Chapter 2

Processing

Telesales Processing Introduction

Telesales is a support environment for the sales operator. It provides simple and rapid access to data, so that the sales operator can answer questions as they arise.

To achieve this it is necessary to:

- Anticipate the nature of the orders to be taken.
- Anticipate areas of concern to the customer.

Telesales addresses these concerns through the call list which:

- Extracts order history data.
- Identifies the relevant prices and discount lists.
- Calculates average order and recommended stocks.

When an order is recorded by a sales operator the details are written to a Telesales database, giving the optimal response time. At the end of the order these details are automatically transferred to the sales order system for servicing by picking and despatching routines.

Generate Call Lists

You can prepare the call list up to the nominated date and generate all of the supporting information using this procedure. Generally you generate call lists once a day, but they can be generated more or less often.

Call List Generation Screen

The screen displays the data which was entered in the previous Call List Generation, together with the standard defaults from the company profile.

TS300		Z1 - Demonstration Company		User: SP1		9/09/94 14:46:28	
Call List Generation							
	Default	Telesales	Planned Delivery	Tele-Marketing	Options		
Remove Calls Before.....		9/09/94	9/09/94	9/09/94			
Add Calls To.....		16/09/94	16/09/94	16/09/94			
Pricing Overnight.....	No	0	0	0	0=No, 1=Yes		
Default Buying List....?..		0001	0001	0001			
Previous Orders							
No. of Previous Orders....	13	13	13	13	0-13		
Orders by Date/Week.....	Date	1	1	1	1=Date 2=Week		
Order Date Format.....	dd/mm/yy	1	1	1	1=dd/mm/yy 2=ddmm yy 3=mm ddy		
Planned Delivery							
Calc. Recommended Stocks..	Yes	0	1	0	0=No, 1=Yes		
F3=Exit F4=Prompt F5=Refresh F8=Submit							

There are three columns of input fields, one each for Telesales, Planned Delivery and Telemarketing. Using the date and parameters available the Call List can be generated for any combination of order types. Standard defaults are shown on the left if they have been previously defined.

Fields:

Remove Calls Before

The date before which previously generated calls are removed. All calls prior to this date are dropped irrespective of their status (unless the call is currently in progress). The date must be present and valid.

Add Calls To

The date up to which calls with a next call date equal to or before the entered date are added to the call list.

Telesales reviews all call profiles to ensure they have a next call date and calculates one based on the profile if one is not found. A check is performed to ensure the call is not already present. The date must be present and valid.

Note: Each type of order may have different 'before' and 'to' dates if required.

Pricing Overnight

The normal price list and discount list details can be extracted to speed interactive processing. The maximum advantage may be gained by limiting this processing to Telesales and planned delivery, particularly if there is a high probability of the buying list changing for telemarketing.

1 - Yes

0 - No

Default Buying List

If the buying list is not set up in the call profile the default buying list detailed here is used as a basis for the preparatory work. It may be changed as required. This field is mandatory.

No. Of Previous Orders

The number of previous orders per customer that Telesales analyses for order history display during order taking. You can enter any number between 0 and 13.

The greater the number of orders specified, the longer analysis will take.

Orders By Date / Week

The order history may be displayed by date or week.

1 - By date.

2 - By week.

Order Date Format

If the Orders by Date / Week is set to By date, you can set the date format to:

1 - dd/mm/yy.

2 - ddmm yy.

3 - mm ddy.

Planned Delivery

The system can calculate the recommended stock for a customer using the history data. This option is for planned delivery orders only.

Press **Enter** to perform validation, identify and highlight fields in error.

Select **F8=Submit** to run Call List Generation and return to the menu.

Functions:

F8

Perform the validation and if there are no errors submit the job for processing. This job may be run while normal order taking is being done.

Manage Call Lists

You can review work to be done and to be distributed amongst the available operators.

Call Management Pause

This warns the operator that after the first load of the day of the procedure a reorganise routine is run.

The following message is displayed during the reorganise routine:

- Operator workload being calculated.

Call Management Graph Screen

This displays the work to be done by each operator.

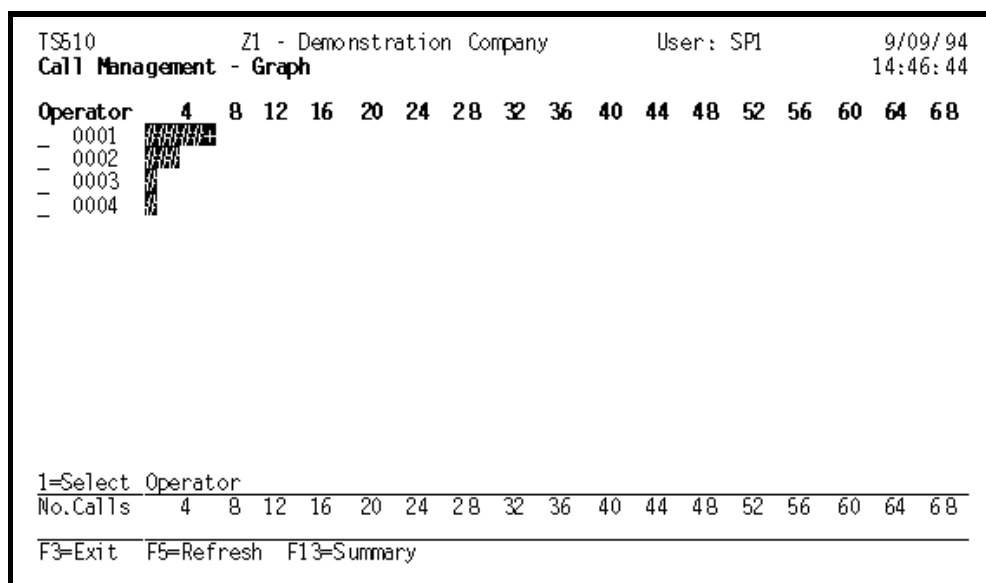

A horizontal bar chart is displayed with the operator's codes on the left of the screen. If there are more than 68 calls to be made the horizontal axis is scaled to the appropriate size.

The following characters are used to indicate to nature of the calls:

- - Overdue Calls.

- Today's Calls.

+ - Future Calls.

Fields:

Select

Untitled on screen. Enter the following:

1 - Display the Call Management - Call Action screen for the selected operator.

Operator

The operator code for the current line of calls.

Functions:

F13

Display Call Management Summary screen.

Call Management Summary Screen

You can display a summary of the calls to be made by each operator.

TS510	Z1 - Demonstration Company	User: SP1	9/09/94		
Call Management - Summary			14:46:54		
Operator	Operator Name	Overdue Calls	Todays Calls	Future Calls	Total Calls
1	0001 Sandra Williams		5	1	6
-	0002 Karen Smit		3		3
-	0003 Judy Brown		1		1
-	0004 Susan Tonks		1		1

1=Select Operator
F3=Exit F5=Refresh F13=Graph

Fields:

Select

Untitled on screen. Enter the following option:

1 - Display the Call Management - Call Action screen.

Functions:

F13

Display Call Management - Graph screen.

Call Management Call Action Screen

You can display a list of the calls to be made by an operator, to enable re-scheduling and the distribution of work.

The list of calls is displayed by time of call in date sequence. Untimed calls are placed before timed calls.

TS510	Z1 - Demonstration Company	User: SP1	9/09/94
Call Management - Call Action			14:46:57
Operator: Sandra Williams			
Customer	Telephone	Call Date & Time	Action
1 La Perfumerie Agnes	0101 3342968815	9/09/94	8:00

1=Spread, 2=Reschedule, 3=Change Operator			
F3=Exit F5=Refresh F12=Previous			

Fields:

(Untitled)

Enter one of the following:

- 1 - Spread. Press **Enter** to display the Call Management - Spread window.
- 2 - Reschedule. Press **Enter** to display the Call Management - Reschedule window.
- 3 - Change Operator. Press **Enter** to display the Call Management - Change Operator window.

The authority level of the operator is checked. You can select as many actions as required and any combination of actions may be selected at the same time.

Action

This is a mnemonic code as follows:

*SPRD - Spread

*RSCHD - rescheduled

*OPCHG - operator changed

This is displayed after an action has been taken.

Press **Enter** to process the actions you have selected. When one selected action is processed the next selected action is presented.

Call Management Spread Window

You can reallocate a number of calls for one operator by spreading them over a number of other operators.

A window is displayed listing the number of calls to be spread. This is followed by a list of operators. The number of calls to be spread to each operator is then entered. The totals of the calls selected must equal calls to spread. An authority level of 3 is required to perform this action.

TS510		Z1 - Demonstration Company		User: SP1		9/09/94

F3=Exit F5=Refresh F12=Previ		F5=Refresh F12=Previous	

Fields:

Select

Untitled on screen. Enter the following:

1 - Select this operator to allocate the call to.

Outgoing Calls

This activity is compatible with Work Management and can be run as part of a Business Process in System 21 Constructor and System 21 Explorer.

Outgoing calls provides, in a single procedure, all of the information and support required by an sales operator to make calls.

Within Outgoing Calls the following functions are available:

- Call Selection
- Establish Contact
- Enter Order Item Details
- Add Additional Items and Charges
- Order Close

Outgoing Calls has been designed to provide the best response time while the order line details are being recorded in order to minimise inconvenience to the customer.

If it is required that a group of operators work as a team it can be achieved in the following way.

- Each of the operators is set up in their own right.
- Each call group is set up as an operator.
- When a call list is created the preferred operator is chosen to be one of the call groups.
- When an operator signs on they will have no calls displayed. If they then select **F19=Select List** they can select the call group to which they have been assigned
- The application will also allow more than one operator to be active on a list at one time.
- The target operator, call group and the actual operator (the person who made the call) are recorded by the system.

Call Selection Screen

Call Selection allocates calls to the operator. It is possible for calls to be made on a specific day and, optionally, at a nominated time.

The screen is divided into two with the upper half displaying timed calls and the lower, untimed. The timed calls are sequenced by date and time and the untimed by date.

A scheduling program promotes the next call to the top of the screen.

There is a sales prompt at the top of the screen and each time the screen is changed the next prompt is displayed.

1=Select Call, 2=Reschedule Call, 3=Change Operator, 4=Abort Call			
F3=Exit F4=Prompt F5=Refresh F13=Sales Prompts F19=Select List			
F22=Incoming Call			

Fields:

Call Selection Operator

The name of the operator whose list is being displayed - typically that of the operator who has selected the Outgoing Calls option.

If the operator has the correct authority, they can display the call list of any other operator. The name displayed is the name of operator whose call list is being displayed.

Next Call

The next call that Telesales has determined should be made. This is reconsidered every five minutes, when a call is scheduled or when a change is made to the list of calls to be made.

There are two lists of calls to be made; the timed list at the top and the untimed list at the bottom. An asterisk is displayed along side the next call to be taken. The fields displayed are:

(Untitled)

Enter one of the following:

- 1 - Select the call. The Establish Contact screen is displayed showing the data from the selected call profile.
- 2 - Reschedule Call. The operator's authority is checked and then the Reschedule Call window is displayed allowing new times or dates to be entered.
- 3 - Change Operator. The operator's authority is checked and then the Change Operator window is displayed allowing the selection of a new operator.
- 4 - Abort Call. The operator's authority is checked and then the Abort Call window is displayed. A reason code must be entered for the call to be aborted.

Call Status Code

This untitled field displays a call status code as follows:

Blank - The call is due to be made today.

> - The call is planned in the future.

R - The call has been rescheduled from the original call date or time.

C - the call has been changed from one operator to another.

Functions:

F4

Position the cursor on a call list entry select **F4=Prompt** to display the Call Action window. This window contains a list of the actions taken for that call.

It is particularly useful if an operator sees that the call has been rescheduled (an R is displayed next to the call date), or changed from one operator to another, (a C is displayed next to the call date). More information can be displayed by selecting an action. This will provide details of the change.

F13

Displays a list of the current sales prompts in a window.

F19

Displays a list of current operators and allows a copy of their list to be worked on.

F22

This function key provides direct access to accept incoming calls. Exiting from incoming calls after completion will return the Call Selection screen.

Establish Contact Screen

To make the best use of operator's time the time taken to get to the right person must be minimised. The type of call being made is displayed in the top right hand of the screen and is one of the following:

- Telesales
- Planned Delivery
- Telemarketing

TS120	Z1 - Demonstration Company	User: SP1	9/09/94
Establish Contact	Operator: 0001	Telesales	14:47:53

Extension.....			
Buying List... Standard Buying List - All Items			
If you require to do anything other than taking this call then enter the required action below. Leaving the action blank will assume that an order is to be taken.			
Call Action.. _ 2=Reschedule, 4=Abort			
F5=Refresh F12=Previous F19=Select Contact			

Fields:

Buying List

The name of the buying list which was used to form the basis of the preparation.

Call List

This may only be changed for telemarketing calls.

Maintain Text

The most recent additional text for the contact is displayed. This may be added to or amended prior to continuing with the order.

**** Warning**

A warning message is displayed if the customer has exceeded the credit limit and / or is on credit stop. Order taking may proceed but the order is suspended by the application.

Call Action

Enter one of the following:

2 - Reschedule Call. This displays the Reschedule Call window allowing new times or dates to be entered.

4 - Abort Call. This displays the Abort Call window with reason codes. If a reason is selected, the call is aborted.

Press **Enter** to proceed to the order taking phase. The system records the details of the order taking cycle agreed at this point, e.g. the name of the actual contact and the actual buying list.

Functions:

F12

Previous screen. The Reason Code window is displayed and one must be selected before the application will proceed.

F19

The Select Contact window is displayed to aid the operator in asking for other known employees of the customer.

If a selection is made the new contact is automatically associated with the taken order.

F21

Enables maintenance of contact text.

F22

If, the call to be taken is a telemarketing call the buying list can be changed. The Select Buying List window is displayed allowing selection of the chosen list.

Enter Order Item Details

The Enter Order Item Details procedure enables an operator to review an agreed buying list of items with a customer, and record the customers requirements. There are two ways of doing this:

- In Telesales and Telemarketing the order quantity is entered.
- In Planned Delivery the customer's current stock level is entered.

Note: Catchweight and secondary values. The Order Item Details option will calculate secondary values and UoMs.

The type of call being made is displayed in the top right hand of the screen and is one of the following:

- Telesales
- Planned Delivery
- Telemarketing

Fields:

Contact

The format of the centre area of the screen is controlled by the Presentation Design option from the company profile maintenance.

Go To Panel Number

Enter the panel (screen) number of the buying list you want to go to.

P

If the item is being promoted an asterisk (*) is displayed on this line. Position the cursor on the line and select **F4=Prompt** to display the details of the promotion, and provide prompted quantity entry.

Qty

The information to be entered into this field differs depending on the type of call in progress. Enter:

The order quantity (Telesales and Telemarketing).

The Customer's current stock (Planned Delivery).

Currency code and currency conversion details are also displayed if the customer is a currency customer.

Functions:

F4

In the Enter Order Item Details screen the standard prompt key displays details of current promotions (items marked with an asterisk (*) in the P field. If the cursor is positioned on the line and **F4** selected, details of the promotion are displayed.

There are four pieces of information in this window.

A summary of the type and details of the promotion.

If a promotion item is to be sold in place of the standard item, e.g. promotion packs, the item number is displayed together with the per factor.

The promotion text is displayed in this area.

The quantity to be ordered may be entered in this part of the window.

F5

Refresh.

F10

An item may be added to an order at any time in the order taking cycle. A window is displayed that allows the entry of an item number and quantity. The required stock checking and pricing is performed during the order taking cycle.

F13

A window is displayed to show the available actions for the information area.

F18

This is only available on planned delivery. The quantity entered represents the customer's quoted stock position or the order quantity.

F19 F20

These are only displayed when the Previous Order Detail information screen is displayed. F19 will view the data to the left of the window and F20 for the right of the window.

F22

This is the first phase of order close. It enables non-standard items to be added and sourcing to be performed.

Enter Order Item Details Actions Window

The Actions window provides you with a list of available information areas on which to base your selection. These are either variants on the basic Enter Order Item Details screen, or windows displayed on it.

F22=Close Order							

The Display Line Values option causes the following fields to be displayed on the Enter Order Item Details screen:

Fields:

Extended Value

The price list and discount list are used to derive the current extended line value. The calculation is: Value - (Quantity x Price) - Discount

Prc.Lst

The currency used by the price list.

Dis.List

The currency used by the discount list.

Actions Window Display Whole Order Details

This window displays the value of the order taken so far to the operator. If the whole order discount is given the percentage discount earned is also displayed. In certain situations this can be used to raise the average value of orders taken by informing the customer how much more need be spent to earn the next level of discount.

You can display details of previous orders. The display can be tailored using options in the company profile. You can configure and display the following information:

- The orders may be displayed by date in which case the presentation of the date format may be chosen.
- The number of orders to be displayed can be controlled, to a maximum of 13.
- Rather than displaying individual orders and dates the quantity ordered per week may be displayed instead of a date.
- The quantities that are displayed can either be the orders taken or the sales made.

Actions Window Display Customer Promotions

Promotions for a specific customer or range of customers can be viewed.

```

Fields:

Text Type

System maintained field; displays the type of text being entered.

Text Reference

System maintained field; indicates the unique reference assigned to this text.

Usage Code

Enter one of the following Usage Codes:

E - External Text. This additional text will be printed on customer documents. The first few words of external text will be included in the item description search facility when maintaining an item.

I - Internal Text. This text will be printed, if required, on any internal reports referencing this item.

Text may also be maintained against the following codes for memo purposes only:

B - Batch Reference Text

D - Certificate of Conformance

P - Transport Planner

Q - Quality Control

S - Sales Office Memo

T - Technical

Note: To enter text in multiple languages enter a valid Language Code, in addition to the Usage Code, to display the Item Text window.

Language Code

Enter a valid language code, in addition to the Usage Code, if you want to enter multi-lingual text. The Item Text entry window is displayed where you can enter text in the language specified. This field is optional and may be left blank if you do not use multi-lingual text entry. However, any code entered must be defined to the Application Manager.

Functions:

F13

Select existing text. This lists all currently defined Usage/Language code combinations for the entered text type/text reference. You can select the combination you want to use for entering multi-lingual text.

Select **Enter** to display the **Item Text** entry window where you can enter text in the specified language.

Actions Window Display Planned Delivery Detail

This option is only available if the order is a Planned Delivery order. These fields that can be displayed on the Enter Order Item Details screen assist in taking orders for the Planned Delivery system.

In Planned Delivery the customer quotes his existing stock level which is used in conjunction with the other information displayed on this screen to calculate the required quantity. During the generation of call lists Telesales has calculated the average order quantity per week. This is multiplied by the number of weeks cover required to give the Recommended Stock. When the customers stock is entered the difference between the recommended stock and the customers stock figure results in the quantity to be ordered.

Fields:

Priced Despatch Notes

Indicates whether or not prices should be printed on despatch notes.

0 - No.

1 - Yes.

Type Of Despatch Note

The option is given to generate despatch notes and invoices separately, or produce a single combined document.

1 - Separate despatch note and invoice.

2 - Combined document.

Invoice Consolidation

Note: Invoice consolidation is only applicable where Type of Despatch Notes is set to 1 (separate despatch notes and invoice)

0 - Despatch note.

1 - Daily.

2 - Weekly.

3 - Monthly.

Despatch Note Language

Languages are validated against those defined to the Application Manager.

Invoice Language

Languages are validated against those defined to the Application Manager.

Despatch Method

Indicates the default despatch method. Must be defined on the Inventory descriptions file, against major type MODE.

Transport Method

Indicates the default transport method. Must be defined on the Inventory descriptions file, against major type TMTH.

Reason For Despatch

Defaults to Blank. Any entry made is validated against the Inventory descriptions file, against major type MOVR

Terms Of Delivery

Indicates the default terms of delivery. Must be defined on the Inventory descriptions file, against major type TDEL.

Note: If World Trade is live, this field will default to the value held on the (Sales Order Processing) Customer Maintenance - Trade Details screen

Carrier

Indicates the default carrier. The validation of this field is dependent on interfaced applications. The following checks will be carried out in the order specified.

Note: If Advanced Shipping is live, and the processing company is active with Sales Order Processing, the carrier will default to that defined via Shipping Customer Defaults.

Note: If a new code is entered, it will be validated against the Shipping names and Address file (Shipping Customer Defaults Maintenance)

Note: If Transport Planning is live, and the processing company is active within Sales Order Processing, the carrier will default to the carrier defined to the Transport Planning Delivery Profile.

Note: If a new code is entered, it will be validated against the Transport Planning Carrier file.

Note: A Sales Order Processing company is defined to a Transport Planning company via an SOP company / stockroom combination.

Note: If neither Advanced Shipping nor Transport Planning are live, then the default will be blank. Any entry made must be defined on the Inventory descriptions file, against major type CARR.

Shipping Marks

Free format field for shipping marks.

Functions:

F13

Access customer attributes.

Additional Overrides Customer Attributes Window

Note: This function is only available in maintenance mode for authorised users.

Select **F13=Customer Attributes** on the Additional Overrides screen to display the Additional Overrides Customer Attributes window.

This window enables you to override default customer details.

Fields:

VAT Calc Basis

This field indicates the customer's VAT status for sales invoicing.

- 1 - VAT exempt.
- 2 - Use the VAT code in the following field.
- 3 - Use the VAT code from the inventory item.

Note: If World Trade is live, this flag must be set to 3.

VAT Code

Indicates the VAT code applicable. This is a mandatory field if VAT Calc Basis is set to 2 or 3

Extra Rate VAT

Indicates whether an extra charge will be applicable using the VAT code defined.

VAT Country

Indicates the country code for the country in which this customer is registered for VAT. If this is a delivery address, and the same country applies to the statement address, then there is no need to re-enter the information.

Validation and prompting on this field will depend on which applications are interfaced.

Note: If World Trade is live, then the system will default to the Customer Trading Details setting.

Note: A country code must be entered.

Note: Any code entered must be valid to World Trade.

Note: If World Trade is not live, the country code will be validated against the General Ledger

VAT Registration

Indicates the customer's VAT registration number in the specified country.

Note: If General Ledger is live, VAT registration will be validated according to a country specific format based on the VAT country code

Fiscal Code

Indicates the classification code assigned by the government to this customer. This will default to Customer Additional Details.

Salesman

Indicates the default salesman for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type TN.

Agent

Indicates the default agent for the customer, (Customer Maintenance, Sales Details, Additional Details) any code entered will be validated against the Inventory descriptions file, against major type AN

Sub Agent

Indicates the default sub agent for the customer, (Customer Maintenance, Sales Details, Additional Details) any code entered will be validated against the Inventory descriptions file, against major type AN

Region

Indicates the default sales region for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type SN.

State

Indicates the default state for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type ST

Territory

Indicates the default territory for the customer, (Customer Maintenance, Sales Details) any code entered will be validated against the Inventory descriptions file, against major type TR.

Order Close Screen

You can display details of the order lines, highlight stock shortages and provide sourcing facilities. You can also add items and charges.

The upper part of the screen confirms the customer and contact details. This is followed by the list of order lines that have been recorded including the buying list description, quantity, line value and line discounts. If the account is currently over the credit limit this is displayed.

Fields:

Payment Terms

This option consists of three fields which define the default payment terms when setting up customers for this company. The terms defined here are the standard terms for this company. They may be changed for individual customers.

The first field is a single character code which defines the type of terms:

D=Number of days from invoice date.

M=Net monthly account number of months and payment due date.

P=Periodic range.

If you use the code P, you must enter a 4 digit data range. For example, 1211, in the second field. 12 is for the 12th of the current month and is the start of the range, and 11 is for the 11th of the next month and is the end of the range.

For the D and M codes, leave the second field blank. For code D you must enter the number of days in the third field in the format DDD. For example, for a payment of 30 days from the receipt of invoice, enter 030.

For codes P and M, the third field contains the month and the day within that month (MDD). For example:

A code of M 210 will generate a payment date of the 10th of the 2nd month following the date of invoice. In this example, an invoice date of 22/4/91 would generate a payment date of 10/6/91.

A code of P 2019 106 would generate for all invoices with a document date between the 20th of this month and the 19th of the next month a payment date of the 6th of next month.

Payment Method

The method of payment is an optional field in the form of a code that is defined within Cash Management.

Example: 'CHQ', 'STD'.

Cash Discount Code

A discount code is used to identify the type of discount and its rate. These are defined in the description file. This field would be used in cases where a discount is given to a customer for paying in cash for their goods.

Staged Discount Code

A discount can be given to a customer if they pay for their goods within a specific timescale.

Note: Cash Discount and Staged Discount are mutually exclusive.

Maintain Payment Details Bank Details Override

Select **F13=Bank Details Override** on the Maintain Payment Details window to display the Maintain Payment Details Bank Details Override Window.

Fields:

Customer Order Reference

Enter the customers purchase order number. This will only be mandatory if it has been requested on the customer sales information screen in customer maintenance.

Customer Order Date

Defaults to today's date, may be overridden.

Date Delivery Required

Defaults to today's date, may be overridden.

Next Call Date

Default to the next call date calculated from the call profile, may be overridden.

Next Call Time

The start time of the earliest call window from the call profile, may be overridden.

Suspension Reason Code

If a suspension reason has been generated in the process of taking the order, e.g. credit limit, zero price, it may not be altered. If nothing is generated by the system, the order may be suspended by entering a valid reason code. A prompt is available.

Press **Enter**, to validate the data and highlight any error conditions.

Note the only exit from this screen is to accept the order.

Functions:

F13

Display the actions window. The actions displayed are:

Display Whole Order Details

Display Customer Promotions

Display Sales Prompts

Maintain Order Text

Maintain Additional Charges

Additional Overrides

Except for Maintain Additional Charges these are as detailed for Enter Order Item Details. Maintain Additional Charges is detailed below.

F22

This order is added to the list of orders to be transferred to the standard Sales Order Processing order bank. The next screen to be displayed is the call list.

Order Close Maintain Additional Charges Window

You use this window to add up to three additional charges to the order.

Fields:

Charge Code

This is a charge code which is defined against the major type 'SUNC' on the descriptions file, in Inventory Management. The charge description is retrieved.

Charge Amount

This may be entered or the standard may be retrieved. The standard will only be retrieved if no entry has been made and the standard is not zero.

VAT Code

If a code has been set as standard for the charge code, it is retrieved when **Enter** is pressed or a valid code may be entered. The VAT rate is retrieved.

Incoming Calls

This activity is compatible with Work Management and can be run as part of a Business Process in System 21 Constructor and System 21 Explorer.

Sales operators can access the call list by customer and take a Telesales order regardless of whether or not it is planned.

This can either be directly from the menu or from the Outgoing calls selection screen.

Incoming Calls Customer Selection

This screen is used to identify the customer's account.

Incoming Calls			15:16:34
Customer Account Code.....?.. GC01			
Delivery Address Seq..... 000			
F3=Exit F4=Prompt F22=Outgoing Calls			

Fields:

Customer Account Code

Enter a valid customer Account code. You may search on this field using the standard prompt facility.

Delivery Address Seq

Enter the customer delivery address code for this order.

If the account code is valid the customers existing call profiles are displayed.

Functions:

F22

Display Outgoing Calls Selection screen.

Incoming Calls Call Selection Screen

This displays the summary details for any existing call profiles, indicates if the call is already planned and provides entry into the call profiles and contact maintenance screens. You can select a planned call, a call profile without a planned call, or an incoming call.

1=Take Call, 2=Maintain Profile			
F3=Exit F5=Refresh F10=Add New Profile F12=Previous			

Fields:

Select

Untitled on screen. Enter one of the following:

1 - Starts the order taking cycle based upon the call profile selected.

If the call is planned then the full facilities is available during order taking including order history review and planned delivery support. If the call is not planned the order can still be recorded, but order history and recalculation of planned delivery values will not be done.

2 - Selects the call profile for maintenance.

Press **Enter** to select the order entry procedure with system defaults for type of order and buying list.

Functions:

F10

Add new profiles. This enables call profiles to be created and then used as the basis for the subsequent order.

Record Order Details

The recording of an order using from the incoming calls procedure follows the same process as making an outgoing call. However, if the call was not already in the call list (i.e. planned) no order history is available during the cycle. After completing an order, the Incoming Calls - Call Select screen is re-displayed.
