## Chapter 1

### Maintenance

## Requisitioning Maintenance Functions

Much of the data used by requisitioning is held in the Inventory Management, Purchase Management, Production, or Distribution Requirements Planning applications. The usage of master file data from other applications is as follows:

| Data               | Sourced From                                       |
|--------------------|----------------------------------------------------|
| Item               | Inventory Management                               |
| Supplier           | Accounts Payable / DRP                             |
| Purchasing Officer | Purchase Management<br>Inventory Management<br>DRP |
| Stockroom          | Inventory Management                               |

The definition of user authorisation is the only data maintained within the Requisitioning application.

|                                                                          |                            |                             |                      |
|--------------------------------------------------------------------------|----------------------------|-----------------------------|----------------------|

# Authorisation Maintenance

## 1/RQM

To maintain details of all users who may create manual requisitions, i.e. 'Requisitioners', and their respective 'authorisers'. These records are used within this application to decide who should authorise a manually entered requisition. This decision is based on the spend limits assigned within this procedure.

The procedure consists of the following :

- Authorisation Maintenance - Select
- Authorisation Maintenance - Details

## Authorisation Maintenance Screen 1

This allows you to enter the ID of the requisitioner. It must be a valid user ID on the system.

|                                                        |                            |          |                      |
|--------------------------------------------------------|----------------------------|----------|----------------------|
| RQ270                                                  | Z1 - Demonstration Company | User SP1 | 23/08/94<br>16:40:43 |
| <b>Authorisation Maintenance - Select</b>              |                            |          |                      |
| Requisitioners User ID .....?.. <u>SP1</u> Jane Farlow |                            |          |                      |
| F3=Exit F4=Prompt                                      |                            |          |                      |

### Fields:

#### Requisitioner's User ID

Enter a valid User ID, i.e. one defined to System Manager. The **F4=Prompt** key is available.

Press **Enter** to display the Authorisation Maintenance Details screen. This will be blank if the User ID has not been maintained previously.

## Authorisation Maintenance Screen 2

This enables the maintenance of the Department, Spend Limits, and optionally the Authoriser for this Requisitioner.

|       |                            |          |                      |
|-------|----------------------------|----------|----------------------|
| RQ270 | Z1 - Demonstration Company | User SP1 | 23/08/94<br>16:40:51 |
|-------|----------------------------|----------|----------------------|

**Authorisation Maintenance - Details**

Requisitioners User ID ..... SP1

Name ..... Jane Farlow

Department .....?.. Purchasing

Telephone ..... 2357

**Spend Limits**

-Per Requisition .... 10000.00

-Per Month ..... 100000.00 Actual Spend. .... .00

Authorisers User ID..?.. QUSER Steven Barker

F3=Exit F4=Prompt F5=Refresh F8=Update F11=Delete F12=Previous

### Fields:

#### Requisitions User ID

This is displayed from the previous screen.

#### Name

Enter the name of the person who is to be allowed to enter manual requisitions.

#### Department

Enter the name or code of the Department in which this person works. The **F4=Prompt** key is available.

*Note: A new Department may be created, using F8=Update, when the first person in the Department is defined to this procedure.*

#### Telephone

Optionally enter a telephone number or extension for this person.

#### Spend Limit:

##### Per Requisition

Enter the maximum total net value for a single requisition that this person can raise without requiring authorisation (e.g. from the Departmental Manager).

*Note: If this control is not required, or the Requisitioner is sufficiently senior within the company, enter this as all lines with this decimal*

*place i.e. 999999999999.99.*

### Per Month

Enter the maximum total net value of the requisitions which this person can raise per month without requiring authorisation (e.g. from the Departmental Manager).

*Note: If this control is not required, or the Requisitioner is sufficiently senior within the company, enter this as all lines with this decimal place i.e. 999999999999.99.*

*Note: The Calendar month is obtained from the current system date.*

### Actual Spend

This is the total net value of all manual requisitions raised by this person in the current calendar month. This value is automatically maintained within the application, when the manual requisition is authorised, but may be manually amended here.

*Note: Where the Authoriser is not the original Requisitioner, the amount spent is updated for the Authoriser rather than the Requisitioner, as he / she is considered to have actually committed the expenditure.*

### Authoriser's User Id

Enter the User ID of the person who is responsible for authorising requisitions for this requisitioner. An authoriser is not required where the requisitioner has unlimited spend capability.

***Warning: This authoriser must have been defined previously as a requisitioner in his / her own right, with at least one spend limit higher than the current requisitioner.***

The authoriser may in turn need to have an authoriser defined on his / her requisitioner record. This may be left blank, if both spend limits are set to all nines, i.e. as far as Requisitioning is concerned this requisitioner is the most senior person within the company. At least one such requisitioner must be defined for the company.

Press **F8=Update** and the record is updated in the Requisitioning Authorisation File, and record(s) are written to the corresponding Audit File.

To delete press **F11=Delete** and the following conditions are checked:

- Are there outstanding requisitions which were manually entered by this Requisitioner?
- Is this Requisitioner defined as an Authoriser to any other Requisitioner?

If the answer to either of these is 'yes', an appropriate error message is displayed and the delete request is not performed. Otherwise a confirmation message is displayed before the record is deleted and an audit record written.

# Authorisation Maintenance File List

## 21/RQM

This option submits a batch job which produces the Authorisation Maintenance File List Report.

Authorisation Maintenance File List Report, for each Requisitioner defined using Authorisation Maintenance, lists the following information:

- User ID.
- User Name.
- Contact Telephone.
- The Requisitioner's Spent Limits.
- Actual Spend for the current month.
- The Requisitioner's Authoriser.
