Chapter 2

Processing

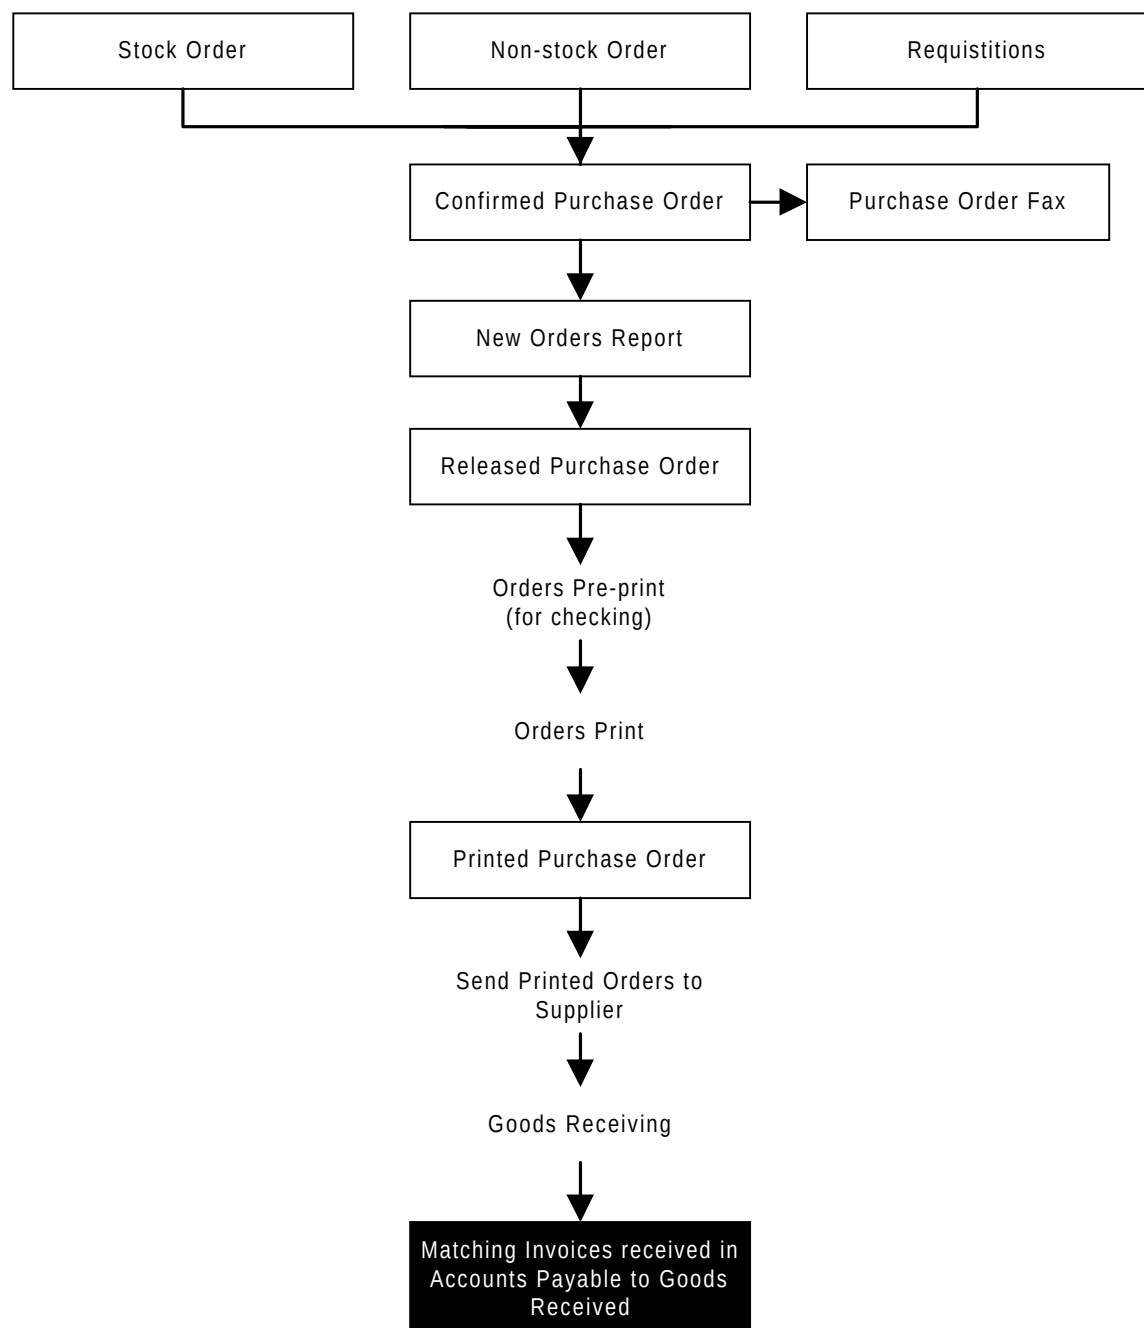

Purchase Management Processing

The normal day-to-day processing in Purchase Management can be divided into three types of tasks:

- Creating and amending orders.
- Receiving goods.
- Matching invoices to goods received.

This section covers the procedures which control these processing functions.

Invoice Matching.

With the introduction of the Euro and European Monetary Union (EMU) in 1999, the way in which we process any monetary transaction will change.

There are two ways to match an invoice to a purchase order.

- Batch.
- Interactive.

With either method System 21 determines whether the currencies are defined as an IN Currency, that is linked to the Euro, or not.

If either currency is not linked to the Euro, then the discrepancy is written to the Rounding Errors Account held within Financials.

If it is a positive error, then the amount is written to the Euro Rounding Debit Account.

If it is a negative error, then the amount is written to the Euro Rounding Debit Credit Account.

Order Entry

41/PMP

Select Order Entry from the Purchase Management Processing Menu.

This procedure uses Header, Details and Completion Options screens.

The screens seen at order entry will vary depending on the type and class of order being processed. Both are determined by entries made on the order header.

- A Stock Order is an order that contains stocked items as well as non-stocked items or services that require item tracking. The order class is 1, 2, 3 or 4.
- A Non-stock Order is one of order class 5, 7 or 8, containing non-stocked items or services that do not require item tracking.
- A Service Order, where item tracking is not required, is order class 6. For these orders it is not necessary to release or receive the order and it is possible to match invoices to these orders once they have been entered.

There are three main order types:

Line order - consists of separate order lines, giving the quantity and other details for each item. Multiple deliveries are acceptable against such an order

Schedule order - multiple deliveries are requested for each line, with individual delivery dates and quantities. The whole order quantity is scheduled for specific dates.

Blanket order - similar to the schedule order but the full order quantity need not be scheduled when the order is raised. A default date of 99/99/99 will be automatically set-up for the unscheduled part.

Order Entry Header Screen

This screen enables you to assign a supplier, order class (stocked, non-stocked or service), schedule type, stockroom, and delivery instructions to the order. Defaults that appear on this screen can be overwritten.

PM080	Z1 - Demonstration Company	User SP1	31/08/94

Disc % 1..		Disc % 2..	-
F3=Exit F4=Prompt F13=Receiving Address			

Fields:

Order Number

If automatic numbering has been selected in the Company Profile this field displays a system generated number; which can be manually amended if required. The number may optionally include an amendable alpha character prefix. If automatic numbering is disabled enter a unique order number.

Supplier

The supplier code against which you wish to raise the order. This supplier must exist in Accounts Payable.

Address Code

The address code for this supplier. This must have been set up in Accounts Payable. Entering three zeros selects the invoice address. A default address code is specified in the Company Profile.

Receiving Address Code

The code for the address to which the goods should be sent. The default entered on the Company Profile appears here and can be amended if required. Selecting **F13=Receiving Address** allows you to enter an address for this order only, leaving the receiving address blank.

Order Date

Defaults to today's date but can be amended.

Delivery Date

A mandatory field used as the default for the Due Date field on each order line. It must not precede the order date.

FOB

Note: This field is displayed only when the country code is U.S.

Freight On Board.

Order Class

The type of goods ordered.

Order classes 1 - 4 are for stocked items, non-stocked items or services which require tracking via an item code.

Order classes 5, 7 and 8 are for non-stocked items and services which do not require tracking via an item code.

Order class 6 is for services that do not require the receipt of goods.

The Order Class code is set up in the Parameters and Miscellaneous Codes option on the Purchase Management Maintenance menu.

This is a mandatory field

Note: Stock orders require an item record in Inventory Management to be present for each item ordered.

P. Officer

Enter a valid code for the purchasing officer responsible for this order. This field is mandatory if Purchase Officer to be Mandatory in the Company Profile has been set to Yes.

Schedule Type

The following options are available:

Blank - Leave blank if the order is a line order i.e. a single delivery is expected for the full order line quantity.

S - The order is a Schedule Order

B - The order is a Blanket Order

Stockroom

The code for the stockroom where the goods from this order are to be received.

This field is mandatory if the order is a stock order.

Dly. Ins. Code

The code for the Delivery Instructions you wish to be printed on the order.

Department

This field is for memo purposes only.

Shipping Code

This field is for memo purposes only.

Job Number

It is possible to enquire on orders via their Job Number.

User Defined Field

Any entry you make in this one character field is not validated and is for memo purposes only. You could use this field as a way of separating and selecting purchase orders when running your own reports.

You can set up your own description to be displayed beside this field by taking the Parameters and Miscellaneous Codes option from the Maintenance menu, and selecting Parameter Type XDEF and Parameter ID IPRI.

Discount %1

Enter discounts which apply to the total order to be printed as part of the header details. These fields are optional.

Discount %2

Press **Enter** to display the Currency Code field .

The Order Entry - Header screen displays the following field after **Enter** is pressed on the first Header screen:

Fields:

Currency Code

The Currency Code is displayed if the supplier is a multi-currency supplier. The default is the supplier's currency. This may be amended if necessary.

Note: If ordering in a different currency, a valid conversion rate must exist in Advanced General Ledger.

Press **Enter** to display the Order Line Entry screen.

Order Line Entry Screen

All types of order line entry display the following fields:

Fields:

Order Number

From the Header screen.

Supplier

The first line of the name and address from Accounts Payable.

Class

Description of order class entered on the header screen.

Currency

The currency of the order. Currency will only be displayed if the supplier's currency is different to your base currency.

Additional fields displayed depend on the type of order being entered.

This field is untitled on screen. A selection may be made against any existing line on the order:

- 1 - to amend the line details.
- 2 - to display the schedule line details screen (only for scheduled or blanket order)
- 3 - to display the line text screen.
- 5 - to add additional cost/date line details.

Supplier Item Ref

The supplier's reference for the item. If not entered, this defaults to the supplier item reference held on the item supplier profile.

Item

You may enter a valid item or use the item name search to select a valid item.

Valid item details must exist in Inventory. Stockroom details must be associated with the item unless it is defined as a non-stock item in Inventory.

F21=Review Specification enables you to enter text against the item.

If no Item/Supplier record is found, i.e. this item has not previously been ordered from this supplier, then a message is displayed suggesting that a record may be created using the **F22=Create Item/Supplier profile** key. Care must be taken to check the Supplier's Item Reference, Price and Discount are correct before adding this profile.

This is a mandatory field.

Quantity

The order quantity must be entered. This relates to the unit of measure specified in the UOM field.

UOM

This is the quantity UOM and must be one of the purchase, stock or issue units of measure set up in Item Maintenance in Inventory Management. If left blank, it defaults to the purchase unit of measure from the item record. The F4 prompt is available in this field.

Sr

The stockroom where this line will be received. This defaults to the stockroom specified on the order header.

Price

If entered, the price is compared to that on the item supplier profile. If a price difference is found, a warning message will be displayed saying 'Price difference: F10 to update price & discount or F20 for special price'.

To accept the price you have entered for this order and update the item supplier profile price to the new price, select F10. If you wish to accept the entered price for this order only, select F20. To change the price you entered, select F20 to accept a special price and then amend the order line by putting a 1 against it.

If left blank the price defaults to the purchasing unit of measure specified on the item supplier profile, or any current price structure which exists for the item supplier.

Note: If catchweight is active for this company, a catchweight item type's line value is calculated at nominal secondary value. Enter or override a catchweight item's price as follows:

Catchweight items set up as types 1 and 2 must be priced by secondary UoM.

Catchweight items set up as types 3 and non-catchweight items with a secondary UoM can be priced by either a primary or secondary UoM.

Non catchweight items are always priced by primary value.

UOM

The code for the unit of measure in which the price is expressed. The same rules apply as for the quantity UOM. If left blank, the quantity UOM code is used as a default. If the quantity UOM is blank, the default purchasing unit of measure code is used, which is specified on the item supplier profile.

Note: If catchweight is active for this company, the price UoM entered can be any of the secondary UoMs that have conversions previously defined in Inventory Management for the item's catchweight type.

Full Text

1 - Copy the Purchase Management item text into the order line text.

Blank - Copy the Inventory item text into the order line text.

VAT Code

This field defaults to the VAT code associated with the item and is validated against the VAT Codes file on the Advanced General Ledger.

Disc%

Enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

If the first discount is entered, this will be compared to that held on the item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences described above.

This field is optional.

Due Date

This may be entered for non-scheduled orders only and represents the date that this order line is due to be delivered. (Scheduled order dates are catered for on a separate screen).

If not entered, this field defaults to the value from the header screen. This field is optional

GI Acct

This field defaults to the Advanced General Ledger account code held on the Inventory item file. This code is used to generate automatic nominal dissections if full invoice matching is used.

When you accept the order line details a window 'Select Account Code' will display to allow you to view the default account code. Any associated GL account extension codes will display to be accepted or amended.

Job Number

This field defaults to values from the header screen and is optional.

Department

This field defaults to values from the header screen and is optional

Press **Enter**.

If the order is a type of schedule then, after adding each line, the Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line.

After entering the schedule details, the application returns to this screen in anticipation of the next line. Completion of the entry of the order is achieved by using the **F7=Update and Next Order** or **F8=Update & Options** key.

Functions:

F7

Update the order and return to header screen for the next order (this will default to the order completion options).

F8

Update the order and display the completion options screen for this order.

F11

Cancel this order and return to the header screen for this order number to be re-used.

F21

Review specification. Actioned from the Item field enables you to amend item text.

GL Extension Code

When you have entered a non-stock item a window will display to allow you to view the default account code. Any associated GL account extension code will display to be accepted or amended.

posted in Invoice Matching. This is a mandatory field, if the Advanced General Ledger is active.

A window 'Select Account Code' will display to allow you to view the default account code. Any associated GL account extension code will display to be accepted or amended.

Quantity/UOM

The quantity must be entered together with the appropriate unit of measure these codes are set up in the parameters file.

Sr

Enter the stockroom that is to receive the order line.

Price/UOM

The price must be entered. Optionally enter the unit of measure to which the price applies. If left blank the quantity unit of measure is used as a default.

VAT Code

The VAT Code must be a valid code on the Advanced General Ledger VAT codes file.

Disc%

Enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

If the first discount is entered, this will be compared to that held on the item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences described above.

This field is optional.

Due Date

The date that this order line is due to be delivered. May be entered for non-scheduled orders otherwise it defaults to the value from the previous screen. For scheduled orders, the delivery dates are entered on a separate screen.

Job Number

This field defaults to values from the header screen and is optional.

Department

This field defaults to values from the header screen and is optional

The VAT code defaults to the suppliers, at this stage.

Press **Enter**. The order can now be completed in the same way as for stock orders.

Functions:

F7

Update and prompt for entry of a new order.

F8

Update and prompt for order completion options.

F11

Cancel order. You will be prompted to confirm deletion.

Order Line Entry Scheduled Order Screen

This screen is displayed on pressing **Enter** after entering order line details if the order is a type of schedule. This is determined by the Schedule Type field on the Order Entry Header screen being set to either:

S - for a Scheduled order.

B - for a Blanket Order, if Blanket Orders have been set up. For more information about this see Parameter File Maintenance.

Note: If catchweight is active for this company, the catchweight specific functions for purchase order entry work as normal for schedule orders and blanket orders.

The difference between these two types of schedule is that the full order quantity need not be scheduled for a blanket order.

This screen enables you to schedule the order line quantity entered on the previous screen. The quantity is split into multiple deliveries, each with a required date.

PM082	Z1 - Demonstration Company	User SP1	31/08/94	
Order Line Entry			11:47:33	
Order No 000005 Supplier Coles Commercial Chemicals Ltd				
Class Stock Order

4	9/09/94	200.000	9/09/94	9/09/94
Ref ____ (Change only)				Qty scheduled 1000.000
Request date ____		Quantity ____	Promise date ____	
Confirm flag _		Expected date ____		
F8=Update completed				

Fields:

Order No

Order header details from the header screen

Supplier

Order header details from the header screen

Class

Order header details from the header screen

Currency

The currency of the order. Currency will only be displayed if the supplier's currency is different to your base currency.

Line

This and the six fields following are order line details from the previous screen.

Item Number

Qty

Supplier Item Ref

UOM

Stockroom

Receiving Address Code

Qty Scheduled

A running total of the quantity scheduled.

Ref

You can display line details for amendment at the bottom of the screen by entering the reference number of an existing line and pressing Enter.

Request Date

The date on which the goods are required. This field is mandatory.

Quantity

The quantity required for this delivery. Enter 0 to delete a line.

Promise Date

The date delivery has been promised by the supplier. If no date is entered this date will default to the request date

Confirm Flag

A user-determined flag to describe the status of this line of the schedule e.g. C for confirmed, D for delayed, Q for queried. You can enter any single character in this field.

Confirm flag is used as a selection criteria for the Order Confirmation report.

Expected Date

The date at which the goods can realistically be expected to be delivered. If no date is entered this defaults to the promise date.

The following fields are available for entry if a Ship Code has been entered:

Ship Date

The date that the goods will be shipped, as promised by the supplier.

Advice Note

The advice note number for the shipment.

The application checks that the total quantity scheduled does not exceed the outstanding quantity.

Once the scheduled deliveries have been entered, and update is selected, these details are written to the Order Lines file. The previous order line screen is displayed once the update is complete.

Press **Enter** and add more schedule lines:

When the schedule is complete select
F8=Update Completed.

The order can now be completed in the same way as for stock orders.

Order Line Entry Line Text Screen (Option 3)

This window is opened if 3 is entered against an order line.

This screen enables you to amend the order line text for the order item. This text will be printed on the purchase order.

Fields:

Order No

This and the following seven fields are details from the Order Line Entry screen.

Supplier Name

Class

Line

Item Number

Qty

UOM

Stockroom

Item Cost

Purchase cost of the item.

Total Cost For Line

Purchase cost plus derived landed cost.

Derived Landed Cost

Accumulation of landed cost derived values.

Warning: Derived landed cost is not the same as true landed cost. True landed cost will be calculated using all the respective flag settings and can be seen on the Goods Receiving screen.

Warning: True landed cost is used to update the Inventory value of the item being received if standard costing is not used.

Cost Code

The Landed Cost Code to assign to this line. This field is mandatory.

Description

A Description of the Landed Cost Code

Landed Cost Value

The landed cost value, either as a percentage or as a fixed value per item. This field is mandatory.

Prec/Val (1/0)

A Landed Cost Code can be calculated as a percentage or value.

1 - A percentage of the item cost will apply.

0 - A cost value per unit of measure for the order line will apply.

Derived Value

The value calculated for each landed cost.

If the landed cost is calculated by percentage, it shows landed cost as a percentage of the Item Cost. If the landed cost is calculated by value, it shows value multiplied by the Qty field.

For more information on adding, amending or deleting Landed Cost Codes see Landed Cost Code Maintenance in the Application Set-Up section.

Values may be amended, deleted or added by tabbing to the relevant fields and overwriting the information held in them.

Order Entry Completion Details Screen (F8)

This screen is displayed when **F8=Update & Options** is pressed on the Order Line Entry screen.

This screen allows you to:

- Determine if further orders are to be entered immediately.
- Add text to the order
- Decide if the order should be printed and/or faxed

PM080	Z1 - Demonstration Company	User SP1	31/08/94 11:35:38
Order Entry			
Order no. 000003 Date 31/08/94 Class 1 Stock Order			
Do you wish to enter further Orders ?..... <u>1</u> (0=No,1=Yes)			
Do you wish to print the Order ?..... <u>1</u> (0=No,1=Yes,2=Immediately,3=Fax)			
Do you wish to use External Supplier Text on this order ?..... <u>1</u> (0=No,1=Yes)			
Do you wish to add text for printing on the Order ?..... <u>0</u> (0=No,1=Yes)			
Do you wish to add text for display within the Company ?..... <u>0</u> (0=No,1=Yes)

Fields:

Do You Wish To...Enter Further Orders ?

- 1 - Return to the Order Entry header screen.
- 0 - Return to the Purchase Management main menu.

Print The Order ?

- 1 - Print this order the next time the Print Orders option is selected.
- 2 - Print the order immediately.
- 3 - Create a fax to be sent directly to the supplier. If you choose this option, you will be prompted to choose a fax number for this supplier from the chosen address code. For more information see Supplier Fax Numbers in the Application Set-Up Data section.
- 0 - The order is not to be printed or faxed.

Use External Supplier Text On This Order ?

- 1 - Print the external text set up against this supplier on the order.

0 - Don't print the external text set up against this supplier on the order.

Do You Wish To Add Text For Printing On The Order ?

1 - Add external text to this order.

0 - Don't add external text to this order.

Add Text For Display Within The Company ?

1 - Add internal text for this order.

0 - Don't add internal text to this order.

This text is available for viewing on enquiries and internal reports. It is not printed on the order.

Press **Enter**. If you have selected either additional text option the relevant text entry window is displayed. Enter the appropriate text and select **F8=Update**.

Note: If the immediate print, or fax options are selected, then the order must still be released in the normal way. The order print and pre-print options will not apply if either of these options is selected.

Note: The option to send a fax of the order to a supplier is dependent on whether both parties have the necessary software and hardware installed.

Note: Contact your software support organisation for further details.

Order Amendment

42/PMP

This procedure enables you to amend existing purchase orders.

Order header, order lines, import details, text and schedule details may all be amended.

All changes are logged and can be printed using the Order Amendment Audit (via the Purchase Management Report Menu). The order may also be reprinted.

Screens used in this procedure are:

- Select
- Header
- Stock order details
- Non-stock order details
- Schedule line details
- Order line text

Orders Amendment Select Screen

The Order Amendment option.

This screen allows selection of the purchase order to be amended.

PM081	Z1 - Demonstration Company	USER SP1	31/08/94

Fields:

Order No.

From the previous screen.

Order Date

This and the five fields that follow default from the order header file and cannot be amended.

Order Class

Stockroom

P.Officer

Supplier

Receiving Address

Currency Code

The currency of the order. Currency will only be displayed if the supplier's currency is different to your base currency.

The following details may be entered:

Address Code

A three digit untitled field next to Supplier. This is the address code for this supplier and must have been set up in Accounts Payable.

Entering three zeros selects the invoice address. A default address code is specified in the Company Profile.

Delivery Instructions

The code for the Delivery Instructions you wish to be printed on the order.

Supplier Reference

The supplier's order or acknowledgement number for this order.

Amend Lines

1 - Enable amendment of order lines

0 - Amendment not required.

Warning: The next five fields are only displayed for entry when the order is not a schedule or blanket order.

Amend Delivery Dates

1 - Enable amendment of promise / expected dates and confirmation flag values for individual order lines.

0 - Amendment not required.

Confirm Flag

A user-determined flag to describe the status of this line of the schedule e.g. C for confirmed, D for delayed, Q for queried. You can enter any single character in this field.

Confirm flag is used as a selection criteria for the Order Confirmation report.

Promise Date

A valid date, to apply to all lines on this order. This date represents the date on which the supplier promises to deliver all items on this order. This field is optional.

Expect Date

The date at which the goods can realistically be expected to be delivered. If no date is entered this defaults to the promise date.

Ship Date

The date that the goods will be shipped, as promised by the supplier.

Reprint Order

1 - Print this order the next time the Print Orders option is selected.

2 - Print the order immediately.

3 - Create a fax to be sent directly to the supplier.

If you choose this option, you will be prompted to choose a fax number for this supplier from the chosen address code. For more information see Supplier Fax Numbers in the Application Set-Up Data section.

0 - The order is not to be printed or faxed.

User Defined Field

On the example screen, displays 'Order Priority'. Any entry you make in this one character field is not validated and is for memo purposes only. You could use this field as a way of separating and selecting purchase orders when running your own reports.

You can set up your own description to be displayed beside this field by taking the Parameters and Miscellaneous Codes option from the Maintenance menu, and selecting Parameter Type XDEF and Parameter ID IPRI.

Ship Code

This and the next two fields are for memo purposes only.

Job Number

It is possible to enquire on orders via their Job Number.

Department

If Amend Delivery Dates is selected, a Delivery Dates amendment screen is displayed. If Amend Lines is selected, then the appropriate Order Line Details screen is displayed, (depending on whether the order is for stocked or non-stocked items). If both are selected, the screens are displayed sequentially. All other entries are updated immediately, once validation is complete.

Functions:

F3

Exit to the Menu (no update).

F12

Return to the previous screen.

F13

Enter an alternative receiving address.

F15

Amend Header discounts. This opens a window prompting for Header Discount 1 and Header Discount 2. These fields display the values entered in the Disc %1 and Disc %2 fields on the order header.

F21

Display Internal Text screen for maintenance of text which is to be displayed, but not printed on the order.

F22

Display External Text screen for maintenance of text to be printed on the order.

Order Line Amendment Screen

If amend lines is selected on the Order Amendment Header screen, then the appropriate Order Line Details screen is displayed, depending on whether the order is a stocked, non-stocked order and/or a scheduled order.

Note: If catchweight is active for this company, the catchweight specific functions for Order Line Amendment work as for Purchase Order Entry.

Order Line Amendment Stock Order Details Screen

This screen allows you to enter Order Line Amendment Stock Order information.

Fields:

Order Number

From the previous screen.

Supplier

The first line of the supplier's name and address from the Accounts Payable Supplier Master file.

Class

Description of order class, entered on previous screen, from the parameters file.

Currency

The currency of the order. Currency will only be displayed if the suppliers currency is different to your base currency.

A list of the existing lines on the order is displayed.

To amend an existing line, enter a 1 against the required line. Alternatively, you may enter new lines by entering the details at the base of the screen.

The following details may be entered:

Supplier Item Ref

The suppliers reference for the item. If not entered, this defaults to the supplier item number held on the item supplier profile.

Item

You may enter a valid item or use the item name search to select a valid item.

Valid item details must exist in Inventory. Stockroom details must be associated with the item unless it is defined as a non-stock item in Inventory.

F21=Review Specification may be used to enter text against an item.

If no Item/Supplier record is found, i.e. this item has not previously been ordered from this supplier, then a message is displayed suggesting that a record may be created using the **F22=Create Item/Supplier profile** key. Care must be taken to check the Supplier's Item Reference, Price and Discount are correct before adding this profile.

This is a mandatory field.

Quantity

The order quantity must be entered. This quantity is expressed in the unit of measure specified by the next entry.

UOM

This is the quantity UOM and must be one of the purchase, stock or issue units of measure set up in Item Maintenance in Inventory Management. If left blank, it defaults to the purchase unit of measure from the item record. The F4 prompt is available in this field.

Sr

The stockroom where this line will be received. This defaults to the stockroom specified on the order header.

Price

If entered, the price is compared to that on the item supplier profile. If a price difference is found, a message will be displayed saying 'Price difference: F10 to update price & discount or F20 for special price'.

To accept the price you have entered for this order and update the item supplier profile price to the new price, select **F10=Update**. If you wish to accept the entered price for this order only, select **F20=Special Price**. To change the price you entered, select **F20=Special Price** to accept a special price and then amend the order line by putting a 1 against it.

If left blank the price defaults to that specified on the item supplier profile, or any current price structure which exists for the item supplier.

Note: If catchweight is active for this company, a catchweight item type's line value is calculated at nominal secondary value. Enter or override a catchweight item's price as follows:

Catchweight items set up as types 1 and 2 must be priced by secondary UoM.

Catchweight items set up as types 3 and non-catchweight items with a secondary UoM can be priced by either a primary or secondary UoM.

Non catchweight items are always priced by primary value.

UOM

The code for the unit of measure in which the price is expressed. The same rules apply as for the quantity UOM.

If left blank, the quantity UOM code is used as a default.

If the quantity UOM is blank, the purchase UOM code is used.

Note: If catchweight is active for this company, the price UoM entered can be any of the secondary UoMs that have conversions previously defined in Inventory Management for the item's catchweight type.

Full Text

1 - Copy the Purchase Management item text into the order line text.

Blank - Copy the Inventory item text into the order line text.

VAT Code

This field defaults to the VAT code associated with the item. It is validated against the Advanced General Ledger VAT Codes file.

Disc%

Enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

If the first discount is entered, this will be compared to that held on the item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences described above.

This field is optional.

Due Date

This may be entered for non-scheduled orders only and represents the date that this order line is due to be delivered. (Scheduled order dates are catered for on a separate screen).

If not entered, this field defaults to the value from the header screen. This field is optional

GI Acct.

This field defaults to the Advanced General Ledger account code held on the Inventory item file. This code is used to generate automatic nominal dissections if full invoice matching is used. This field is optional

Job Number

This field default to values from the header screen and is optional.

Department

This field default to values from the header screen and is optional.

*

Select field. A selection may be made against any existing line on the order:

- 1 - To amend the line details.
- 2 - To display the schedule line details screen (this is only for Scheduled or Blanket orders).
- 3 - To display the line text screen. This is described later in this section.
- 5 - To amend landed cost details. This is described later in this section.
- 9 - To complete the order line.

Entering 9 allows a purchase order line to be completed without the necessity for posting a Goods Received Note or the allocation of a Goods Received Note number.

The process is similar to that within the goods receiving function for completing an order line short and the same user authority is required.

If 9 is entered the details of the selected order line are displayed at the bottom of the screen. The **F8=Update** key confirms that the line is to be completed and subject to your user authority (as set up in User Authority Parameters Maintenance) the outstanding quantity will be reduced to zero and the line updated as completed.

If the message 'no storeroom record' is returned, you can set up these details by taking the Stockroom Details option in the Inventory Management Maintenance menu.

If the order is a type of schedule then, after adding each line, the Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line. After entering the schedule details, the application returns to this screen.

Completion of the order amendment is achieved by using the **F8=Update** key.

Note that:

- *Order quantity cannot be reduced below that already received.*
- *For stock orders the Item code and units of measure cannot be changed.*
- *An order line can be cancelled by using **F13=Cancel**, once the line has been selected and as long as no receipts have been made against it.*
- *New order lines can be added.*

```

```

Enter the Advanced General Ledger account code to associate with this order line. An enquiry is available by this code, and it is also the account to which the goods value is posted in Invoice Matching. This is a mandatory field, if the Advanced General Ledger is active.

Quantity/UOM

The quantity must be entered together with the appropriate unit of measure these codes are set up in the parameters file.

Price/UOM

The price must be entered. Optionally enter the unit of measure to which the price applies. If left blank the quantity unit of measure is used as a default.

VAT Code

The VAT Code must be a valid code on the Advanced General Ledger VAT codes file.

Disc%

Enter up to two discounts to be applied to the price for this item. If the first discount field is left blank, then the discount held on the item supplier profile is used as a default.

If the first discount is entered, this will be compared to that held on the item/supplier profile. If there is a difference, then a message is displayed and the same options apply as for price differences described above.

This field is optional.

Due Date

The date that this order line is due to be delivered. May be entered for non-scheduled orders otherwise it defaults to the value from the previous screen. For scheduled orders, the delivery dates are entered on a separate screen.

Job Number

This field is optional and defaults to the value from the header screen.

Department

This field is optional and defaults to the value from the header screen.

*

A selection may be made against any existing line on the order:

- 1 - Amend the line details.
- 2 - Display the schedule line details screen - this is only allowed for scheduled or blanket orders.
- 3 - Display the line text screen.
- 5 - Amend landed cost details. For a non-stock order, there are no defaults.
- 9 - Complete the order line.

Press **Enter**.

If the order is a type of schedule then, after adding each line or amending the quantity, the Order Amendment - Schedule Line Details screen is displayed for entry of multiple expected deliveries against the line.

After entering the schedule details, the application returns to this screen in anticipation of the next line. Completion of the order amendment is achieved by using the **F8=Update** key.

Order Line Amendment Scheduled Order Details Screen

This screen is displayed on pressing **Enter** after entering order line details if the order is a type of schedule. This is determined by the Schedule Type field on the Order Entry Header screen being set to either:

S - for a Scheduled order.

B - for a Blanket Order, if Blanket Orders have been set up. For more information about this see Parameter File Maintenance.

The difference between these two types of schedule is that the full order quantity need not be scheduled for a blanket order.

This screen enables you to schedule the order line quantity entered on the previous screen. The quantity is split into multiple deliveries, each with a required date.

Fields:

Order No

This and the following eight fields default to the details from the header and previous screens.

Supplier

Class

Currency

Line

Item

Code

Supplier Item Ref

UOM

Stockroom

Qty Scheduled

A running total of the quantity scheduled.

Ref

You can display line details for amendment at the bottom of the screen by entering the reference number of an existing line and pressing Enter.

Request Date

The date on which the goods are required. This field is mandatory.

Quantity

The quantity required for this delivery. Enter 0 to delete a line.

Promise Date

Enter the date delivery is promised by the supplier. If this not entered, this date defaults to the request date.

Confirm Flag

A user-determined flag to describe the status of this line of the schedule e.g. C for confirmed, D for delayed, Q for queried. You can enter any single character in this field.

Confirm flag is used as a selection criteria for the Order Confirmation report.

Expected Date

The date at which the goods can realistically be expected to be delivered. If no date is entered this defaults to the promise date.

The following fields are available for entry only if a shipping code has been entered on the header screen. These are used for memo purposes.

Ship Date

The date that the goods will be shipped, as promised by the supplier.

Advice Note

The advice note number for the shipment.

The application checks that the total quantity scheduled does not exceed the outstanding quantity.

Order Line Amendment Line Text Screen

This screen enables you to amend the order line text for the order item. This text will be printed on the purchase order.

Promise Date

Enter the date that the supplier promises for delivery of the line.

Confirm Flag

A user-determined flag to describe the status of this line of the schedule e.g. C for confirmed, D for delayed, Q for queried. You can enter any single character in this field.

Confirm flag is used as a selection criteria for the Order Confirmation report.

Select F12=Previous to return to the Order Amendment Header screen.

Goods Receiving

43/PMP

This procedure enables you to record the receipt of goods. The area of goods receipt can be specified, i.e.

1- Goods Inwards.

2 - Inspection.

3 - Stores.

Only receipts into Stores update the Physical Stock values in Inventory or Warehousing.

Stock items that are in Goods Inwards or Inspection are treated as being on-order only. The usual booking-in point is named on the Company Profile or stockroom and will be the default specified by the user.

Purchase Management expects the input of an order number, an advice note number (the supplier's despatch reference), a Mode of Transport flag (if the World Trade module is attached), and a Goods Receipt Note (GRN) number (if the GRN number is not automatically generated). If the order number is not known then all outstanding orders for a supplier or item may be displayed and the appropriate order selected.

Lot, batch, and serial controlled items are catered for, by the recording of receipts at this level of detail.

The entry of receipts creates the necessary data for invoice matching, and the update of Inventory Management, including any landed cost calculations.

A report of all receipts is augmented and may be printed via the Receipts and Returns or Daily Receipts and Returns Audit options on the Reports Menu.

If a receipt is input which exceeds, or is less than, the quantity ordered, then the users authority values are checked before the receipt is accepted.

The following should be taken into account when considering Goods Receiving:

- Purchase orders must be released via the New Orders Report before goods can be received against them.
- Goods receipts relating to purchase orders should always be carried out from within Purchase Management.
- Stock items which have batch, lot or serial controls set up in Inventory, will require the input of relevant numbers on receipt.
- Schedule orders can not be considered complete, and any over receipts are deducted off the next schedule line
- If standard costing is used in Inventory, then it must be appreciated that any landed costs generated will NOT be transferred to Inventory.

Note: For service orders (order class 6), it is not necessary to release or receive the order and it is possible to match invoices to these orders

once they have been entered.

Note: If World Trade is attached and active, any receipt of goods which crosses a country border (as defined in World Trade) will cause additional processing, for the reporting of the taxation.

Screens included in this procedure are:

- Select Receipt Point
- Select Order
- Non-scheduled Order Details
- Scheduled Order Details
- Order Line Text
- Batch/Lot/Serial Details
- Internal Order Text

If required, a specified number of labels may be printed for each order line received. These are output to the printer queue immediately.

Goods Receiving Select Receipt Point Screen

The Goods Receiving option.

This screen enables you to select the Stockroom, Receipt Point (Goods Inwards, Inspection or Stores), and Receipt Date, for the goods to be confirmed as received.

The Receipt Point defaults to the normal Receipt Point specified in the Purchase Management Company Profile. The Receipt Date is defaulted to today's date.

PM010	Z1 - Demonstration Company	USER SP1	31/08/94 12:16:07

Mode of transport.....?.. 1 Sea

F3=Exit F4=Prompt F12=Previous F13=Orders by item F14=Orders by Supplier

04-16 ☐ MW KS IM II KENB20A PET129S1

Fields:

One of the following details must be entered:

Order No.

The order number.

OR

Item

The item number, then use **F13=Orders by Item** to see a list of all outstanding orders for this item.

OR

Supplier

A valid supplier code and use **F14=Orders by Supplier** to see a list of all outstanding orders against this supplier.

Advice Note

The advice note number from the supplier's despatch document. This is a mandatory field.

GRN Number

This field is only displayed for entry if GRN numbers are not automatically generated by the application, as designated on the Company Profile. If a manual

GRN Number is entered for this receipt it must not have been previously allocated to a different order.

1 - To enable subsequent orders to be added to the same GRN.

0 - To create a new GRN for this receipt

Mode Of Transport

The mode of transport that was used to ship the goods. This field will only be displayed if the World Trade module is installed, and defaults to the default mode of transport defined in the World Trade Company Profile.

Once details have been entered, the appropriate Order Details screen is displayed (depending whether the order is a type of schedule or not).

Goods Receiving Non Scheduled Order Details Screen

This screen enables you to confirm selected lines on a non-scheduled order as received or partially received. The whole order can be received at once provided it is all for the selected stockroom.

Order lines can be completed if the received quantity is less or more than the order quantity. In these cases, your authority is checked to ensure that you are allowed to process the value of the discrepancy.

Note: The title of this screen can be 'Goods Inwards Receipt', 'Inspection Receipt' or 'Receipt into Stores' depending on the receipt point specified in the first screen in this procedure.

Fields:

Order Number

From previous screen entries.

Advice Note

From previous screen entries.

GRN No.

This number is either generated automatically or specified in the previous screen, depending on whether automatic GRN generation is set on the Purchase Management Company Profile.

Order Class

The code and description of the order class assigned to the order.

Stockroom

The code and description of the stockroom into which these goods are to be booked.

For each outstanding order line, the following is displayed:

Ref

Computer-generated reference to enable partial/over receipt of an order line by entering the details at the base of the screen. The reference relates to the number of the line in the displayed list.

Lne

Order line number.

Due

Date on which delivery of this order line is required.

O/S Qty

Outstanding quantity, i.e. the quantity not yet received.

*Note: If catchweight is used for this company and the item has a secondary value, press **F9** to toggle this field's display between the item's outstanding quantity and this quantity's secondary value.*

UOM

A code describing the issue unit of measure for the item ordered, or the order unit of measure.

Order Qty

Original order quantity for this order line.

*Note: If catchweight is used for this company and the item has a secondary value, press **F9** to toggle this field's display between the item's order line quantity and this quantity's secondary value.*

Item

Item code for the item ordered.

Supplier Item Ref

Supplier's reference for the item ordered.

*

Against each line, you may enter:

- 1 - Display Order Line Text for this line.
- 2 - Receive the order line in full.
- 3 - Display the reservations for this line.
- 5 - Receive the order line in full and amend Landed Costs for the line.

Warning: WARNING: Only Enter 5 if you wish to receive the whole line. Once you have selected this option there is no way out and the update will take place immediately you leave the Amend Landed Costs screen.

*Note: If catchweight is used in this company and the items you are receiving are catchweight types 1 or 2, when you first press **Enter** the <Secondary Value Entry> window is displayed where you enter the item's weight you want to receive. The title of this window varies, as it is formed from the short description of the item's secondary UoM plus 'Details', e.g. 'KilosDetails'.*

Below each line, the first line of order line text is displayed.

You can enter and amend details at the base of the screen, as follows:

Ref

Enter the reference number of a displayed order line that you want to partially receive, or over-receive.

Quantity

Enter the quantity you want to receive.

*Note: If catchweight is used in this company and the items you are receiving are catchweight types 1 or 2, when you first press **Enter** the <Secondary Value Entry> window is displayed where you enter the item's weight you want to receive.*

If the weight you enter exceeds the catchweight item's default tolerance limits for secondary value conversions, a warning message will be displayed with a request to confirm the value entered. You may proceed or cancel the receipt.

The default tolerances for catchweight items' secondary value conversions are defined in Inventory Management Maintenance

UOM

If this is a stock order (classes 1-4), the unit of measure will default to the displayed unit of measure.

If this is a non-stock item, the unit of measure must be a valid unit of measure set up for the parameter UOMC in the Purchase Management parameters file.

Complete

If this is a partial receipt enter:

1 - Complete the line (i.e. the remaining quantity will not be received).

0 - If the remaining quantity is to be left outstanding.

No. Labels

This is only displayed for entry if the Company Profile is set up to enable labels to print. If so, enter the number of labels to be printed for this line. It defaults to printing one label if no number is entered. Labels are printed immediately.

Int. Trace

The batch/lot/serial number for batch/lot/serial controlled items where the quantity entered relates to a single batch/lot/serial number.

A separate screen is displayed for the entry of numbers if nothing is entered here. This is an optional field for non-batch/lot/serial controlled items.

Ext. Trace

Used to enter a reference number related to this specific delivery, if required. This is an optional field.

Expiry Date

The date on which the 'shelf life' of this consumable item will expire. This is an optional field.

Amend Landed Cost

1 - Allow landed cost details to be amended.

0 - Don't amend landed cost details.

This is an optional field.

Several means of receiving goods are available:

Full Order Receipt

This is when the received quantities agree with the whole order detail.

This is achieved by selecting the **F8=Receive Whole Order** key. If internal or external references, number of labels to print or expiry dates are required, then these should be entered at the foot of the screen prior receiving the order.

The values entered then apply to all lines. If different values are required for each line, then each line must be received individually.

If the order is for more than one stockroom, only the lines for the stockroom currently selected for receiving will be updated.

*Note: If catchweight is active, the **F8=Receive Whole Order** function can be used only if all the order lines are for non-catchweight items, or if all order lines for catchweight items types 1 or 2 have been fully received. This is because catchweight item types 1 and 2 require a received weight to be entered via the <Secondary Value Entry> window. If the order comprises a mix of catchweight and standard item order lines, the catchweight item lines may be received by entering option 2 against each line.*

For catchweight item types 3, the calculated nominal weight does not need to be entered as it

is the actual weight for the item.

Selected Order Line(S) Receipt

This is when full order line quantities are received for one or more, but not all, order lines. This is achieved by entering 2 against the selected line(s).

Select as many order lines for receipt as required, using Roll-up and Roll-down keys, prior to pressing Enter.

If internal or external references, number of labels or expiry date are required, then these should be entered at the foot of the screen prior to pressing Enter. Values entered will apply to all order lines selected for receipt.

If different values are required for each line, then each line must be received individually.

Partial Line Receipt

This is when the full order line quantity is not received in one delivery. This is achieved by entering the reference number for the line at the foot of the screen, together with quantity, and optionally UOM and complete fields. On pressing Enter the partial receipt is accepted. However, if an attempt is made to close the order, i.e. complete is set to 1, then the application will check the users authority values prior to accepting.

Note: If the value or percentage of the 'written off' goods in this partial receipt exceeds the user's maximum allowable value or percentage, a message will be displayed at the foot of the screen and the partial line receipt will not be accepted as a complete delivery.

Over Receipt

This is when a quantity greater than that ordered is received. This may be recorded by entering the same details as for a partial receipt, except that 1 for complete need not be entered. The application will make the same checks for user authority as for the partial line receipt, except that value and percentage will be calculated using the excess quantity received rather than the written off quantity. An over receipt will automatically complete the order line.

Note: Authority to over or under receive will be calculated using the User Authority Values Maintenance on the Purchase Management Maintenance menu.

If receipt into stores is specified, the following updates will occur for stock orders only:

- Stock balances for on-order will be reduced, and physical stock increased
- Stock movement records will be written to audit the receipt
- Actual costing data will be updated (i.e. latest, average and FIFO), including consideration of landed costs.

Note: You may have to deal with other receipt processing screens, such as inspection warnings (if the item is set up in Inventory Management Maintenance as requiring inspection), lot / batch /

serial details, or warehouse details before coming to this screen.

*Note: If the item being received is set up as requiring inspection in item maintenance, and is not being received into inspection, then a warning window will be displayed. Select **F8=Receive** to process the receipt without going through inspection. Press **Enter** if you do not wish to process the receipt.*

Note: If you receive goods into goods inwards or inspection, they must be transferred to stores before these updates will occur. Use the Transfer Goods Locations option on the processing menu.

Note: If catchweight is used in this company and you are receiving catchweight item types 1 or 2 into Stores, the movement value will be calculated by secondary value rather than quantity. The movement cost will be calculated by actual secondary value.

Note: If the Warehousing application is installed and the receipt is into a store defined as a Warehouse, then an additional screen is displayed automatically for entry of a packaging type code, and expiry date (for consumables). For more information see Warehousing.

Warning! Receiving the whole order or whole order lines happens immediately the relevant option is selected!

When you have received part of an order as outlined above, the input field next to the line or lines you have received is removed from display, and you must select **F12=Previous** to return to the Goods Receiving - Select Order screen.

The specified number of labels are output immediately to the printer queue. The details printed are:

- GRN number.
- Date received.
- Label number.
- Supplier code.
- Advice note number.
- Supplier name.
- Internal trace reference.
- Expiry date.
- Supplier item reference.
- Item number.

- Quantity received.
- Pack type code (if Warehousing is installed).
- Stockroom.

Functions:

F8

Select **F8=Receive Whole Order** to receive the whole order, and automatically return to the Goods Receiving - Select Order screen.

*Note: If catchweight is active, the **F8=Receive Whole Order** function can be used only if all the order lines are for non-catchweight items, or if all order lines for catchweight items types 1 or 2 have been fully received. This is because catchweight item types 1 and 2 require a received weight to be entered via the <Secondary Value Entry> window. If the order comprises a mix of catchweight and standard item order lines, the catchweight item lines may be received by entering option 2 against each line.*

For catchweight item types 3, the calculated nominal weight does not need to be entered as it is the actual weight for the item.

F9

Quantity/Sec.Vals. This is a toggle function which is only displayed when catchweight is used for this company and the item has a secondary value or multiple item information is displayed.

When **F9=Quantity** is displayed at the bottom of the screen, select **F9** to display the order quantity of the item in the primary unit of measure.

When **F9=Sec Vals** is displayed at the bottom of the screen, select **F9** to display the secondary value for the item's order line. The abbreviation of the secondary unit of measure is displayed on the screen by the appropriate fields.

F13

Toggles between displaying Item Issue units (the default for this screen) and Order units.

If toggled to Order units any receipts recorded will be registered in the order unit i.e. stock movement details and product labels will show the order line unit. The only exception to this is where, for partial line receipt, an alternative unit is specifically entered at the base of the screen

Goods Receiving Scheduled Order Details Screen

This screen is similar to the Goods Receiving Non Scheduled Order Details screen. The differences are highlighted below.

The information displayed is as for non-scheduled orders, except:

- 'Schedule Order' is displayed below the stockroom.
- Only deliveries scheduled for delivery within the 'time fence' number of days are displayed and eligible for receipt. This time fence factor is maintained on the Company Profile.

The methods of receipt vary as follows:

- A selected line may not be received in total by entering 2 against it. Instead quantities are received by entering the line number and quantity at the foot of the screen.
- The Complete Line option (option 2) is removed as this is not required for a schedule.
- The Receive In Full With Amendment To Landed Costs option (option 5) is removed. Landed Costs may be amended by using the Amend Landed Costs option at the bottom of the screen.
- If a quantity is received which is greater than that due for a selected scheduled delivery, then the excess is deducted from the next scheduled delivery.

Only on the final receipt is the user's authority checked.

Goods Receiving Amend Landed Cost Screen

If Amend Landed Cost is selected on Goods Receiving Non-scheduled/Scheduled Order Details the Goods Receiving Amend Landed Costs screen is displayed.

Fields:

Unit Landed Cost

True calculated landed cost for a single unit of the item.

Item Cost

Purchase cost of the item.

Total Line Cost

Purchase cost plus derived landed cost.

Derived Landed Cost

Accumulation of derived landed costs.

Warning: Caution! Only the unit landed cost field is showing the true landed cost. All other values are derived costs

Landed Cost Code

A valid landed cost code. You can use the landed cost prompt to select a valid landed cost code.

Landed Cost Value

Enter a landed cost per unit if the retrieved percentage/value flag is 0, otherwise enter a percentage value. This is mandatory for each entered cost code.

Note: If the receipt is being made into Stores, then the value booked to Inventory is: Item total cost + (unit landed cost x receipt quantity) except when the item is standard costed.

Goods Receiving Batch/Lot/Serial Details Screen

This screen enables you to enter specific references for batch, lot and serial controlled items. It is displayed automatically for any such controlled item unless an entry was made in the Internal trace field on the order details screen.

In the latter case, the application uses the Internal trace as the batch, lot or serial number. The Order No., Advice note, Item and Qty received fields are displayed as on the order details screen.

Note: If catchweight is used in this company and you are receiving catchweight item types 1 or 2 that are Batch/Lot/Serial controlled, enter the lot number you want to receive into and press Enter to display the Secondary Value Entry window. This is where you enter the Lot weights you want to receive.

Fields:

Maintain Batch

1 - Create or amend the batch or lot details. This is mandatory if you have not set up these details before.

0 - Do not create or amend the batch or lot details.

Bin Number

The appropriate number(s) for each batch/lot or serial number.

Quantity

The quantity received against each batch number. Quantity is not entered against serial controlled items as each unit must have a unique reference.

The total quantity entered on the screen must equal the quantity received. Once the full quantity is entered, the order line and transaction files are updated with the details.

Amend Lande	F12=Previous F4=Prompt F24=More keys		
F3=Exit F4=Prompt F8=Receive Whole Order F12=Previous F17=Maintain Batch F21=Order text			

This window allows you to create or amend the details associated with a lot / batch / serial number reference. This window is only available if extended details for lot, batch, or serial controlled items is specified for the company in Inventory Management.

In Purchase Management, it is accessed by:

- Putting an order line number against Ref. and selecting **F17=Batch Maintenance** on the Goods Receiving - Details screen.
- Entering 1 in the maintain batch field (for more information see Goods Receiving - Batch / Lot / Serial Details), against a lot / batch / serial number reference and a quantity to be received on the Batch / Lot / Serial - Details screen.

Note: The fields displayed on the screen will depend on the options set up in Inventory Management, in Lot Header Parameter Maintenance.

Note: The Production Date, First And Last Available and Expiry times are displayed if the Display Lot Time field on the Lot Header Parameters screen, in Item Maintenance is set to 1. For more information see Inventory management.

Fields:

Item

The item specified in the order line. This field is display only.

Lot

This field will be empty if a lot has not yet been specified. You can input an existing lot / batch / serial number , or you can put in a new reference.

If the Lot is already selected, this field will be display only.

Production Date

The date that the lot is received or manufactured. It defaults to the current date. If no date is entered the date can be calculated back from the expiry date using the shelf life of the item as set up in Item Maintenance. If you are entering a date here, it should be not later than today's date. This field will be a display field only if you are maintaining an existing lot reference.

Production Time

Production time cannot be changed once the lot has been created.

Expiry Date

The date that the shelf life of the item expires. If no date is entered the date is calculated by adding the shelf life to the production date. This field will be display only if you are maintaining an existing lot / batch / serial number.

Expiry Time

The time at which the shelf life of the item expires.

First Available Date

This must be greater or equal to the production date. All lots with a first available date greater than the current date are automatically frozen. If not entered it is generated by adding the release time on to the production date. This field can be amended at any time.

First Available Time

The time at which the lot becomes available.

Last Available Date

This must be greater than the first available date but less than or equal to the expiry date.

All lots with a last available date less than the current date are normally automatically frozen (unless otherwise indicated in the stock status). If not entered, the date is generated automatically. This field can be amended at any time.

Last Available Time

The time at which the lot ceases to be available.

Stock Status

Used as an over-ride to determine if a lot is available or frozen stock. If the status is changed then a reason code (see below) must be used to indicate the reason for the change. If stock status blank then the availability dates above will be used to move stock in and out of the frozen state.

This is an optional field. You can prompt on this field and choose from the status's defined in the Inventory descriptions file against major type SKTS. New status codes are set up in Inventory Management.

Reason Code

You can prompt on this field and choose from the reason codes defined in the Inventory descriptions file against major type MOVR. New reason codes are set up in Inventory Management.

This code can only be entered if the stock status code is changed and indicates why the status of the lot was changed.

Supplier's Lot Reference

Enter up to 36 alphanumeric characters to specify the batch reference allocated by the supplier.

Depending on the setting of the Potency Required and Status Required on the Lot Header parameter screen in Item Maintenance the following field may be displayed on the Lot Header maintenance screen.

Potency

A numeric potency, with up to 5 decimal places, should be entered to represent the level of active ingredient in the lot. This is the potency of the whole lot irrespective of which stockroom the lot is located in.

Grade

A grade code chosen from those defined on the descriptions file against the Major Type GRAD. This is the grade of the whole lot irrespective of which stockroom the lot is located in.

If Advanced Order Entry is installed then a Certificates of Conformance field may be displayed on the lot header maintenance screen. This will be the case if a Certificate of Conformance was specified for this item on the second item maintenance screen. (See Advanced Order Entry for an explanation of Certificates of Conformance).

C Of C Reference

Enter a Certificate of Conformance reference to be assigned to this lot. This must have been set up in Certificate of Conformance in Advanced Order Entry Maintenance menu, or defined at the time of entry by selecting the F17 key.

Goods Receiving Line Text Screen

This screen enables you to display and amend order line text at receipt time. For more information see the Order Line Entry - Line Text option in the Order Entry section.

Fields:

Supplier

From the Order Header.

Supplier Name

This and the two fields following are from the previous screen.

Order

Line

Existing order line text details, created originally in Order Entry, will be displayed.

The following details may be entered:

Up to 99 lines of order line text, each of up to 45 characters.

Position To

The line number that display is to start at.

Insert/After

The number of lines to be inserted after the entered line number.

Delete/From

The number of lines to be deleted starting from the entered line number.

Select **F8=Update**, to write the Order Line Text details to the Text File.

Goods Receiving Internal Order Text Screen

This screen enables you to create and amend Order specific text to be used for internal reference only - it does not appear on purchase order prints.

The supplier/order number, and any existing internal order text, are displayed.

The following details may be entered:

Up to 99 lines of text, each of up to 45 characters, may be maintained.

Fields:

Position To

The line number at which the display is to start.

Insert/After

The number of lines to be inserted after the entered line number.

Delete/From

The number of lines to be deleted starting from the entered line number.

Select **F8=Update**, to write the Order Line Text details to the Text File.

Secondary Value Entry Window

If catchweight is used in this company then, for items which are catchweight category 1 or 2, when you press **Enter** the Secondary Value Entry window is displayed.

Note: The title of this window varies, as it is formed from the short description of the item's secondary UoM plus 'Details', e.g. 'Kilos Details'

Fields:

Item Code

The item code is displayed for your information only and cannot be amended.

Item Issue UoM

The item's issue unit of measure is displayed for your information only.

Nominal Secondary Value

The short description of the item's UoM is displayed in the field's title. The item's nominal secondary value is displayed. You can override this value if required, however if you enter a value that exceeds the configured tolerance, an error message will be displayed.

Secondary Unit Of Measure

You can change the unit of measure for the quantity of the item to be moved. To do this, prompt the field to display the Units Of Measure window listing the available configured units of measure.

Press **Enter** to validate and update entries made.

Returns And Adjustments

44/PMP

This procedure provides a facility to record returns, adjustments, or scrap against a given receipt. You can request a rejection note to be printed, including appropriate text. Debit notes may be produced and printed via the Print Debit Notes option. You can match returns against credit notes as part of the invoice matching process.

Screens used in this procedure are:

- Select
- Details

Rejection notes are printed automatically and contain the following details:

- **Header** - rejection note number, rejection date, supplier name and address, replacement required, date received, GRN number, Stockroom, Supplier Code.
- **Lines** - item references, return/scrap quantity and UOM, return/scrap value, original order number and line number, Advice Note Number, Lot Reference, Rejection Note Text.
- **Totals** - Rejection Note Value.

Valid reason codes must be entered for returning, rejecting or scraping stock..

Note: If the items are to be returned from the Stores then the Inventory physical stock records are adjusted. If the item is reinstated as outstanding the on-order value will also be updated.

Returns/Scrap/Adjustments Entry Select Screen

This screen enables you to select the Goods Receipt Note (GRN) to be processed, and to specify:

- Whether replacements are required for the goods, from this supplier.
- Whether a rejection note is to be printed or not, after details have been entered.

PM024	Z1 - Demonstration Company	User SP1	31/08/94 13:46:00
-------	----------------------------	----------	----------------------

Returns/Scrap/Adjustment Entry

GRN Number..... 3 Date 310894
Stockroom.....?.. 01 Central Stockroom

Replacement Required..... 1 (0=No,1=Yes)
Rejection Note required.. 0 (0=No,1=Yes)

F3=Exit F4=Prompt

Fields:

GRN Number

The GRN number associated with the receipt against which the return is to be recorded.

Stockroom

The code of the stockroom from which the goods are being returned. This defaults to the stockroom defined as the default for your user ID if you have one.

Note: A warning message is displayed if you transfer a quantity out of Stores that will result in a negative stock balance. You can proceed with the transaction only if Negative Stock is allowed for the stockroom, which is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, F8 can be selected to override the warning message.

Date

The date of this return/scrap/adjustment. The field defaults to today's date.

Replacement Required

- 1 - Add return quantities to the outstanding balance on the original order.
- 0 - Don't add return quantities to the outstanding balance on the original order.

Rejection Note Required

- 1 - To print a rejection note to accompany returned goods to the supplier. The note will be printed automatically after entry on the detail screen is completed.
- 0 - If no rejection note is required.

Once validation is completed the details screen is displayed.

Returns / Scrap / Adjustments Entry Details Screen

This screen enables you to specify which lines on the GRN are to be processed.

10-02 82 MW KS IM II KENB20A PET179S2			

For each line chosen the quantity returned/scrapped should be entered, along with a Reason Code for scrapped items.

Note: If Warehousing is installed and the item processed is in a store defined to Warehousing, then this transaction is recorded in Purchase Management but there will be no update in Inventory Management or Warehousing. For these applications to be updated, you need to carry out a Miscellaneous Issue in Inventory Management.

Fields:

GRN No

This, and the 3 fields following, are from the select screen.

Date

Receipt Stockroom

Replacement Required

Supplier

This, and the field following, are from the original goods receiving transaction.

Original Receipt Date

Currency

From the original goods receiving transaction if the supplier is defined as multi-currency.

All lines on the GRN are displayed. If an item is held at multiple locations (i.e. goods inward, inspection or stores), then these are displayed on separate lines.

Ref

The GRN line number.

Supplier Reference

The supplier's item reference.

Item

The item code of the item received.

Order No.

The order number received.

Quantity/UOM

Quantity received and the unit of measure. (This quantity is reduced as entries are made on this screen).

*Note: If catchweight is used for this company and the item has a secondary value, press **F9** to display the quantity of the item in this field in either primary or secondary units of measure.*

Loc

S - Stores.

I - Inspection.

G - Goods Inwards.

Invoiced Value

Invoiced value, or order value if not yet invoiced.

You may return the whole of a line by entering a 1 against the line in the list.

You must allocate a reason code for the return. Alternatively, you may return part of a line by entering the following at the base of the screen:

Ref

The reference number of the line to be amended.

Ref Qty

The quantity returned/scrapped.

UOM

The unit in which the quantity is expressed. This defaults to the displayed unit of measure if it is not entered.

Reason Code

The reason code which you wish to associate with this return. It must be a valid scrap reason code.

For more information about maintaining Reason codes see the Application Set-Up Data section.

Mode Of Transport

The mode of transport that was used to return the goods. This field will only be output if the World Trade application is installed, and defaults to the default mode of transport defined in the World Trade Company Profile.

If the location of the item is S (Stores), and the Inventory Management application is installed, then the stock records are reduced accordingly.

Press **Enter**.

*Note: If catchweight is used in this company and the items are catchweight types 1 or 2, when you first press **Enter** the <Secondary Value Entry> window is displayed where you enter the item's weight.*

If the weight you enter exceeds the catchweight item's default tolerance limits for secondary value conversions, a warning message will be displayed with a request to confirm the value entered. You may proceed or cancel the transaction.

The default tolerances for catchweight items' secondary value conversions are defined in Inventory Management Maintenance

When you have finished select **F12=Previous** to return to the Select screen.

If you have requested a rejection note it is printed immediately on return to the Purchasing Management Processing menu.

Functions:

F9

Quantity/(Short Description). This is a toggle function which is only displayed when catchweight is used for this company and the item has a secondary value.

When **F9=Quantity** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in the Qty/UOM field.

When **F9=Secondary** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in this field in the secondary unit of measure.

F18

Accesses the Despatch Details window.

Returns / Scrap / Adjustments Entry Despatch Details Window (F18)

This window is opened if **F18=Despatch Details** is pressed on the Returns / Scrap / Adjustments Details screen

Fields:

Online Print Of Despatch Notes

Indicates whether or not despatch notes are to be printed immediately (yes) or in batch mode (no).

0 - No

1 - Yes

Priced Despatch Note

Indicates whether or not despatch notes show prices.

0 - No

1 - Yes

Type Of Despatch Note

Indicates whether invoices and despatch notes are a combined or separate documents.

1 - Separate despatch note & invoice

2 - Combined document

Despatch Note Language

Indicates the language of the text printed on the despatch note.

Codes are validated against those defined in the Application Manager.

Despatch Method

Indicates the default despatch method. Must be defined on the Inventory descriptions file, against major type MODE.

Transport Method

Indicates the default transport method. Must be defined on the Inventory descriptions file, against major type TMTH.

Reason For Despatch

Defaults to Blank. Any entry made is validated against the Inventory descriptions file, against major type MOVR

Terms Of Delivery

Indicates the default terms of delivery. Must be defined on the Inventory descriptions file, against major type TDEL.

Note: If World Trade is live, this field will default to the value held on the (Sales Order Processing) Customer Maintenance - Trade Details screen

Carrier

Indicates the default carrier. The validation of this field is dependent on interfaced applications. The following checks will be carried out in the order specified.

Note: If Advanced Shipping is live, and the processing company is active with Sales Order Processing, the carrier will default to that defined via Shipping Customer Defaults.

Note: If a new code is entered, it will be validated against the Shipping names and Address file (Shipping Customer Defaults Maintenance)

Note: If Transport Planning is live, and the processing company is active within Sales Order Processing, the carrier will default to the carrier defined to the Transport Planning Delivery Profile.

Note: If a new code is entered, it will be validated against the Transport Planning Carrier file.

Note: NOTE: A Sales Order Processing company is defined to a Transport Planning company via an SOP company/stockroom combination.

Note: If neither Advanced Shipping nor Transport Planning are live, then the default will be blank. Any entry made must be defined on the Inventory descriptions file, against major type CARR

Shipping Marks

Free format field for shipping marks.

Number Of Packs

Requires entry of a packaging code in addition to a quantity and unit of measure. The validation is dependent on interfaced applications.

Note: If Advanced Shipping is live, the code entered is validated against the Pack Types file

Otherwise, codes are validated against the Inventory descriptions file, against major type TPPK

Weight

Requires entry of a UOM code in addition to a weight.

Any UOM code entered is validated against the Inventory descriptions file, against major type UOM

Volume

Requires entry of a UOM code in addition to a volume.

Any UOM code entered is validated against the Inventory descriptions file, against major type UOM

Press **F8=Update** to update details.

Transfer Goods Location

45/PMP

You can transfer goods from one location to another.

Three locations are allowed:

- 1 - Goods Inwards
- 2 - Inspection
- 3 - Stores

Note: A warning message is displayed if you transfer a quantity out of Stores that will result in a negative stock balance. You can proceed with the transaction only if Negative Stock is allowed for the stockroom, which is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, F8 can be selected to override the warning message.

The method of transfer is flexible and single lines of a GRN or a complete GRN may be moved. When moving single lines, the quantity to be moved is input to allow one delivery to be split into several movements.

A report is generated to give an audit trail of all movements.

Screens used in this procedure are:

- Select
- Details by GRN
- Details by Item
- Order Line Text

A Goods Location Transfer Report is automatically sent to the printer after any transfer has been completed.

Note: Items are only considered to be part of the Inventory physical stock if they are received or transferred in to Stores. Items cannot be allocated while in Goods Receiving or Inspection

Transfer Goods Location Select Screen

The Transfer Goods Location option.

You can select the locations from and to which goods are transferred. A GRN number and/or item must be specified.

You can search for valid items using the standard Inventory Management search on the item's description.

and either			
	GRN number..... 2		
and/or	Item.....?...		
	Date.....		
F3=Exit F4=Prompt			

Fields:

Move From

The location that the goods are to be moved from.

- 1 - Goods Inwards
- 2 - Inspection
- 3 - Stores

Note: A warning message is displayed if you transfer a quantity out of Stores that will result in a negative stock balance. You can proceed with the transaction only if Negative Stock is allowed for the stockroom, which is set on the Stockroom Record of the Inventory Company Profile. If Negative Stock is allowed, F8 can be selected to override the warning message.

Move To

The location the goods are to be moved to using the choices as above.

This must be different from the Move From location.

Stockroom

The code of the stockroom from which the goods are being returned. This defaults to the stockroom defined as the default for your user ID, if you have one.

GRN Number

A valid Goods Receipt Note (GRN) number to identify the goods which have to be moved.

And/Or Item

A valid item code to identify the goods to be moved. Either a GRN or an item code must be entered.

Date

The date of the transfer.

Once validation is completed, the details screen is displayed.

Transfer Goods Location Details By GRN Screen

This screen is displayed if a GRN number was entered on the previous screen. If an item was also selected, then only details for this item will be displayed.

If only the GRN is entered, then all current receipts which at the from location and stockroom for this GRN are displayed.

If the GRN and item are entered, then only current receipts for this specific item on this GRN, located at the specified from location and stockroom, are displayed.

The whole GRN can be transferred, by using **F8=Transfer All**, or selected lines can be fully, or partially transferred.

Fields:

From Location

This and the following two fields are from the select screen..

To Location

GRN Number

Advice Note

This and the following two fields are from goods receiving details.

Supplier

Supplier Name

Stockroom

From select screen.

The details shown for each receipt line are:

Ref

A computer-generated reference number that may be used to identify a line for partial transfer.

Item Ref

The item received.

Receipt Date

The date of the receipt.

Quantity/UOM

The quantity currently outstanding at this location, in the item issue unit of measure.

*Note: If catchweight is used for this company and the item has a secondary value, press **F9** to display the quantity of the item in this field in either primary or secondary units of measure.*

Traceability Ref

Internal trace reference, or lot / batch / serial number entered at receipt time.

Expiry Date

The end of the shelf life.

*

You can enter the following against the lines displayed:

- 1 - to view or amend text for the original order line, via the standard Order Line Text screen.
- 2 - to transfer the full quantity of that line.
- 3 - to create and amend lot headers. This option is only available for items that are lot / batch / serial controlled, where there is a reference under traceability ref.

The following may be entered at the base of the screen to perform a partial line transfer:

Ref

The reference number of the line to be part transferred.

Quantity

The quantity to be transferred.

UOM

The unit in which the above quantity is expressed. Where this is left blank, the unit as shown for the line will be assumed.

*Note: If catchweight is used in this company, and you want to transfer a partial line quantity, when you first press **Enter** the <Secondary Value Entry> window is displayed where you enter the item's weight you want to transfer.*

When you press **Enter**, any transfers to or from stores result in the appropriate stock updates.

A Goods Location Transfer Report is sent to the printer automatically. It contains the following details:

- Location From/To
- Date of Transfer
- Supplier
- Order/Line Stockroom
- GRN Number
- Item
- Quantity Transferred
- Unit of Measure
- Batch/Lot/Serial Number.

Note: If the Warehousing application is installed and the 'location from' is a stockroom defined to Warehousing then the transfer will be prohibited with an error message to the effect that this transfer must be handled within the Warehousing application.

Note: If the 'location to' is a stockroom defined to Warehousing then an additional screen is displayed for entry of a packaging type code for each line transferred.

*Note: If catchweight is used in this company and the items you are transferring are catchweight types 1 or 2, when you first press **Enter** the <Secondary Value Entry> window is displayed where you enter the item's weight you want to receive.*

If the weight you enter exceeds the catchweight item's default tolerance limits for secondary value conversions, a warning message will be displayed with a request to confirm the value entered. You may proceed or cancel the receipt.

The default tolerances for catchweight items' secondary value conversions are defined in Inventory Management Maintenance

Functions:

F8=Transfer All

Select F8 to transfer all lines and update the relevant stock records.

Note: If catchweight is active, when you select F8=Transfer All to transfer a GRN line, a warning

*message is displayed that previously received
secondary values for the catchweight item will be
used in the transfer.*

F9

This is a toggle function which is only displayed when catchweight is used for this company and the item has a secondary value.

When **F9=Quantity** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in the Quantity/UOM field.

When **F9=Secondary** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in the Sec Val/UOM field in the secondary unit of measure.

Transfer Goods Location Details by Item Screen

This screen is displayed if an item code was entered on the select screen without a specific GRN number. If only the item is entered all current receipts for this item, across all GRNs, at the specified from location and stockroom, are displayed.

All references for the item can be transferred, by using **F8=Transfer All** , or selected lines can be fully, or partially transferred.

The Transfer Goods Location - Order Line Text screen displays the following fields:

Fields:

Supplier

From the Order Header.

Supplier Name

From the previous screen.

Order

Line

Existing order line text details, created originally in Order Entry, will be displayed. The following details may be entered. Up to 99 lines of order line text, each of up to 5 characters.

Position To

The line number at which the display is to start.

Insert/After

The number of lines to be deleted starting from the entered line number.

On selecting update, the Order line text details are written to the Text file.

Match Invoices to Receipts

46/PMP

Invoice matching allows you to authorise all invoices relating to purchase orders before payment. To use this facility all invoices must be posted to the Accounts Payable Log. After matching, the invoice is posted from the log to the ledger and payment is made.

You can match receipts against invoices and returns against credit notes. Multiple receipts can be matched to an individual invoice. Usually the supplier's invoice is used as a guide in the matching procedure. During matching amendments can be made to:

- The order line price - with the option to update the Item/Supplier Profile, if appropriate
- Order line discount
- Order and invoice text

Additional dissections are allowed for charges not on the original order, such as an unexpected packing cost. Unmatched quantities on receipts are kept available for matching against later invoices. You can prohibit invoice matching for goods not in the Stores location by amending the Company Profile.

Note: Invoice matching writes the appropriate analysis codes and dissections to the logged invoice and so Advanced General Ledger dissections need not be entered when the invoice is first logged.

A dissection is a breakdown of an order by values posted to accounts in the Advanced General Ledger and is created in the Accounts Payable log. Four dissection types are possible:

Goods Dissection

This involves the posting of values of goods to specified goods account(s) in the Advanced General Ledger. These accounts are initially taken from the item master file for the product (item).

VAT Dissection

The VAT value is posted to VAT account(s) in the Advanced General Ledger.

The Advanced General Ledger VAT subsystem will assign postings to the correct accounts according to the VAT codes in the Advanced General Ledger.

Variance Dissection

If you buy a standard cost item at a different cost to the standard cost, a variance occurs which must be accounted for.

The value of the variance will be posted to the appropriate account which should be specified for that product in item maintenance in Inventory Management.

If you change the item cost at invoice matching, a variance also occurs and is dealt with as above.

Difference Dissection

When invoice matching, if the goods value differs from the invoice value, this difference must be accounted for by a dissection. The Advanced General Ledger account, and any associated extension codes, to which this is posted is defined in the differences screen in invoice matching.

A flag on the Purchase Management Company Profile determines whether or not Invoice Matching will overwrite goods dissections on the Accounts Payable invoice log for fully matched invoices.

Invoices Matched Audit Report

The Purchase Management Company Profile has a flag asking if you wish to 'Print Invoice Matching detail?' If you say yes, the Invoices Matched Report will print automatically. If you do not choose this option, you may run this report manually from the Accounts Payable Enquiries and Reports menu.

The screens used in this procedure are:

- Select
- Unmatched Advice Notes
- Detail
- Order Line Text
- Completion
- Invoice/Credit Select
- Difference Warning
- Dissections

Invoice Match Select Screen

You can select the supplier and a specific Advice Note to be processed. If no Advice Note is entered, the Unmatched Advice Notes screen is displayed for the selection of one or more advice notes.

The Match Invoices to Receipts option. You can search for a supplier using the standard name and address search.

F12=Previous F13=Continue			

Fields:

Supplier

This and the five fields following are from the advice note header details.

Name

Advice Note

Order

GRN

Receipt Date

Currency

The currency of the order.

All lines on the advice note, which have not yet been matched, are displayed with the following details:

Item

The code of the received item.

Cost Code

This is the account used for goods dissections generated automatically by this routine.

Loc

The item's current location, i.e.

S - Stores

I - Inspection

G - Goods inwards.

Tip: It is possible, using the company profile flag to stop other users from matching invoices where goods are not in the stores

Supplier Item Ref

The supplier's reference for the item.

Quantity/UOM

The quantity received expressed in the appropriate unit of measure.

*Note: If catchweight is used for this company and the item has a secondary value, press **F9** to display the quantity of the item in this field in either primary or secondary units of measure.*

Gross Price/UOM

The gross purchase price of the item in the price unit of measure of the order line.

VAT

The VAT code assigned to the order line.

Disc

The first order line discount.

Special Disc

Up to three special discounts are shown. These are the two discounts entered for the whole order, and the second order line discount.

Value

The total net value of the line. This is obtained by taking the price, applying the discounts, and extending the net price using the quantity.

*

Against each line, you may enter:

- 1 - to match the line after amending details.
- 2 - to match the line with no amendments.
- 3 - to display and / or amend the order line text.

If a line is selected for amendment, the following details may be overtyped at the foot of the screen:

- Quantity
- Gross Price/UOM
- Discount (this is the first order line discount)

- Special Discounts

The item code, supplier item reference and VAT code are displayed.

*Note: If catchweight is used in this company and the items you are matching are catchweight types 1 or 2, when you first press **Enter** the Secondary Value Entry window is displayed where you enter the item's weight and price you want to match.*

The title of this window varies, as it is formed from the short description of the item's secondary UoM plus 'Details', e.g. 'KilosDetails'.

The line value is calculated using the catchweight item's secondary value and price.

A warning is displayed if you try to match more than the item's available quantity and weight quantity.

*Note: If the price is amended, a message will be displayed saying 'Price difference: **F10** to update price & discount or **F20** for special price'. If current price structures exist this message will not be displayed and the entered price will be accepted.*

*Note: If you wish to accept the entered price for this order and update the item supplier profile price to reflect the entered price, select **F10**.*

*Note: If you wish to accept the entered price for this order only, select **F20**.*

*Note: If you wish to change the price you entered, select **F20** to accept a special price.*

Note: If you make amendments that change the value of the order, your authorisation level will be checked (the authorisation level for your User ID are set up in Purchase Management Maintenance under the User Authority Parameters).

If the changes you have made exceed your authority level you will receive a message stating 'Excess value on invoice exceeds authority'. In this case you will need to get someone with sufficient authority to carry out the amendments.

Note: When matching advice notes, it is not possible to match orders of different currencies.

Once all lines have been selected for matching, or the **F13=Continue** key is selected when at least one line has been selected, the Invoice Match Completion screen is displayed.

Note: Matching against lines where the goods are not in the stores location may be prohibited with an appropriate error message displayed.

This is an option on the Company Profile.

Note: The item supplier price may be updated automatically if the price is changed by an amended match on this screen. This is an option on the Company Profile.

Functions:

F9

Quantity/Secondary. This is a toggle function which is only displayed when catchweight is used for this company and the item has a secondary value.

When **F9=Quantity** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in the Quantity/UOM field.

When **F9=Secondary** is displayed at the bottom of the screen, select **F9** to display the quantity of the item in the Secondary/UOM field in the secondary unit of measure.

Invoice Match Override VAT Code Window

If the option to override VAT codes is selected in the select screen, the following window will be displayed. This option is only displayed if the World Trade module is attached.

This window allows you to override the VAT code for each item receipt/return. At the top of the window, the order number, line number and the item number are displayed.

PM034 Z1 - Demonstration Company USER SP1 22/09/94
17:58:37

Item number 5013
Acquisition VAT code ?.. 000

F4=Prompt F8=Update F12=Previous

F12=Previous F13=Continue

The Invoice Match - Override VAT Code screen displays the following fields:

Fields:

Acquisition VAT Code

Enter the VAT Code that will be used to calculate the VAT amount.

Invoice Match Completion Screen

This screen enables you to confirm as complete the matching against the current invoice. If you have selected all of the advice notes that are to be matched, select **F8=Complete Match** to complete matching. Alternatively, further advice notes may be selected for matching.

PM031	Z1 - Demonstration Company	USER SP1	1/09/94
Invoice Match			15:17:25
Supplier.. GS02		Advice note..	
Name..... Coles Commercial Chemicals Ltd		Currency.....	
Matched value..	864.20		

F7=Partial match	F8=Complete match	F11=Cancel this match
------------------	-------------------	-----------------------

Fields:

Supplier Code

From the previous screen.

Name

From the previous screen.

Matched Value

The running total, maintained by the application, of the value of goods from the above supplier matched so far.

Currency

The default supplier currency.

The following may be entered:

Advice Note

Enter a valid advice note in order to return to the Invoice Match Detail screen. Any subsequent matched lines will be added to those already selected.

Alternatively, leave Advice Note blank and press **Enter** to return to the Unmatched Advice Notes screen to select further advice notes for matching.

Partial match and complete match are processed in a similar fashion in that both functions insist that the whole value of an invoice is accounted for.

For a partial match, separate dissections are written for the value which remains unmatched, allowing the rest of the invoice to be matched at a later date. Partially and completely matched invoices may be requested separately on the 'Invoices Matched with Purchasing' report in Accounts Payable.

Invoices may still be selected for subsequent matching until the invoice values are transferred to Advanced General Ledger from the Accounts Payable log. However, only the value of the invoice not already matched directly with receipts is available for further matching.

Functions:

F7

Partial Match to match the selected receipts against part of the invoice, returning later to complete the match.

F8

Complete Match to match the receipts selected against the whole invoice value. This is the more usual option.

F11

Cancel this Match to end this invoice match

F12

Return to the previous screen.

Invoice Match Invoice/Credit Select Screen

You can specify the invoice, credit or journal against which the selected lines are to be matched.

PM031	Z1 - Demonstration Company	USER SP1	1/09/94
Invoice Match			15:17:29
Inv/Cred ref..	00000011	Type..	IN
Do you wish to add/review document text?..			0=No.1=Yes
F11=Cancel this match			

Fields:

Inv/Cred Ref

Enter the reference of the invoice, credit note, or journal to be matched, as entered on the Accounts Payable log.

Type

Enter IN (Invoice) or, CR (Credit), as appropriate.

Do You Wish To Add/Review Document Text?

1 - To amend or view the Accounts Payable item text.

0 - Or leave blank, if not required.

If the matched value agrees with the invoice/credit value, then the application returns to the initial select screen after updating advice notes and invoice records. Otherwise, the difference warning screen is displayed.

Invoice Match Difference Warning Screen

This screen highlights any difference between the goods value of the invoice and the total value matched against the invoice.

PM031 Invoice Match	Z1 - Demonstration Company	USER SP1	1/09/94 15:17:40
Invoice Value Differs to Total Matched			
The goods value of invoice.. 00000011 is		862.36	
The total value matched against the invoice is..		864.00	
The difference between the two values is		1.64-	
Press F8 if you wish to complete this match by accounting for the difference			
Press F12 if you wish to resume matching or cancel this match			
F12=Continue/Cancel F8=Complete this match			

If there is no difference, the Invoice Match - Difference Warning screen is not displayed. Options are provided to complete, continue, or cancel this match.

The goods value of invoice, invoice number, total matched value and difference are displayed. The next screen displayed is based upon the function key selected.

In addition to the goods and VAT dissections created by invoice matching, this screen enables you to enter invoice dissections to ensure that the total matched value equals the total goods value on the invoice. This difference may be due to freight or other sundry charges not specified on the order. These variances may be properly accounted for here.

Functions:

F8

Complete this match to complete the match despite the differences.

F11

Cancel this Match and returns to the supplier select screen.

F12

Continue/Cancel to return to the matching process

The total value of received goods matched against the invoice.

Line Number

To amend a dissection displayed on the screen, enter the line number here. The requested line will be displayed for amendment.

G/L Account

The Advanced General Ledger account and any extension level codes associated with the dissection. You may amend GL Account/Extension codes for any difference entered here between the invoice and order value.

Goods Amount

The value of goods to be posted to this account.

Description

A description for the dissection. This field is optional

On selecting update, a check is made to ensure that the matched value plus the value entered on this screen equals the invoice goods value. If it does not, an error message is displayed and the difference must be resolved.

Press **Enter** to add this dissection to the match.

When all the required dissections have been entered select **F8=Update** to complete the match.

If you wish to cancel this match, select **F7=No Match**.

Once the match is reconciled, the update flags the invoice record on the Accounts Payable log as partially or completely matched, depending on your earlier selection. Dissections are also written to the Accounts Payable log. These are either generated automatically from the matching with receipts, or dissections entered manually via this screen.

If Print Invoice Matching Detail? in the Company Profile is enabled a report is automatically generated.

When you transfer the invoice values from the Accounts Payable log to the Advanced General Ledger, the details of all dissections are displayed. See Accounts Payable for more information.

Invoice Match Stand Alone

This is reached by choosing the Invoice Match - Stand Alone option.

You may wish to use this option if you do not want the invoice log in Accounts Payable to be checked/updated for the specified invoice or credit note number.

This option does not check the invoice log or 'match' the actual invoices, but it does create a file of details of the receipts that have been matched, which may be of use. The other role of this option is to allow the orders against which receipts have been made to become available for historical enquiries.

Note: The 'Difference Warning' and 'Dissections' screens are not displayed as there is no Invoice Log to check against.

Screens used in this procedure are:

- Select.
- Unmatched Advice Note.
- Detail.
- Order Line Text.
- Completion.
- Invoice/Credit Select.

The Invoices Matched Audit Report is printed if the Company Profile Flag is set to request it. This flag is set up in the Purchase Management Utilities menu, under the Company Profile option.

Note: If catchweight is active for this company, the catchweight specific functions for Invoice Match-Stand Alone work as for Invoice Match.

Landed Costs

This is selected from the Purchase Management Processing menu, under the Landed Costs option. This procedure enables the amendment of Landed Costs that have been assigned to receipt lines.

The Procedure contains Select, Select Order Line and Maintenance screens.

Landed Costs Select Screen

This screen enables you to select the appropriate GRN or style number for Landed Cost Maintenance.

PM102	Z1 - Demonstration Company	USER SP1	31/08/94 11:29:16
-------	----------------------------	----------	----------------------

Landed Costs Maintenance

GRN No..... 7

Line No.....

Or

Item.....?..

Receipt Date..

F3=Exit F4=Prompt

Fields:

GRN No.

The GRN number associated with the receipt against which the landed cost details were assigned.

Line No.

The line number associated with the selected GRN, for which landed costs are to be modified.

Item

The required item to maintain landed costs for.

Receipt Date

The required receipt date to maintain landed costs for.

If a single line matches the selection the details screen is displayed. Otherwise, a list of matching lines is displayed, from which you may select a line to maintain landed costs.

Landed Costs Select Order Line Screen

This screen allows you to select order lines so that you can maintain landed costs.

PM102	Z1 - Demonstration Company	USER SP1	31/08/94 11:29:21			
Landed Costs Maintenance						
GRN No.....		7				
	Order	Line Seq	Date	Item	Supplier	Transaction Quantity
1	000009	1	4/08/94	5017	GS01	500.000
-	000009	2	4/08/94	5018	GS01	1250.000
-	000009	3	4/08/94	5020	GS01	750.000
1-Select F3=Exit F12=Previous						

Fields:

GRN No.

The Goods Receipt Note number if it was selected on the previous screen.

Line No.

The order line number, if it was selected on the previous screen.

Or

Item

The item if it was selected on the previous screen.

Receipt Date

The receipt date if it was selected on the previous screen.

On each line the following details are displayed:

Order

Order number.

Line

Order line number.

Seq

The blanket /sequence number.

Date

The receipt date.

Item

The item code.

Supplier

The supplier of the order.

Transaction Quantity

The number of units of the item for the line.

Enter 1 beside any line and press **Enter** to maintain landed costs for that line.

Landed Costs Maintenance Screen

This screen allows you to maintain the landed costs for an order line. On entering a landed cost code and a landed cost value, the description of the landed cost code is displayed, along with the line item, receipt date and unit of measure.
