Chapter 2

Processing

Requisitioning Processing Functions

Processing within Requisitioning may be split into four distinct stages:

- Creation of Requisitions.
- Maintenance of Requisitions.
- Authorisation of Manual Requisitions.
- Creation of Supply Orders from Requisitioning.

All four stages can be accessed from the Processing menu.

RQP	Z1 - Demonstration Company	User SPI	26/08/94 11:33:37

Creation of Requisitions

Requisitions may be created by any of the following:

- Inventory Reordering.
- Interface to Production (MPS / MRP) applications.
- Interface to DRP application.
- Interface to Advanced Order Entry.
- Manual entry.

These facilities reside within Requisitioning.

Maintenance of Requisitions

Requisitions are maintained within the Requisitions Confirmation function. They may also be reported on during their existence within the Requisitioning application.

Manual requisitions may be created via the Requisitions Confirmation procedure within this application.

Authorisation of Manual Requisitions

Any manually entered requisitions which require authorisation are displayed for processing by the relevant Authoriser. This Authoriser is determined by the Requisitions Confirmation procedure using the spend control data from the Authorisation file. The requisition may then be authorised, rejected or transferred to another authoriser.

Creation of Supply Orders

There are two types of supply orders handled by Requisitioning. They are Purchase Orders and Distribution Orders.

Purchase order lines may be created for purchased items, i.e. those defined to Purchase Management, from selected requisitions.

Distribution order lines may be created for items supplied by a Supply Centre within the company, as defined within DRP. This is created as a special type of Sales Order line, i.e. an internal order which will not create an invoice or update Sales Analysis.

Inventory Reordering

1/RQP

This procedure enables users of the Inventory Management application to automatically generate recommended order lines (requisitions), based on the re-order criteria set up for an item within the Inventory Management application.

The basic report, accessed from Inventory Management, will report on all items that require either re-ordering or are over-stocked.

When an item is selected for re-ordering, in addition to the above function, a requisition record is generated for this item.

Reorder Report and Requisitions Creation Selection Screen

This procedure enables you to select the sequence of the report before submitting the batch program to create the re-order report and requisitions.

```
RQ309                Z1 - Demonstration Company      USER SP1      26/08/94
                                     11:33:57

Re-Order Report & Requisitions Creation

Enter required report sequence:  _   1 - Item Sequence.
                                     2 - Stockroom Sequence.

F3=Exit
```

Fields:

Enter Required Report Sequence

1 - for report in Item Code sequence

2 - for Stockroom sequence.

Note: You must enter either 1 or 2.

Press **Enter** to display the confirmation message.

Press **Enter** again to submit the program to the job queue.

The batch program will output the report in the specified sequence and add the generated requisitions. These may be subsequently amended or reported on.

For details of the re-order report, and the calculations made to determine re-order quantities etc., see the relevant section of the Inventory Management product information.

In addition to the re-order report, two other reports are generated:

- The New Requisitions report which details all new requisitions that have been generated.

- The Requisitions Deleted report which details all requisitions not previously converted to orders, and so have been deleted to prevent duplicate requisitions by this batch program.

Note: Only requisitions sourced from Inventory are deleted, not those from Manufacturing, Advanced Order Entry, DRP or manual entry.

When requisitions are generated, the data is sourced as follows:

Item

The item identified by the application as requiring re-ordering.

Supplier

The preferred supplier from the Item / Stockroom details for the item.

Purchase Officer

The Purchase Officer defined for the item.

Stockroom

The stockroom for which the application has identified a shortage of the item.

Quantity

Recommended re-order quantity, as calculated by the application.

Due Date

Due date calculated by the application by adding the lead time for the item to the requisition creation date.

Price / Discount

Item price and discount is taken from the Item / Supplier details in Purchase Management. If these details are not found the price is set to the standard cost in the Inventory Item / Stockroom details. The discount is set to zero. Requisitions for internal distribution are not priced.

Release Flag

Set to the default value as defined on the Purchase Management Company Profile.

Requisition Number

A unique number allocated to this requisition based on the range defined within the Purchase Management Company Profile.

Requisition Text

If purchasing text exists for an item, it is copied to become requisition text. If no purchasing text exists for an item, its description is copied to become the first line of requisition text.

Create Requisitions from MPS or MRP

1... 2/RQP
2...

1... 4/RQP
2...

This option allows you to generate requisitions from suggested Purchase Order lines output by the last MPS or MRP processing run. All requisitions that have not been converted to purchase orders will be deleted from the start Planner Action date onwards.

Create Requisitions from MPS or MRP Confirmation Screen

On selecting this option, a check is made that the Production application is installed for this company. If not, a message is displayed with the instruction to exit this function as it is not available.

This option enables you to confirm submission of a batch program to delete and add requisitions sourced from either MPS or MRP, selecting by Planner Action date range.

RQ230	Z1-Demonstration Company	USER SP1	13/09/94 13:05:40
Create Requisitions From Suggested Orders In MPS/MRP			
This option is only valid if the manufacturing system is installed.			
If the create requisitions option is confirmed, requisitions will be created for suggested purchase orders from MPS/MRP model 01			
From MPS or MRP..... _ (0=MPS, 1=MRP)			
Planner Action Date range.... <u>130994</u> To _____			
WARNING: All outstanding requisitions generated for this manufacturing company will be deleted prior to creating the new requisitions.			
F3=Exit F8=Submit			

Fields:

Model

The model number for which suggested orders will be selected from MPS or MRP. This is set to the value on the company profile on Production.

From MPS Or MRP

0 - To select suggestions from MPS.

1 - To select suggestions from MRP.

Planner Action Date Range

Enter a range of valid calendar dates for which requisitions will be created if the action date falls between the dates entered.

Press **F8=Update** to submit a program to the job queue. This will delete and create requisitions sourced from either MPS or MRP (as selected). A new requisitions report is also output. This details all new requisitions which have been created.

A Requisitions Deleted report is also output which details all requisitions sourced from MPS or MRP (as selected) that have not been converted to orders.

When requisitions are generated, the data is sourced as follows:

Item

The item identified by MPS or MRP as requiring re-ordering.

Supplier

The preferred supplier from the Inventory Item / Stockroom details for the item.

Purchase Officer

The Purchase Officer defined for the Inventory item.

Stockroom

The stockroom for which MPS and MRP has identified a shortage of this item.

Quantity

Recommended re-order quantity as calculated by MPS or MRP.

Due Date

Due date set by MPS or MRP as the required date for the demand on this item.

Price, Discount

Price and discount for the item.

Note: If no price is found in Purchase Management, it defaults to the standard cost in the Inventory Item / Stockroom details.

Release Flag

Set to the default value as defined on the Purchase Management Company Profile.

Requisition Number

A unique number allocated to this requisition, based on the range defined to the Purchase Management company profile. No purchasing text is added by this option.

Create Requisitions from DRP

3/RQP

This option enables you to generate requisitions from suggested order lines output by the last DRP processing run. (Selects suggestions by Planner Action date range for the specified Centre, DC or Supply Network.)

The requisitions are for externally supplied items (with a valid supplier), and internally distributed items, (where the supplier is a valid DRP Supply Centre).

Requisitions which have not been converted to orders will be deleted prior to the creation of the new requisitions. All requisitions which were previously created from the selected DRP DC, Centre or Network will be deleted from the start Planner Action date onwards.

Create Requisitions From DRP Selection Screen

This option enables you to select the date range for which requisitions will be created, plus the DRP DC, Centre or Network and submit the batch program to create requisitions.

RQ240	Z1 - Demonstration Company	USER SP1	26/08/94 11:34:09
-------	----------------------------	----------	----------------------

Create Requisitions From DRP Suggestions

Planner Action Date range 260894 To _____

Centre/DC code?.. __

or

All DC's for Network code ...?.. __

F3=Exit F4=Prompt F8=Update

Fields:

Planner Action Date Range

Enter a range of valid calendar dates for which requisitions will be created if their action date falls between the dates entered.

Centre / Dc Code

Enter a valid DRP Centre or DC code, i.e. defined to at least one supply network within DRP. The F4=Prompt key is available.

OR

All Dcs For Network Code

Enter a valid DRP Network code. The F4=Prompt key is available. Entry must be made in one of the input fields, but not both.

Press **F8=Update**. A check is made that the Distribution Requirements Planning (DRP) application is installed for this company. If it is not, a message is displayed with the instruction to exit this function as it is not available. Otherwise, a program is submitted to the job queue. This will delete and create requisitions sourced from the selected DRP DC, Centre or Network.

*Note: If Network is selected, requisitions are created for **all** DCs defined to it, but not for the Supply Centre. The latter must be processed separately (after the central supply plan has been created in DRP).*

A new requisitions report is output, which details all new requisitions created by the batch program.

The Requisitions Deleted report is also produced, which details all requisitions sourced from DRP (as selected) that have not been converted to orders.

When requisitions are generated, the data is sourced as follows:

Item

The item identified by DRP as requiring re-ordering.

Supplier

This depends on the source of supply, defined for the item within DRP. If the item is locally purchased, at the selected Centre or DC, then the supplier is from the Inventory Item / Stockroom details. Alternatively, if the item is centrally supplied, the supplier is the Centre Code defined to the item in DRP.

Purchase Officer

The Purchase Officer number defined for the planner who is assigned to the item in DRP.

Stockroom

The stockroom for which DRP has identified a shortage of this item.

Quantity

Recommended re-order quantity, as calculated by DRP.

Due Date

Due date set by DRP as the required date to satisfy the demand on this item.

Price / Discount

Item price and discount is taken from the Item / Supplier details in Purchase Management. If these details are not found the price is set to the standard cost in the Inventory Item / Stockroom details. The discount is set to zero. Requisitions for internal distribution are not priced.

Release Flag

Set to the default value as defined on the Purchase Management Company Profile.

Requisition Number

A unique number allocated to this requisition, based on the range defined on the Purchase Management Company Profile. No purchasing text is added by this option.

Requisitions Confirmation

11/RQP

This procedure enables you to maintain the recommended order lines, i.e. requisitions that are generated from Inventory Management, Advanced Order Entry, MPS, MRP or DRP. Also enables the entry and control of Manual Requisitions for both stocked and non-stocked items (including services).

The procedure consists of the following:

- Requisitions Confirmation - Selection
- Requisitions Confirmation - Details
- Requisitions Confirmation - Status
- Requisitions Confirmation - Text

Requisitions Confirmation Selection Screen

This enables you to select the requisitions to be amended or deleted.

RQ260	Z1 - Demonstration Company	User SP1	26/08/94 11:34:22
Requisitions Confirmation - Select

Stockroom?.. _		(blank for all)	
Requisitioner?.. _____		(blank for all)	
Department?.. _____		(blank for all)	
F3=Exit F4=Prompt			

Fields:

Release Flag

If entered, selects only requisitions with the release flag assigned to them.

Item

If entered, must be a valid item and only requisitions for this item are selected. The item must exist in the Inventory Item file.

Supplier

If entered, the supplier must exist on the Supplier Master file within the Accounts Payable application. The only exception to this is if DRP is installed, then the supplier may be a Supply Centre code defined to DRP. If entered, only requisitions for the specified supplier are selected.

Purchase Officer

If entered, the Purchase Officer must exist on the Purchase Officer file in Purchase Management. If it does, only requisitions assigned to this officer are selected. The **F4=Prompt** key is available.

Order Class

If entered, order class should be in the range 1 to 8 inclusive. If so, only requisitions with that order class are selected.

Stockroom

If entered, must be a valid stockroom code defined in Inventory Management. If specified, only requisitions destined for the entered stockroom are selected.

Requisitioner

If entered, must be a valid Requisitioner user ID in the Authorisation file. If specified, only requisitions manually entered by this Requisitioner will be selected. The F4=Prompt key is available.

Department

If entered, must be defined to at least one Requisitioner in the Authorisation file. If specified, only requisitions required by this Department will be selected.

Press **Enter** to display the Details Screen which will display details of requisitions satisfying the selection.

If no selections are specified, the display will default to show all requisitions for this company.

Requisitions Confirmation Detail Screen

This procedure enables you to add, change or delete requisitions whilst showing general details for the selected requisitions.

F3=Exit F4=Prompt F8=Update F11=Delete F12=Previous F14=Status
 F15=Where bought enquiry F16=Spend limit enquiry

Fields:

Item

A code representing the requisitioned item.

Supplier

This code represents one of the following:

An external supplier

or

An internal supply centre (as defined to DRP)

Note: Supply Centres are in reverse colours on this screen for identification of an internal requisition within the company, rather than one relating to an external supplier.

SR

The code assigned to the stockroom for which the requisition has been raised.

Cls

The order class for the requisition.

1 - 4 for stocked orders.

5 - 8 for non-stocked orders (including 6 for services)

A list of valid order classes can be prompted on.

Quantity / UOM

The recommended or manually specified order quantity expressed in the appropriate unit of measure.

Price / UOM

The price and price unit of discount for the requisition. DRP centrally supplied items are not priced.

Cur

The Currency Code for the supplier.

Rlsf

Release flag value. May be used to select requisitions for amendment, reporting or conversion to orders. This value is totally user-defined and each alphanumeric value may have its own meaning.

Description / Cost Code

Item description for stocked orders or the Cost Code for non-stocked orders. This code is used to charge the cost for this item to the relevant GL code.

Due

The date that delivery of these goods is desired, as calculated by Inventory, Manufacturing, DRP or manually specified.

P Off

The Purchase Officer responsible for this requisition. A list of valid Purchase Officers can be prompted on.

Disc

The discount for the requisition.

Source

This field is not named on the screen. The order source (Manual, Inventory, Production, DRP or Advanced Order Entry).

**Notes:**

- 1. The description of the requisitioned item is displayed below the Item Code*
- 2. If any of the fields are displayed in reverse image, this indicates that the value of the field is invalid.*
- 3. If the Item is displayed in reverse image, then the item does not exist in the Item Specification within Inventory Management.*
- 4. If the supplier name is displayed in reverse image, then the supplier does not exist in the Supplier Master within the Accounts Payable. This field will also be displayed in reverse image if the supply is via a Distribution order.*
- 5. If the Purchase Officer's name is displayed in*

reverse image, then this code does not exist on the Purchase Officer file in Purchase Management.

Manual requisitions may be added by entering the following details on the foot of the screen.

Rlsf

Release flag value. This may be used to define the status of the requisition. The value entered is not validated. The value entered may be used for future selections of requisitions for amendment, reporting and conversion to orders.

Item

Enter a valid item in Inventory Management. The F4=Prompt key is available.

Supplier

Enter a valid code in the supplier master file, or a valid Supply Centre defined to DRP. The F4=Prompt key is available.

P. Off

Enter a valid Purchase Officer number defined in Purchase Management. Defaults to the number defined on the item record.

Strm

The stockroom for which the requisition has been raised. This must be a valid stockroom code defined in Inventory Management. The F4=Prompt key is available.

Cls

The order class for the requisition.

1 - 4 for stocked orders.

5 - 8 for non-stocked orders (including 6 for services).

Note: Non-stocked items defined to Inventory Management are ordered on normal stocked orders (i.e. order classes 1 to 4). Non-stocked orders (classes 5 to 8) are only used where no item code corresponds to the goods or services to be purchased.

Qty / UOM

Enter the requisition quantity. Requisitions for stocked orders are always held in the issue unit of measure defined on the item master record in Inventory Management. This is the unit that will be assumed if the unit of measure field is left blank.

However, any of the units of measure defined to the item may be entered, in which case the system will automatically convert the quantity to the item master issue unit before adding or updating the requisition. For non-stocked orders, the units of measure available are those defined in the Purchase Management Parameter file. Prompts are available on Unit of Measure fields.

Note: When Purchase Order lines are created from requisitions, they will be converted to the item master purchasing unit if this requirement has been indicated on the item / supplier profile

in Purchase Management.

Due Date

Enter the due date for this requisition.

Price / UOM

Enter the price of the requisitioned item. The price is sourced from the Item / Supplier file in Purchase Management or manually entered.

For a stocked order, the price unit of measure may be expressed in any of the units defined on the item master details in Inventory Management. For a non-stocked order, the unit must be defined on the Purchasing Parameters file and must be the same unit code as that in which the requisition quantity is expressed. Prompts are available on Unit of Measure fields.

Note: If catchweight is active for this company, the price UoM entered can be any of the secondary UoMs that have conversions previously defined, for catchweight items only, in Inventory Management.

Cur

A Currency Code may be entered if the requisition supplier is multi-currency.

Full Text

Enter a 1 here to retrieve the purchase text for an item and place this text on the requisition. The text will be passed to the order on conversion from the requisition.

Disc %

Discount percentage allowable against the displayed price. It is normally sourced from the Item / Supplier file in Purchase Management, but may be manually entered.

Cost Code

This must be entered on Manual Requisitions for non-stocked orders. This code is used to charge the cost for this item to the relevant General Ledger account code.

Dept

Optionally enter a Department Code. If specified, it must be valid for at least one Requisitioner in the Authorisation file.

If left blank for a Manual Requisition, it will default to the Department assigned to the Requisitioner in the Authorisation record.

Select

This field is not named on the screen.

1 - If 1 is entered against a line the corresponding requisition details are shown on the entry lines at the foot of the screen. These may be amended and the requisition is then returned to the main body of the screen. However, Manual Requisitions may only be amended, or deleted, by the original Requisitioner. Once authorised, requisitions cannot be amended.

2 - The Text Screen is displayed for purchasing text to be maintained for the selected requisition. This may not be done for distribution requisitions, i.e. for DRP

centrally supplied items, and an appropriate error message is displayed on the current screen.

Note: Text cannot be added to a manual requisition until F8 is taken to create it.

3 - Purchase reservations for the requisition are displayed.

4 - The confirm deletion screen is displayed.

*Note: No updates are actually made to the files until **F8=Update** is pressed.*

Press **Enter** to continue.

Functions:

F14

Display the status screen.

F15

This is the Purchasing 'Where Bought' enquiry.

F16

This allows you to enquire on the Spend limit available.

Requisitions Confirmation Status Screen

This screen enables you to add, change or delete requisitions whilst showing the status of the selected requisitions. This is of particular interest for manual requisitions.

The displayed details are the same as the Detail Screen, except that Release Flag, Description, Due Date, Source and Discount are replaced by the following fields.

RQ260		Z1 - Demonstration Company		User SP1		26/08/94	
Requisitions Confirmation - Status							
1=Amend, 2=Text, 3=Reservations Enquiry, 4=Delete							
Item	Requisitioner	Supplier	Department	SR	Qty	UoM	Price

F3=Exit	F4=Prompt	F8=Update	F11=Delete	F12=Previous	F13=Detail
F15=Where bought enquiry	F16=Spend limit enquiry				

Fields:

Requisitioner

The User ID of the person who manually entered the original requisition. This will be blank for non-manual Requisitions.

Department

The code or description of the department for which the requisitioned items are required.

Authoriser

The User ID of the person who is responsible for authorising this Requisition. This is blank for non-Manual Requisitions. For Manual Requisitions this is determined automatically when the Requisition is added. However, if the Requisitioner has sufficient spend (per Requisition and per Month) then he / she authorises the Requisition and the Authoriser will be blank.

Otherwise, the Authoriser is determined by chaining through the authorisation records until an Authoriser is found with sufficient spend authority available.

Status

This field is not named on the screen but contains the current condition of the Manual Requisition:

'To be authorised

Rejected

Authorised'.

However, this will be blank for generated requisitions, i.e. non-manual.

Reqn No

The number assigned to the Requisition when it was originally created. This is assigned for all requisitions from the range specified on the Purchase Management Company Profile.

All other displayed details, input details, processing and function keys are the same as the Details screen, except **F13=Display** replaces **F14=Status**.

*Note: If the Requisitioner has authorised himself / herself to sanction a manual requisition, then his / her actual spend is updated (when **F8** is used) in the Requisitioners Authorisation record.*

Requisitions Confirmation Text Window (Option 2)

This option enables you to maintain purchasing text for the selected requisition. This text may be transferred to Purchase Management when the requisition is converted into a purchase order line.

The unique number assigned to the requisition is displayed in the upper right hand corner of the requisition text screen.

RQ260		Z1 - Demonstration Company		User SP1		26/08/94 11:34:37

The maximum value allowed for requisitions per month.

Actual Spend This Month

The amount spent by the requisitioner in the current month.

Press **F8=Update** to add Requisitions to the Actual Spend Value.

Requisitions Authorisation

21/RQP

This option enables you to review and action the Manual Requisitions which are awaiting your authorisation, if any.

You must be defined as an Authoriser to at least one Requisitioner within the Authorisation File. For each displayed Requisition, the Authoriser has the choice of authorising, rejecting or transferring the Requisition to another valid Authoriser.

Note: Authorisation is not required for Requisitions generated automatically from DRP, Inventory, MPS or MRP.

Note: Manual Requisitions cannot be transferred into Orders until they have been authorised.

Requisitions Authorisation Detail Screen

This enables you to display and action the requisitions awaiting your authorisation.

Stockroom into which the requisitioned items will be received.

Qty / UOM

The requisitioned quantity expressed in terms of the displayed unit of measure.

Due

Due date for the requisition, i.e. the date by which the requisitions items are required.

Reqn Value

Total net value of the Requisition.

Cc

Code representing the currency in which the value is expressed.

Requisitioner

User ID of the person who created the Manual Requisition.

Department

A code or description representing the requisitions department.

Reqn No

The unique Requisition Number generated by the application when the Requisition was created.

P. Off

Purchase Officer number assigned to the requisition.

Select

Any one of the following may be entered against one or more Requisitions:

- 1 - to authorise
- 2 - to transfer to another Authoriser
- 3 - to reject.

Change Requisitions Authoriser Window

When you select option 2, the change Requisitions Authoriser window is displayed.

This window allows you to transfer the selected requisition to another authoriser.

Fields:

To Authoriser

This is displayed for entry if the selection is 2 (Transfer). In this case the Authoriser must be defined to at least one Requisitioner and have sufficient spend limits to be able to authorise the Requisition.

The total requisition net value is accumulated for all requisitions selected for authorisation, and compared against the Spend Available This Month. Each requisition is also compared, in net value, with the Spend Limit per Requisition. If either test is failed, an appropriate message is displayed.

Press **F8=Update**, to complete the transaction.

System Updates on Validation

When **F8=Update** is pressed on the Requisitions Authorisation Screen, the following updates are performed, provided that validation is completed successfully:

1=To Authorise - Updates status of Requisition to 'Authorised'. Updates Actual Spend This Month, in the user's Requisitioner record with the net Requisition value.

2=To Transfer - Updates the Authoriser on the Requisition record.

3=To Reject - Updates status of Requisition to 'Rejected'.

Note: Audit records are created for all updates.

Create Purchase Orders

31/RQP

To convert selected Purchase Requisitions (manually entered or generated by the Inventory Management, MPS, MRP or DRP applications) into Purchase Orders in the Purchase Management application.

Requisitions to be converted may be selected on the following basis:

- Release Flag Value
- Supplier
- Purchase Officer
- Order Class
- Stockroom.

The rules for the creation of Purchase Orders are determined from the Requisitioning options on the Purchase Management company profile.

Note that requisitions for different Stockrooms will be consolidated on the same Purchase Order.

Detail is passed to the Purchase Management application exactly as it is held on the requisition.

Purchasing text may be transferred to the Purchase Order Line, if it has been maintained for the requisition.

Create Purchase Orders Selection Screen

This enables you to select the purchase requisitions and submit the batch programs to convert them into Purchase Orders.

Create Purchase Orders

Enter selection criteria (blank for all)

Release flag..... _

Supplier.....?.. _____

Purchase Officer..?.. 00000

Order class.....?.. _

Stockroom.....?.. _

Copy Text..... 1 (1=Yes/0=No)

F3=Exit F4=Prompt

Fields:

Release Flag

Optionally, enter a value to limit the conversion of requisitions to those with the release flag entered.

Supplier

Optionally, enter a valid supplier code to select requisitions only for this supplier. The F4=Prompt key is available.

Purchase Officer

Optionally, enter a valid Purchase Officer number to select for conversion only requisitions for which he / she is responsible. The F4=Prompt key is available.

Order Class

Optionally, enter a valid Order Class to select for conversion only requisitions for this class. The F4=Prompt key is available.

Stockroom

Optionally, enter a valid Inventory Stockroom code to select for conversion only requisitions for supply to this stockroom. The F4=Prompt key is available.

Copy Text

- 1 - Create order line text from the requisition text.
- 2 - Create order line text from the item description.

Press **Enter** to display a confirmation message.

Press **Enter** again, and a batch program is submitted to the job queue to convert selected requisitions to Purchase Order lines.

A new order will be set up for each Supplier / Order Class combination.

If an order already exists for the supplier, which is not fully completed, then the relevant requisitions will be added as new lines on the first such order for the supplier, unless the new order flag is set on the requisition record when the requisition was created, depending on the Purchase Management company profile parameter.

Requisitions for different Purchase Officers may be combined onto a single order (subject to the previous limitation of supplier / class), or split into different orders, depending on the Purchase Management company profile parameter.

On successful conversion of the requisition into a purchase order line, the on-order quantity will be updated for the stocked items in the Inventory Management application.

Newly created orders should be audited, by running the New Orders Audit within Purchase Management.

Note: Manual Requisitions will not be transferred unless they have been authorised.

Note: Only valid requisitions will be processed. Those with an error flag set need amending before they can be converted to orders.

Create Distribution Orders

32/RQP

To convert selected Requisitions (manually entered or generated from DRP) into Distribution Orders in the Sales Order Processing application.

This includes only items that are defined within DRP as being sourced from the specified Supply Centre, which must always be entered.

A specific Stockroom at a DC supplied by the Centre, may be entered. Only requisitions created for this stockroom are then selected. This may be required where multiple stockrooms are defined to a DC within the DRP application.

Create Distribution Orders Selection Screen

Select the Create Distribution Orders option.

This screen enables you to select the requisitions, and submit the batch program to convert them into Distribution Order lines on the selected Supply Centre. Before displaying this screen for the first time, a check is made to see if DRP is installed for this company. If not, a message is displayed to exit this function as it is not available.

Create Distribution Orders

Enter selection criteria

Release flag _

Centre?.. _

Centre Stockroom..?.. _

DC Stockroom?.. _

Purchase Officer .?.. 00000

Lines per Order 999

F3=Exit F4=Prompt

Fields:

Release Flag

Optionally enter a value to limit the conversion of requisitions to those with the release flag entered.

Centre

Enter a valid DRP Centre to limit requisitions to those supplied by this Centre.

Centre Stockroom

If the DRP Centre entered has more than one Stockroom defined to it in DRP Stockroom Maintenance, then a specific Stockroom defined to this Centre must be entered to create the Distribution Orders for supply from this Stockroom.

Note: If the DRP Centre has only one Stockroom defined to it, no entry needs to be made here.

Dc Stockroom

Optionally enter an Inventory Stockroom defined to a DC within DRP. Only requisitions intended for supply to this stockroom will then be selected.

Purchase Officer

Optionally enter a valid Purchase Officer number to select for conversion only requisitions for which he / she is responsible.

Lines Per Order

Specifies the maximum number of lines to be included on a single Distribution Order. Defaults to the number specified on the DRP company profile. This may be overridden, but must be greater than zero.

Press **Enter** to validate and display a confirmation message is displayed.

Press **Enter** again and a batch program is submitted to the job queue to create the distribution order lines from the selected requisitions.

A new Distribution Order will be set up for each DC Stockroom supplied by the Centre, and also if the Lines Per Order is exceeded.

On successful conversion of the requisition into a Distribution Order line, the on-order quantity will be updated in Inventory for the item, (at the relevant DC stockroom).

The newly created Distribution Orders will appear as normal orders in Sales Order Processing, except that the Customer number will be one assigned specifically to the DC for which the internal order is required.

Note: Manual Requisitions will not be transferred unless they have been authorised.

Create Transfer Orders

1... **33/RQP** **2...**

You use this option to convert selected Requisitions into Production Transfer Orders in Sales Order Processing. These can be manually entered requisitions or requisitions generated from the Production applications.

This only includes items that are defined within DRP as being sourced from the specified Plant, which must always be entered.

Specific From and To Stockrooms, at a DC supplied by the Centre, must be entered. Only requisitions created for the From Stockroom are then selected. This is required where multiple stockrooms are defined to a DC within DRP.

Requisitions to be converted may be selected on the basis of Release Flag Value, Purchase Officer and Stockroom.

Production Transfer Orders are distinguished from Sales Transfer Orders by the order type. This order type is stored by the system against each Transfer Order.

Create Transfer Orders Screen

Select the Create Transfer Orders option.

You use this screen to:

- Select the purchase requisitions.
- Submit a batch job which converts them into Production Transfer Orders.
