Chapter 8

Application Interface

EDI Sales Order Considerations

These options are to support EDI interfaces for documents sent and received by the Sales function within the company. You can:

- Send Sales Invoices/Credit Notes.
- Send Order Acknowledgements.
- Send Despatch Notes.
- Send Intrastat/ESL Reports.
- Send Electronic Sales Catalogue.
- Generate And Maintain Electronic Sales Catalogue.
- Receive Sales Orders.
- Receive Schedule Orders.
- Receive Advanced Customer Schedules.
- Received Orders Error Recovery.
- Receive Order Status Enquiries

Valid sales orders are received into the Sales Order Processing order bank and optionally suspended. These orders can then be processed via the standard Order Processing options.

Sales orders that fail verification can be retained in the AI interface files for review and maintenance. You can use the maintenance function to review, correct or delete rejected data. The maintenance option does not perform validation. The checking of data entered takes place within the Receive Orders batch job.

If Advanced Order Entry is installed, you can use the Order Amend option to fulfil the demand by using back-to-back orders (including directs) or purchase order reservations.

Valid scheduled orders will replace existing schedules and will update the Sales Order Processing order bank. These are then processed using the standard Scheduled Order and Sales Order Processing options.

Invoices/Credits

1/OEAI

Select Invoices/Credits

Use this option to extract invoices and credit notes from the Sales Order Processing module for EDI.

The sales invoices to be sent via EDI are determined when the invoice is posted to Accounts Receivable, by validating the customer against the trading partners maintained in this module. (The customer account used for this purpose is the one to which invoices are to be sent.) If the partner is defined to receive invoices, and the document is active, the posting function flags the invoice to send it via EDI.

The EDI sales invoices may be added into the EDI Mailbox send queue if this module is installed.

A control list may be printed, displaying all invoices sent via this run.

A VAT analysis report is always printed, giving a breakdown per VAT code for each trading partner who is to receive an invoice file via EDI in this run.

The standard Invoice Print function must be selected. This prints all sales invoices waiting to be sent to customers, except for those which are defined to this module as active and in production.

Sending invoices and credit notes via EDI is a three stage process:

- Run Invoices/Credit Notes without Accounts Receivable update. This prints invoices/credit notes that are not to be sent via EDI. It also flags invoices with E - EDI in the Print flag. It must be run without Accounts Receivable update.
- Send Invoices/Credit via EDI. This adds to the Mailbox any invoices/credit notes flagged as requiring sending via EDI (including reprints).
- Post to Accounts Receivable. This is a batch job in Invoice Posting that posts all invoices/credit notes that are printed/sent to the Sales Ledger/Accounts Receivable.

You can also resend invoices and credit notes via EDI.

Send Invoices/Credits Via EDI Screen 1

Select Send Invoices/Credits.

Use this screen to select options before starting the batch function which extracts invoices to be posted, sent via EDI or printed.

AI070	Z1 - GB Demonstration Company	User GJBATD0	6/03/97 9:06:37
Send Invoices / Credits via EDI			
Send invoices/credits or both <u>3</u> (1=Invoices, 2=Credits, 3=Both)			
Add documents directly into mailbox queue . . <u>1</u> (0=No,1=Yes)			
Print EDI documents control list. <u>1</u> (0=No,1=Yes)			
F3=Exit F8=Submit			
06-48	SP	MA	KS IM II EDN400A PET201S2

Fields:

Send Invoices/Credits Or Both

Enter one of the following:

- 1 - Invoices. This only sends sales invoices.
- 2 - Credits. This only sends credit notes.
- 3 - Both. This send both sales invoices and credit notes.

Add Documents Directly Into Mailbox Queue

Enter one of the following:

- 0 - No. This holds the extracted documents in the Application Interface database.
- 1 - Yes. This extracts and adds the selected documents into the EDI Mailbox send queue as a translated document.

Print EDI Documents Control List

Enter one of the following:

- 0 - No. This suppresses printing of the Control List.
- 1 - Yes. This prints a Control List containing all documents sent via EDI.

Once all the selected documents have been extracted an EDI Interface function can be started; this picks up all selected documents created in the Application

Interface database, translates them into the appropriate message standard and adds them into the Mailbox send queue in the EDI module.

You can print a control list, giving details of all documents sent via EDI.

A VAT analysis report is always printed, giving a breakdown per VAT code, for each trading partner who is sent documents via EDI.

Select **F8=Submit** to submit batch function.

Acknowledgements

2/OEAI

Warning: This option must replace the Sales Order Processing Acknowledgement Print function, as this processes all acknowledgements since it was last run (whether or not the customers are trading partners).

Use this option to extract order acknowledgements from the Sales Order Processing module, which are to be sent via EDI.

This function determines which acknowledgements are to be sent via EDI and/or printed. This is achieved by validating the customer delivery account against the trading partners maintained in this module. The decision is based on the following table (which applies to all document types, not just acknowledgements):

Document Active	In Production	Send Via EDI	Print
Yes	Yes	Yes	No
Yes	No	Yes	Yes
No	Yes	No	Yes
No	No	No	Yes

The acknowledgements to be sent via EDI may be added into the EDI Mailbox send queue. A control list is available to be printed and displays all acknowledgements sent via EDI.

Send Acknowledgements Screen 1

Select Send Acknowledgements.

Use this screen to select options before starting the batch function which processes all acknowledgements to be sent to customers.

Notes: Quotation type is only displayed for entry if Advanced Order Entry is installed; quotations are always printed, not sent via EDI.

AI030	Distribution V3 -> V3 Financials	User GBJBAPH2	27/10/95 15:38:25
Send Acknowledgements			
Add acknowledgements directly into mailbox queue. . . . 1 (0=No,1=Yes)			
Print EDI acknowledgements control list 1 (0=No,1=Yes)			
Quotation type. ? _ (BLANK=Sales Orders)			
F3=Exit F4=Prompt F8=Submit			
06-58	SF	ML	KS IM II KENB20A PET158S1

Fields:

Add Acknowledgements Directly Into Mailbox Queue

Enter one of the following:

0 - No. Holds the extracted order acknowledgements in the Application Interface database.

1 - Yes. Extracts and adds order acknowledgements into the EDI Mailbox send queue as a translated document.

Print EDI Acknowledgements Control List

Enter one of the following:

0 - No. Suppresses printing of the Control List.

1 - Yes. Prints a Control List showing details of all Acknowledgements to be sent via EDI.

Quotation Type

Enter a valid quotation type to only process this type of quotation order.

Leave blank to process all orders.

Once all orders have been acknowledged, an EDI Interface function is invoked if selected. This picks up all acknowledgements created in the Application Interface database, translates them into the appropriate message standard and adds them into the Mailbox send queue in the EDI module.

You can print a control list which gives details of all order acknowledgements extracted for EDI.

Select **F8=Submit** to submit batch function.

Despatch Notes

3/OEAI

Use this option to extract despatch notes from the Sales Order Processing module, which are to be sent via EDI.

This function extracts order lines which have been despatched since it was last invoked. This is limited to customers defined as accepting despatch notes via EDI, with the document defined as active.

The despatch notes may be added directly into the EDI Mailbox send queue, if this module is installed. A control list is available to be printed and displays all despatch notes sent via EDI.

Send Despatch Advices Screen

Select Send Despatch Notes.

Use this screen to select options before starting the batch function which extracts all despatch notes to be sent via EDI.

AI050	Distribution V3 -> V3 Financials	User GBJBAPH2	27/10/95 15:39:24
Send Despatch Advices			
Add despatch advices directly into mailbox queue. . . . 1 (0=No,1=Yes)			
Print EDI despatch advices control list 1 (0=No,1=Yes)			
F3=Exit F8=Submit			
06-58	S*	ML	KS IM II KENB20A PET158S1

Fields:

Add Despatch Advices Directly Into Mailbox Queue

Enter one of the following:

0 - No. Holds the extracted despatch notes in the Application Interface database.

1 - Yes. Extracts and adds despatch notes into the EDI Mailbox send queue as a translated document.

Print EDI Despatch Advices Control List

Enter one of the following:

0 - No. Suppresses printing of the Control List.

1 - Yes. Prints a Control List showing details of all Despatch Notes to be sent via EDI.

Once all despatch notes have been extracted, then (if selected) an EDI function is invoked. This picks up all despatch notes created in the Application Interface database, translates them into the appropriate message standard and adds them into the Mailbox send queue in the EDI module.

If requested, a control list is printed, giving details of all despatch notes to be sent via EDI.

Select **F8=Submit** to submit the batch function.

Send Electronic Sales Catalogue

4/0EAI

Use this option to send records from the catalogue database to the Application Interface files, optionally printing a report or calling a third party translator (usually Premenos), or both. The records can be of type Sent, Add, Change and Delete.

Send Electronic Catalogues Prompt Screen

Select Send Electronic Sales Catalogue.

AI330A	Z1 - GB Demonstration Company	User GBJBATD0	6/03/97 9:40:14
Send Electronic Catalogues Prompt			
Add catalogue transactions directly to mailbox queue... 1 (0=No,1=Yes)			
Print electronic catalogue control list..... 1 (0=No,1=Brief,2=Full)			
Include (1=Add,2=Del,3=Chg,4=All,8=Init,9=Replace).... 4			
Send to Single Trading Partner.(Include=8,9 only)...?. _____			
From Catalogue...?. _____			
From Selection... _____			
From Revision.... _____

To Selection..... _____			
To Revision..... _____			
From Trading Partner...?. _____			
To Trading Partner...?. _____			
F3=Exit F4=Prompt F8=Submit			
05-S7 KS IM II EDN400A PET201S2			

Fields:

Add Catalogue Transactions Directly To Mailbox Queue

You can decide whether or not a call is made to the translator by entering one of the following:

- 0 - No.
- 1 - Yes.

Print Electronic Catalogue Control List

You can decide how to print the electronic catalogue by entering one of the following:

- 0 - No.
- 1 - Brief. This displays a one line description for each item sent to the trading partners.
- 2 - Full. This displays all the details of each item before and after being sent to the trading partners.

Include

You can decide what types of database records are sent by entering one of the following:

- 1 - Add. Add records.
- 2 - Del. Delete records.

3 - Chg. Change records.

4 - All. That is, the records of type Add, Delete and Change.

8 - Init. Initialise. Only Sent records are sent. If a catalogue has previously been sent to a trading partner, it can be sent to an additional trading partner. This is useful if a new trading partner is added to the catalogue because current item records can be sent to update the trading partner.

9 - Replace. This replaces a catalogue which has previously been sent to a trading partner.

Send To Single Trading Partner

If 8 or 9 are entered in the Include field, you can select the trading partner by entering it in this field. If you do not know which trading partner to enter, you can prompt for a list of existing trading partners.

From/To Catalogue

You can select the range of catalogue records to be sent. If you do not know which catalogues to enter you can prompt for one. If you select the catalogue records, you can also enter a range for the selection and revision records. If a range of trading partners is defined, then the range of catalogue records to be sent must also satisfy the range of trading partners. If these fields are left blank, all the catalogues are sent.

From/To Selection

You can select the range of selection records to be sent if a range has been defined for the catalogue records. If a range of trading partners is defined, then the range of selection records to be sent must also satisfy the range of trading partners.

From/To Revision

You can select the range of revision records to be sent if a range has been defined for the catalogue records. If a range of trading partners is defined, then the range of revision records to be sent must also satisfy the range of trading partners.

From/To Trading Partner

You can select the range of trading partners for which records are to be sent. If you do not know which trading partner to enter you can prompt for one. If you also select a range of catalogue, selection or revision records, then the records to be searched must also satisfy the range of trading partners.

Select **F8=Submit** to send the selected records.

Order Status

5/OEAI

Use this option to produce a report of order status and to send an Order Status report via EDI to the customer.

Send Order Status Reports Screen

Select Order Status.

The outbound sales order status report determines whether the status of the order or orders has changed since the status was last reported to the trading partner.

OEI362	Z1 - UK Demonstration Company	User GBJBAMSA	11/06/98

F3=Exit F4=Prompt F8=Submit			
ME	a	MW	15/029

Fields:

Print EDI Order Status Report Control List

1 - Complete

Enter 1 to print out a complete EDI Order Status Report Control List.

2 - Exceptions

Enter 2 to print out a EDI Order Status Report Exception List. This will print all records that have failed validation.

Order Status Report Group Code

Enter a Report Group Code or ? to display a Report Group Selection window.

Functions:

F8

Submit. To submit the report.

Select **F8=Submit** to send the Order Status report via EDI to the customer.

Catalogue Maintenance

11/OEAI

Use this option to send a sales catalogue to one or more customers. You can edit the catalogue by deciding which items are in or out, and by editing the item details.

Note: The catalogue, selection and revision fields are used to make a unique reference code for the catalogue.

Electronic Catalogue Maintenance Screen 1

Fields:

Catalogue

This field displays the name of the catalogue and is for your information only.

Selection

This field displays the name of the selection and is for your information only.

Revision

This field displays the name of the revision and is for your information only.

Untitled

Select. Enter one of the following:

1 - Select. You use this option to edit the details of the selected item. The first Catalogue Item Maintenance screen is displayed.

4 - Delete. You use this option to delete the selected item from the catalogue. You cannot delete an item of type Sent.

Item Number

For each item, the item code is displayed for your information only and cannot be amended.

Description

For each item, the item description is displayed for your information only and cannot be amended.

Type

For each item, the item type is displayed for your information only and cannot be amended. The following types can be displayed:

S - Sent. This item record has been sent to the trading partners.

D - Delete. This item record has not been sent to trading partners and, when sent, deletes the item from the customer's catalogue.

C - Change. This means the item record has been changed but not yet sent to trading partners. When sent to the trading partners, the item on the customer's catalogue is changed.

A - Add. This means the item record has been added but not yet sent to trading partners. When sent to the trading partners, the item is added to the customer's catalogue.

Status

For each item, the item status is displayed for your information only and cannot be amended. The following status can be displayed:

H - Held. This means the Add item record has not been sent to trading partners and the user has set it to Held to stop it from being sent.

M - Maintained. This status means the type of the Add or Change item record has been edited.

F - Firm. This means the Add or Change item record has not been sent to trading partners but, when it is, it is automatically set to Held. This allows the user to define changes which are inconsistent with the database but are not changed by the system after running Catalogue Change Recognition.

Chg Date

For each item, the date the item details were last changed is displayed for your information only and cannot be amended.

Functions:

F10

Add. You can add an item to a catalogue. When this option is selected the Add Item window is displayed containing the Item field. Enter the name of the new item in the Item field and press **Enter**. The item is added to the list and is type A (Add).

F14

All/Held. Select this option to toggle the screen between displaying item records for the selected catalogue with a status of either All or Held.

F15

All/Pending/Sent. Select this option to toggle the screen between displaying item records for the selected catalogue with a type of either All, Pending or Sent. Pending item records are those item records which are not of type Sent.

Catalogue Item Maintenance Screen 1 (Option 1)

To display this screen enter 1 in the Untitled field on the Catalogue Item Maintenance Selection screen and press **Enter**.

The item details are displayed for your information only if displaying an item record of type Sent. If an item record of type Delete, Change or Add is displayed, you can edit the item details.

Functions:

F11

Delete. If the type of the item is Sent, this function is displayed. If you select this function you can create a Delete item record for this item.

Activate. If the type of the item is Delete, this function is displayed. If you select this function you can create a Change item record for this item, or a Delete item record.

F16

Maintain/View Sent. If the type of the item is Sent, Change or Delete, this toggle function is displayed on the screen.

Maintain. You can display and edit existing change or delete item records which can be updated when the item details change on the System 21 database.

View Sent. You can display the item details which were previously sent to the trading partner.

F18

Release/Hold. If the type of the item is Add, this toggle function is displayed on the screen.

Release. If the item record displayed has a status of Held, this function is displayed on the screen. An item with a status of Held cannot be sent to trading partners. Select this option to change the status of the item from Held to Released.

Hold. If the item record displayed has a status other than Held, this function is displayed on the screen. Select this option to change the status of the item to Held.

F19

Firm. If the type of the item is Change or Add, this toggle function is displayed on the screen.

When you select this function, the status of the item becomes Firm. This means that a Change or Add item (and the subsequent Sent item) cannot be edited when Catalogue Change Recognition is used. This is useful if you want to edit item details in catalogues which are different to the item details in the System 21 database.

Select **F8=Update** to update the catalogue database with the additions and edits.

Electronic Catalogue Trading Partner Authorisation Screen (F23)

To display this screen select **F23=TP Maint** on the first Electronic Catalogue Maintenance screen.

Or: Select **F23=TP Authority** on the second Electronic Catalogue Maintenance screen.

You can decide which trading partners are associated with the catalogue. When the catalogue is sent to the trading partner, the outbound files are only created for the defined trading partners. Even if the catalogue is to be sent to a single specified trading partner, it must be defined here.

Fields:

Catalogue

This field displays the name of the catalogue and is for your information only.

Selection

This field displays the name of the selection and is for your information only.

Revision

This field displays the name of the revision and is for your information only.

Sel

Select. For each trading partner, you can enter the following in this field:

1 - Select. You can display a list of all the catalogues to which this trading partner belongs. In this case, the All Catalogues For Selected Trading Partner screen is displayed.

4 - Delete. You can delete a trading partner from the list. The selected trading partner is deleted from this catalogue.

Trading Partner

For each trading partner, the trading partner code is displayed for your information only and cannot be amended.

Seq

The delivery sequence which defines the different delivery addresses of the same company is configured in the Delivery Name And Address Maintenance screen.

For each trading partner, the delivery sequence of trading partners is displayed for your information only and cannot be amended.

Trading Partner Name

For each trading partner, the trading partner name is displayed for your information only and cannot be amended.

Add Trading Partner

There are two fields with this heading. If you want to add a trading partner to this catalogue, first enter a trading partner code and sequence in the fields. If you do not know which trading partner code to enter you can prompt for one. Next, select **F10=Add Trading Partner** and the trading partner is displayed on the list.

Functions

F10

Add Trading Partner. If you want to add a trading partner to this catalogue, first enter a trading partner code and sequence in the Add Trading Partner fields. If you do not know which trading partner code to enter you can prompt for one. Next, select **F10=Add Trading Partner** and the trading partner is displayed on the list.

All Catalogues For Selected Trading Partner Screen (Option 1)

To display this screen enter 1 in the Select field on the Electronic Catalogue Trading Partner Authorisation screen.

You can display a list of all the catalogues to which a trading partner belongs.

```

Fields:

Trading Partner

This field displays the code, sequence and description of the trading partner and is for your information only.

Catalogue

For each catalogue, this field displays the catalogue code and is for your information only.

Selection

For each catalogue, this field displays the selection code and is for your information only.

Revision

For each catalogue, this field displays the revision code and is for your information only.

Catalogue/Selection/Revision

For each catalogue, this field displays either the catalogue, selection or revision text description and is for your information only. Toggle between the descriptions by selecting **F20=Selection Desc.**

Functions:

F20

Selection Desc. Select this option to toggle between the catalogue, selection or revision text descriptions.

Electronic Catalogue Maintenance Screen 2

To display this screen press **Enter** on the first Electronic Catalogue Maintenance screen.

You can edit the selected catalogue by amending the details displayed in the fields on this screen.

Fields:

Change Date

The date that the catalogue was last edited is automatically displayed here and is for your information only.

Catalogue

This field displays the name of the catalogue and is for your information only. You can enter a text description in the untitled field to the right of the Catalogue field.

Selection

This field displays the name of the selection and is for your information only. You can enter a text description in the untitled field to the right of the Selection field.

Revision

This field displays the name of the revision and is for your information only. You can enter a text description in the untitled field to the right of the Revision field.

Publication Date

You can enter a date in this field. This is a memo field where you can enter the date you want to send the catalogue.

1st Order Date

You can enter a date in this field. This is a memo field where you can enter the first date you want to accept orders.

1st Ship Date

You can enter a date in this field. This is a memo field where you can enter the last date you want to first ship items.

Expiration Date

You can enter a date in this field. This is a memo field where you can enter the last date this catalogue can be used.

Lead Time Days

You can enter the amount of days in this field. This is a memo field where you can enter the number of days between an order being received and it being shipped.

Freight MOP

You can enter a freight method of payment in this field. If you do not know which freight method of payment to enter you can prompt for one. The method of payments for this field are configured in the Descriptions file for major type FMOP.

Customer

You can enter the customer code in this field. If you do not know which customer code to enter you can prompt for one. If it is entered, this is used to retrieve the price list details which are automatically displayed in the Discount Code, Discount %, Staged Disc Cd and Staged Disc Desc fields.

Discount Code

You can enter a discount code in this field. If you do not know which discount code to enter you can prompt for one. This is configured in Inventory Management.

Discount %

You can enter a discount percentage in this field. This is configured in Inventory Management.

Staged Disc Cd

You can enter a conditional discount code in this field. If you do not know which one to enter you can prompt for one. This is configured in Sales Order Processing.

Staged Disc Desc

You can enter a staged discount description in this field. This is configured in Sales Order Processing.

Vendor ID

You can enter the vendor ID in this field.

Functions:

F17

Change Profile. You can display the change details of the selected catalogue. When this option is selected, the second Catalogue Item Maintenance screen is displayed.

F21

Details Maint. When this option is selected, the Catalogue Item Maintenance Selection screen is displayed.

F23

TP Authority. If item details change on the System 21 database, then you can update selected item details on a catalogue. When this option is selected, the Electronic Catalogue Trading Partner Authorisation screen is displayed.

Select **F8=Update** to update this information and display the first Electronic Catalogue Maintenance screen.

Catalogue Item Maintenance Screen 2 (F17)

To display this screen select **F17=Change Profile** on the second Electronic Catalogue Maintenance screen.

If item details change on the System 21 database, you can decide which item details on the System 21 database are compared to the customer catalogue. If there is a difference and a change record already exists, it is updated; otherwise a change item record is automatically added. You can send the change item record later.

F3=Exit F4=Prompt F8=Submit			
07-22	SF	MK	KS IM II EDN400A PET201S2

Fields:

Print Report

You can decide whether or not to print the Electronic Catalogue Change Control Report by entering one of the following:

0 - No.

1 - Yes.

From/To Catalogue

You can select the range of catalogue records to be searched for item detail differences. If you do not know which catalogues to enter you can prompt for one. If you select the catalogue records, you cannot enter a range for either the selection or revision records. If a range of trading partners is defined, then the range of catalogue records to be searched must also satisfy the range of trading partners. If these fields are left blank, all the catalogues are searched.

From/To Selection

You can select the range of selection records to be searched for item detail differences. If you select the selection records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the range of selection records to be searched must also satisfy the range of trading partners.

From/To Revision

You can select the range of revision records to be searched for item detail differences. If you select the revision records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the range of revision records to be searched must also satisfy the range of trading partners.

From/To Trading Partner

You can select the range of trading partners for which records are to be searched for item detail differences. If you do not know which trading partner to enter you can prompt for one. If you also select a range of catalogue, selection or revision records, then the records to be searched must also satisfy the range of trading partners.

Catalogues, selections and revisions within the selected range, that are authorised to trading partners within the selected range, are compared with the System 21 database to find significant item detail differences.

Select **F8=Submit** to search the selected records.

Print Electronic Catalogue

14/OEAI

You can decide what records to include in the Electronic Catalogue when it is printed.

Print Electronic Catalogues Screen

Select Print Electronic Catalogue from the Sales Order Processing Application Interface Menu.

```

```

Fields:

Include

Enter one of the following:

0 - Sent Records Only. This prints the item records of type Sent.

1 - All Records. This prints all item records for the selected catalogue.

From/To Catalogue

You can select the range of catalogue records to be printed. If you do not know which catalogues to enter you can prompt for one. If you select the catalogue records, you cannot enter a range for either the selection or revision records. If a range of trading partners is defined, then the range of catalogue records to be printed must also satisfy the range of trading partners. If these fields are left blank, all the catalogues are printed.

From/To Selection

You can select the range of selection records to be printed. If you select the selection records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the range of selection records to be printed must also satisfy the range of trading partners.

From/To Revision

You can select the range of revision records to be printed. If you select the revision records, you cannot enter a range for either the catalogue or revision records. If a range of trading partners is defined, then the range of revision records to be printed must also satisfy the range of trading partners.

From/To Trading Partner

You can select the range of trading partners for which records are to be printed. If you do not know which trading partner to enter you can prompt for one. If you also select a range of catalogue, selection or revision records, then the records to be printed must also satisfy the range of trading partners.

Catalogues, selections and revisions within the selected range, that are authorised to trading partners within the selected range, are printed.

Select **F8=Submit** to print the selected records.

Print Trading Partner Report

15/OEAI

You can print a list of all the catalogues, selections and revisions which are associated with one or more selected trading partners.

Electronic Catalogue Trading Partner Authorisation Report Prompt Screen

Select Print Trading Partner Report.

Fields:

From/To Trading Partner

You can select the range of trading partners for which a list of all the associated catalogues, selections and revisions are to be printed. If you do not know which trading partner to enter you can prompt for one.

A list of all the trading partners is printed. For each trading partner, a list of all the catalogues, selections and revisions associated with the trading partner is printed.

Select **F8=Submit** to print the report.

Receive Orders

21/OEAI

The purpose of the function is to receive sales orders sent via EDI by customers directly into the order bank. These orders are fully validated as if they were entered via conversational order entry and are suspended with the appropriate code if any of these checks fail. A control list is available to provide an audit of sales orders received, or of only those in error.

You can generate the following reports:

- Audit Report - This report contains details of all the inbound orders including all exceptions.
- Exception Report - This report only contains orders where an error has been encountered. There are three types of error:
 - Warning Messages. These are provided to inform users of conditions that may warrant review. Sales orders have been created on the basis of well defined circumstances. The related AI inbound file records are deleted from the AI files
 - Suspense Messages. These reflect conditions which are serious enough to place the sales order on suspend. The order is created and the related records are deleted from the AI files
 - Fatal Error Messages. These reflect an inability to create order entry database records. Fatal errors may exist at the header - in which case the order cannot be created - or may be at the line level, where the order can be created but the order line in error is not created. Records with fatal errors are retained with the AI interface files for subsequent processing by the next run. A maintenance option exists which allows the data that is in error to be corrected.
- Summary Report - This report contains a summary of all the orders with the total number of lines created for each order.

Note: These sales orders must have already been received into the Application Interface database via the Receive Documents function.

Receive EDI Orders Screen

Select Receive Orders.

This screen enables you to submit the batch function which adds records to the Sales Order Processing database.

AIS10		Z1 - GB Demonstration Company		User GBJBATD0		6/03/97	
						10:55:21	
Receive EDI Orders

Run Batch Allocation. 1 (0=No, 1=Yes)							
F3=Exit F8=Submit							
06-41 KS IM II EDN400A PET201S2							

Fields:

Print EDI Orders Control List

You can enter the following:

- 1 - All Orders. To print details of all Sales Orders received. The Audit Report, Exception Report and Summary Report are printed.
- 2 - Exceptions Only. To print only those details in error. The Exception Report and Summary Report are printed.

Run Batch Allocation

Batch allocation is a batch job which considers all orders due for delivery and matches them against available stock. For more information see Batch Allocation.

You can enter the following:

- 0 - No.
- 1 - Yes. This means batch allocation is run immediately after inbound order processing has been completed.

The default for this field is configured in the Inventory Management Descriptions file for major type EDI. The stockroom used is also configured there. The minor type ALLOCATE decides whether or not batch allocation is run. For the minor type ADEPOT the first two characters of the description refer to the depot to be used as the default for batch allocation.

Press **F8=Submit** to submit the batch function.

Order Status

22/OEAI

The Receive Order Status option allows you to examine Order Status Enquires received via EDI.

Receive Order Status Inquiries Screen

Select Order Status.

Select one of the following:

- 1 - Print Complete Inquiry Control list.
- 2 - Print an Exceptions Inquiry Control list. This report displays records that have failed validation.

Functions:

F8

Submit. Selecting **F8=Submit** to process the Order Status Inquiry. The order status can now be maintained by selecting Order Status Trigger Maintenance.

Select **F8=Submit** to process the Order Status Inquiry.

Received Orders Error Recovery

31/OEAI

When purchase orders are received from the customer, the system converts them to sales orders. Sometimes the sales order cannot be created. This can be because the purchase order contains invalid data, or does not conform to the company conditions. For example, if credit checking, the purchase order may be suspended.

This option allows you to maintain fields that may have been in error. All validation mentioned here takes place in Receive Orders.

If a sales order is not created, the failure to do so is displayed on the Audit and Exceptions reports. It is advisable that you use these reports as reference. For more information see Receive Orders.

EDI Received Orders Error Recovery Screen

Select Received Orders.

Use this screen to find a purchase order from which a sales order failed to be created.

AIS26	Z1 - GB Demonstration Company	User GBJBATD0	6/03/97 10:59:10

F3=Exit F4=Prompt			
07-19	SP	ML	KS IM II EDN400A PET201S2

Fields:

Customer PO Ref

You can enter the customer purchase order reference in this field.

Customer

You can enter the customer name in this field. If you do not know which customer to enter you can prompt for one.

Mailbox ID

Each translator (usually Premenos) has a special identification address, called the Mailbox ID. The Mailbox ID is displayed on the Exception report. You can enter the Mailbox ID in this field.

Include

You can enter the following:

- 1 - Errors Not Updated. These are failed orders which have not been edited.
- 2 - All Errors.

Maintain

You can enter the following:

1 - Headers. When you press **Enter**, if one header satisfies the selection criteria, the EDI Received Orders Error Recovery - Header Maintenance screen is displayed. If more than one header satisfies the selection criteria, the AI Error Inbound Purchase Order Header Selection screen is displayed.

2 - Lines. When you enter this option and press **Enter** a window is displayed. You can enter a line number in the Enter Line Number field and press **Enter**. In this case, the EDI Received Orders Error Recovery - Line Maintenance screen is displayed. If you leave the Enter Line Number field blank and press **Enter**, the EDI Received Orders Error Recovery - Line Selection screen is displayed.

Press **Enter**. The screen displayed depends on what is entered in the above fields.

AI Error Inbound PO Header Selection Screen

This screen displays when more than one header satisfies the selection criteria in the EDI Received Orders Error Recovery screen.

Use this screen to select a customer to edit.

Fields:

Action

You can enter the following:

- 0 or C - Cancel an existing order.
- 1 or N - Add new order.
- 2 or M - Modify an existing order.
- 3 or P - Add new quotation (proposed) order.
- 4 or F - Confirm quotation (convert to standard order).
- 9 - Not processed. Will be printed in audit report.

Quote Ord Type

You must enter a valid quotation type in this field, as defined in the Inventory Management Descriptions file against major type QTNO.

Quote Expires Date

If you enter a type in the Quote Ord Type field, you can enter a date in this field which is the last date the quote is offered.

Customer

You can enter the name of the customer.

Unique

This code is used to link all the Application Interface files together, so it must be unique. It is strongly recommended that the EDI Document Control Number is entered in this field.

Location

If a value is entered here the AI Customer Alternative Location Reference file is accessed to determine the correct customer delivery sequence number to be used for this order.

If SDQ (Specified Destination Quantity) details are provided at order line level this field must be blank, because SDQ details provide the basis for determining customer delivery sequences.

Ord Ref

This field contains the Customer Purchase Order reference.

If the customer's account has been set to require unique references, there cannot be any existing orders with this reference in the sales order database.

If duplicate references are allowed, customer orders with duplicate references may not exist for existing orders which have been selected for changes or cancellation.

This field is part of the key that links all the AI interface files together. It should not be amended here but all other files need amendment.

Dept

This field is reserved for future use.

Deal/Promo

This field is reserved for future use.

Mailbox

This field is for your information only and cannot be amended.

Ship With Order

This field is reserved for future use.

Ord Date

This field defaults to the current system date. You can enter a valid date which is before or the same as the current system date. The displayed date becomes the customer order date within the database. If a new order, this is the date of the original order. If it is an amendment, this is the date of change.

Cancel

This field is reserved for future use.

Ship Not Before

This field is reserved for future use.

Forward Inv Date

This field is reserved for future use.

Transport Offset

If the requested ship date on the line is not sent, this is used.

The default for this field is configured in the Inventory Management, Descriptions file against major type EDI. The minor type TRANSLEAD has a limit of 1, which means that the transport offset is in weekdays only. Otherwise, it is in calendar days.

This field is used as an offset, in days, to the Date Delivery Required field on the line. The resulting date is used if it is valid and is not earlier than the system date.

Carrier

If not blank, this is entered in the Carrier Code field on the order header.

Currency

This is the currency of the order.

Curr Rate

This is the exchange rate.

Price List Ovr

Price List Override. If this is entered, it is validated against defined lists and used as an override to the default price list associated with the customer.

Discount List Override

If this is entered, it is validated against defined lists and used as an override to the default discount list associated with the customer.

Ord Pricing At Override

Order Pricing At Override. If something is entered in this field or is invalid, the order pricing is controlled by the sales order processing company profile default.

Valid Ord Suspense Code

This is the code used to suspend valid orders. If the order is valid and this field is blank, the sales order processing order is not suspended.

Ord Process Control Flag

This field defines why the order failed. You can enter the following:

(blank) - Allow partial processing, that is the creation of sales orders in Sales Order Processing which fail to include all relevant lines from the inbound order due, to line validation failure.

1 - Disallow partial processing.

- 2 - Disallow suspended orders.
- 3 - Disallow partial processing or suspended orders.

Quantity Calc Control

This field is used to define how quantities are interpreted when processing order line quantity changes. You can enter the following:

(blank) - New amount ordered line quantity.

1 - Net increase or decrease in order quantity.

2 - New unreceived order line quantity.

Price Comparison Rule

This field defines how order line prices are evaluated and processed. You compare the customer's price with supplier price, and decide what to do if there is a difference. You can enter the following:

(blank) - Use supplier calculated price with warning error message if different than customer price.

1 - Use supplier calculated price with warning error message if different than customer price, but with suspension error if price exceeds tolerance % and tolerance value.

2 - Use customer calculated price if variance from supplier price is within tolerance % and tolerance value. If tolerances exceeded, process as a suspension error.

3 - Use customer price but process as a suspension error.

4 - Use customer price and do not compare to calculated supplier price.

5 - Valid only on changes. As for 1, but comparison is to existing price on order line.

6 - Valid only on changes. As for 2, but comparison is to existing price on order line.

7 - Valid only on changes. As for 3, but comparison is to existing price on order line.

Cash Discount Code

This defaults to the entry on the Order Header in Sales Order Processing.

Pay Terms Type

This defaults to the entry on the Order Header in Sales Order Processing.

Periodic Range

This defaults to the entry on the Order Header in Sales Order Processing.

Payment Term Days

This defaults to the entry on the Order Header in Sales Order Processing.

Settlement Profile Cd

This defaults to the entry on the Order Header in Sales Order Processing.

Stage Cash Disc Cd

This defaults to the entry on the Order Header in Sales Order Processing.

Functions:

F11

Delete. When you select this function, this record is flagged for deletion.

F14

Line Selection. When you select this function a window is displayed. You can enter a line number in the Enter Line Number field and press **Enter**. In this case, the EDI Received Orders Error Recovery - Line Maintenance screen is displayed. If you leave the Enter Line Number field blank and press **Enter**, the EDI Received Orders Error Recovery - Line Selection screen is displayed.

F23

Header Text. When you select this function the EDI Received Orders Error Recovery - Text Inquiry screen is displayed. You can display the Customer, Unique, Ord Ref (Text Description), and Order Text fields.

Press **Enter**. The fields are validated when the batch job is carried out. Any failures are defined on the reports.

EDI Received Orders Error Recovery Line Selection Screen

When more than one line satisfies the selection criteria in the EDI Received Orders Error Recovery screen, the EDI Received Orders Error Recovery - Line Selection screen is displayed.

You can display a list of selected suppliers.

Fields:

Customer

The text description of the customer is displayed in this field for your information only.

Order Ref

The customer order reference is displayed in this field for your information only.

Unique

The unique code is displayed in this field for your information only.

Untitled

You can enter the following:

1 - Select Line Details. When you enter 1 in this field, the EDI Received Orders Error Recovery - Line Maintenance screen is displayed.

2 - Select SDQ Details. When you enter 2 in this field, the EDI Received Orders Error Recovery - SDQ Details Maintenance screen is displayed. This is used if there is more than one delivery address for a selected supplier.

Lin

This field displays the line number for your information only and cannot be amended.

Supplier

This field displays the supplier code for your information only and cannot be amended.

Item

This field displays the item code for your information only and cannot be amended.

Bar Code

This field displays the barcode for the item, is for your information only and cannot be amended.

Customer Item

This field displays a text description of the customer for your information only and cannot be amended.

Updated

This field displays the update status.

EDI Received Orders Error Recovery Line Maintenance Screen

When 1 is entered in the Untitled field on the EDI Received Orders Error Recovery - Line Selection screen, or when one line satisfies the selection criteria in the EDI Received Orders Error Recovery screen, the EDI Received Orders Error Recovery - Line Maintenance screen is displayed.

You can enter details for a selected supplier.

The fields on this screen are not validated.

Fields:

The following fields are displayed for your information only and cannot be amended:

Action

The following is displayed:

0 or C - Cancel an existing order.

1 or N - Add new order.

2 or M - Modify an existing order.

3 or P - Add new quotation (proposed) order.

4 or F - Confirm quotation (convert to standard order).

9 - Not processed. Will be printed in audit report.

Customer

Unique**Ord Ref****Ord Line**

You can edit the following fields:

Supplier's Item

Enter the supplier's item being ordered. If blank, the Barcode and Customer's Item fields are used to determine the item ordered.

Barcode

This is checked to ensure it corresponds to the supplier's item, or used to find the supplier's item.

Customer's Item

This is checked to ensure it corresponds to the supplier's item, or used with the customer code to find the supplier's item.

Quantity

Enter the quantity ordered or the quantity for amendment.

UOM

Unit Of Measure. If this field is left blank, this defaults to the item stockroom issue unit of measure.

If a unit of measure is entered, it must be the item purchase or stock. If it is either of these, the quantity is multiplied by the appropriate conversion factors to get the item stockroom issue unit.

Date Required

This is the date by which the customer requires the item to be delivered. This is used as the order line due date if the requested ship date is blank. Note that the transportation lead time offset is added if it is entered.

Requested Ship Date

This is used as the order line due date.

Stockroom

This is the stockroom for the order line.

Priority

This is the allocation priority of the line. If this field is left blank, batch allocation assumes the allocation priority is infinity and does not allocate the line.

Price

If provided, the use of this is dictated by the price comparison rule from the header.

Functions:**F11**

Delete. When you select this function, this record is flagged for deletion.

F16

SDQ Details. When you select this function the EDI Received Orders Error Recovery - SDQ Details Maintenance screen is displayed. This is used if there is more than one delivery address for a selected supplier.

F23

Line Text. When you select this function the EDI Received Orders Error Recovery - Text Inquiry screen is displayed. You can display the Customer, Unique, Ord Ref (Text Description), Order Line and Existing Order Line Text fields.

The fields are validated when the batch job is carried out. Any failures are defined on the exception reports.

Select **F8=Update**.

EDI Received Orders Error Recovery SDQ Details Maintenance Screen

When 2 is entered in the Untitled field on the EDI Received Orders Error Recovery - Line Selection screen, or when **F16=SDQ Details** is selected on the EDI Received Orders Error Recovery - Line Maintenance screen, the EDI Received Orders Error Recovery - SDQ Details Maintenance screen is displayed.

There can be more than one delivery address for a selected customer. You can edit the details and allocate how many go to each address.

Fields:

Customer

The text description of the customer is displayed in this field for your information only.

Order Ref

The customer order reference is displayed in this field for your information only.

Unique

The unique code is displayed in this field for your information only.

Order Line

The order line is displayed for your information only.

Line Quantity

You can enter the total number of items on this order line.

SDQ Total Quantity

The total number of items listed for the different delivery addresses is displayed in this field and is for your information only. This must be equal to the Line Quantity before **F8=Update** can be used.

1

For each delivery address, you can enter the following:

1 - Select. When you enter 1 in this field, a window is displayed containing the SDQ Location, SDQ Quantity and UOM fields. You can select **F11=Delete** on the window to delete the location and details from the list. In this case, D is displayed in the Deleted field on the EDI Received Orders Error Recovery - SDQ Details Maintenance screen.

SDQ Location

For each delivery address, the delivery address code is displayed in this field for your information only. Any delivery addresses configured in Transport Planning is automatically displayed.

SDQ Quantity

For each delivery address, the quantity to be sent to the delivery address is displayed in this field for your information only.

UOM

For each delivery address, the unit of measure of the quantity to be sent is displayed in this field for your information only.

Deleted

For each delivery address, if it is to be deleted, a D is displayed in this field for your information only. In this case, the SDQ Quantity is ignored when calculating the SDQ Total Qty field.

Functions:

F10

Add. When you select this function, a window is displayed containing the SDQ Location, SDQ Quantity and UOM fields. When you enter data into all these fields and press **Enter**, the additional location is displayed on the list.

Select **F8=Update**.

Order Status Triggers

32/OEAI

The Order Status Report Trigger Maintenance Prompt Screen allows you to add, change or delete records from the file that controls orders and items to be included in the next outbound order status report.

Order Status Report Trigger Maintenance Prompt Screen

Select Order Status Triggers.

F20=Effective Status Maint.					
MA a		04/014			

Fields:

Ord Ref

The customer order reference is validated with the customer for enquiry types 01, 02, 03 and 04 and must be blank for types 05, 06 and 07.

Enq Ref

This must be non-blank for each record and unique.

Enquiry Source

The enquiry source can be either blank, 1 or 2.

Blank - Customer Enquiry.

1 - Unsolicited.

2 - Prearranged schedule or Agreement.

Enquiry Type

There are seven enquiry types, numbered from 01 to 07:

01 - Selected orders. If the enquiry type on the Order Detail screen is 01, then item detail maintenance can be performed.

- 02 - Selected orders, selected items.
- 03 - Selected orders, shipped items only.
- 04 - Selected orders, unshipped items only.
- 05 - All orders, items with changed status only.
- 06 - All orders, unshipped items only.
- 07 - All orders with changes status only.

Qualifier

If a constraint date is entered, then a qualifier must also be entered. The qualifiers are numbered from 01 to 07:

- 01 - Delivery date requested.
- 02 - Shipment requested date.
- 03 - Despatch date.
- 04 - PO date.
- 05 - Acknowledgement date.
- 06 - Cancel after date (Style only).
- 07 - Ship not before date (Style only).

Before/After

If a constraint date is entered, then the Before/After flag must be set to blank or 1.

Functions:

F20

Effective Status Maint. Select this function to display the Effective Status Array Maintenance Screen. This screen is used to select what areas are reported on for any particular order enquiry.

Select **F8=Update**.

Order Status Trigger - Item Detail Selection Screen

The Item Detail Selection is displayed when the enquiry type is 01 and more than one detail line exists.

If there is more than one line, then this screen is used to select the particular line which requires maintenance.

Fields:

Line

1-Select

Enter 1 against a line which requires maintenance.

Functions:

F16

Add new record. When you select this function, an Order Status Trigger-Order Detail Maintenance Screen is displayed. This allows you to send order status reports to customers at agreed time periods without having to formally receive an order status enquiry

Select an Item Line for Maintenance to display the Item Detail Maintenance screen.

Order Status Trigger - Item Detail Maintenance Screen

The Item Detail Maintenance screen is displayed when an item line has been selected for maintenance.

Fields:

The following fields can be edited:

Item Barcode

Customer Item Number

PO line number

Functions:

F8

Update. Select update to submit the item details that have been modified.

Select **F8=Update** when item details have been modified.

Effective Status Array Maintenance Screen

The Effective Status Array Maintenance screen is displayed when **F20=Effective Status Maintenance** is selected on the Order Detail Maintenance.

This screen is used to select what areas are reported on for any particular order.
