Advanced Pricing is used.

In addition the system produces, where applicable, Collection Documents plus reports covering Document Creation, Replacement Documents, Accepted and Unaccepted Document Exception Reports.

Multi-Currency

Invoices are in the same currency as the orders. Postings to Accounts Receivable are in both the order currency and the Accounts Receivable base currency.

Note: If World Trade is active, a Currency Conversion Exceptions Report is produced.

Note: If AFI is active, two reports are produced: Invoices Note Extracted Report and Account Deviation Errors Report.

Invoice Print Selection Screen

Select Invoices/Credit Notes.

Use this screen to select the documentation you wish to print.

Enter one of the following:

- 1 - Select invoices.
- 2 - Select credit notes.
- 3 - Select both invoices and credit notes.

Print Invoice Summary

Enter one of the following:

- 0 - Do not print an invoice summary as standard.
- 1 - Print an invoice summary as standard.

Post To Accounts Receivable

The Invoice Posting and Credit Note Posting activities are compatible with Work Management you can run both as part of a Business Process in System 21 Constructor and System 21 Explorer.

Enter one of the following:

- 0 - Do not post to Accounts Receivable. You can post Invoices and credits to Accounts Receivable separately by using Invoice Posting.

1 - Post documents to the ledger. All invoices and credits printed but not yet passed to Accounts Receivable up to those invoices (or credits) selected will be posted.

Post to EDI Data

Enter one of the following:

0 - Do not post to EDI Data.

1 - To post to EDI Data.

Selection Criteria

You can select a range of invoice numbers, despatch dates or despatch references; or manually enter a list of the same items. When you press **Enter** the system will prompt for a range or for entry of specific items.

Invoice Number

Enter one of the following:

1 - For a range.

2 - For a list.

Despatch Date

Enter one of the following:

1 - For a range.

2 - For a list.

Despatch Reference

Enter one of the following:

1 - For a range.

2 - For a list.

Note: If you have set the Assignment of Numbers flag on the Sales Order Processing, second Company Profile Maintenance screen to 2 (invoice print) then invoices will be assigned new invoice numbers.

Select **F8=Continue** to create a list or enter a range and action the batch job.

Invoice/Credit Note Reprint

1... 4/OER
2...

Use this option to re-print a single or range of invoice or credit notes.

Invoice/Credit Note Reprint Selection Screen

Select Invoice/Credit Reprint on the menu.

Use this screen to select the type of document you wish to reprint.

OE346	Z1 - UK Demonstration Company	USER GBJBAHEH	11/06/98 13:55:48

Enter one of the following:

- 1 - To reprint invoices.
- 2 - To reprint credit notes.
- 3 - To reprint both invoices and credit notes.

Invoice/Credit From

Enter the starting range of the invoices/credit note.

Invoice/Credit To

Type in the end range of the invoices/credit note.

Leave this blank to re-print all relevant transactions starting from the invoices/credit from number.

Note: If the transaction type is invoice and you enter a credit note number a warning message will be displayed, and vice versa.

Re-Send If EDI

Enter one of the following:

0 - No. You cannot re-send via EDI.

1 - Yes. You can automatically re-send when you do a Send.

2 - Print the invoice.

Tip: The reprinted documents will be an exact copy of the original but marked **Reprint.

Select **F8=Submit** to validate your selection and process the background job.

Batch Allocation

10/OER

Warning: You must run the Order Pricing routine before the batch allocation job. Otherwise, all unpriced orders will not be allocated stock.

The Batch Allocation activity is compatible with Work Management you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

This option reviews all outstanding orders and tries to allocate stock. This is a complex decision process and a number of factors are considered:

- The relative priority of orders.
- The required due date.
- Credit control modules.
- Whether your customer allows part shipment for orders?
- Whether your customer allows back orders?

These obviously interact with each other in contributing to the allocation decision.

Orders are considered for allocation in priority and then due date sequence. They are excluded from allocation if any of the following is true:

- The due date is beyond the allocation time fence (this is a forward order).
- The customer is on credit stop.
- The credit limit is exceeded prior to allocation commencing.
- The order is suspended prior to allocation.

An order is suspended for credit exception if either of the credit checks fail before allocation is attempted.

The action taken by the batch allocation run is shown in the Decision Table. The procedure is submitted directly to the job queue from the menu. The customer's credit limit is compared to the sum of:

- Accounts receivable balance.
- The value of all allocated orders.
- The value of goods despatched but not yet invoiced.
- The value of accepted bills of exchange; if available.
- The value of allocated stock for the order line.

Once an allocation has been performed the allocated order balance is increased.

After the Credit Check/Suspend routine, orders are not suspended by the allocation routine, but excluded and reported on the appropriate report.

Batch Allocation - Decision Table														
Allocation Check														
Order fully allocated?	Y	Y	Y	Y	Y	N	N	N	N	N	N	N	N	N

Note: ¹ = Allocation to stock limit

Batch Allocation Stockroom Selection Screen

Select Batch Allocation.

This option reviews all outstanding orders to allocate stock, for all depots or just a specific depot.

OE315	Z1 - Demonstration Company	USER SP1	23/09/94 12:41:14
Batch Allocation			
Stockroom.....?...?.. __			
EITHER Enter a specific stockroom to process.			
OR leave blank to select all locations.			
F3=Exit F4=Prompt			

Fields:

Stockroom

Enter a specific stockroom or leave blank to include all stockrooms.

System Updates:

Three reports are produced from the run.

- Credit Exception Report - A list of orders where allocations have been prevented due to a credit problem.
- Stock Exception Report - A list of orders where allocations have been prevented due to insufficient available stock.
- Allocation Audit Report - Showing a list of orders where allocation has been done.

Press **Enter** to process the job.

Batch Order Pricing

11/OER

Warning: *You must run this job before the batch allocation job. Otherwise, all unpriced orders will not be allocated stock.*

When you set up the company profile you can decide whether you want pricing to be done interactively or as a batch job, for Transactional Order Entry.

The batch pricing process will select the prices from the price list in the customer's sales information (or the price and discount if Advanced Pricing is used). You can override the list at order header or at order line level.

Select Order Pricing.

You must run this option regularly so that orders that have not been priced will be processed. This option will price all transcription orders entered or amended since the last run. The process will suspend an order if:

- The customer is on a credit stop.
- The customer's credit limit has already been exceeded.
- No price is found for a particular item.

Note: If Advanced Pricing is in use, the batch order pricing routine will calculate the price according to price types in force for the order date.

System Updates:

Two reports are generated by running this job:

- Order Pricing Exceptions Report - A list of order lines that have been suspended as they have no price, a fixed price entered manually on the order line, or a negative value.
- Order Pricing Credit Exception Report - A list of customer orders on credit stop or which have a credit limit failure.

Select **F8=Confirm Submit** to process the job.

Picking Note Cancellation

12/OER

Use this option to cancel a previously printed picking note.

Note: The stock which was allocated on the picking note remains allocated.

Once a picking note has been cancelled it cannot be confirmed as despatched. It is important that cancelled picking notes are either destroyed or defaced to stop them being used.

Note: This option does not de-allocate the associated stock.

Note: A picking note raised against a depot defined to Warehousing can only be cancelled up to the point of selecting it for printing on a Warehousing picking list.

Picking Note Cancellation Screen

Select Picking Note Cancellation.

This activity is compatible with Work Management you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Use this screen to select the picking note you want to cancel.

Note: You should restrict this procedure to perform when the operator actually has the document to hand.

Functions:

F11

Delete. Use this to flag the picking note as cancelled. The allocated stock remains allocated to the order such that if a new picking note was requested immediately the items would be included on it.

Day End Processing

13/OER

Select Day End Processing.

This option performs two tasks:

- Produces a report listing all orders input to the system since the option was last run, regardless of current status.
- Checks that order headers are set to complete or cancelled, if there are no outstanding order lines.

The report shows the order number, header details, line details and trailer details. It is a useful way to check which orders have been entered in the system.

It generates the List of Orders Report but does not check the order header.

Select **F8=Submit** to submit for processing.

Confirmation Of Despatch

14/OER

Select Confirmation of Despatch.

Once you have entered a batch or a number of batches of despatches, you must submit a job number to the batch queue.

This activity is compatible with Work Management you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

System Updates

The picking note is matched against the customer and, if correct, is added to a list of despatches to be confirmed. Quantities confirmed will be printed on the picking notes.

The processing performed for each despatch is identical to the processing carried out by the interactive confirmation.

1. Stock is reduced.
2. Allocated stock is reduced.
3. The cost of the inventory movement is calculated.
4. Inventory movements are written to the movement history file.
5. The usage of the despatched items is increased.
6. Last issued date for the despatched items is updated.
7. The order is changed to reflect the quantity despatched.
8. An Invoice is generated in the system, including the invoice number.
9. Customer account balance for despatched not invoiced is increased.
10. The appropriate lot or batch records are reduced.

Note: If World Trade is attached the movement is analysed. This is necessary to establish if it is an EC movement or not, and as such if it needs to be included on the Intrastat and ESL reports. (For more information on Intrastat and ESL refer to the World Trade product information).

If it is found that any of the picking notes are no longer eligible for confirmation because they have already been confirmed, an error report is produced.

Tip: Clean despatch notes are *not produced* if fast batch despatch is used.

Press **Enter** to submit a background process.

Invoice Posting

15/OER

Select Invoice Posting.

Use this option to post invoices to Accounts Receivable, up to a specified date. You can do this in addition to the option to post invoices during invoice printing.

This activity is compatible with Work Management you can run it as part of a Business Process in System 21 Constructor and System 21 Explorer.

Gross Margin Exceptions Report

30/OER

Use this option to report on high or low margins on sales order lines. The gross margin is the difference between sales value and the cost of item. It calculates the gross margin as a percentage. It can either be:

$$\frac{\text{Sales value} - \text{Cost value}}{\text{Sales value}} \quad \text{or} \quad \frac{\text{Sales value} - \text{Cost value}}{\text{Cost value}} \times 100$$

- The system compares the result with two control parameters to make sure the gross margin is between the set limits. Exceptions are listed. Asterisks identify those order lines with exceptionally high differences. The control parameters are held on the descriptions file Major type MARG in the percentage field.

The report is sequenced by order number. The following information is printed:

- Order Number and Line.
- Item Code and Description.
- Despatch Quantity.
- Sales Value.
- Cost Value.
- Gross Margin.
- Kit Flag.

Select Gross Margins Exceptions .

Zero Value Invoice Lines Report

35/OER

When you raise a sundry invoice or credit note, you can override the pricing. If no price exists in the price list and you do not enter a price once the invoice or credit is completed, then a line exists on the invoice with no price.

When you print the invoice and Accounts Receivable is updated, the system will attempt to re-price with the date of despatch routine. If this fails the invoice is not printed and Accounts Receivable is not updated. Each time the Invoice print routine is run an attempt will be made to re-price the invoice and if successful print and post it.

The information recorded on the exception report is

- Invoice Number.
- Order Number and Line Number.
- Customer Code.
- Despatch Sequence Number.
- Item Code and Description.
- Quantity.
- Price List.
- Unit Price.
- Kit Flag.

Select Zero Value Invoice Lines.

Frequency

Regularly - weekly or at least once a month prior to Accounts Receivable close.
