Chapter 7

Utilities

Introduction to Sales Order Processing Utilities

You use Sales Order Processing Utilities for set-up, housekeeping and database integrity, and to access AFI functions.

Warning: Some of these options require exclusive use of the company or sometimes the whole application in order to run. JBA recommend that the authority to run these procedures is restricted to perhaps two to three people who have responsibility for the whole system.

If you select a utility while another user is signed on to the same company, the system displays a warning screen.

A similar message is displayed when exclusive use of the application is required but cannot be achieved. Use **F7=View Existing Jobs** to view a list of other jobs currently running in the company. For example, jobs which are finished but not de-allocated. The most likely cause being jobs that were cancelled whilst active or on the job queue, or a system crash.

To correct these, use Verify Allocated Files in Application Manager.

Maintain Company Profile

1/DSCO, 1/OEU

Warning: Take care during file maintenance, particularly of the company control records and description file, as errors will have far reaching effects. JBA recommend the institution of proper authorisation and maintenance.

You must set up a company profile for each company you want to use in Sales Order Processing.

A Sales Order Processing company will interface to Inventory Management, General Ledger and Accounts Receivable companies with the same two character code.

The company profile specifies:

- Company controls.
- Operation defaults.
- Customer search control.

Company Profile Maintenance Selection Screen

Select Maintain Company Profiles.

Use this screen to select an existing company or create a new one.

Company Profile Maintenance		USER GBJBANER	29/05/96 13:12:09

Fields:

Untitled

Select. Enter 1 against the company you want to maintain.

Enter Company Code To Maintain

Enter a two character code to create a new company.

The first Company Profile Maintenance screen is automatically displayed.

Company Profile Maintenance Screen 1

The first Company Profile Maintenance screen is automatically displayed.

Use this screen to create or maintain the official name and address of the sales company, together with control numbers.

Warning. Take care when updating any company data. For instance, if control numbers are changed there may be a risk of duplicate order or invoice numbers being created.

OE010	Company Profile Maintenance	USER GBJBAEH	11/06/98 14:08:38
Company code..... Z1			
Company name..... <u>Demonstration Company</u>			
Address..... <u>Clews Road</u>			
<u>Oakenshaw</u>			
<u>Redditch</u>			
<u>England</u>

F3=Exit F4=Prompt F12=Previous F15=Reference numbers			
MA a			05/033

Fields:

Name, Address And Post Code

The name of this sales company and its trading address.

Note: The following four fields are maintained by the system.

Last Order Number Used

The last order number processed. This is incremented by the system. During set up it should be set to the number prior to the first order number to be used.

Last Quote/Proforma No. Used

The last quotation number issued. The system updates this number incrementally.

Last Schedule Number Used

This number is not yet used by the module.

Last Acknowledgement Printed

The system updates this field with the last order number against which an acknowledgement was printed.

Note: The following fields are defaults

Currency Rate Code

This field is displayed if Accounts Receivable is operating as a multi-currency module. This is the default rate code used to identify the currency rates used to convert prime currency orders into base currency. The system captures the value of both currencies at the time of the order. You can change this at customer or at order level.

Default Price List

The default price list code. The module allows one price list in each company to be designated a default price list.

Invoice Consolidation

Enter one of the following to specify the default level for consolidating invoices, you can override this at customer delivery address level.

- 0 - Raise an invoice for each despatch.
- 1 - Consolidate all orders despatched during the day onto one invoice.
- 2 - Consolidate all orders despatched during the week onto one invoice.
- 3 - Consolidate all orders despatched during the period onto one invoice.
- 4 - Print one invoice per day per customer order reference. The customer order reference is usually the customer's purchase order number.
- 5 - Print one invoice per week per customer order reference.
- 6 - Print one invoice per period per customer order reference.

Note: The consolidation feature uses Inventory Management's weeks and periods.

Functions:

F15

Maintain reference numbers.

Press **Enter** to display the second Company Profile Maintenance screen.

Reference Numbers Window (F15)

 To display this window select **F15=Reference Numbers** on the first second Company Profile Maintenance screen.

Use this window to maintain reference numbers.

Fields:

Customer Defaults

Produce Manual Pick List

Enter one of the following:

0 - Do not produce a manual pick list.

1 - To produce a manual pick list for customers at the time of the print picking notes run.

Allow Back Orders

Enter one of the following:

0 - Customers do not permit back orders.

1 - Customers permit back orders if an attempt to allocate stock fails (hold the request for this item until stock is available).

Allow Part Delivery

Enter one of the following:

0 - Customers do not permit part deliveries.

1 - Customers permit part deliveries.

The Allow Back Orders and Allow Part Deliveries fields work together as follows:

1

Allow back orders - No.

Allow part delivery - No.

The order is cancelled if stock allocation fails.

2

Allow back orders - No.

Allow part delivery - Yes.

The remainder of the order line is cancelled if stock allocation fails.

3

Allow back orders - Yes.

Allow part delivery - No.

Create a back order for the whole line quantity if stock allocation fails.

4

Allow back orders - Yes.

Allow part delivery - Yes.

Create a back order at line level for the unallocated quantity if stock allocation fails.

Order Reference Required

Enter one of the following:

0 - Optionally enter a customer's order reference during order entry.

1 - Always enter a customer's order reference during order entry.

Print Acknowledgement

Enter one of the following

0 - Print Acknowledgements not required.

1 - Print Acknowledgements are required.

Carriage Charged

For future development.

Apply Small Order Charge

For future development.

Special Customer

Enter one of the following:

0 - Do not identify customers as special.

1 - Identify customers as special.

This is used in Sales Analysis to highlight a customer or product as special. This does not affect sales order processing.

Allocation

Priority

Batch allocation attempts to allocate orders first by the delivery point's allocation priority, then by order due date. The allocation priority is a number between 00 and 99.

The higher the number, the more favourably the system regards the order. So 99 indicates that batch allocation has absolute priority as soon as stock levels allow. Conversely a 00 implies manual allocation.

Priority Increment

When a delivery point's order fails to get stock allocated the priority is automatically increased to give it a better chance next time.

Note: [1] You cannot override the priority increment for individual delivery points.

Note: [2] Regardless of how many attempts are made to allocate an order the allocation priority will never exceed 98.

Allow Negative Stock

When you manually allocate, stock will be allocated up to the point where available stock is zero. If forced allocation is allowed enter 1.

Pricing

Option

Enter one of the following:

- 1 - To price during order entry.
- 2 - To price using a batch process. This can improve data entry times.

Order Priced At

Enter one of the following:

- 1 - Order entry. The pricing at order entry is printed on acknowledgements and invoices.
- 2 - Despatch. The order is to be re-priced at despatch time.

Despatch

Cancel Balance Allowed

Enter one of the following:

- 1 - To cancel the under-confirmed quantity from the order line at confirm despatch time.
- 0 - For the under-confirmed quantity to remain outstanding on the order line.

Clean Despatch Notes

Enter one of the following:

0 - Do not produce clean despatch notes.

1 - To produce a second despatch note showing actual quantities despatched.

Print Borders On Documentation

There are two styles of document, that is, with or without borders. This feature may be controlled separately for each document:

- Acknowledgements.
- Picking/despatch notes.
- Invoices.

You may wish to suppress printing of borders if you use pre-printed stationery.

Print Rotation Dates On Picking Notes

Select this to print stock rotation dates on picking notes.

Functions:

F14

Maintain Advanced Pricing parameters; only displayed if Advanced Pricing function is active.

F15

Maintain Advanced Order Entry parameters; only displayed if Advanced Order Entry module is active.

Press **Enter** to display the third Company Profile Maintenance screen.

Advanced Pricing Parameters Window (F14)

To display this window select **F14=Advanced Pricing** on the second Company Profile Maintenance screen.

Use this window to determine pricing defaults for the selected company.

Fields:

Pricing Structure

Enter one of the following:

0 - This company uses Standard Pricing.

1 - This company uses Advanced Pricing.

Note: You must select Advanced pricing if you use Catchweight.

Warning: Standard pricing does not support the Catchweight function.

Pricing Level

Enter one of the following:

0 - Orders are priced by the background pricing job (after order entry).

1 -Orders are priced at order entry but only line discounts are applied. Whole order discounts are applied via Inventory Management's background pricing monitor.

2 - Orders are priced and discounted during order entry.

Discount Module

Enter one of the following:

- 1 - Sequence No. Discounts are applied by sequence number. (Lowest number first.)
- 2 - Nett/Gross. Nett discount is applied first then gross discounts.

Restriction Generation

Enter one of the following:

- 0 - Customer restrictions must be entered manually via the Customer Maintenance, Sales Details screen.
- 1 - Customer restrictions will be generated automatically by running the Generate Customer Restrictions routine from the menu.

Advanced Order Entry Parameters Window (F15)

To display this window displays select
F15=Advanced Order Entry Functions on the
second Company Profile Maintenance screen.

Use this window to specify advanced order entry functions for the selected company.

Fields:

Show Markups

Enter one of the following.

- 0 - Do not require this facility.
- 1 - Display markups as negative discount.

Display Margins

Enter one of the following:

- 0 - Do not wish margins to be displayed.
- 1 - Display margins on the order line entry screen.

Margin Calculation

Enter one of the following:

- 1 - Margin is to be calculated as a percentage of cost (net).
- 2 - The margin is to be calculated as a percentage of sales (gross).

The module allows identification of an acceptable margin level, by entering an upper and lower tolerance level.

Lower Margin Tolerance

Enter the lowest acceptable margin. You will be warned at order entry, if the margin on the selling price on the sales order line is too low.

Upper Margin Tolerance

Enter the highest acceptable margin. You will be warned at order entry, if the margin on the selling price on the sales order line is too high.

Default Customer

Enter the account code and delivery sequence number of the Advanced Order Entry default customer. The default customer is automatically selected by Advanced Order Entry if you do not enter a customer, and can be used for general enquiries and quotations.

Default Customer Search

Enter one of the following:

- 1 - Customer select.
- 2 - Customer name.
- 3 - Customer search word 1.
- 4 - Customer search word 2.

Note: Customer search words 1 and 2 are defined in Sales Order Processing, Company Profile, Alpha Search screen.

Company Profile Maintenance Screen 3

To display this screen press **Enter** on the second Company Profile Maintenance screen.

Use this screen to set, at company level, the defaults to control the financial details for sales order processing.

Fields:

Assignment Of Numbers

Indicates whether invoices and credit notes should be renumbered at time of printing.

- 1 - Confirm despatch. Not renumbered.
- 2 - Invoice print. Invoices and credit notes will be renumbered according to the defined number ranges.

Invoice Layout

To ensure that the invoices are printed off consistently you can set the number of characters per inch. There are two options:

- 1 - 10cpi (standard layout: 2 lines of detail per invoice line).
- 2 - 15cpi (condensed layout: a single line of detail per invoice line). This must be the setting used for invoice printing in the USA.

Discounts Printed On Invoices

This option will print the discounts on invoices as either per Unit of items on the order line or as a whole order line Value. To choose either option type in:

- 1 - Unit Discount.
- 2 - Value Discount.

VAT Summary

The module will allow invoices to be printed off with or without VAT. If the VAT is to be printed it can be printed as a VAT Total, or the normal VAT can be printed separately to the extra VAT.

0 - No VAT.

1 - VAT Total.

2 - Normal and Extra VAT.

Print Salesman/Agents

Enter one of the following:

0 - Do not print salesman/agent details.

1 - To print salesman/agent details.

Miscellaneous Invoicing For Warehouses

Enter one of the following:

0 - No. Do not produce miscellaneous invoices for stockrooms also defined as warehouses.

1 - Yes. Produce miscellaneous invoices for stockrooms also defined as warehouses.

Invoice Date Policy

Enter one of the following:

0 - Use the despatch date if you chose not to consolidate invoices.

1 - Print the date of printing.

2 - The despatch date if non-consolidated.

2 - The last date of the consolidation report if consolidated.

Press **Enter** to display the Company Profile
Maintenance Alpha Search screen.

Company Profile Maintenance Alpha Search Screen

To display this screen press **Enter** is pressed on the third Company Profile Maintenance screen.

Use this screen to select two fields from the customer database to be used with the customer name in the customer alpha search facility.

Note: You would normally do this when you set up the company.

Fields:

Untitled

Select. Enter 1 against the two customer fields to be used for the customer search facility in addition to customer name.

Note: If you change these two fields after customers have been set up you must also run the Recreate Customer Search Index routine to rebuild the search paths.

Press **Enter** to exit Company Profile Maintenance.

Copy Company

1...
2...

2/OEU

Select Copy Company.

Use this option to create a new sales order company within Sales Order Processing. The company profile data is copied from an existing company. You can add differences for the new company using the company profile maintenance option.

OE003	Order Entry Company Utilities	User SP1	26/09/94 10:44:31
-------	-------------------------------	----------	----------------------

Copy Companies

From company.. Z1

To company.... ZM

F3=Exit

Fields:

Company Range

Enter both the From and To company codes.

The From company must be an existing Sales Order Processing company. The To company must exist within Inventory Management and Accounts Receivable.

Press **Enter** key to submit a batch job and create the new company profile record.

Delete Companies

3/OEU

Use this option to remove data from the application for one or more selected companies. The process is performed in three steps:

1. Copy data for the companies to be retained, to a temporary library.
2. Clear the physical files in the live library.
3. Copy back the data from the temporary library.

Tip: Sufficient free disk space must be available to hold the copied data.

Select Delete Companies.

Specify the libraries that contain the data for deletion on the first screen Press **Enter** to continue.

Note: If bespoke libraries are present this option must be run separately for each library.

The second screen displays a list of existing companies. Enter 1 to select the companies you want to delete and press **Enter** to continue.

Select **F8** to confirm and submit the procedure to the job queue. A batch job will be submitted to delete the companies.

Functions:

F16

Override. None Selected error.

Recreate Customer Search Index

21/OEU

The alpha search helps to identify customers within sales order processing. This search will operate on the words or part words of the customers name. In addition, you can select two extra fields from the customer record to be used as search arguments. If any of the criteria are changed, or the index has become corrupt you must run to re-create the search index for existing customers, and create the new ones.

Select Recreate Customer Search Index.

There are no selection criteria. Following selection from the menu, the screen to confirm processing a batch job is displayed.

Archive Orders/Invoices

22/OEU

Select Archive Orders/Invoices.

Use this option to reduce the size of the Sales Order Processing database. The archive process has three stages.

1. Purge order and invoice data from the live files and write them to a set of history files.
2. Back up the history files to an off-line medium and clear the history files.
3. Reorganise the following files:
 - OEP40 - Order header.
 - OEP45 - Order address overrides.
 - OEP50 - Order charges.
 - OEP55 - Order lines.
 - OEP65 - Invoice header.
 - OEP70 - Invoice lines.
 - INP40 - Order/invoice text.

Record are archived if:

- The order is complete or cancelled.
- The invoice is paid in Accounts Receivable.
- The processing date (of completion, cancellation or payment) is before the nominated date.

A screen is displayed that requests that the target date is entered. The default date is one year prior to the current date. This may be changed. Once the date has been validated by pressing **Enter** confirms the run. Data is added to the following history files:

- OEP40H - Order header.
- OEP45H - Order address overrides.
- OEP50H - Order charges.
- OEP55H - Order lines.
- OEP65H - Invoice header.
- OEP70H - Invoice lines.
- INP40H- Order/invoice text.

Price Type Purge Request

23/OEU

Select Price Type Purge Request.

Note: This function is only relevant to Advanced Pricing.

Use this option to select non-effective price types for subsequent purging via the Price Type Purge Update option.

Fields:

S

Select. Enter one of the following:

- 1 - To review the definition prior to deletion.
- 4 - To remove the price type from the list of price types to be purged.

Position To

To start the display at a specific price type.

Functions:

F5

Refresh. Return list of purge types to that which exited prior to any amendments being made.

F8

Update. Updates the workfile of price types to be purged, in accordance with the amendments made. You will be prompted to confirm removal.

F11

Delete/Cancel Purge. Remove all price types. In effect this cancels the purge process.

Price Type Purge Update

25/OEU

Select Price Type Purge Update.

Use this option to purge non-effective price types.

Note: The Price Type Purge Request routine must have been run prior to accessing this option.

Price Type Purge Report

This report is produced automatically and details all price types which have been purged.

Price Type Purge Exceptions Report

This report is produced automatically when applicable, and details all price types which were listed for deletion but which were retained as they were found to have effective lines.

The standard batch processing screen is displayed. Select **F8=Confirm Submit** to process the purge as a batch job. As part of the processing the workfile is rechecked for the effectivity of each price type. If the price type is still ineffective it will be deleted. If the price type is found to have effective lines, then the purge is halted and the line written to an exceptions report.

Back Order Reconciliation

1...
2...

33/OEU & 34/OEU

If a hardware or power failure occurs, the back order figures in Inventory Management, and the allocated order values in Accounts Receivable, may become out of line with the equivalent Sales Order Processing order file figures.

A back order is an order which should have been allocated in order to meet the customer's delivery date, but has not. The sum of the back orders at any time is held on the stockroom balance record for the item per depot. This balance is used in the calculation of *expected* stock. This utility can calculate the total of back orders for all depots and update the inventory stock balance totals. It may be run in two modes, each with its own menu option. These are:

- Report only (see Back Order To Order Lines (No Update)).
- Report and update (see Back Order To Order Lines (Update)).

Back Orders On Stockroom Vs Order Lines Report

The report lists the discrepancies found between actual back orders and the stock balance total. The update option will correct the stock balances. The report contains the following details:

- Item Code and Description.
- Stockroom.
- Back Order Quantity.
- Quantity Outstanding.
- Variance between the outstanding and back order quantities.

Select **F8=Submit** to process the batch job.

Sales Ledger Order Value Reconciliation

35/OEU & 36/OEU

As part of credit management it is necessary to value the immediate commitment in terms of the allocated stock to a customer. This is the value by which a customer's credit will increase if no action is taken to stop it. This value is held, with the other financial balances for the customer, in Accounts Receivable.

This utility calculates the value of stock allocated to customers, both printed on picking notes and not yet printed, and compares the result with the total held on the customer's Statement Account Balance, in Accounts Receivable. The Accounts Receivable balance is updated if any discrepancies have been found. It may be run in two modes, each with its own menu option, these are:

- Report only (see Sale Ledger Order Value To Allocated Orders (No Update)).
- Report and update (see Sale Ledger Order Value To Allocated Orders (Update)).

O/S Order Value Vs Allocated Orders Report

The discrepancies found are listed on a report. The report contains the following information:

- Statement Code and Description.
- Customer Balance.
- Customer Order Total.
- Variance between the balance and order total.

Select **F8=Submit** to process the batch job.

Goods Despatched Not Invoiced Reconciliation

37/OEU & 38/OEU

The account summary balance update function takes account of any allocations and despatches, for hierarchical customers. During the allocation process the amount on order will increase, and during despatch the amount on order will decrease. The despatch process will also accumulate the goods despatched not invoiced value.

To ensure that the balances are maintained this option will generate a listing of discrepancies, between goods despatched without invoices compared to sales ledger invoice headers. The option is split as two menu options.

- Report only (see Reconcile Goods Despatched Not Invoiced (No Update)).
- Report and update balances (see Reconcile Goods Despatched Not Invoiced (Update)).

Accounts Receivable Goods Despatched Not Invoiced Vs Invoice Header Value Report

The report contains the following information:

- Statement Code and Description.
- Customer Balance.
- Customer Invoice Total.
- Variance between the balance and invoice total.

Select **F8=Submit** to process the batch job.

Rebuild Hierarchy Account Balances

39/OEU

Select Rebuild Hierarchy Account Balances.

Hierarchy accounts need to be monitored to ensure that credit balances are in line for all customers, under a parent account. The summary balances are also updated, when the report is generated.

A report is produced which contains a before and after picture, in both prime and base currency, of outstanding orders and despatched goods that have not been invoiced, to a customer.

Select **F8=Submit** to process the batch job.

AFI Extract

This section describes the interface between AFI and Sales Order Processing. The Sales Order Processing Live extract is called directly from the SOP Invoice Print function and is unaffected by these menu changes.

Where AFI is linked to Sales Order Processing (AFI is set to active), invoice details are extracted at the point where updating to the Accounts Receivable takes place as part of the invoice print run.

Transactions are created in AFI for the invoices or credit notes, or both, in the batch just processed. These are posted to the General Ledger as journals in one of two ways:

1. If the Automatically Update GL flag in the AFI Maintain Application option is set to 1 or 2 then journals are immediately posted to the General Ledger following their creation.
2. If the Automatically Update GL flag is set to 0 then no posting to the General Ledger occurs until the AFI – GL Update option is selected from the AFI menu.

If AFI is not linked to the Sales Order Processing application (AFI is not set to active) then sales invoices or credit notes, or both, are posted to the General Ledger by the standard facilities of AFI which are not accessible by the user. This alternative method of posting is known as the Basic Financial Integrator (BFI).

As well as the AFI link status being set to active, there must also be one or more live journals. The facility to set up a journal as live is part of the Journal Conditions option on the AFI application.

Note: The journal condition field must be set to test for a valid value when reading data from the source application. For example, the journal condition field must be set up to test for the presence of invoices, credit notes or both. If your journal conditions do not cause an extract of invoices or credit notes to occur, then a warning message is displayed (for example, when the invoice or credit note transactions do not meet the selection criteria specified on your journal conditions).

Data Dictionary

The AFI data dictionary can be viewed and maintained within AFI. The following files, and their associated fields, are available for defining how selection or consolidation, or both, is to take place.

Invoice Header

- Company Number.
- Customer Invoice Code.
- Customer Account Number.
- Customer Order Reference.
- Discount Group.
- Division.
- Invoice Number.
- Warehouse/Depot Location.
- Order Number.
- Order Type.
- Order Source.
- Salesman.
- Statement Account Number.
- Transaction Type (IN or CR).

Invoice Lines

- Company Number.
- Item Code.
- Customer Invoice Code.
- Customer Account Number.
- Discount Group.
- Cash Discount Code.
- Division.
- Invoice Number.
- Warehouse/Depot Location.
- Order Number.
- Order Type.
- Statement Account Number.
- VAT Code.

Invoice Charges

- Company Number.
- Charge Code.
- Order Number.
- Invoice Number.
- VAT Code.

Parts

- Company Number.
- General Ledger Cost of Sales Account.
- General Ledger Stock Account.
- General Ledger Price Variance Account.
- General Ledger Sales Account.
- Division.
- Feature Type.
- Item Class.
- Item Group Major.
- Item Group Minor.
- Item Code.
- Purchase/Packing Unit.
- Item Type.
- Sub-Division.
- Stock Unit.
- VAT Code.
- EEC Tariff Code.

Customer Master Details

- Customer Group 1.
- Customer Group 2.
- Customer Group 3.
- Customer Group 4.
- Customer Name.
- Company Number.
- Credit Control Responsibility.
- Customer Account Number.
- General Ledger Bank Account.

- General Ledger Debtors Account.
- Sales Region Code.
- Salesman Code.
- VAT Indicator.
- Prime Currency Rate Code.

Additional Customer Sales Details

- Branch.
- Customer Class.
- Company Number.
- Customer Account Number.
- Discount Group.
- Division.
- Price List Code.
- Warehouse/Depot Location.
- Region.
- Sub-Division.
- Salesman.
- Territory.

Stock Balance

- Item Type.
- ABC Classification.

The following fields are defined as quantities which are available to post (refer to quantity field to post within posting definitions).

Invoice Lines

- Line Quantity (Stockroom Issue UOM).
- Line Quantity (Item Master Issue UOM).

In addition, for the purpose of Supporting US Sales Tax, the following files, and their associated fields, are available for defining how selection or consolidation, or both, is to take place.

Invoice Tax Header

- Company Number.
- Invoice Number.
- Order Number.
- Tax Body Code.
- Tax Body Type.

Invoice Tax Lines

- Company Number.
- Invoice Number.
- Order Number.
- Tax Body Code.
- Tax Body Type.

Invoice Tax Charges

- Company Number.
- Invoice Number.
- Order Number.
- Charge Code.
- Tax Body Code.
- Tax Body Type.

Tax Bodies

- Company Number.
- Tax Body Code.
- Tax Body Description.
- Tax Body Type.
- Remit To Tax Body.
- Payment Frequency.
- General Ledger Account.
- General Ledger Account Extension.
- From Zip Code.
- To Zip Code.

The following files, and their associated fields, are available for posting values to the General Ledger. In each case the normal sign (+ or -) is shown for each field as held within the Sales Order Processing application.

AFI Test Invoice Extract

31/OEU

Use this option to produce a trial extract of data from Sales Order Processing and create a General Ledger journal. Note that no actual updating of data takes place, either within the source application or the General Ledger. It simulates the effect of creating the specified journals for the nominated company.

Up to three reports are generated:

1. A list of the General Ledger postings generated.
2. An exception report showing, for example, any balancing postings automatically created for an unbalanced journal.
3. An error report, showing any error conditions encountered.

Select AFI Test Invoice Extract.

Source Company

Indicate the source company whose data is to be used for this trial extraction.

Include Only Invoices Not Already Extracted

Enter one of the following:

- 0 - To specify a range of transaction numbers on which the trial is to be based.
- 1 - For the purposes of this trial, you want to use only data which has not been extracted in live operation mode by AFI.

Include Invoices From And To

Use this if you have set the previous field to 0. You can specify the range of invoices in the source application to be used in this trial. If you wish to use only a single transaction, say a single invoice, specify the same number in the From and To entries. A window is available to display transactions within the source application which can be used for this trial.

Type Of Journal Definition To Use

Enter one of the following:

- 1 - Use only journal definitions which are specified as being under test.
- 2 - Use only journal definitions which are specified as being live.
- 3 - Use both test and live journal definitions.

Consolidate Postings

Enter one of the following:

- 0 - No consolidation to take place, even though you may have postings defined as consolidatable.
- 1 - Consolidation to take place on those postings defined as consolidatable.

Press **Enter** to validate the selection screen.

Install SOP/AFI Link

32/OEU

JBA recommend that journal conditions are first set up as under test and that they are thoroughly proven before they are set to live and AFI is active.

Until AFI is activated, posting of sales invoices and credit notes to the General Ledger will continue to take place via the standard facilities of the Basic Financial Integrator. When AFI is set to active postings to the General Ledger will take place via AFI during each subsequent invoice or credit note run.

The steps required to be taken to activate AFI are as follows:

1 AFI

Use the Maintain Journal Condition option to change the status of your journal conditions from inactive (0) or under test (1) to a status of live (2).

This need not be done for all journal conditions - only those which you are ready to activate.

2 SOP

Use the Initiate Extract option to change the status of the AFI Link from BFI Mode to active using F8. At the same time check the validity of your consolidation settings on this display (that is, Install SOP/AFI Link)

AFI will now be used to process sales invoices and credit notes to create General Ledger journals, according to your rules and definitions, from the point when your next invoice or credit run takes place.

Should the AFI determine that an extract or update will not be completed successfully, then a message is sent to the user, giving details of the problem. After correction, the next invoice run will collect all outstanding data.

Library List

A separate task level library list has been created within the Sales Order Processing application for the purpose extracting data from the Invoicing application into AFI, as part of the invoice print run.

As well as containing the necessary Sales Order Processing libraries, this includes the following AFI libraries:

OSLFIF3

AFI Data files.

OSLFID3

AFI Printer and Display files.

OSLFIP3

AFI Programs.

This library list is loaded as part of the invoice print run.
