Glossary

Glossary

Business Process

This relates to System 21 Constructor for Work Management. A business process is at the top level of the business function. Within a Business Process it is possible to have Elemental Activities, Assembled Activities and other Business Processes. Business Processes can be nested to several levels.

However, there are restrictions on the way in which you construct Business Processes depending on whether you use Constructor as a design tool for enterprise modelling or a configuration tool for Work Management.

If the Business Process is to be uploaded to Work Management these rules apply:

- Assembled activities cannot be present
- Nesting can only be to one level down
- At the top level, a nested Business Process be linked to an end node.
- A User selected path cannot link into a parallel path

There may be other restrictions in place, but the validation will highlight these.

Buying List

A list of items to be discussed with a customer or group of customers. This list can be up to 999 panels long and there are up to twelve items on each panel. During the order taking process a panel of the buying list may be displayed directly on entering its number.

Call List

The list of calls due to be made for which the system has pre-generated the list of items and the order history.

Call Management

A facility to view the work load of all operators and to redistribute it to match resources.

Call Profile

A definition of a call to be made to a customer to include the customer contact,

operator, buying list, type of call and the frequency and timing of the call.

Customer Contact

The details of the contact for the customer including internal telephone number, job title and supporting text.

Delivery Profiles

A definition of the acceptable times for delivery, delivery area and contact information.

Item Family

When the average sales per week is calculated for planned delivery a number of items can be grouped together in an Item Family. This is to allow for promotion of substituted items.

Operator Profile

A definition of the authority and skill level of the operator. When an operator elects to make outgoing calls this profile is used to prepare and present the list of calls to be made.

Planned Delivery

A style of telesales where the customer gives the current stock level. The application suggests the size of the order necessary to cover the period of time until the next order.

Promotion

An item may be flagged as being promoted. The promotion may be restricted to customers, customer groups, sales areas and regions or price lists and discount lists. A promotion may be used to substitute one item for another. Otherwise it is for information only.

Sales Prompts

At the top left of the order taking panels a series of messages are displayed. These are to continually remind the operator of key points.

Telemarketing

Telemarketing enables the operator to view the available buying list and select

the most appropriate for discussion with the customer.

Telesales

Making a pre-arranged call to a customer to discuss a pre-defined list of items and to take an expected order.

Work Management

This is the term that describes JBA's implementation of activity task automation and control. The Work Management Engine is central to this processing and it is server-based.

System 21 Constructor is the design and configuration tool for Work Management. You upload Business Processes from Constructor to enable them for Work Management.

System 21 Explorer is the interface which Work Management uses to initiate its enabled activities.
