Chapter 4

Reports

Purchase Management Reports

The reports in Purchase Management may be grouped into five categories:

- Actions
- Status
- Analyses
- Audits
- File Lists

All of the above are to be found on the Purchase Management Reports menu, except for file lists, which are found on the Maintenance menu.

New Orders (Audit Prior to Release) Report

Once an order has been entered on the system it is referred to as a confirmed order. However, before receipts can be entered against it, it must be released. The releasing of orders is carried out by running this option from the Purchase Management Reports menu. This option produces a report of all new orders on the system, whether they have been entered manually or created from purchase requisitions.

This report should be run at regular intervals in order to release all orders that have been confirmed since this report was last run.

Frequency

As required, but should be run at least on a daily basis.

Stationery

Standard listing paper.

Change of supplier.

Overflow.

Totals

Values are totalled at the following levels:

Line

Order

Supplier

Company

Note: If catchweight is active for this company, the layout of the printed report changes to show values for items with a secondary value.

This job is run by selecting the option from the menu. A screen is displayed stating that a batch job is required to carry out the report.

Choose **F8=Update** to confirm or
F3=Exit/F12=Previous to cancel.

Order Pre Print

Once an order has been released (see the New Orders section) it can be printed for checking. The printing of orders for checking is sometimes referred to as pre-printing and is carried out by running this option from the Purchase Management Reports menu. The option produces a copy of all released orders that have not yet been printed. The orders are printed in the same format as they will eventually appear but are printed on standard paper rather than special stationery.

The orders that are printed are only those selected in Order Entry for printing or in Order Amend for reprinting.

This report may be run at regular intervals in order to allow checking and amendment of released orders before they are finally printed.

Frequency

As required.

Note: If catchweight is active for this company, the layout of the printed report changes to show values for items with a secondary value.

This job is run directly by selecting the menu option. A screen is displayed stating that a batch job is required to carry out the report.

Choose **F8=Update** to confirm or
F3=Exit/F12=Previous to cancel.

Print Orders

Once an order has been released it can be printed. The option to print produces a copy of all released orders, whether or not they have been pre-printed. The orders are printed on special purchase order stationery but otherwise appear the same as order pre-prints.

The orders that are printed are only those selected in Order Entry for printing or in Order Amend for reprinting.

This report should be run at regular intervals in order to print all orders released but not printed since this option was last taken.

The print option is found on the Purchase Management Reports menu.

Frequency

As required.

Stationery

Purchase order forms.

This job is run directly by selecting the menu option.

Note: If catchweight is active for this company, the layout of the printed report changes to show values for items with a secondary value.

Note: If the order is being reprinted, a message is displayed.

Print GRNs

This procedure prints Goods Receipt Notes for all receipts to a specified stockroom made since this option was last taken.

A screen is displayed asking you to select the stockroom at which goods have been received. Your default stockroom will be displayed in this field if you have one. If a stockroom is not specified, GRNs will be printed for all stockrooms. You can prompt for valid stockrooms.

The print GRNs option is found on the Purchase Management Reports menu.

Fields:

Confirmation Flag

Blank to print deliveries with any flag value or enter a selected flag value.

Item

Blank to print orders for all items, or enter a valid item code for a specific item.

Supplier

Blank for all suppliers, or enter a valid supplier code for a specific supplier.

Order Class

0 for all order classes, or enter a valid order class.

Purchasing Officer

0 for all purchase officers, or enter a valid purchase officer.

Delivery Dates

Leave as the default for all deliveries, or enter a valid date range to limit the report to order lines due for delivery in this inclusive range.

Last Order Place Date

Leave the default for all orders, or enter any valid date to select orders placed prior to the selected date.

Sequence

1 - To sequence the report by supplier.

2 - To sequence the report by purchase officer.

Overdue Orders By Supplier Report

This screen allows you to produce a report giving details of overdue orders. For this report you may specify information relating to one supplier, a supplier range or all suppliers. For these suppliers you may also include overdue orders specific to one item, a range of items or all items. Another option is to define a range of delivery due dates, which allows you to do a report of all orders due in a specific period of time.

The report gives the following details:

- Supplier code and name
- Item code and description
- Order number
- Line number
- Blanket sequence
- Purchase officer
- Stockroom
- Outstanding quantity
- Quantity unit of measure
- Price
- Due Date
- Price unit of measure
- Currency code
- Base value
- Telephone number of supplier
- Value totals for each item/supplier combination
- Value totals for each supplier
- Total value outstanding

Overdue Orders by Supplier Select Screen

PM088	Z1 - Demonstration Company	User SP1	31/08/94 16:49:44
Goods Value By Location Report			
Location.....	<u>0</u>	0=All locations 1=Goods inwards 2=Inspection 3=Stock	
Stockroom.....?	<u>01</u>	(Leave Blank For ALL Stockrooms)	
Receipt dates...FROM....		TO	<u>310894</u>
Summary by Item.....	<u>1</u>	(0=No,1=Yes)	
F3=Exit F4=Prompt			

Fields:

Location

Select the location for the report:

- 0 - To select all locations.
- 1- To select goods inwards only.
- 2 - To select inspection only.
- 3 - To select stock only.

Stockroom

The default stockroom for your User ID is shown, if you have one. Specify any valid stockroom or leave blank to select all stockrooms. A prompt is available.

Receipt Dates From/To

A range of dates to restrict the report to receipts in this inclusive range. If the default is left unchanged, all receipts to the current date are selected.

Summary By Item

- 1 - Summarise value and details by item.
- 0 - Summarise by location only.

Cancelled GRN Number Audit Report

This report is used to show all GRN numbers that have been cancelled and can be used for audit purposes. There is also the option to clear cancelled GRN numbers from the audit file.

When you take the Goods Receiving Option from the Processing Menu, a GRN number is allocated. If you then exit out of that option without receiving goods, that GRN number is cancelled and a label will not be printed. Thus for each GRN number, you will either have goods received against it or it will appear on this report.

The report gives the cancelled GRN number, the order number and stockroom it relates to. It also gives information on the circumstances under which it was cancelled.

Fields:

Sequence Number

The number corresponding to the sequence required, as shown on the screen above.

Summary/Detail By Item

1 - To provide summary information for each item.

2 - To provide full details for each item.

Select

You may limit the report to a particular supplier, nominal code, item class or purchase officer by entering the required value here. The selection should correspond to the report sequence previously selected. This field is optional.

On pressing **Enter**, the report is run.

Supplier Performance Report

This report provides statistics relating to the services provided by each supplier. The performance of each supplier is evaluated on the basis of:

- Timeliness - comparing due date with receipt date.
- Quality - using the number of returns made.
- Price - using order and invoice prices.

Each of these factors can be given relative weight depending on their perceived importance. The system then calculates an overall rating for each supplier based on these weightings. The report is intended as an aid in determining supplier efficiency.

The report is sequenced by item or supplier, conditioned by range of delivery due dates. Performance can be shown at summary level or at detail level for the item or supplier.

Timeliness

To calculate timeliness, the function first of all calculates the Number of days late. For received items this is calculated as receipt date less due date. For outstanding items this is calculated as tomorrow's date or the maintained expected date (whichever is the later) less the due date. If the result of either of the above calculations is negative, zero days are assumed.

A ratio is calculated relating Number of days late for each item to lead time. The lead time used here is the number of days from order to due date for the item. These two statistics are expressed as an average for a single unit of the item, across all receipts/orders in the selected range for the level reported.

At supplier level this average is based on value rather than quantity.

Quality

Quality is expressed as a percentage of quantities rejected against quantity received. Rejects are defined as returns or adjustments where a reason code has been specified.

Price

Price performance is expressed as a relationship of quoted order price to invoice price. It is therefore based on invoice matched data only. It is shown as a total excess charge and as a ratio of excess charge to original order value.

Summary/Detail?... 1 (1=Summary,2=Detail)			
Select	From	To	
Item(s).....?	_____	_____	
Supplier(s)....?	_____	_____	
Due dates.....	000000	310894	
NOTE: If all selection fields are left blank a complete report is produced. Name search facilities are available for the FROM and the TO entries. A FROM entry without a corresponding TO entry will be validated and produce a report restricted to that entry.			
Attribute	Weight factor		
Timeliness.....	001	NOTE: The report prints performance figures for each attribute and computes an overall rating according to the weight factors.	
Quality.....	001		
Price.....	001		
F3=Exit F4=Prompt			

Fields:

Sequence By

- 1 - Sequence the report by item.
- 2 - Sequence the report by supplier.

Summary/Detail

- 1 - Summary report
- 2 - Detailed report.

Item From/To

You can restrict the report to a range of items. Leave blank for all. If Item From is entered and Item To is left blank, a single item is selected. (This applies to each From/To selection).

Supplier From/To

You may restrict the report to a range of suppliers. Leave blank for all.

Due Dates

A range of due dates for the report. The defaults assume all order lines up to the current date.

Weight Factor

A weighting factor to be assigned to each performance attribute which reflects their relative importance. The defaults are 1 for each attribute, but can be

overwritten. The higher the value in the field, the higher the relative importance of this factor in calculating supplier performance.

Press **Enter** to run the report.

F3=Exit F4=Prompt F8=Submit

Fields:

Delivery Dates From/To

A range of delivery dates for which the report should select transactions. The default From date is today's date. The To date is mandatory.

Receipts

- 1 - Select receipts for printing.
- 2 - Omit all receipts.

Invoices

- 1 - Select invoices for printing.
- 2 - Omit all invoices.

Currency Code

A valid currency code if you wish to print the report for suppliers in a single currency, or leave blank to select records for all currencies.

Conversion Rate

The conversion rate to be used for converting transaction currency values to base values.

Parameters and Misc Codes Report

This option is found on the Purchase Management Maintenance menu.

The report lists all the parameters and miscellaneous codes currently set up. It includes details of the parameter table, (length of code and description), and also lists the individual codes set up in each table.
